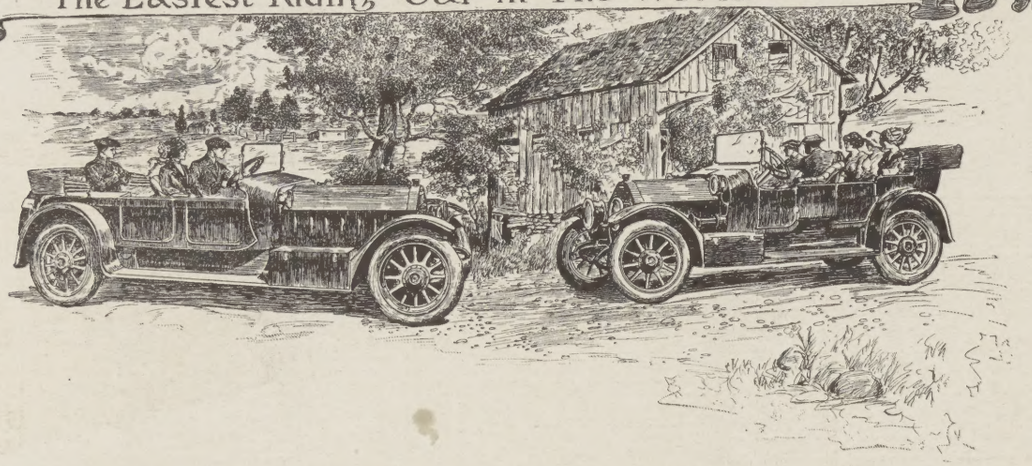
MARMON

"The Easiest Riding Car In The World"



REAL worth is measured by but one standard—Time. Weighed in the crucible of Time, the Marmon has come to represent the greatest of automobile values. Consider the car you buy not only by the demonstration in all the newness of its beauty—but by the comfort, capability and service of the car of four, five or six seasons' use. Dividing dollars of investment by either days or miles of satisfactory service will point out to you the true wisdom of buying the best—of owning a Marmon.

NOTE—If you would "know the maker as well as the car," we have recently issued a folder giving the history of Nordyke & Marmon Company from its beginning, over sixty years ago, to today, illustrating the development of the Marmon car. The old frame building shown in the sketch above, is the first Nordyke & Marmon factory, built in 1851—the present factory is shown below.

The constant growth of this great institution is proof of the soundness of its policy—"the best that can be produced at a fair price, for the greatest service to the purchaser." Every Marmon car is better for this unwavering standard.

The Marmon "Thirty Two"

Price $3,000. Four-cylinder, 32-40 h. p., 120-inch wheel base, body types and equipment to meet every requirement. A rational, logical car for touring and city use. Years of satisfactory service have proved its economy in tires, fuel and upkeep—plus smooth, delightful operation and durability.

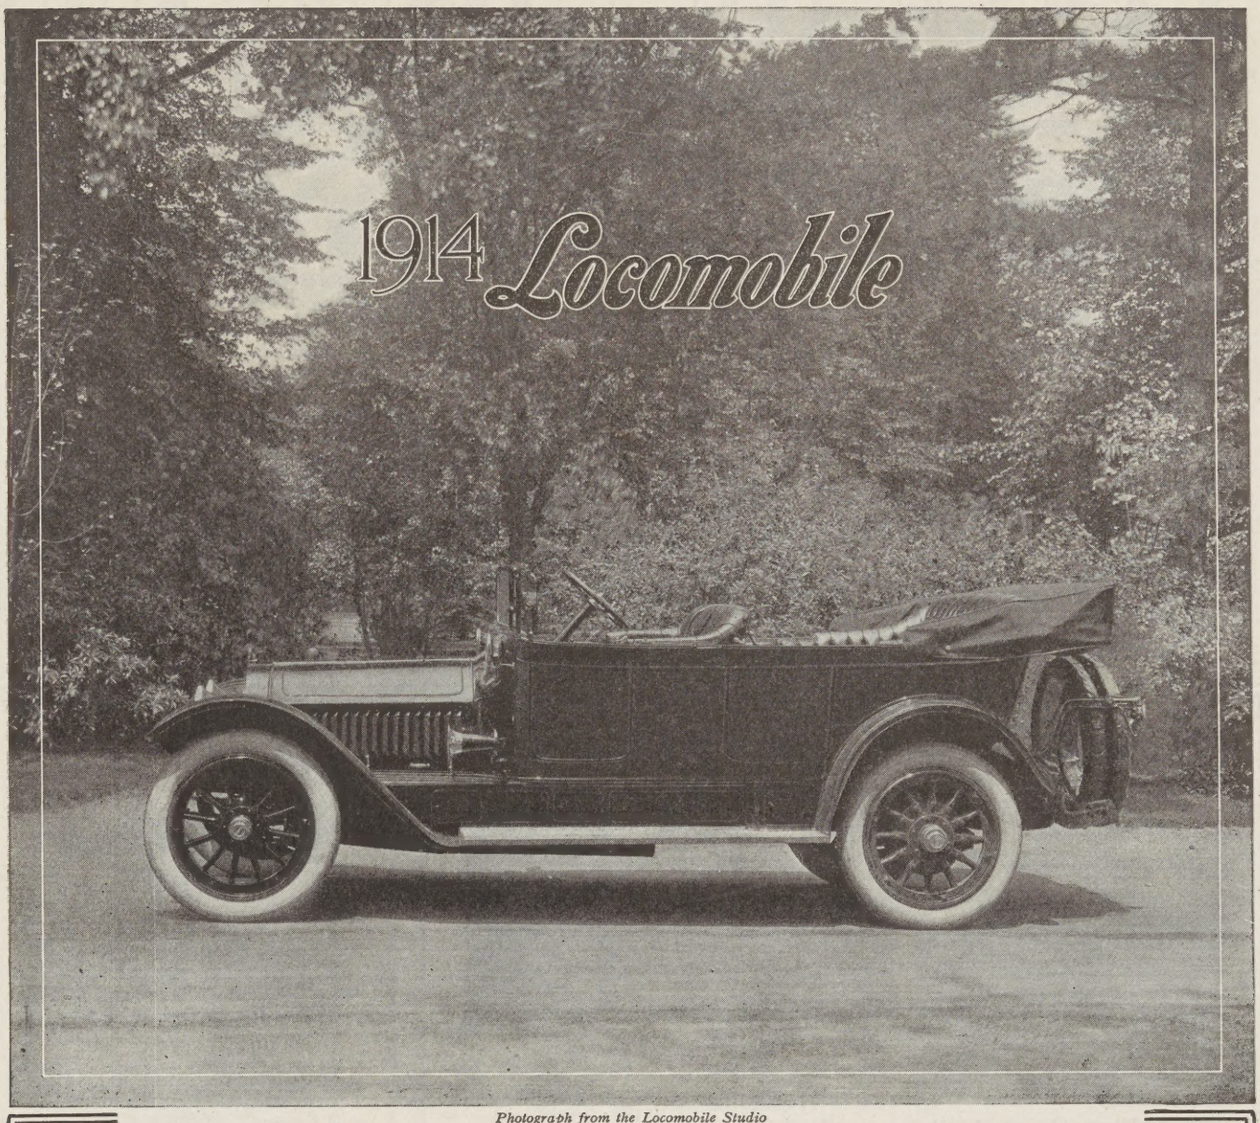
The Marmon "Forty Eight"

Price, $5,000. Six-cylinder, 48-80 h. p., 145-inch wheel base with short turning ability eliminating the old objections to long wheel base. Body types and equipment to meet every requirement. The only big car with small car advantages. Wonderful riding qualities and surpassing power and flexibility. A car developed by years of exacting tests.

Nordyke & Marmon Co.

INDIANAPOLIS (Established - 1851) INDIANA

Sixty Years of Successful Manufacturing



Photograph from the Locomobile Studio

One of the most charming of the Locomobile models for 1914

The Left Drive Little Six

Both Right Drive models and Left Drive models are produced for 1914, the only high grade car offering this choice. On all cars the gear lever is operated by the right hand, which is the safest and most natural arrangement. We invite competitive demonstration of the superior riding qualities of the Locomobile, its finish and all-round attractiveness.

School Information Free

The easiest and quickest method of choosing a satisfactory school, according to the testimony of hundreds of our subscribers, is to write our School Bureau.

Parents, guardians and students themselves seek our advice and help in choosing schools, and this service is open ***to you.***

Perhaps you are confused by the large number of schools advertising and are unable to make a final selection.

For years we have been consulted by the best families in the nation, and we are able to give you competent and unbiased advice in deciding this important matter.

There is absolutely no charge for this service, and it is offered not only to Digest subscribers, but to their friends as well.

No time should be lost in writing us, as most schools open on or before October 1st, requiring immediate arrangement for rooms and plans for courses of study, etc.

It is very important in writing us to give us full details of your requirements, stating kind of school, location preferred, and price of tuition you are willing to pay.

We will advise you promptly and to the best of our ability. Address

Mitchell Tower

Architectural Drawing and Draughtsmen

By REGINALD BLOMFIELD, A.R.A.

A book not only for architects, but for all lovers of art. He traces the development of architectural drawing and recalls the achievements of masters of the art from medieval times down to our own generation. The volume is a mine of wealth to the student of architecture. It is illustrated with almost one hundred full page half-tones, selected from the choicest examples of the work of the great master-draughtsmen of the past. Bound in fine grey silk, art cloth, with gold stamping. Large Quarto, $3.50 net; by mail $3.80.

FUNK & WAGNALLS COMPANY

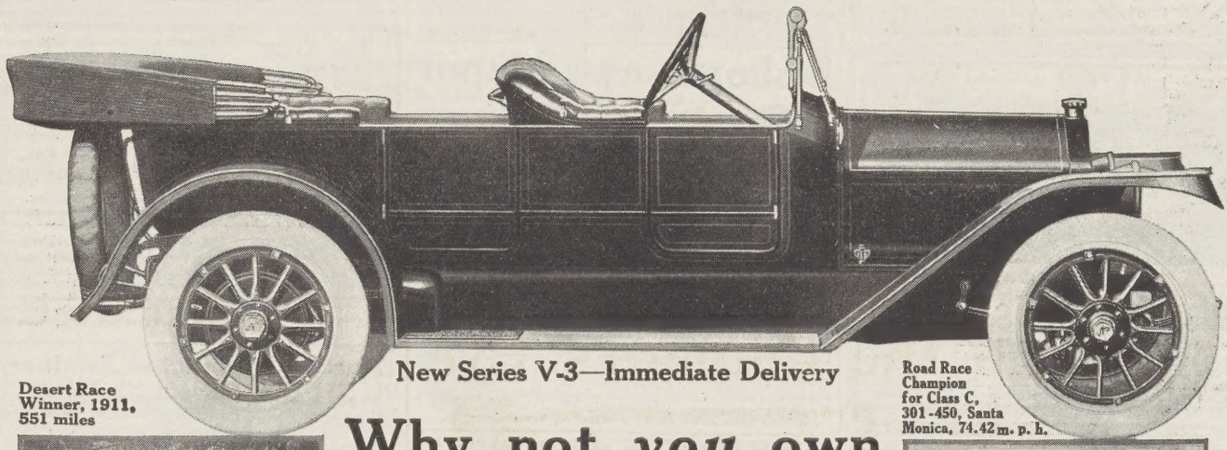
National

WORLD'S CHAMPION

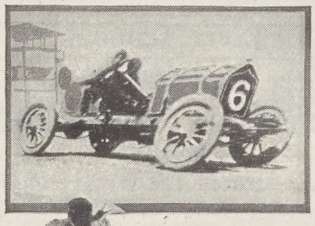


New Series V-3—Immediate Delivery

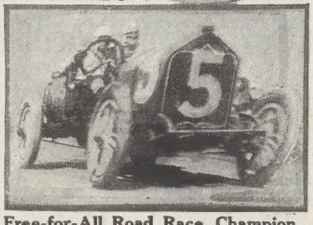
Desert Race Winner, 1911, 551 miles

Stock Champion, Elgin, 1911, 305.03 miles

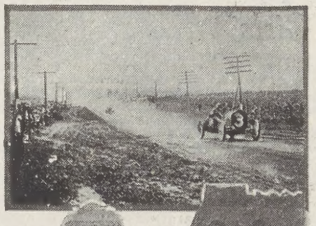
Fastest Mile for Stock Cars, average 89.28 miles per hour



Road Race Champion for Class C, 301-450, Santa Monica, 74.42 m. p. h.



Free-for-All Road Race Champion, 1911, 202.008 mi., av. 74.628 m. p. h.



Why not *you* own the champion?

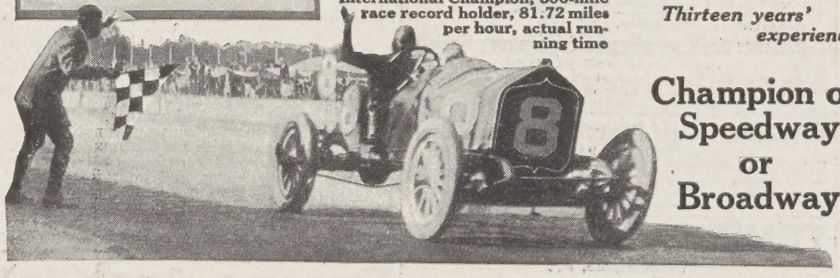
There can be but *one* leader. It *is* the *National*. Not once, but year after year it remains supreme—unconquered! Records, demonstrations and actual performances prove this.

A ride today in a National will prove to you how this is possible, despite desperate efforts of the costly foreign cars to wrest laurels from America's defender—the *National*.

The *National's* championship quality is bred into its very fibre and strength. Its power is indefatigable and its control marvelously simple. There is a pride in ownership of the one, absolute leader.

Dignified in appearance, quiet in operation, comfortable and luxurious, the *National* is complete in everything from electric self-starter to concealed baggage compartments.

Five models, $2750 to $3400



International Champion, 500-mile race record holder, 81.72 miles per hour, actual running time

Thirteen years' experience

Champion on Speedway or Broadway

MASSACHUSETTS

New England CONSERVATORY OF MUSIC

BOSTON, MASS.

Year opens Sept. 18th, 1913

GEORGE W. CHADWICK, Director

The Largest and Best Equipped School of Music

Located in the music center of America. It affords pupils the environment and atmosphere so necessary to a musical education. Its complete organization, its imposing Conservatory Building, splendid equipment, and the Residence Building offer exceptional facilities for students.

Complete Curriculum. Courses in every branch of Music, applied and theoretical, including Opera.

Owing to the practical training of students in our Normal Department, graduates are much in demand as teachers.

The free privileges of lectures, concerts and recitals, the opportunities of ensemble practice and appearing before audiences, and the daily associations are invaluable advantages to the music student.

A Complete Orchestra offers advanced pupils in voice, piano, organ and violin experience in rehearsals and public appearances with orchestral accompaniment.

Dramatic Department. Practical training in acting.

Address, RALPH L. FLANDERS, Manager.

MISS E. A. ELY, A. M., and MISS M. F. SMITH, Principals, Box Z, Evanswood, Clifton, Cincinnati, Ohio

It would mean a great deal to any girl to become a student at the

School of the Brown County Ursulines, ST. MARTIN, OHIO

"The school that is aloof from the iconoclasm of the age"

because (1) the association between student and teacher is very close and is kept up after graduation;
because (2) careful instruction is given, not only in practical and cultural courses, but in everything that makes for good breeding; and
because (3) the 300 acres of high ground give plenty of room for outdoor exercise, and also for a dairy and an orchard and all the things that go with a big country home.

The school is two hours from Cincinnati; this is the 69th year, and the tuition is $300. Send for the little brown booklet; perhaps one of the graduates lives near you.

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Published by Funk & Wagnalls Company (Adam W. Wagnalls, Pres.; Benj. F. Funk, Vice-Pres.; Robert J. Cuddihy, Treas.; W. J. Funk, Sec'y), 354–360 Fourth Ave., New York

VOL. XLVII., No. 9 NEW YORK, AUGUST 30, 1913 WHOLE NUMBER 1219

TOPICS OF THE DAY

THE STRUGGLE IN NEW YORK

OUTSIDE OF THE EMPIRE STATE the impeachment of Governor Sulzer seems to be generally taken as an incident in a remarkable political struggle rather than as a case for quiet judicial determination. While there is "hope that the facts may be so convincingly established as to leave no room for doubt as to judgment upon them," the Springfield *Republican* (Ind.) thinks it "would be folly to expect that the tools of Tammany in the Albany Senate will sit as unprejudiced judges." On the other hand, it adds, "there are evidences of a 'through thick and thin' support of Sulzer, particularly in some of the up-State cities, which, in view of the gravity of the unmet charges against the Governor, can only be attributed to execration of Tammany and all its works." "Observant and thoughtful onlookers," concludes the veteran editor of the Louisville *Courier-Journal* (Dem.), are now convinced of the complete "collapse of self-government" in the greatest State of the Union, where "justice, patriotism, truth have fled to brutish beasts, leaving graft and grafters to fight over the loot, and to flourish one after another in corrupt succession, the people looking on, impotent and dazed." More hopeful is the opinion of those who, with the Detroit *News* (Prog.), consider the "political imbroglio in New York" as "a fight of the Tammany organization for continued existence." It is perhaps inevitable that the political side of the case should receive the most attention, since the impeachment trial will not be held until next month. In the meantime, Mr. Sulzer on the one hand and the Assemblymen in charge of the impeachment on the other are securing counsel, and these lawyers are setting to work preparing their respective plans for the legal battle.

Much curious and ironic comment upon New York's "two governors" appears in the outside press. For, according to one interpretation of the State Constitution, the lieutenant-governor automatically becomes acting governor upon the presentation of impeachment charges against the chief executive. Wherefore Lieutenant-Governor Glynn has had a suite of rooms in the capitol fitted up as his executive chambers, has secured the allegiance of many State officials, and has been transacting much routine business. But in the regular executive chambers above him, Governor Sulzer keeps his office hours as aforetime and receives the "Governor's" mail. His friends find no constitutional warrant for the Governor's stepping down before he is actually found guilty of the offenses charged in the articles of impeachment. Governor Sulzer further insists that as the legislature at a special session can only act upon matters proposed by the governor, the impeachment proceedings are illegal. This is met by the other side with the statement that the legislature may at any time act in its judicial capacity. The Attorney-General of the State, it may be said, stands with those who uphold Mr. Glynn's right to the powers of the head of the commonwealth. Yet no one has spoken with a voice of such authority as to impress the partizans on both sides, tho newspaper correspondents at Albany seem to think that Mr. Glynn is gradually growing stronger at Mr. Sulzer's expense.

While this situation is not without interest, it seems to most editors a temporary and trifling matter compared with the great fight on Tammany which produced it. The impeachment of Governor Sulzer is taken as the climax of a Tammany campaign for complete power in the State of New York, and also as the call to arms for a campaign that will eventually drive the Tiger back to its lair. Those closely identified with the present leadership of the regular New York State Democracy, of course, say little of Tammany, preferring to enlarge upon the guilt of Sulzer and his "usurpation" of power in continuing to occupy the executive offices while under impeachment. Mr. Sulzer, says the New York *Evening Mail* (Prog.), "is a mere incident" in a Tammany conspiracy to gain control of the governorship and the State treasury. The purpose of the impeachment is thus stated by the Philadelphia *North American* (Prog.):

"First, to wrest from an unexpectedly honest executive State departments controlling vast patronage, the award of huge contracts, and the auditing of expenditures; second, to prevent his forcing the passage of an effective primary law, the enactment of which would be the death warrant of Tammany and its ally, special privilege; and, third, to inflict such punishment upon the Governor as would deter future public officials elected by the machine from daring to exhibit like proclivities toward decency and independence.

"The real controversy, therefore, is not as to whether Governor Sulzer's campaign accounts were regular. It is as to whether corrupt bossism and special privilege shall by 'constitutional' methods strangle popular government in New York State and perpetuate a system of misrule and public plundering."

That which raises the affair at Albany to the dignity of "an event," in the opinion of the New York Socialist Labor journal, *The Daily People*, "is the spectacle and proof of the political State on the rocks." And this daily outlines for its readers a version

TERMS: $3 a year, in advance; four months, $1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage $1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE,** or **CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect. *Both old and new addresses* must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnalls Company, 354–360 Fourth Avenue, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

of the Sulzer-Murphy fight which is enlightening, however incomplete it may be. According to the Socialist writer, the fight began on the primaries—

"In the struggle Tammany had the advantage: it owned the legislature; it voted down the Sulzer primary propositions, and when the Governor called the legislature in special session to reconsider the bill, the legislature revoted it down. So far

HYPNOTIZED.

—Harding in the Brooklyn *Eagle*.

Tammany held the fort, with what looked like an impregnable position. The Governor flanked the same.

"There is an election for Assemblymen this November; next year Senators also are to be elected. The agitation, conducted in the meanwhile in favor of the State-wide primary might, or might not, wrench the legislature from Tammany; scandalous disclosures, however, of Tammany corruption in State Departments surely would. The Governor moved in that direction. The Moreland Act of recent enactment afforded a handy means to this end. The act authorizes the Executive to institute special investigations of State Departments. Accordingly, while the Tammany legislature was investigating the Governor, the Governor started a back-fire investigation by appointing his principal lieutenant, John A. Hennessey, to investigate the newly established and Tammany-run Department of Efficiency and Economy. To raise the lid from that Department was a thrust aimed at Tammany's vitals. How avert it?"

By impeaching the Governor, was the answer. For, says *The Daily People*, they examined the Constitution and found that, according to their interpretation of certain clauses, "the mere act of impeaching the Governor suspends him." This would mean—

"The immediate occupation of the gubernatorial chair by the Tammany Lieutenant-Governor, Martin H. Glynn; and, in the intoxication of their glee, some of the indiscreeter Tammany impeachers have allowed their interpretation's further and rapidly-to-follow consequences to leak out—first, the recommendation to the Legislature by the then Governor Glynn that it repeal the Moreland Act; secondly, the immediate and glad acquiescence by the legislature; and, last tho not least, indeed the real purpose in mind, the dropping of investigator Hennessey's head into the basket. The Moreland Act being out of the way, the Governor's acquittal and reinstallation, tho not desirable, would be immaterial—Hennessey's investigating head could not be restored to him, and the lid will remain tight on the Department of Efficiency and Economy. In short, the solemn machinery of impeachment is put in motion, not in order to cleanse the gubernatorial chair, but to side-track the incumbent long enough to enable the Lieutenant-Governor, in conjunction with the legislature, to strike off the statute-book an act by virtue of which light threatens a peculiarly dark corner of Tammany."

Investigator Hennessey himself, in an article in the New York *Evening Mail*, agrees that it was Governor Sulzer's "inflexible determination to go after all the looters" that ended all relations with Tammany Hall and led to "the savagery of recent events." "'It's his life or ours,' was the way one Murphy leader put it to a group of newspaper men." Mr. Hennessey's activity in looking into the State Department of Highways has resulted in the indictment of several politicians. The investigator tells of fraudulent road work and crooked contracts all over the State. And this, he declares, is only a beginning:

"It is a much bigger struggle than the fight against Tweed and against the canal ring. In the entrenchments of the thieves will be found men who have been elevated to high and supposedly virtuous office, and men who have to-day the confidence of their fellow citizens. The trail of graft will run from the Controller's office into the banks and out again. The misuse of the excise department will leave, when exposed, a trail of shame and blacken some of the men now loudly crying for the life of the Governor.

"When the story of the canal system is told the highway thefts won't look so big. When the State Election Department is fully investigated the people will stand aghast in contemplation of the men selected to give them pure elections."

In view of all this, asks the Albany *Knickerbocker Press* (Ind.), which may be taken as representative of the newspapers which stand by Governor Sulzer, "will the people of the State sit idly by and thus have their chief executive threatened with political extinction simply because he stood firm in his resolution to expose million-dollars grafters?" And it continues:

"It is now up to the people of New York State to decide whether this gigantic crime against them shall be fearlessly exposed. Of still more immediate importance is the question of whether a Governor who dared to begin the exposé shall himself be driven from public office by the very men who are so terrified over uncovering the graft that mounts into the millions."

But while many agree with the Albany paper, there are also a large number of editors and readers whose position is well

THE DEGRADATION OF A STATE.

—Robinson in the New York *Tribune*.

stated in these paragraphs from a New York *Evening Sun* editorial:

"There should be no confusion between the Sulzer investigation as it is a detail in the Governor's fight to retain office and the actual investigation of highway frauds. The chief trouble with the present process is that its entire effort is directed, not at finding out who are the criminals, but in attempting to con-

nect certain persons with crimes solely for political purposes. The result is to confuse and to complicate what should be clear and simple. . . . . .

"Until the Sulzer case is disposed of public attention will be fixt upon the main issue, and the effort to use the highway frauds to bolster up the Governor's case is at once futile and against public interest, because it weakens the effect of disclosures which must otherwise command public attention. . . . . .

"If Martin H. Glynn succeeds to the Governor's office in this State by reason of the removal of William Sulzer, the first business before him will be to dispose of this State highway scandal. The suspicion that Tammany is responsible for his promotion and expects him to serve its ends, if no other reason, will compel him to act. Failure to take satisfying action would mean disgrace and oblivion as complete as that which came to John T. Hoffman in the old Tweed days.

"Martin H. Glynn is an honest man, whose political career has never been associated with Tammany. As State Controller in the Hughes Administration, he investigated frauds and punished thieves without regard to political considerations. His previous record supplies the best promise that the highway scandal will be fully explored."

This may well be followed by a word from Mr. Glynn, for in a statement to the public he says:

"I do not intend to employ a temporary occupancy of the Governorship for the purpose of partizan warfare.

"Under me as acting Governor, there will be no political earthquakes and no factional reprisals."

Tammany men say, according to a news item in the New York *Evening Post* (Ind.), that Mr. Murphy's fight on the Governor "has strengthened his position as Democratic leader very much up-State." But enemies of Tammany are just as confident that he has weakened himself. Among Mr. Murphy's followers in New York and Albany, says the Brooklyn *Standard Union* (Rep.), there is no "conception of the anger of the people throughout the whole State at the prostitution of their government. . . . There is an earthquake coming for Murphy." And *The Evening Post* says editorially:

"If anything were lacking to let Boss Murphy know in what opinion he is held by the people of this State, it would be supplied by the extraordinary defenses of Governor Sulzer which are appearing in letters to newspapers and in public meetings. The gist of them is that Sulzer may have been as crooked as his assailants declare, but that, at any rate, he is an angel of light compared with Murphy. Say what you will of the Governor, is the tenor of all this, but admit that Murphy is ten times worse. Such is the nature of this wonderful Tammany 'triumph'! It simply results in showing that Murphy is an object of universal detestation."

Typical of many up-State gatherings was the Rochester mass-meeting where resolutions were adopted denouncing "this prostitution of the machinery for impeachment" and calling for the election of unbossed candidates for State offices, and where Democrats, Republicans, and Progressives united in cheering most loudly the speakers "who roasted Murphy the hardest and who defended Sulzer the most strenuously." Conspicuous in the attack on Tammany and the defense of Sulzer is the Albany *Knickerbocker Press*, which has been devoting pages to the printing of corruption charges against Tammany leaders, of pro-Sulzer letters and editorials, of offers of financial aid in the campaign. Thomas W. Lawson sees another chance to hit the "System" and is willing to help raise a great fund to carry on the work.

The issue in November, says the Rochester *Herald* (Ind.), "will be Murphy or the people. Tammany can control Democratic and Republican Assemblymen, but whether it can control the people in November will not be known until the polls close." The "union of good government forces" behind the fusion ticket in New York City, observes the Chicago *News* (Ind.), "aided by Boss Murphy's recent demonstration of the ruthless and dangerous power wielded by Tammany, ought to lead to the overthrow of Tammany at the coming municipal election in New York City." From another Western State, the Madison *Wisconsin State Journal* (Ind.) bids "the great Empire State take heart; the scandal that has destroyed Governor Sulzer should, at the same time, bring to ruin the infamous Tammany Hall."

"The quickness and clearness with which the people of the country, in and out of New York, have sized up the meaning and importance of this contest, the sureness with which they have gone to the heart of the issue, in spite of the efforts to becloud it with casuistry and special pleading, is," declares the Baltimore *Sun* (Ind.), "in the highest degree encouraging to the friends of clean government and political progress throughout the whole country."

Yet it seems to the New York *Journal of Commerce*, reflecting upon these verbal flayings of Tammany, the raising of funds for the vindication of Sulzer, the report that Mr. Sulzer may stump the State with speeches exposing Tammany, that while "showing up Tammany is no great task," "defending the Governor is becoming rather difficult." Let not "the friends and conscienceless admirers of Governor Sulzer," writes a Brooklyn man to the New York *World*, think that "they will save him by yelling 'Stop thief!' at Tammany." And *The World*, an outspokenly anti-Tammany paper, is no less fully convinced that Mr. Sulzer's friends "can not save Sulzer by railing at Murphy." To quote *The World* further:

"The popular feeling against Murphy and Tammany is highly creditable and, properly directed, much good may come of it. Murphy and Tammany, however, are not to be overthrown by men of questionable deeds and dubious character."

IN CHARGE OF THE CASE AGAINST SULZER.

The committee of the New York State Assembly which will manage the prosecution of the Governor under the articles of impeachment. They are from the reader's left to right, (sitting) Patrick McMahon; Aaron J. Levy, chairman; Abraham Greenberg; (standing) William J. Gillen, T. P. Madden, Theodore H. Ward, Thomas K. Smith, and J. V. Fitzgerald.

EUGENICS IN PENNSYLVANIA

THE OPERATION of Pennsylvania's new marriage-license law, which provides a list of about twenty intimately personal questions to be answered by prospective bride and groom under oath, brings the whole question of eugenics again into editorial notice. Some observers doubt the wisdom of the Pennsylvania law, altho they unhesitatingly advocate the eugenic movement as a serious social effort which has come to stay and "to exercise an increasingly beneficial influence" on our national life. On the other hand, there are those who have only a superior contempt for "the apostles of eugenics" and point out as the fatal error of their theories that human beings can not be "mated scientifically" as animals are mated. According to press reports, Pennsylvania's law, which went into effect on August 1, prohibits the issuance of a marriage license to persons having transmissible disease and to imbeciles, persons under guardianship, and persons of unsound mind. The marriage of first cousins is forbidden, furthermore, and to secure a license a man must be able to show he can support a family. Finally, no licenses will be issued to persons "under the influence of liquors or narcotics." A particular objection to this statute, voiced by the Washington *Post*, is that its enforcement seems to be "left to the marriage-license clerks." Nor should they be surprized, *The Post* says, to receive indignant replies when they ask "the blushing bridal pair whether they are imbeciles, epileptics, degenerates, or have any transmissible disease," while it picks out Wisconsin's law as much saner, because in that State—

"There is an opportunity for an imbecile to consult his doctor first, and if refused a certificate he might then excuse himself from marrying on the ground that his salary had been reduced. It could hardly be expected, however, that even an imbecile would admit his deficiency in the presence of his sweetheart. An epileptic, under the sudden shock of the questions, might throw a fit for the benefit of the license clerk, but it is hardly likely that the questions would bring out the truth in any circumstances. The law merely gives the applicant a choice between perjury and admitting humiliating facts about himself or herself, and to many persons perjury will seem the lesser of the two evils, especially as the admission of disease or imbecility means a refusal of the license to marry."

Such a law as this is foolish, observes the New York *World*, in commenting on the press reports that many couples are going into other States to marry rather than submit to it. And *The World* adds:

"Another and less desirable result will be to delay marriage, if not ultimately to encourage irregular unions. This particular law is an example of the hasty legislation by which it is sought to secure racial improvement by statutory restrictions of marriage without regard to consequences, and which has become the cause of much of the discredit cast on eugenics."

However acceptable eugenics may be in theory, in practise it is bad, declares the Pittsburg *Chronicle Telegraph*, which is not at all surprized to learn that the new law is "not working well in Allegheny County." *The Chronicle Telegraph's* authority for this dictum is Dr. Charles S. Potts, a neurologist of Philadelphia, who is reported as saying: "You can not regulate the marriage of people in this world on utilitarian principles, that is, unless you are going to run it on the principles of a stock-farm." Of this statement *The Chronicle Telegraph* remarks:

"One need not be a scientist in order to see the point of the objection thus raised. Plain, unlearned men and women, who believe in getting married because of mutual love and respect, independent of scientific principles, can see it for themselves, and hence it is that the attempt to force the eugenics inquisition upon the people of Pennsylvania already shows signs of being a failure."

Another physician averse to what he calls the "violent methods" of some of our eugenic legislation is Prof. William Bateson, who is described by the New York *Evening Sun* as "unquestionably one of the leading authorities on genetics." In a paper read before the recent International Medical Congress in London, Professor Bateson is quoted by the press as saying:

"It is one thing to check the reproduction of hopeless defectives, but another to organize wholesale tampering with the structure of the population, such as will follow if any marriage not regarded by officials as eugenic is liable to prohibition. Nothing yet ascertained by genetic science justifies such a course, and we may well wonder how genius and the arts will fare in a community constructed according to the ideas of such legislators as we are told propose this measure in Pennsylvania and New Jersey"

In prompt answer to this the Philadelphia *Press* expresses the fear that Professor Bateson "has not carefully examined" the new law, which, it says, has the approval of a number of experts and "aims to do no more than prevent the marriage of persons who, it will be almost universally agreed, ought not to marry." Moreover, *The Press* points out that:

"The few diseases specified are diseases notoriously known to be responsible for a great deal of the lunacy, a great deal of the degeneracy, of the misery, and of the unnecessary mortality that modern science is fighting against. To prevent so far as is possible and proper the mating of people liable to transmit such ills to posterity is not to ignore mental and spiritual gifts no less important than physical traits. Our new law does not go anywhere near the extreme of allowing only physically and mentally perfect people to marry, with the object of raising up a perfect race. It simply says who within a very limited number shall not marry, not who shall."

Also emphatic in approval of the law is the Atlanta *Constitution*, which believes that "a clean marriage statute" in all the States would "lessen the records of crimes and morbidity," and argues that:

"While physical soundness is not the sole requisite for happy marriage, the records of eugenics prove what results from the union of persons afflicted with mental and moral and physical defects. No one questions the immediate effects of the union of unsound persons, and the criminal records show how the poison spreads out in future generations.

"The 'conspiracy of silence' which permits the contamination of the race to continue is largely responsible for this unhappy situation. There should be more plain talk in legislative bodies."

Pondering the matter in similar mind, the Philadelphia *North American*, while admitting the contention of its critics that "this is a law without teeth, in that it provides no penalty for falsifying in answering the questions," tells us that the only reason a more exacting statute was not enacted is because "the people of Pennsylvania are not yet awake to the importance of eugenic legislation," and adds:

"Despite the fact that these matters of race improvement and race preservation are so vital to human welfare and progress. . . . Pennsylvanians, on the whole, are so blind to this need that if a really effective marriage law had been urged, doubtless it would have been defeated. So the administration of the measure that was adopted, which does little more than establish a principle, will be chiefly educational. Its operation marks the beginning of a campaign of education which had to be undertaken in order to pave the way for genuinely protective laws such as the one just signed by the governor of Wisconsin, requiring every man applying for a marriage license to produce a certificate of good health signed by a licensed physician. . . . . .

"Behind the question concerning 'transmissible disease,' which is the chief target for the critics of the new marriage-license law, are certain social diseases which, tho they do not slay so quickly or directly as the white plague, to which they are a contributing cause, are recognized by the medical profession as the chief causes of human suffering and by all expert investigators ranked as the arch-destroyers of mental and physical efficiency.

"As a recent authority has said, if it were possible to present figures showing the full extent of this 'black scourge,' the eugenics movement doubtless would become a world crusade without delay. But this enemy is so insidious that it can not be fought in the open; hence the need for such protection as may be gained first through education.

"Pennsylvania's new law is a step in that direction."

IN THE EMPIRE STATE.

TAXING ANTHRACITE

THE STATE OF PENNSYLVANIA will add $4,500,000 to her annual income, according to press calculations, through the operation of a new law which puts a tax of "2½ per cent. ad valorem on anthracite coal at the mine breaker," and it is the opinion of some editors that the burden of this tax will be borne not by the coal companies, but by the ultimate consumer. In support of this contention, they refer to the fact that certain coal companies are inserting a line of explanation on their bills, which reads: "Plus the 2½ per cent. tax levied by the Commonwealth of Pennsylvania." Of the total amount collected by the State, we are told, one-half will be allotted to the counties producing coal, while the remainder will be subject to legislative appropriation. The tax will not alone materially reduce local taxation, *The Wall Street Journal* predicts, but in some cases "will eliminate it entirely." Nevertheless this newspaper is far from approving the coal tax, which it describes as "a charge drawn from the public for the selfish interest of a particular State," and it says in further criticism that the tax is "economically unsound," that it means "a dire increase in the already overwhelming cost of living," and finally that it violates in spirit the Federal Constitution, which "forbids any State from taxing exports without the consent of Congress." The New York *Tribune* is also outspoken in its condemnation of the new law, which it believes to indicate that "the Pennsylvania Legislature has dropt back into economic barbarism," and *The Tribune* continues:

"It is inequitable to put a consumption tax, with no view to protecting domestic labor or stimulating domestic industry, on a necessary of life, the cost of which will be increased in geometrical ratio to the smaller purchasers. Moreover, it is against the interest of the community to handicap the use of a valuable source of heat and power. The cheaper that power is and the freer its employment the more efficient the community becomes as a producer of wealth and comforts. It would be just about as sensible to put a tax per foot-pound on the water with which mills and factories are operated, thus artificially diminishing the value of the gifts which nature has bestowed upon us."

Just because nature decreed that most of our hard-coal deposits should be located in Pennsylvania, the Springfield *Republican* observes in this connection, is no reason why that State should collect from New England "a tax which is virtually a payment for the privilege of burning Pennsylvania coal," and it adds:

"The tax will inflame agitation for Federal ownership of the mines if it be made permanent. From any proper and reasonable viewpoint, those coal deposits are a national resource, a national asset. It would have been a blessing had they not passed under private ownership in the first place—only to become the property of monopolists controlling also the railroads that make the coal accessible to the consumer."

Comment of the like strain, which it has noticed in other Eastern papers, elicits from the San Francisco *Bulletin* the statement that:

"Coming from the heart of extreme conservatism, backed by organs of a reactionary type, this is a strange admission of the fact that private capital can't be trusted to deal fairly and equitably with the people where it has great power; that greed, selfishness, and folly will overcome any scruples of human nature and will not hesitate to impose on the needy the horrors of an artificial winter; that only from the collective body can even-handed justice ever come. In a roundabout way we are learning some fundamental truths."

A Pennsylvanian answer to the objections against the coal-tax proceedings from other States is voiced by the Philadelphia *Record*, which reminds us that the people of Pennsylvania have to pay the tax as well as coal consumers outside the State, and has this to say in favor of the tax:

"The State government is put to a large expense for the maintenance of hospitals necessary for the care of sick and injured miners, to say nothing of the cost of mine inspection, and there is no reason why it should not recoup itself. The day is also not far distant when a considerable portion of the anthracite region will, through the exhaustion of the coal supplies, be deprived of almost the sole means of its support. Pennsylvania can not regard this with indifference, and half of the tax is to go to the counties which see their wealth being rapidly depleted."

Additional support of the coal tax is found in a letter addrest to the New York *World* by John C. Jardine, who calls attention to the fact that great stores of wealth have been taken from Pennsylvania and are being taken "for the enrichment of other parts of the country," and he concludes:

"The coal tax has come from an appreciation of the fact that

Pennsylvania wealth has been diverted to exploit other parts of the country to Pennsylvania's disadvantage. It is simply a case of the community safeguarding itself against the injustice of the individual, and that policy is everywhere present-day practise."

DAYTON'S UNIQUE CHARTER

DECIDING BY A VOTE of two to one, on August 12, in favor of what has been described as "the most advanced charter ever adopted by an American city," the citizens of Dayton are said to set an example that will be watched with interest by her sister cities in Ohio and in other States. Taking effect January 1, 1914, the charter, according to press accounts, provides for the short non-partizan ballot, a legislative commission, and a city manager, and the claim is made for it that it combines "the best features of the old commission plan" with the improvement of the manager idea. The commission, whose presiding officer has the title of mayor, consists of five members, and its functions are purely legislative. One of these is to employ "a trained city manager," to whom is entrusted the administration of the city's business, with the exception of the courts and schools. Thus there is no diffusion of responsibility, we are advised, "as seen in the straight commission plan, where each commissioner is in active charge of a department." To complete the balance of power, the people are given the right of the initiative, referendum, protest, and recall. That a city of the size and importance of Dayton should be willing to adopt the city-manager plan of government strikes the Chicago *Record-Herald* as "an interesting and significant development." It mentions Sumter, N. C., with 10,000 population, and one or two smaller places as being the only towns trying this system, and says of Dayton's new move:

"It illustrates the spread of the gospel of efficiency and local non-partizanship. Our cities are evidently prepared to do things which Germany alone has been credited with by students of municipal efficiency."

Similarly enthusiastic is a Columbus editor who, seeing other cities of his State "bound for better things," says:

"Dayton has adopted the commission plan of government with the managerial appendage, and Sandusky is to have the managerial, both rigid departures from the old federal plan. Now, watch them go by, which they will if the old gang doesn't resort to sabotage to destroy the delicate processes of civic reform. How we wish Columbus could have joined the golden opportunity and marched with her sister cities to the goal of an efficient and unselfish city government."

What the New York *Evening Post* calls "the noteworthy thing" about Dayton's new charter is "its break with commission government as it has been understood hitherto," and it states the case thus:

"Dayton, while declaring by a vote of two to one in favor of a commission, declares at the same time for that separation of legislative and executive functions which has been decried by advocates of commission government as a relic of an outworn system. Dayton's commission will do what any city council does, pass ordinances. Its mayor will have the honor of being the 'political head' of the city, and of presiding at commission meetings. But the man who will loom large in the city government will be the 'city manager.' Appointed by the so-called mayor, dependent for his salary upon the commission, he will exercise control, through appointments and removals and subject to civil-service regulations, of the entire Administration, exclusive of the courts and schools. In other words, commission government has swung around to the point of restoring the office of mayor, but with the difference that he is appointed by the Council instead of elected by the voters. This is Cabinet government in little. It may be a wise development. At any rate, the evolution thus recorded is a warning to reformers not to be sure that old ideas of government have suddenly become archaic, and that by the simple process of discarding them we can have the millennium merely by voting for it."

BLACK HAND SWAY IN ITALIAN NEW YORK

THE IMPORTANCE of the coming municipal election in New York City to the country at large is well shown, says *The Outlook*, by the increase in crime and the sway of the "Black Hand" among New York's Italians. According to the editors of the New York weekly, Italian murders in and near the city "since January 1 last number about seventy, and are on the increase; it is said that this is over twice the homicide rate of all England." This is a peril to the nation, but a problem to be solved by the city government of New York, for while "the evil spreads from city to country," it "must be met and checked at the port of entry." In a recent number of *The Outlook*, Mr. Frank Marshall White shows the completeness of the Black Hand's control over the Italians of the city. He further hints at the "politics" and the politicians back of this control. It is impossible here to reprint Mr. White's stories of individual exaction, spoliation, and murder. But even without these concrete illustrations, it is startling enough to be told that while up to 1909 the material progress made by Italians was marvelously rapid, their holdings in real estate and general commerce "not only have failed to increase during the last four years, but are probably considerably less than in 1909." Tho it is admitted that something must be attributed to other influences, "it is a fact that the falling off in these indicated totals of material prosperity among the Italians of New York is synchronous with the presentation of the freedom of the city to the Black Hand." And men of high standing among our Italian citizens are named who "do not hesitate to say that the Black Hand has ruined and driven out of the United States thousands of honest and industrious Italians who might otherwise have made the best kind of citizens." It was with the unavenged murder of Petrosino in 1909, says the writer in *The Outlook*, that "Italian crime began to increase throughout the United States, and it has continued to increase steadily until it is at its height to-day."

"The first manifestation of the power of these miscreants after the tragedy at Palermo was when they ruined the concert for the benefit of Petrosino's widow that took place in the Academy of Music in May, by sending threatening letters to prominent Italians who had promised to attend, and to the singers who were to take part. Within a month of the assassination of the famous detective, attempts were made upon the lives of Gabriel Longobardi in Chicago and Salvatore Dantonio in New Orleans, each at the head of the Italian detectives in those cities. All over the country Italian criminals showed their contempt for the powers of law and order. In New York City and the immediate vicinity, in 1909, after the death of Petrosino in March, aside from bomb-throwings, kidnapings, and crimes of blackmailing and extortion, there were fifty murders committed in the Italian settlements, two kidnaped children being among the victims. Italian crime had reached its greatest previous height in New York in 1905, when something like twenty lives paid the penalty. During the three years immediately following, Petrosino and his men cut down this record almost one-half.

"Black Hand crimes increased with more rapidity than ever when the Italian ex-convicts learned that General Bingham's scheme for their wholesale deportation had been frustrated by the Mayor. Things had come to such a pass in the summer of 1910 that Acting Mayor John P. Mitchel was memorialized on the subject of Italian crime by the Italian-American Civic League. In December of the same year a meeting was held at the City Club, under the auspices of the League, to discuss measures for relief. At the close of the year 1911 the New York *Times* devoted a page to prove that Black Hand crimes in this city had doubled during the previous twelve months; in 1912 the record of the previous year was far surpassed.

"During the first seven months of 1913 Italian criminality broke all previous records. It was noted in the newspapers that the four bombs that blew out windows and doors at respectively 756 Eighth Avenue, 187 Elizabeth Street, 35 Stanton

Street, and 53 Oliver Street, between 3.20 A.M. of July 20 and 1.25 A.M. of July 22, brought the numbers of explosions in the Italian settlements of the five boroughs since January 1 into the nineties. More than sixty murders are recorded in the newspapers as committed by Italians in New York and the immediate vicinity from the beginning of the year up to August 1. Two policemen who died in the discharge of their duty were among the victims. The first few days of August saw no let-up in the activities of Italian criminals in New York. Early on the morning of the 1st the police captured four Italian burglars on a roof in West Broadway, after the desperadoes had emptied their pistols at their pursuers. On the night of Sunday, the 3d, two Italians were killed in a fight over a girl at Coney Island. The following night another policeman was killed in attempting to make the arrest of an Italian gunman in the Bronx."

Alberto Pecorini, editor of *Il Cittadino*, a newspaper whose aim is the uplift of the Italian citizen, and himself for many years a careful student of conditions among Italians in this country, is Mr. White's authority for the statement that

"the only Italians among between 500,000 and 600,000 members of that race in New York who are not being exploited by the Black Hand to-day are those who have made fortunes and do not live in the Italian settlements, together with the skilled workers, such as cooks, waiters, chauffeurs, barbers, tailors, mechanics, and masons. Ninety-five per cent. of the rest, Pecorini declares, the tradesmen, shopkeepers, and unskilled workers, are paying daily tribute to ex-convicts of the Mafia and the Camorra."

Mr. Pecorini, it seems, "attributes much of the power of the Black Hand to conditions brought about by the Italian newspapers of the city." He asserts that their policy "is to keep the Italian as much as possible out of an American environment, and ignorant of the laws, the history, and the opportunities this country affords, in order that the masses may be the more easily exploited by the criminals among them."

But the Black Hand's present power is, in Mr. White's opinion, to be traced to certain happenings in the last four years. Going back to 1909, we are reminded of the good work done by Lieutenant Petrosino under Police Commissioner Bingham in controlling the lawless Italian element in New York. But the Commissioner saw that something had to be done to "dam the noxious stream" of criminal immigration. The plan adopted was "to procure in Italy the penal certificates of as many as possible of the Italian ex-convicts who had come here within the three previous years and were therefore liable to deportation under the law of 1907, and then to round them up and send them back to Italy, where they would be taken in hand by the Italian authorities, instead of returning them to the ports whence they had embarked for America, that were in nearly all instances non-Italian, and from which they might readily return to this country." The cooperation of the United States and Italian Governments was secured, and Lieutenant Petrosino was sent over to get the certificates. After his murder on March 12, 1909, two other detectives succeeded in getting the needed records identifying some 350 Italian ex-convicts. But, as the story is retold in *The Outlook*, General Bingham had been dismissed from office when the detectives returned. More certificates were received from the Italian Government "until the number of criminals registered as available for deportation reached seven hundred." But, despite the need for haste because of the three-year limit for deportation, "there was no round-up of the malefactors." Mr. White continues:

"The machinery that, with the assistance of high officials of Italy and the United States, and at the cost of human life, General Bingham had constructed for the suppression of the Black Hand, was allowed by Mayor McClellan to fall into decay before a wheel was turned. This conduct on the part of the Mayor is all the more extraordinary in view of the fact that he had discust with General Bingham every detail of the project of securing the penal certificates from Italy, and had given it his hearty approval.

"There are only two conceivable theories upon which the retention in the United States by Mayor McClellan of the seven hundred Italian ex-convicts, whose names and penal certificates were in the hands of the police, may be accounted for. One is that to carry out a project that was calculated to reflect credit upon the official he had humiliated would make the Mayor's conduct in sacrificing General Bingham to the politicians seem the more reprehensible; the other is that the politicians came to the rescue of the Black Handers and ordered the Mayor to prevent their deportation. The acceptance of either theory convicts McClellan of a crime against civilization, and makes him more than any other one man responsible for the fearful carnage since wrought by these exotic desperadoes among their countrymen in the Italian settlements of New York and other parts of the United States."

ONE BLACK HAND LEADER WHO WAS CAPTURED.

Giovanni Rizzo, who is here seen handcuffed between his two captors, was convicted and sentenced to a long term of imprisonment. On his left, with the raincoat over his arm, is Lieutenant Corrao.

While the Black Hand operators are sometimes caught, and Lieutenant Corrao of the Detective Bureau, who occupies a position similar to that held by Petrosino, has been active and vigilant, it is Mr. White's deliberate opinion that to-day the Black Hand is in control of Italian New York. Much of the Black Hand's security, we are told, is due to political protection. To quote *The Outlook* article again:

"If it is doubted that the Italian criminal in New York has his defenders among politicians high in office, it may be mentioned that less than a year ago, when one of these ex-convicts was found guilty of perjury in the Supreme Court of the State, another Supreme Court Justice and a district leader of Tammany Hall went to the Justice who had tried the case and induced him to make the sentence of the convicted man a ridiculously small one. . . . When Lieutenant Vachris was in charge of the Italian squad under Police Commissioner Cropsey, the brother of a leading politician came to him at Police Headquarters to ask him to use his good offices on behalf of an ex-convict from Italy who had already served ten years here for forgery and was then under indictment for counterfeiting.

"The brief experience of William J. Flynn, now chief of the Secret Service of the Treasury Department in Washington, as Second Deputy Police Commissioner during the administration of James C. Cropsey, gives reason for the belief that influential politicians had the welfare of the Black Hand at heart at that time. Flynn, who as head of the Eastern division of the Secret Service, with headquarters in New York, had broken up the most important gang of Italian counterfeiters in the country and sent a score of them to long terms of imprisonment, was made Second Deputy and given charge of the Detective Bureau in October, 1910, his familiarity with Italian criminals and their methods being one of his qualifications for the position. He at once began a vigorous crusade against the Black Hand, and in

December, for the first time in the history of the Police Department, a band of Italian kidnapers was captured with a stolen child they were holding for ransom in their possession, Flynn having personally conducted operations. Soon after this achievement he was assigned to the duty of raiding gambling-houses, and in April he resigned from the Police Department in disgust. 'I found the work that I wanted to do blocked and interfered with, and the work that I did not want to do put onto me,' was his only explanation."

END OF THE "MAGAZINE TRUST" SUIT

THE GOVERNMENT'S abandonment of its Sherman Law prosecution of the Periodical Clearing House, sometimes called the "Magazine Trust," is regarded as a vindication of the defendant publishers, press reports indicate, while it elicits occasional editorial opinion on "the possibility of using the antitrust act to interfere with common-sense business methods." A ripple of amusement is afforded, moreover, by the revelation that before the suit was started the Periodical Clearing House had practically gone out of business, "because it had been found useless and impracticable" by its founders, with the result, as one commentator notes, that it "actually had to be brought back to life in order that it might defend the prosecution." By a decree entered in the Federal District Court of New York on May 29, the suit was dismissed, and the Government had sixty days in which to take an appeal. The failure of the Government to take an appeal is interpreted as the end of the case. As a sign of the magnitude of the "magazine trust," we read that its initial capital was $2,500; and of its influence, that it never was an integral or important part of any publisher's business. Such is the statement attributed to Herbert S. Houston, president of the association, who is also reported as saying that the publishers who served as officers of the Clearing House gave of their time "out of all proportion to the importance of the matter to the magazines involved." The purpose of the Clearing House was to regulate and systematize the magazine-subscription business done through outside agents, and, according to Mr. Houston, "to a certain extent the Clearing House accomplished its purpose when it focused the attention of the magazine trade upon the demoralizing practises that had grown up around the business." His story of the case is thus related in the New York *Times:*

"When the Government's suit was started, many months after the conclusion of an investigation which the publishers had been led to believe was satisfactory to the Government, we, nevertheless, felt that we did not care to carry on an organization that was even claimed to be in violation of the law, and, therefore, while the suit was pending, the Periodical Clearing House was allowed to run down.

"Mr McReynolds, acting for the present Administration, apparently concluded, after the defeat of the Government on the full trial of the suit, that the Government could not succeed with a broader application of the Sherman law than had ever been given it, involving new principles not concerned with sales at all, but with the relations of employers to their agents, and so has decided to take no appeal.

"It has been fully explained to him that the Periodical Clearing House was practically out of business before the suit was brought, and the view of the Department of Justice apparently is that it was not worth while to take an appeal in a case where the Government would have to establish the application of the law to a new principle involving a concern that has already gone out of business.

"One of the results of the nation-wide publicity which was given by the Attorney-General to the commencement of this suit was that the press of the country had a good deal of quiet fun in anticipating developments which would show that muck-raking, trust-busting periodicals, professing a high moral tone, and severe in their condemnation of all sorts of combinations in restraint of trade, would be caught in a flagrant combination in violation of the laws against such monopolies and restraints."

Speaking editorially, *The Times* puts the question that if it is meet there should be joy over a repentant sinner, "what exaltation of sentiment becomes the discovery that the sinner was unjustly charged"? Then, adverting to the "hilarity" that must greet the abandonment of the suit against the Periodical Clearing House, it predicts that it will extend beyond the publishing trade to those who think they have "a right to maintain what conditions suit them in their own business, unless some public detriment be shown," and adds:

"In this specific case profits were attacked by combinations of distributers who sought to absorb funds allotted for the encouragement of circulation without rendering the services paid for. There was a combination of magazine publishers to correct what they thought undesirable influences on their business. The Government charged that this combination was for the purpose of regulating prices of sale and resale, but it had not a shred of proof, and now declines to appeal against an adverse decision. . . . This is satisfactory so far as it goes, but it would have been more satisfactory to have the same thing settled by a verdict of business men. Traders have had a certain grievance when their acts have been tested by the language of a statute which they have had no hand in framing, and in a form of litigation which makes judges act as a jury, testing the prosecution not by business standards, but by the language of a law which even judges had difficulty in understanding. The discovery of a right to regulate commissions comes pretty close to a right to regulate prices. If the Government may regulate prices by all sorts of uneconomic measures, why may not business men regulate prices fairly by measures adapted to that end? Admittedly the public dearly loves a bargain, and has a right to such as it can get by fair means. But has the public a right to 'cut prices' and the disruption of trade arrangements? Foreign courts hold that stability of prices and profits is as much in the public interest as irregular reductions of prices."

The failure of the Government's suit, in the view of the Washington *Times*, makes plain the fact that, "in one case at least, business is not to be unduly interfered with in order that the technicalities of the law may be vindicated."

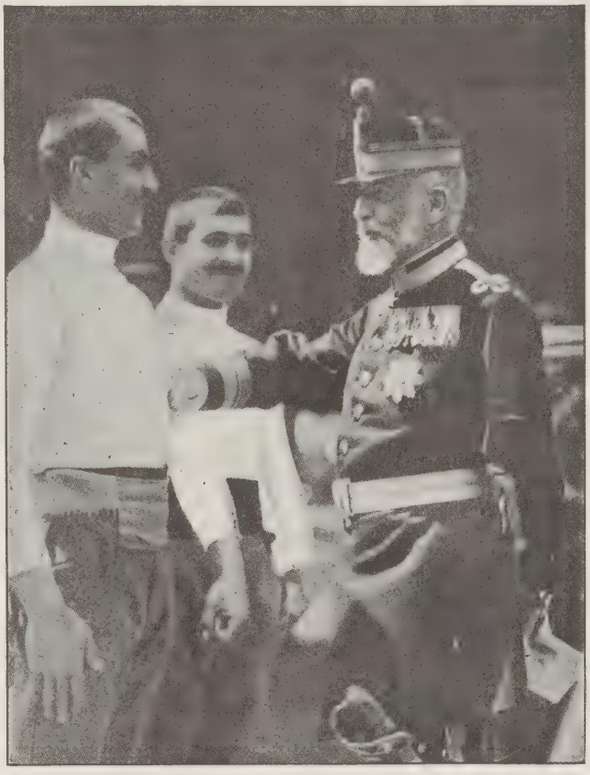
FOREIGN COMMENT

ROUMANIA'S HEGEMONY IN THE BALKANS

THE VAULTING AMBITION of Czar Ferdinand of Bulgaria has "o'erleapt itself and fallen on the other side"—the wrong side. Roumania, that never drew a single sword against the Turk, has come out as the lord paramount of the Peninsula. The press generally praise the statesmanship, tho they talk of "the piracy" of King Charles of Roumania, who mobilized his Army and threatened to march into Sofia, Ferdinand's beautiful capital, unless the peace treaty with all its humiliating conditions was signed by the Bulgarian sovereign. It is true that Russia and Austria avow that they will not submit to an excessive humiliation of Bulgaria; nevertheless the newspapers tell us that Bulgaria's wings have been clipt, that she is not to have Kavala, the coveted seaport on the Ægean with its hinterland of rich tobacco-plantations, but to be allowed possession of Strumnitza, an inland town fifty-five miles northwest of Salonika. She is to yield to Roumania a large strip of territory on the Danube, including the strongly fortified town of Silistria. Roumania now occupies a kingdom more populous than that of any Balkan sovereign state, as we see from the following table of figures published in the London *Times:*

POPULATION OF THE BALKAN MONARCHIES

Roumania	7,600,000
Bulgaria	5,000,000
Greece	4,500,000
Servia	4,000,000
Albania (about)	2,000,000
Montenegro	500,000



KING CHARLES OF ROUMANIA,
Chatting informally with two of his officers.

The London *Observer* expresses disgust at the bloody struggles of the Balkan Powers for territory—ending as it has in a sort of readjustment, not by right but by might. Thus we are told:

"There is no conceivable villainy, oppression, partition, and triumph of violence in any part of the world which would not be justified upon the precedents set by an unprincipled struggle in which the fight for territory has been carried on without the least regard to the political preferences and racial affinities of the hapless population of Macedonia."

To complicate matters, Bulgaria is dissatisfied with the final arrangement to which she gave her signature under the terror of a Damoclean sword, and the *Fremden-Blatt* (Vienna), the organ of the Austrian Foreign Office, remarks very guardedly, but very significantly:

"It is said in Bucharest that Bulgaria intends to make the frontier lines fixt by the Conference under the presidency of the Roumanian premier, Mr. Majorescu, as dependent on the indorsement of the Great Powers. It is not yet clearly known what form the Bulgarian protest will take. It may take the form of some reservations to be appended to the final treaty as a sort of protocol. In any case the peace initiatives at Bucharest mark an important event, and we hope when they are put to the proof by Europe, will end in a genuine pacification."

One of the best summaries of the provisions of this treaty we find in the London *Westminster Gazette*, which we quote as follows:

"What, as things stand, is the exact position of Bulgaria, for that is the determining fact both for the immediate and the remoter future? Roughly speaking, the peace for her has been made not on the basis of her victory over the Turks, but on the basis of her defeat by the Allies. She gets only a little triangle of Macedonia, with Strumnitza for its apex, lying between the Servian and Greek boundaries; she gets a narrow strip of Ægean coast, with no desirable port and very uncertain and difficult access for a railway, and as much of Thrace as she can recover from the Turk. Greece has been unyielding in her claim to Kavala, and tho certain concessions on her part are spoken of in the last stage, these are not important enough to be defined specifically. Servia and Greece divide the rest of Macedonia between them, but the former has apparently promised to make certain concessions to Montenegro 'corresponding to the aid which she has rendered in the war against Bulgaria.' To complete the story, we must add that Roumania has cut off and annexed a considerable slice of Northern Bulgaria, so that the Bulgarian people have to submit not only to the disappointment of their hopes, but to the actual loss of territory which till now has been theirs."

But the fight over the frontiers is not yet ended. Roumania, now triumphant, is warned by the *Hamburger Nachrichten* that "there will be many counter-claims made between her and Bulgaria before the frontier lines between these two neighboring States be finally settled."

Altho, to quote the London *Times*, "the impotence to which Bulgaria has been reduced by the paralyzing action of the Roumanian Army compels her to make peace on any terms," she still has the right to make claims for a revision of the "preliminary" treaty. That such a revision is possible seems to be indicated by Austria's positive demands for one, and we read in the *Wiener Allgemeine Zeitung*, "Now that the weapons of war have been laid down a period of energetic work is come for European diplomacy. The preliminary Treaty of Bucharest was approved by most of the delegates in the hope that in a short time its stipulations would have no more than a historic value as far as they clashed with the proposals made by Austria-Hungary before the opening of the Conference. These proposals were, first, that Bulgaria should not be crusht or humiliated,

and, secondly, that she should not be ousted from central Macedonia. It is the task of Austria-Hungary and other Powers who take her view of the matter to secure the realization of these principles." The *Neuer Wiener Taggblatt* thinks that the treaty, from which Roumania is to reap most benefit, "is

KLEPTOROUMANIA; OR, THE PINCH OF CHIVALRY.

ROUMANIA—"Sirs, I will not stand idly by and see this helpless gentleman extinguished."

—*Punch* (London).

not valid without the assent of the Great Powers, and no Power that withholds its assent is bound by it."

The rôle of Roumania is thus outlined by the *Fremden-Blatt:*

"In the short space of eight days, a vast work has been accomplished under the direction of Roumania. After arranging her own disputes with Bulgaria, this nation has carried out the views of Europe in dealing with the belligerents, in order to reconcile them one with another. Convinced that to secure a favorable atmosphere for a peace conference an armistice was necessary, she secured an armistice. Now she is aiming at a general demobilization, in this way carrying out the exprest views of the Powers."

The *Reichspost* (Vienna) is of opinion that the treaty should be so revised as to give Kavala and a part of central Macedonia to Bulgaria, and this in "the name of justice and in the interest of a durable peace." The Russian Government, according to the *Temps'* correspondent at St. Petersburg, is strongly in favor of a revision of the treaty, and especially such a revision as would concede Kavala to Bulgaria.

Germany is averse to any such revision. The *Lokal Anzeiger* (Berlin) declares that this would necessitate the meeting of all the European Powers. Roumania is warmly felicitated by the *Kreuzzeitung* (Berlin) on her triumph, and this organ declares "the revision of the treaty is not by any means advisable."

Of Roumania's success and preponderance among the Balkan rulers and the dangers that result from this, the widely circulated *Daily News* (London) observes:

"Roumania will be the greatest of the States, which is what she desired; and the other States, having made the sacrifices from which she profits, will be sufficiently near equality to hold out a prospect of permanent rivalry and unrest, which is what Russia and Austria want. Speculation is venturesome, but it can hardly exclude as the outcome of such an arrangement an ultimate division of the Balkan Peninsula between Austria and Russia."

Finally, the influential *Irish Times* (Dublin), which has a keen interest in the political fate of the under-dog, sums up the situation in the following pungent sentences:

"King Charles has acted in this matter with the worldly wisdom which has marked his policy throughout the last year. He saved his strength until the last moment, when all the combatants were weakened by the long wars. Then he stept in, quite unscrupulously and without any particular justification, to demand a share in the general spoil. The strength of his Army allowed him to do so with the certainty of success, so long as his claims were moderate. It is to his credit that he did not ask for more than Bulgaria could give."

TURKISH OPTIMISM OVER ADRIANOPLE

THE TURKISH PRESS speak cheerfully of the prospects of Turkey in her hold on Adrianople. The veiled threat of the British Prime Minister, in which we see an intimation that the Powers are ready with the Big Stick; the charges made by Sir Edward Grey, and echoed in the European press, against Turkey's recalcitrancy and dishonesty in openly repudiating her pledges in the London Treaty, fall upon deaf ears in Constantinople; and Turkey, which has been driven out inch by inch till she is reduced to a frontier stretching between Media and Enos, calmly comes back again, seizes Bulgaria's captured city, the second city in the Turkish Empire, and says loftily in the words of the *Ikdam* (Constantinople), "Our retaining it (Adrianople) will contribute to the Balkan balance of powers!" According to this paper, no Government in particular wants Adrianople or wants any other Government to get it. Thus we read:

"Neither Greece nor Bulgaria will sacrifice one soldier to enable the other to recover it, and Servia will not again lend her aid to Bulgaria for the capture of Adrianople. She has already gained what she fought for. Why should she suffer more for an ungrateful ally? That she will not do so has been made clear by a recent utterance of her Prime Minister, Mr. Pachitch, 'If Bulgaria should propose that all the Christian

THE WOLVES.

FIRST WOLF—"Our poor brother has got badly wounded killing our turkey. What can we do for him?"

ALL THREE—"Eat him, of course."

—*Westminster Gazette* (London).

Powers, by armed force, compel the retirement of the Turks from Adrianople, the proposition would be considered, but the idea of such action is still vague.'"

The idea of Roumania's interfering with the Turkish occupation of Adrianople is dismissed in the following terms:

THE BALKAN DELEGATES AT BUCHAREST.

From the reader's right to left the first four are Mr. Pachitch of Servia, Mr. Venizelos of Greece, Mr. Majorescu of Roumania, and Mr. Toutchef of Bulgaria. Summoned by the King of Roumania, they framed the treaty defining the boundaries of the Balkan provinces.

"That Roumania should lend her aid to Bulgaria, under existing conditions, in an attempt to take Adrianople out of the hands of her old friends the Ottomans is to us unthinkable."

The *Tanine* (Constantinople) strangely interprets the warnings of English statesmen as referring to Russian interference, but quietly maintains its position that Adrianople is a Moslem city with whose possession Russia has nothing whatever to do. To quote the words of this paper:

"Both in London and at Bucharest it is regarded as essential that we observe the requirement to make the Enos-Media line our boundary on the west. Mr. Asquith and Lord Morley warn us of the danger we incur if we do not retire within that line. Their fear is for us, for some unmentioned calamity that is to overtake us if we stay in Adrianople. England is not herself to interfere against us. Oh, no! What then? These English statesmen do not say our movement in occupying Adrianople is bad or unjustifiable, but is dangerous. Why? Because there is a Power ready to make the possible peril actual, to take advantage of the opportunity—Russia! On what ground; not because of some alleged infringement of the London argument, but because by our occupation, as Mussulmans, we have no quarrel or questions impossible of solution with her. Adrianople is a Moslem city. We are not trying to wrest a Slavic possession from her owners. We claim the right of holding what is our own."

Turkish editors, evidently writing to please and flatter their own party, seem too frequently to miss or misunderstand the point which lies in the dark sayings of European statesmen as representing the attitude of the Christian Powers. Thus, *The Sabah* (Constantinople), sweeping aside all Ottoman pledges and treaty promises, thus reasons calmly on the general advantages of Turkey's remaining in the territory from which she has been turned out at the expense of so much blood and treasure:

"To compel the abandonment of Adrianople by us will make present confusion in the Balkans worse confounded, will open the door for intrigue, and offer pretenses for changes and readjustments without end.

"We can not believe the European Cabinets will invite occasions for further strife or willingly subject the Ottomans to yet greater calamities and internal divisions or hedge up our path in honest pursuit of our common aim for the progress of all our peoples in whatever contributes to the physical, mental, and moral elevation of a nation."—*Translations made for* THE LITERARY DIGEST.

ORIENTAL MENACE TO INTEGRITY OF THE BRITISH EMPIRE

THE QUESTION of the yellow races in the United States is of trifling import compared with the peril to which England's imperial dependencies, and indeed the whole Empire, are exposed from the restless aggressions of the Oriental races, including Japanese, Chinese, and East Indians. This is the opinion of Mr. Archibald Hurd, who is editorial writer on the London *Daily Telegraph* and an expert on the naval question of the world. He has published volumes and contributed to both English and American reviews, and deals in a broad way with the question as to what part fleets are to play in keeping together the eastern, southeastern, and western sections of the British Empire. Writing in *The Fortnightly Review* (London), he quotes from the speech of "a public-spirited resident of British Columbia" to the effect that "the problem of the new era is the problem of the New Pacific and New Asia, and the problem of the New Pacific and New Asia is that of the struggle of the white and yellow peoples for world supremacy; the vital issue of to-day is the Japanese struggle for world supremacy." English statesmen seem blind to this truth, he continues, and confine their attention to "study of the chart of the North Sea and the map of the Balkans." There are more important subjects of inquiry for England than "the fortunes of Montenegro or the sickness of Turkey." Then follow these words of warning:

"If we do not determine to see the Empire whole and keep the fears, aspirations, and needs of its every section within view, we may lose some of it. The writing is on the wall.

"While Europe is preoccupied with the struggle of Slav against Teuton, and British politicians are watching the changing scenes on the European continent as tho no other continent existed, incidents are occurring on the other side of the world which show unmistakably that the rivalry between the white and yellow peoples is assuming dangerous proportions. While the Imperial Government is bound to Japan by a defensive alliance, the British peoples whose shores are washed by the Pacific Ocean are becoming increasingly dominated by the fear of the 'yellow man' as well as of their fellow subjects of India. This fear, and not the growth of German naval armaments or

uncertainty as to the future of the little Balkan States, is definitely and rapidly molding the destinies of these Dominions on the other side of the world. As a straw indicates the direction of the wind, so numerous events of recent occurrence suggest that this anti-Asiatic movement will in a short time become the determinative factor in Imperial policy, and may eventually prove a root of action surpassing in strength the sentiment of kinship which has hitherto sufficed as an effective bond between the various sections of the Empire."

"A state of racial war already exists in the Pacific—the new world of politics and commerce." Mr. Hurd thinks that this war "may split the British Empire in two." The alarm felt on this point by the British inhabitants of Australasia and Western Canada is acute, remarks this writer, and why?

"They have seen Japanese emigrants settle in Queen Charlotte Islands, off Vancouver, and rapidly take possession not only of those islands, but of the fisheries on the coast of British Columbia; they have witnessed the settlement of 40,000 Japanese, and nearly as many Chinese, in California, where whole districts have become Orientalized; they have heard of the rapid increase of the Japanese population in the Island of Hawaii; they know that the Japanese are swarming over the Loyalty Islands under the eyes of the Commonwealth, and they believe that they covet the vast unoccupied territories under the British flag in Australia. Wherever the Japanese emigrant settles he underbids the white man in the labor market, his family follows him to his new place of settlement, his customs and habits become predominant, and, with persistent pressure, he and his kin enlarge their boundaries, driving the white man before them.

"We who live far removed from this racial problem can not afford to ignore it, unless we are content to witness the growth of a movement which may dismember the Empire. The people in other parts of the King's dominions can hardly realize the intensity of the anti-Japanese feeling which dominates all the peoples of the white race who live on the slopes of the Pacific Ocean."

According to the views of Mr. F. B. Vrooman, of British Columbia, quoted in the article we cite, the Japanese have placed in their political program "the occupation of British Columbia," where they have "settled down in solid phalanxes of 10,000 or more at a time and place, and become undigested and indigestible lumps in the political ventricle." To quote further:

"Our Province is becoming Orientalized, and one of our important questions is whether it is to remain a British province or become an Oriental colony—for we have three races demanding seats in our drawing-room, as well as places at our board—the Japanese, Chinese, and East Indian.

"According to a report of the Assessment Commissioner several years ago (I have no later figures), nearly an eighth of the population of Vancouver was Oriental, with that of the New Westminster district larger. But the Orientals are practically all male adults. If they had their families with them their numbers would have been about five times as great, and this would represent permanent population; and this would have given over half the population of Vancouver as Oriental, while giving one Oriental male adult to every three-and-a-half whites of the male adult population of the Province."

Mr. Vrooman, in the speech from which our writer quotes, states clearly the basis on which the anti-Japanese feeling in the Dominion rests, and informs us that:

"Japan will not allow a foreigner to own or even work a mine in Japan, but she unreasonably demands for the Japanese the right to work in the mines and to own and exploit the mines of Canada and the United States—one small syndicate of coolies having now possession of a copper-mine in British Columbia worth nearly a million pounds. She allows no foreigner to engage in fisheries in Japanese waters, but she demands the right of the Japanese to fish American and Canadian waters; and, as a consequence, all the fisheries of British Columbia, which are 30 per cent. of the fisheries of Canada, which are the largest and most profitable in the world, are now wholly in Japanese hands, yielding 10,500 Japanese laborers from £100 to £600 a year apiece, the most of which is sent in cash to Japan, and alienated from the British Empire forever. It is a well-known fact that Japan will not tolerate our workmen on her soil, except those skilled laborers we have been simple enough to send over to teach the Japanese how to make goods cheaper than we can make them.

"Japan is gradually taxing, or legislating, or expropriating every Western interest out of Japan, Korea, and Manchuria, and as far as possible out of China, but she demands equal rights and opportunities for the Japanese workman, merchant, financier, farmer, in the business opportunities and potential wealth of the New World, and more—those safeguards and protections which the Japanese themselves can not grant to their own people on their own soil—equal rights in the privileges of an Anglo-Saxon democracy.

"If Japan wants something on the American Continent, Canada and the United States must give it. If Canada and the United States want something in Japan, Korea, or Manchuria, it is inimical to the interests of Japan, and they can not have it. Whatever is prejudicial to the interests or the pride of Japan must be yielded by Canadians and Americans. Whatever is prejudicial to the interests of Americans and Canadians must be accepted because of the imperious demands of Japanese pride and national interest, and the power of the Japanese war-ships."

An imperial world fleet, enforcing strict immigration laws, must be organized for British protection as a barrier against the rising flood of Orientalism. The danger to British interests at present is that the British in the Pacific Territories may be forced, by the neglect of Imperial Government, to turn for help to the United States. As this writer says:

"It must be evident to all who study the course of Dominion policy that matters have reached a critical condition. In some minds in the Dominions there is already developing the idea, still it may be dim and shadowy, that the road to safety lies rather in close cooperation with the United States than in reliance upon the vague and undefined, if benevolent, intentions of the Imperial Government, worried by many little things—not forgetting the suffragettes. While these white peoples are facing the problem which they regard vital as to their future, the Imperial Government appears to them to be absorbed in a hundred and one more or less trifling problems appertaining to the affairs of the British Isles and in the clash of policies in Europe, to the exclusion of all thought upon the major problems of the Empire which to the Dominions are very near and very real."

THE ORIGINATOR OF THE BALKAN WAR—The statesman who originated the war that ended by crippling Turkey in Europe, and was principal agent in revivifying Greece and giving her back some of her early prestige, was the present Prime Minister, Eleutherios Venizelos, says W. Pember Reeves in the London *Daily Chronicle*. In 1910 he said to King George, "Let me have five years of office and I will give you a new Greece!" Mr. Reeves gives a clear account of the way in which the Prime Minister baffled the bellicose Young Turk Party by forming a Balkan Confederacy. Of his pledge to the King we read:

"He has gone far to redeem his promise of national regeneration in less than three years. He came into office anxious for peace abroad in order to have time for reorganization at home. To face the aggressive policy of the Young Turks, he had the hardihood in the spring of 1911 to make his famous secret approach to Bulgaria in quest of a defensive alliance. The Bulgarians kept him waiting twelve months for their decision. They only gave him their assent after concluding a secret alliance with Servia, of which they did not apprize him. They closed with his offer finally in May, 1912, chiefly because they discovered about that time that the Greek Army was being licked into something like shape by French military trainers and a better administration. Moreover, Italy's attack on Turkey had wakened all the Balkanic Governments. Venizelos found no difficulty about coming to an understanding with Servia and Montenegro; but when the massacres at Kochana and Berane made it inevitable that the Slav kingdoms would go to war, he was still uncertain of Bulgaria's attitude. At the last moment the Bulgarian Government informed him that they were about to mobilize, and invited Greece to cooperate. Venizelos had just four days in which to make up his mind. He found the time sufficient, and the rest is a matter of history."

SOME MEDICAL FADS

MEDICAL FADS have occasionally been commented on by the laity and ridiculed by the comic papers, but when an eminent medical professor dissects and condemns them in a leading article in *The Journal of the American Medical Association* (Chicago, August 9), it is possibly time for some of the rest of us to take notice. When the funny paragrapher suggests that there are too many operations for appendicitis, or that the injection of serums is being run into the ground, we may laugh and pass it by. We may even pay little attention when the same thing is said by an unorthodox or semiorthodox medical writer; but a pronouncement on the first page of such an ultraconservative as *The Journal* can not be overlooked. The writer is Dr. Joseph Zeisler, professor of dermatology in Northwestern University Medical School. Dr. Zeisler believes that Americans in general are faddists, and that American medical men simply swim with the current. Our fads, he says, "show a very short life and a continuous change," and we are "strongly inclined to cultivate certain fads just about when they begin to be discarded by Europeans." He goes on to say:

DR. JOSEPH ZEISLER,

Who says that Americans in general are faddists, and that even our doctors do not entirely escape this characterization.

"There was a time when ovaries were sacrificed to an extent amounting to a fad. The same criticism might perhaps without much injustice be made to-day as to appendectomy. A few in this audience may perhaps recollect that short-lived fad of nerve-stretching in cases of tabes, or may still have in mind the time when galvano-cautery of the turbinated bodies in the nose was practised for the relief of hay-fever, chronic rhinitis, and almost any pathologic state in the nostrils, with a great deal of vigor and very little rationality. The injections of paraffin for the relief of cosmetic defects may also be classed among the short-lived fads. The irreparable harm which this practise has often done has led to its utter abandonment except in rare instances. I may not be competent to speak about matters outside of our own special domain, but my impression is that the extent to which Freud's psychanalysis has been exploited in neurologic literature of late borders on faddism.

"Coming to matters of more personal interest to us, I might remind you of the almost unprecedented enthusiasm with which Roentgen rays were used and abused soon after their therapeutic value was first brought to our notice, twelve or thirteen years ago. It was a veritable fad to employ them in all kinds of conditions, often without even a correct diagnosis being made. It took a great many and costly lessons to narrow down the field of their usefulness and to modify the technic of their application to a plane of safety. No one can appreciate the remarkable therapeutic efficiency of Roentgen-ray treatment in many dermal conditions more than I do, but my brief criticism in this connection is directed against its misuse in inexperienced and untrustworthy hands. . . . . .

"In former times I could make the almost daily observation that physicians in general and even specialists were very slow in adopting any form of treatment which required the regular use of a hypodermic syringe. That applied, of course, particularly to the treatment of syphilis. All this has changed wonderfully of late when almost anything is being treated by the injection of all sorts of serums and the so-called vaccines or bacterins. I feel perfectly incompetent to discuss that subject in general from its many points of view. I realize its great possibilities and its scientific fundaments, but when we see that vaccines are recommended and used for the treatment of vertigo, hay-fever, rheumatism, and sciatica, of appendicitis and gall-stones, we are forced to regard such practises as fads. . . . . .

"Of most interest to dermatologists is without any doubt the use of vaccines in the treatment of acne, on account of the frequency of this disease in our practise. . . . Leaving entirely out of the discussion the question whether or not the acne bacillus is really the cause, or at least the chief cause, of acne, a matter which is by no means universally acknowledged or proved at all, the fact remains that extensive observations will force on us the conviction that these injections have very little, or at best only temporary, effect in most cases of acne. This applies at any rate to the stock vaccines in the market. Whether or not the use of autogenous vaccines, which means dependence on a reliable bacteriologic laboratory, will ever become popular remains to be seen. . . . . .

"We are living in a period to-day when the pathologic laboratory has become indispensable to us in our daily work, but we should not use it for the pursuit of fads; we should not forget that, after all, the laboratory should be our aid, our assistant, not to say our servant, and not our master. Clinical knowledge is in danger of becoming neglected in favor of laboratory methods. The two must work together if we are to perform our work successfully."

IMPROVEMENT IN MATCHES.—The fumeless match is becoming more common than of yore, and the time may come when it will occupy the field to the exclusion of all others. Time was when to strike a match meant vitiating the air for rods around, setting every one coughing and wheezing. The following facts, from *The Lancet* (London, July 12), apply presumably to Great Britain, but they are fairly applicable to our own country also:

"A few years ago something like eighteen million gross of boxes were consumed per annum, 63 per cent. of which were the 'strike-anywhere' match and 37 per cent. the safety-match. About twelve years ago the percentage of safety-matches consumed was only 18 per cent., the consumption of the 'strike-anywhere' match being 82 per cent. More recently the safety-match is being shown to overtake the 'strike-anywhere' match with advantages, we think, to the public. The modern match is a great advance on the match of a decade or so ago. Yellow phosphorus has been banished from its composition—a fact which has conferred benefits not only on the operatives engaged in the manufacture of matches, but on the consumer also. The combustion of phosphorus in the air, of course, adds to it an undesirable constituent. The modern 'strike-anywhere' match contains phosphorus in the form of a sesquisulphide, which does no harm to the factory-hand, but which, all the same, gives off irritating and poisonous fumes when struck—namely, the oxides of phosphorus and sulfur. The safety-match frequently gives off sulfur dioxid in irritating quantity, but no phosphorus. The phosphorus in this case is on the rubber on the box in the shape of red amorphous phosphorus, which is not poisonous, and as little of it actually burns on the friction of the match very little oxid of phosphorus is formed. Some of the matches contain the poisonous lead oxid or chromates as oxidizers, while in others potassium chlorate and manganese dioxid are employed for the same purpose. In spite of the enormous number of matches used, the fumes they give off on combustion can not be considered a serious source of mischief. But these fumes do

unquestionably pollute the air, more especially when they are used frequently, as in a railway-carriage or smoking-saloon. We may be thankful, however, that both the old yellow, or 'live,' phosphorus match and the sulfur-tipped lucifer are extinct, inasmuch as their effect in vitiating the air was appreciable."

PIPE DREAMS ON THE GULF STREAM

THE ABOVE TITLE, which introduces a review of Carroll L. Riker's book on "Power and Control of the Gulf Stream" in *Engineering News* (New York, August 14) would seem to indicate that *The News* does not take seriously Mr. Riker's plan to "control the climates, heat, and light of the world" by deflecting the Gulf Stream, building for this purpose a marine dam or jetty about 300 miles long and 300 feet high. Engineers in general appear to have considered this proposition with an interest that is somewhat academic. It will be remembered that an effort to obtain aid from Congress for the enterprise has so far been unsuccessful. Says the reviewer:

"'Man can control the climates, heat, and light of the world by protecting the warm north-flowing Gulf Stream from the onslaughts of the ice-cold south-flowing Labrador current,' according to the assertion of the author of this book. The results of the intellectual labors designed to establish this assertion the author 'most respectfully dedicates to him who holds the power to physically control the world, its climates, its heat, and its light.' The dedication is not to God Almighty, as we begin to surmise, but to 'His Royal Highness and Imperial Majesty King George V.' With this introduction we hardly need a biography or portrait of the author.

"The assumptions upon which all this fabric of pseudo-science rests are stated in the preface somewhat as follows: . . . The great warm, north-flowing Gulf Stream conveys needed heat to the northern hemisphere, but is met and robbed of it but half-way there by the cold Labrador currents; and this meeting can be avoided and consequent benefits ensue by controlling the flow of the Labrador current. . . . . .

"Mr. Riker begins his book by a general description of the Gulf Stream, with popular but not particularly impressive figures as to the amount of water it carries and the heat it contains, compared with coal, etc. He next describes the Grand Banks off the southeast coast of Newfoundland, where the ocean bottom is known to have a depth of only a few hundred feet for many miles off shore. Over this plateau flows the cold Labrador current from the north, which meets and dissipates the Gulf Stream, causing the North Atlantic fogs; and the easing up of the currents of the two streams deposits the silt carried by the Labrador current, which has thus built up the Grand Banks. A part of the Labrador current then flows down our North Atlantic coast and is, according to Mr. Riker, responsible for all manner of bad climate, coast erosion, and other dolorous results.

"We are now prepared to receive our author's grand conception for obviating all these ills. This consists in nothing more than building a jetty from the southeast point of Newfoundland easterly for 200 miles in water only about 300 feet deep. This jetty would obviously deflect the warm Gulf Stream into deep water around the end of the jetty, while the cold Labrador current, also deflected around the jetty, would immediately sink and pass under the Gulf Stream and be lost forever in the depths of the ocean; and the warm waters of the Gulf Stream would then proceed unmolested to strike terror to the ice accumulations to the very pole itself. A jetty only 30 miles long, we are assured, would modify the climate of the coast from Newfoundland to Cape Hatteras, and modify the rigors of the cold winters; late springs, coastal fogs, and the scouring counter-currents would be avoided, and open winter harbors would unquestionably be secured north to the St. Lawrence. What a 200-mile jetty would do we leave to the imagination of the reader."

The construction of such a jetty at first glance would seem an appalling undertaking, but according to the author it is easily accomplished. The essential requirement, he says, is a backbone of riprap, and the silt deposited by the current will do the rest. The time required, he states, is two years for surveys and plans, about three years to construct the plant for handling the stone, and within three seasons thereafter the jetty would be in use. The cost is roughly estimated at $190,000,000. To quote the reviewer again:

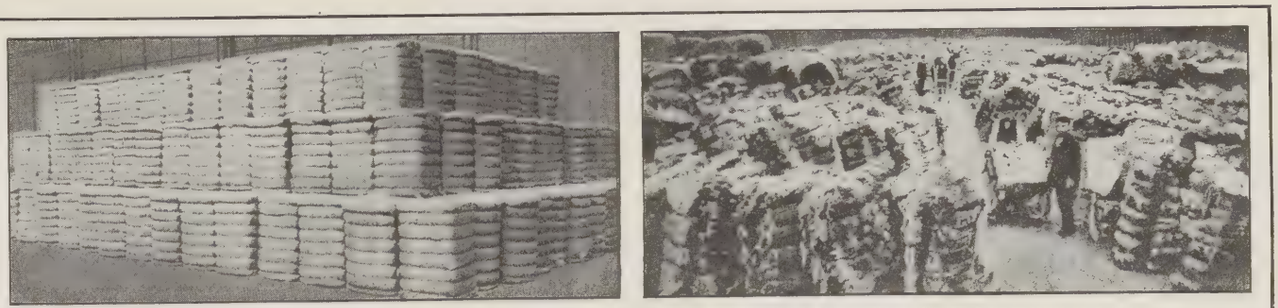
"In a footnote the author assures us that he has 'up his sleeve,' so to speak, a much simpler plan, which is under investigation. Altho not explained in this book, we will satisfy the curiosity of the reader so far as to give some of Mr. Riker's verbal explanations of this scheme, which is to anchor a huge cable or rope, of about the same specific gravity as sea-water, along the line of the proposed jetty to retard the bottom current and build up a silt jetty entirely without a riprap backbone. The cable would lie along the bottom and be kept in position by kedge anchors, which would allow it to rise from time to time as the silt bank was built up under it. This, the author says, would reduce the cost two-thirds or possibly five-sixths, or make the matter of cost a mere bagatelle of $40,000,000. . . . . .

"The subject as a whole certainly has interesting features, and as there are many engineers who as practical scientists like to discuss both terrestrial and celestial engineering problems for mental exercise and amusement, we cordially recommend to them a perusal of this little book. It will furnish the theme for many an animated argument in the off hours in camp and office—and be about as profitable as those arguments we are told the philosophers of the dark ages had as to the number of angels who could rest comfortably on the point of a needle."

THE FALLACIOUS MUSHROOM

UNDER THE HEAD of "Mushroom Fallacies" it is asserted editorially in *The Journal of the American Medical Association* (Chicago, August 9) that the traditional test of the comic paragrapher is really the only way to tell a mushroom from a toadstool. This test, it may be remembered, is simply to eat the object. "If it kills you, it's a toadstool; if it doesn't, it's a mushroom." Furthermore, even the most nutritious mushrooms have little nutritive value. Their chief use, the writer thinks, is as condiments; and as a condiment that may poison the eater is an undesirable one, the conclusion is obvious. Doubtless this writer's advice will not appeal to those who regard the unculled mushroom crop as a vast neglected source of food supply for the million; but it is an undisputed fact that he who never eats a mushroom will never suffer from mushroom-poisoning. To quote from the editorial:

"Many reputed tests to distinguish the innocent from the harmful toadstool are current and are implicitly believed in by some. It can not be too emphatically stated, therefore, that so far as is known there is no single guide, with the possible exception of a chemical analysis, which will give results of any value whatever. Every scheme for distinguishing edibility in these fungi should be decisive and give uniform results. Some of the alleged tests deserve mention in order to point out their unreliability and their danger. Among them the so-called 'silver test' is most prevalent. It is believed that a silver spoon or coin placed with toadstools while cooking will demonstrate by blackening or failure to blacken whether or not the fungi are safe to eat. It need only be said in criticism that there are both poisonous and non-toxic species which act alike on silver. Again, no reliance is to be placed on the contention that if the outer (upper) skin of the top of the toadstool peels off readily, such a species is edible. Some poisonous species also will 'peel.' Flavor has often been alleged to serve as a reliable guide to edibility, the bitter or peppery species being charged with detrimental attributes. Experience shows, however, that the most poisonous toadstools are not at all disagreeable in respect to the flavor of the raw tissues. And so we might mention further the alleged telltale color changes that are supposed to appear when toxic mushrooms are bruised or broken; or the existence of a milky juice, or the susceptibility of the fungi to the invasion of insects, which are believed to avoid the pernicious varieties. None of these 'tests' can be applied with any certainty. As the 'proof of the pudding is in the eating thereof,' so the surest way of learning to distinguish the poisonous from the innocuous mushrooms is by eating them—a heroic



FOREIGN AND AMERICAN STYLES IN COTTON-BALES.

The first picture shows the sound condition in which seven hundred bales of West African cotton, shipped by the British Cotton-Growing Association, reached Liverpool. The second picture shows the slovenly state in which a shipment of American cotton reached the same port.

procedure—or by learning the experience of others. There is no royal road to mushroom knowledge, but one must learn to know the various species as one learns to recognize the familiar plants of the forest, the field, and the garden.

"To those who cherish the hope that the mushroom, often proclaimed as the vegetable beefsteak which Nature lavishly offers at every hand, may solve some of the problems of economy in nutrition, we can give little comfort; for as has been pointed out before, even the most nutritious mushrooms are of little real nutritive value. Their chief claim to dietetic recognition lies in their use as food accessories and dietary condiments. In no wise can they be regarded as a substitute for the substantial meats or the familiar vegetable products ordinarily consumed by man."

BACK-NUMBER COTTON-BALES

THAT OTHER NATIONS have improved on the methods of baling cotton, while we have been standing still, is asserted by *Cotton* (Atlanta, Ga.). Many American spinners, it is said, have exprest their willingness to pay a premium on gin-comprest bales, which are particularly neat; yet the American bale continues, to quote the words of an American critic, "a dirty, damaged, disreputable, water-soaked, wasteful, slovenly, clumsy, highly inflammable, turtle-backed package." The pictures given herewith were taken six years ago, and conditions are practically the same to-day. Says *American Industries* (New York, August):

"Six years of hearty accordance with this anathematization leave the bale unaffected. The reasons for its lamentable condition are better understood, and the tentative recommendations for its improvement have recently been made by a Washington official. The raw cotton is sent from the farm to the ginnery to be stript from the seed and be packed in ginners' bales of a superfluously heavy and wretchedly inferior canvas. The bale weighs roughly 500 pounds, and conveys nineteen to twenty-four pounds of bagging and hoops.

"The majority of gin-presses in America are inefficient, and before export the bale has to be reduced in size to economize freight. For this purpose, it is sent to a compress, owned, like the bagging-factories, by a trust. Export cotton is sold on a contract known as the 'c. i. f. and six,' descending from the days of lighter cotton-bales, and sanctioning a tare of six per cent. (thirty pounds). The ginnery tare of an average twenty-two pounds is excessively heavy to begin with, but in order that the shipper shall not lose any weight, the weight of packing is bloated to the full thirty pounds or beyond at the compress to the shippers' orders. The rules do not admit of the adding of more than a specified number of hoops, or the difference might be made up in steel. Accordingly there are sewn to the bale a number of patches of second-hand bagging proportionate to the circumstances, and cotton-shippers take frankly into calculation their profit on patching. The Egyptian bale, weighing 720 pounds net, arrives in immeasurably better condition than the American, with a three-per-cent. tare, and the Indian bale is efficiently protected by a two-per-cent. tare. No similarly valuable produce is so scandalously mishandled, yet nothing more tangible than a suggestion to change the export contract is forthcoming officially from America."

CLIMATE AND EMIGRATION

THAT RACIAL MIGRATIONS have been affected by weather changes much more than has hitherto been suspected is asserted by an Austrian scientist, Edward Brückner, who adduces some interesting statistics to prove his case. His book, published in Vienna last year, has just been exhaustively analyzed by *La Géographie* (Paris). Our translations below are from a review in *Cosmos* (Paris, July 24). Brückner's theory of a 35-year cycle in meteorological phenomena has been known for some time to scientific men. According to his calculations, dry and wet years are grouped in nearly constant periods. For the nineteenth century he distinguishes five clearly marked periods:

1806–1820	Cold.
1821–1835	Heat.
1836–1850	Cold.
1851–1875	Heat.
1876–1890	Cold.

During the two last centuries, the years representing the centers of periods of cold and wet have been:

1705	1740	1775	1815	1850

And for the periods of heat and drought:

1720	1760	1790	1830	1860

This gives 35 years for the average of the oscillation. The central year of the last warm, dry period, he thinks, was 1900. To quote *Cosmos*:

"In a recent lecture, Mr. Brückner has studied the relations of these variations with the movement of emigrants. From 1805 to 1911, twenty-eight and one-half millions of persons left Europe for North America. This flood did not flow regularly, constantly, or progressively, but underwent fluctuations that Mr. Brückner compares very ingeniously with the periods indicated above.

"If we set aside the primary cause of the emigration—overpopulation in Europe, small population and high wages in the United States, we find that other causes have acted, among them the state of the crops. A period of moist years causes a series of mediocre crops in western and central Europe. In the same period of time, on the contrary, the United States, which does not bear drought well, will have excellent ones. Logically, agricultural populations, attracted by abundance and repelled by sterility, should emigrate in larger masses during rainy than during dry periods. This is Brückner's theory. The curves that illustrate his study are very suggestive. There is undeniable concordance, for example, between the curve of the price of wheat and that of rainfall in south Germany and Switzerland (1758–1848), in England (1703–1783); and—what is more conclusive—between the curve of German emigration and that of rainfall. For immigration into the United States, the question demands closer examination. The curves of rainfall in western Europe and the United States indicate two maxima, about 1850 and 1880. To these dates correspond fairly well two perfectly characterized waves of immigration, but it would be quite proper to inquire whether there is really a relation of cause and effect and not simply a coincidence. We must not lose sight of

the fact that at the end of the year 1848 the news of the gold-discovery in California reached Europe. In May, 1849, there were, in Paris alone, no fewer than 15 emigration societies specially organized on this account. Newspapers were established such as *Californie*, *L'Aurifère*, and *L'Echo du Sacramento*, which indicates the importance of the movement. Later intervened, in an exactly opposite direction, another factor which Mr. Brückner himself notes in passing—the War of Secession. Others of less importance might also be cited.

"It is none the less true that Mr. Brückner, by comparing unconnected statistical and meteorological data, has established a new theory which can not fail to interest historians as well as geographers. If his views explain the migrations from Europe to America in the nineteenth century, they are no less plausible for the barbaric invasions of the third. The waves of migration which, starting at various epochs from the depths of central Asia, rolled into Europe, India, or China, were perhaps determined by climatic variations. It is incontestable, in any case, that these last, as Mr. Brückner ends by proving, have much more effect on populations of inferior civilization than on peoples of advanced culture."—*Translation made for* THE LITERARY DIGEST.

TWO KINDS OF STARVING

STARVING MAY EITHER kill or cure. There is a good kind and a bad kind—a method of withholding food that rests and relieves the organism, and one that exhausts it and retards its development. Curiously enough, the good kind of starvation would appear to be the acute kind. The bad kind is the intermittent variety, in which short periods of underfeeding alternate with normal supplies of food. This has been demonstrated by experiments on salamanders carried out by Dr. Sergius Morgulis and described by him in the pages of *The American Naturalist* (New York, August). Dr. Morgulis showed some years ago that prolonged starvation, notwithstanding the exhaustion which it produces, seems to exercise a rejuvenating effect on the organism, which builds itself up with surprizing speed as soon as feeding begins again. The effect of periodical underfeeding, which is quite the opposite, appears to depend in some way on the accumulation of water in the tissues. Says Dr. Morgulis:

"Why does the intermittent feeding produce such an inhibiting effect upon the growth of the body in weight? Before attempting to answer this question it should be recalled that these animals utilize a larger portion of their food in building up their tissues than normally fed salamanders do, the rate of their growth being likewise about one-fifth greater. We also pointed out that the animals remained smaller in size and lighter in weight than the controls. We meet, thus, in the case of the periodically starved salamanders two contrary phenomena: on the one hand, we observed and directly measured on a number of individuals their deficient growth; on the other hand, we found that the growth activity has not been impaired. . . . If we recall that the per cent. of water in the organism of starved individuals is also somewhat higher than the usual (by 1.5 per cent.) it becomes quite probable that water may be accumulating in the tissues of intermittently starved specimens to the extent of being a hindrance to their growth.

"Acute hunger has an entirely different effect. It may even exhaust the organism for a time, but so long as degeneration has not set in—degenerative changes appear generally in the advanced stages of starvation—inanition may produce an invigorating influence upon the organism, which has its parallel in the embryonic growth only. The temporary relief which the organs of digestion get may contribute much toward improving their capacity, but the resulting rejuvenation of the organism is a composite effect of the activity of all its cells. The chief reason for the revitalization of the organism is in the enhanced need of the cells for nourishment. The cells become 'avaricious,' if we may say so, and the increased proportion of the nucleus in the cell organization may perhaps in a measure be responsible for that.

"From all that has preceded the conclusion can be drawn that periodic starvation is more detrimental to the organism than acute starvation followed by a liberal supply of food. In the former case the individual remains below the level of the normally fed animals; in the latter case, on the contrary, provided the inanition has not been carried too far, the restorative process may go even beyond the limit attainable under normal conditions. From the viewpoint of practical application this conclusion is evidently of importance, suggesting to those who have made the problem of social welfare their own the dangers to the health and vigor of mankind which lurk in the more commonly occurring underfeeding and chronic starvation, especially of the young and growing generation."

GRAVITATION AND THE FOURTH DIMENSION

A THEORY of gravitation that depends on our acceptance of the existence of a fourth dimension of space is propounded by A. G. Blake, a Fellow of the Royal Astronomical Society, in *Knowledge* (London, July). Dr. Blake's explanation depends on the fact that the density of a body may be regarded as our perception of its thickness in a fourth dimension. If all bodies were equally dense, their weight would depend only on their volume. If density is thickness in a fourth dimension, weight is proportional to four-dimensional volume. The type of theory that explains gravitation as due to impact of systems of waves or moving particles has always met with a stumbling-block in the fact that weight is proportional to density as well as to volume. If density is simply another dimension, then this trouble is avoided. Writes Mr. Blake:

"Our ideas of the dimensions of a body are very largely derived from the circumstances in which these dimensions may undergo variation. Thus we speak of a piece of paper as being of two dimensions because of the great difficulty of changing its thickness compared with the difficulty of changing its length or breadth.

"In 'flatland'—a hypothetical region where motion confined to two dimensions only is possible—it is quite conceivable—nay, it is a necessary assumption if we are to allow the possibility of concrete bodies in it—that bodies should have a certain thickness in a third dimension which would be invariable in individual bodies, but not necessarily uniform among different bodies. Thus the sum total thickness of bodies in 'flatland' would be fixt and invariable. To the inhabitants, who would be incapable of realizing thickness, this would result in the conservation of some physical attribute peculiar to bodies of two-dimensional space.

"In seeking evidence of a fourth dimension, then, we must draw our inferences from the conservation of some physical attribute peculiar to three-dimensional space. The most obvious—indeed, the only one—is the conservation of mass. We can not, however, infer that mass is the three-dimensional perception of a four-dimensional thickness; for the mass of a body is directly alterable by changing its three known dimensions by simply cutting or breaking the body. If we change only three dimensions of a four-dimensional body the fourth must remain unchanged. . . . . .

"In our three-dimensional universe every body has a thickness in a fourth dimension, which is variable in different bodies, but invariable in the same body, and that fourth-dimensional thickness is the body's density.

"That this fits in perfectly with analogies drawn from two-space is easily shown. Thus in 'flatland' we may consider a two-dimensional body with a small thickness in the third dimension. A 'flatlander' would cut down its length and its breadth, but would be powerless to alter its thickness, so that its volume would vary as its area. Extending this to three-dimensional space, we may cut down a body in three dimensions—length, breadth, and thickness—but we can not alter what we may call its fourth or extent in a fourth dimension, so that its mass varies as its volume. In fact, mass in four-space corresponds to volume in three-space and area in two-space. The volume of a three-dimensional body is infinity times as great as the volume of a two-dimensional body. The mass of a four-dimensional body is infinity times as great as the mass of a three-dimensional body (*i.e.*, one whose density is nil).

"Tho we can not directly change the extent of a body in its fourth dimension we can do so indirectly by taking advantage of the principle of the conservation of mass and compressing the body in three dimensions. The two-dimensional equivalent

to this is that in two-space, tho it is impossible directly to alter the third dimension, yet by compressing it in two dimensions the third will be increased, while the volume will remain constant. For in two-space the chief physical principle would be the conservation of volume, tho under what aspect volume would present itself to 'flatlanders' we can never tell."

Having shown how a body's density may be our perception of its thickness in a fourth dimension, the author now attempts to explain the cause of universal gravitation in the manner outlined above, supposing ether waves to impinge on two neighboring bodies from all directions, including that of the fourth dimension. The bodies are prest together with a force varying inversely as the square of their distance and as their four-dimensional volume, which is their ordinary three-dimensional volume multiplied by the density. He concludes:

"It is perfectly plain from the foregoing that the ether might be possest of great density, since it bears the waves which cause gravitation itself, and therefore obviously can not gravitate.

"This theory also accounts for the instantaneity of gravitation. The most refined observations have failed to disclose any lapse of time between cause and effect where gravitation is concerned, and this would be wholly inconceivable were gravitation an inherent property of matter."

A NEW DEFINITION OF LIFE

THE EXPERIMENTS of Carrel and others in keeping alive organs or tissues separately have suggested to Dr. R. Legendre a new definition of life. Since an animal may be dead, while each and every one of the parts that composed its organism survives separately, life, in the form in which such an organism possesses it, must be "something that co-ordinates activities that may proceed after it has vanished." The clock may no longer exist, but its wheels, escapement, and pendulum move on. These reflections occur at the close of a lecture on "The Survival of Cells and Organs," delivered by Dr. Legendre at the Paris Museum of Natural History. Dr. Legendre is Preparator in general physiology at the Museum. We read:

"It may be asked what is the nature of this survival, and whether it is comparable to life in the organism. It is difficult to answer, and before doing so we must make a distinction. As Claude Bernard has already remarked, 'it is a characteristic of vital phenomena that they are able to reappear by an elevation of temperature after they have been arrested by cold.' The experiments cited above have really been of two kinds: In one we preserve by means of cold, and during this sort of latent life it would seem that life is simply slowed up or stopt without transformations, since grafting may afterward be performed with success. In the others, life is maintained at bodily temperature, and then the tissue or the isolated organ continues to live, but in an independent, peculiar way that permits of no grafting.

"The experiments in preservation have great practical interest. There is no doubt, in fact, that they will one day make it possible for surgeons to keep in reserve 'exchange pieces' to be used when occasion demands.

"Experiments in survival, altho less immediately utilizable, will nevertheless teach us much, I believe, about the conditions of life, and will enable us to know our own organism by a new light, and with singular precision.

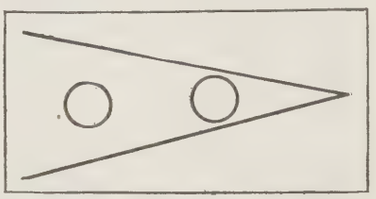
"From a more general point of view, all the experiments in survival, like those in preservation, will raise anew the old question of life and death. How, it will be asked, can all the parts survive when the whole individual is dead? I know very well that for a long time we have distinguished the general death of the organism from the elementary death of the cells; but what is this general death? What is this mysterious bond that coordinates all activities and that may disappear without their cessation? The simplest thing is to answer sagely with Confucius, 'When we are so ignorant of life, can we know death?'

"Happily, in practise, all this is of no importance, as birth and death are recognizable with equal ease."—*Translation made for* THE LITERARY DIGEST.

THE MOON AT THE HORIZON

ANOTHER EXPLANATION of the fact that the moon appears larger at the horizon than in the zenith is advanced by Dr. Ponzo, an Italian psychologist. That this apparent enlargement is an optical illusion is easily demonstrated. Measurement with accurate instruments shows that instead of having greater angular dimensions at the horizon, the moon really appears smaller there, owing to the fact that it is somewhat farther from the observer. Why, then, should we be willing to swear that it looks larger? This last of several scores of explanations runs as follows. We translate from *La Nature* (Paris):

"The psychologist E. T. Sanford has already noted a curious optical illusion, which we reproduce herewith: if in the interior of an angle two equal circles be drawn, the one nearest the apex will always appear the larger because of the proximity of the sides of the angle. The illusion is the same if we modify the experiment by drawing the circle furthest from the apex on a separate sheet of paper. The illusion diminishes as the angle becomes less acute.



WHY THE MOON LOOKS LARGER AT THE HORIZON.

"Dr. M. Ponzo thinks that this illusion explains the apparent enlargement of celestial bodies at the horizon. To speak only of the moon, whose variations of diameter are so clear, it presents itself on the horizon in the angle formed by the earth and the declining arc of the sky, while in the zenith it is free in every way. This angular contrast, together with the conditions of transparency of the atmosphere, may explain in part why, altho the conditions of perspective remain the same. . . . the apparent size of the moon is not the same every evening. The presence of clouds or vapors that diminish the angle formed by the ground and the celestial vault may be the cause of the phenomenon."—*Translation made for* THE LITERARY DIGEST.

AUTOMOBILES AS FOG-PRODUCERS

FOGGY AS LONDON TOWN is, it is in process of being made foggier still by the smoky exhausts of motor-cars. This nuisance has been pretty well suppressed in the United States, but in England little attention has been paid to it, with the result, we are told by *The Lancet* (London), that there is "increasing murkiness" in the streets. As most vehicles in the English metropolis are now motor-driven, says this paper, the nuisance is rapidly increasing and will continue to increase until the facilities for combustion in gasoline-engines are improved. Says the writer:

"In stagnant conditions of weather, as on a fine sunny day or during a windless drizzle of rain, quite a haze of petrol fumes accumulates, which is very unpleasant to the pedestrian. Such an atmosphere is, of course, inimical to healthy conditions. Unburned petrol or partially burned oil is frequently present in notable quantity, which is not favorable to healthy respiration, and a suspicion has been entertained that the presence of so much oil in the air disturbs the protective qualities of paint. Modern traffic has, in fact, introduced a totally new condition of things in regard to the state of the air in the streets, and it will not be surprizing if in the long run mischief in more than one direction comes to be traced to the acrid fumes which are accompanying the motor traffic. We anticipated some years ago that the contamination of the streets would pass from a purely physiological kind to one of a chemical nature as we discontinued horse traffic in favor of motor traffic. That has practically come to pass. . . . . Improvements have, however, been made during the past few years in the engines of the motor-car, and we may hope that soon they will be rendered practically fumeless, which will imply a more economical use of fuel in addition to the suppression of an obvious nuisance."

LETTERS AND ART

DILEMMA OF THE YOUNG SINGERS

THE ETERNAL DILEMMA of the American operatic singer is emphasized by the people who are to form the New Century Opera Company. They are largely Americans but they were found in Europe. One of their number, Miss Lois Ewell, was engaged by Mr. Aborn on his European tour of discovery. She had been there two years, for, as she declares, "I simply had to go to Europe." Two years ago I could not have got into opera in this country without having been over there." Her next declaration is even more significant: "All my real studying of singing has been done in New York. . . . Except for the foreign languages and the coaching in some rôles, I learned all I know in New York." This, says Mr. J. Van Brockhoven in *The Musical Observer* (New York), is a tribute to the "many excellent, conscientious, and capable vocal teachers in many of the larger cities—teachers who have devoted their lives to the solution of artistic singing methods." It is a tribute to a class who are not ranked among the "popular teachers." "Since they require slow and careful development and painstaking efforts on the part of their pupils, they are usually considered slow compared to those who boom a pupil by unripe public show." Their pupils go first to the concert platform or the church choir, and from this class the operatic singer is recruited. We read:

LOIS EWELL,

One of the New Century Opera Company who learned her art in America but had to go to Europe to find an American opera engagement.

"The City of New York draws the trained church singers of the whole country in its musical environment, as does the electric light the moths. This city is overfilled with good and well-trained singers. But how many of these thousands of seekers after operatic or vocal fame and success really arrive at the goal of their ambition? The opportunities are varied in the Metropolis. But, in spite of this fact, how many, or what percentage of singers fill the requirements needed for success? And, again, how many of the New York vocal teachers have the capacity to guide, train, or advise a young man or woman as to the proper course to follow? It can be stated without questioning that New York City offers to an ambitious and talented young singer every opportunity for an operatic development in its artistic environment. But success is a question of the survival of the fittest. Furthermore, it is a question of getting into the hands of the proper teacher, guide, or adviser. A judicious choice of this individual is by no means an easy task. Whose word will you take as absolutely reliable? Say you have some Metropolitan song-bird to advise you. He or she will send you to his or her friends, from whom he has, perhaps, never taken a lesson, or knows little or nothing of his practical teaching methods. Or, maybe, he gives you only vocal lessons, or coaches you in this or that part, or plays the piano-score for you and gives you a few hints. These may be all very useful instruction in special lines. But where is the teacher who has a perfect knowledge of every detail, and practical ability to guide your whole course, and who can convey to you the principles upon which your development must be based? Ah! There is the rub! Where can you find such a one? Such a one will not lead you amiss, by telling you of your great prospects when they are but mediocre. He will demonstrate and prove the nature of your capacity and possibilities.

"The capacities of the New York vocal teachers are as varied as are the students seeking their aid. You can have a choice of any nationality, of any one line of study, or even a fraction of one. You may fall into the hands of a throat specialist posing as a singing teacher; you may be recommended to Mr. So-and-So, who is a fine accompanist and a second-rate singing teacher; you may be told of Mrs. X, who has a swell lot of pupils and has much influence socially; you may be imprest by the promising advertisements of some *bel canto* method, some pure Italian method, the physiological method, etc. But, after all, how are you to find out which one to select? Who can advise you? The solution of this question depends much upon the pupil's own insight. A teacher who has acquired a reliable professional reputation must have given evidence of his ability to achieve results with his pupils, otherwise he could not have risen in the esteem of his fellow musicians. But a pupil should ask himself the question: In what particular direction does this teacher excel? Is it in tone-production, in tone-placement, in tone-volume, in ease of tone-production, in the even quality of registers, in steady tone, a good legato, a *mezza voce*, or an effective *messa di voce?* Is it in the lyric style, the dramatic style, the Italian style, the French, the German, or in a haphazard style? Is the teacher a good musician; has he sufficient general knowledge; is he broad-minded, or is he limited? Is he a practical man or a mere theorist? Does he inspire his pupils to work or does he oppress them? Does he hold out glorious impossibilities, or does he point out the difficulties? Is he interested in you and your progress, or in his egotism?"

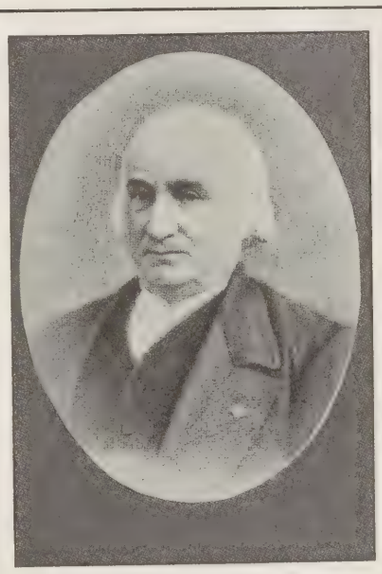
What New York seems to lack, according to Mr. Van Brockhoven, is "an institute of recognized standard," which can boast of having guided its pupils to a successful operatic career. The city is full of experimenters:

"The very fact that the musical opportunities for vocalists are so varied in the metropolis is one of the reasons why a vocal pupil rarely holds out any length of time in one direction of studies. If the students have not the necessary funds for years of study, they will drift into a church position, a concert company, a cabaret engagement, a vaudeville sketch, a comic-opera tour, or a chorus position. And then a systematic, careful development of every branch of operatic study is impossible, or is retarded until the voice is worn, the enthusiasm blunted, and the ambition cooled. This is the record of ninety-nine vocal students

out of a hundred. Their ambitions have not been realized; they are disappointed in their life's mission, and either join the large contingent of church and chorus singers, or take up the profession of teaching as a side issue. And in most cases teachers of this type are as much a disappointment as singing teachers as they were as operatic stars. For in the great majority of cases, they are not prepared for the teaching profession, which is by no means acquired by those who merely learn to sing in church or opera. The actual training of this class of vocal teachers really begins with their first pupil. And as a result of this, the pupil has to suffer, being an object of experimentation, so that by the time such a vocal subject of a teacher's experimenting lands in the studio of a reliable vocal teacher, he or she will have much to undo before reliable results can be achieved. The New York studios are filled with this class of students."

CHARLOTTE BRONTÉ'S LOVE-LETTERS

LETTERS of "infinite pathos and infinite significance," as the London *Evening News* views them, have lately come into the possession of the British Museum. They are the letters written by Charlotte Brontë to Professor Heger, of Brussels, after that fiery genius had returned to her lonely moorland home in Yorkshire from the school where she had been studying French. "They are the cry of a human spirit in mortal anguish; as a human document they are unique," continues *The Evening News*, confirming what other papers, like *The Pall Mall Gazette*, say in estimating the gift as "one of the proudest additions to the British Museum's priceless collection of manuscripts." They come as a gift from Dr. Paul Heger, of Brussels, the son of the hero of "Villette," Charlotte Brontë's novel founded on her Belgian school life. Hitherto these letters were believed by many writers on the Brontë sisters to have been lost. Their coming to light "confirms the views of those among us," says W. Robertson Nicoll in the London *Times*, "who have steadily argued that the decisive event in Miss Brontë's life was her meeting with M. Heger. No English writer," he continues, "has been base enough to suggest any scandalous interpretation of this friendship, but it has been very seriously and ably argued that Miss Brontë's regard for M. Heger was nothing more than an ordinary friendship." The reader may form his own judgment from the selections offered here. We quote from *The Daily Mail* (London) extracts from the copyrighted London *Times* versions. As *The Mail* reads them, "all the loneliness, all the disappointments, all the hopes of Charlotte Brontë are poured out to the man she loves." Thus:



PROFESSOR HEGER,

The *Paul Emanuel* of "Villette" who was the inspirer of Charlotte Brontë's youthful romance.

"Formerly I passed whole days and weeks and months in writing, not wholly without result, for Shelley [Southey? Miss Brontë was six when Shelley died] and Coleridge—two of our best authors, to whom I sent certain manuscripts—were good enough to express their approval; but now my sight is too weak to write. Were I to write much I should become blind. This weakness of sight is a terrible hindrance to me. Otherwise do you know what I should do, Monsieur?—I should write a book and I should dedicate it to my literature master—to the only master I ever had—to you, Monsieur. I have often told you in French how much I respect you—how much I am indebted to your goodness, to your advice; I should like to say it once in English. But that can not be—it is not to be thought of. The career of letters is closed to me.

"I have not begged you to write to me soon as I fear to importune you—but you are too kind to forget that I wish it all the same—yes, I wish it greatly. Enough; after all, do as you wish, Monsieur. If, then, I received a letter and if I thought that you had written it *out of pity*—I should feel deeply wounded."

CHARLOTTE BRONTÉ.

Whose lately published letters, now in the British Museum, sound "the cry of a human spirit in mortal anguish."

Professor Heger was married and a father, and appears to have written only one reply, and that not in the key of those he had been receiving. Here is in part another:

"Day and night I find neither rest nor peace. If I sleep I am disturbed by tormenting dreams in which I see you, always severe, always grave, always incensed against me.

"Forgive me then, Monsieur, if I adopt the course of writing to you again. How can I endure life if I make no effort to ease its sufferings?

"I know that you will be irritated when you read this letter. You will say once more that I am hysterical [or neurotic]—that I have black thoughts, etc. So be it, Monsieur; I do not seek to justify myself; I submit to every sort of reproach. All I know is, that I can not, that I will not, resign myself to lose wholly the friendship of my master. I would rather suffer the greatest physical pain than always have my heart lacerated by smarting regrets. If my master withdraws his friendship from me entirely I shall be altogether without hope; if he gives me a little—just a little—I shall be satisfied—happy; I shall have a reason for living on, for working.

"Monsieur, the poor have not need of much to sustain them—they ask only for the crumbs that fall from the rich men's table. But if they are refused the crumbs they die of hunger. Nor do I, either, need much affection from those I love. I should not know what to do with a friendship entire and complete—I am not used to it. But you showed me of yore a *little* interest, when I was your pupil in Brussels, and I hold on to the maintenance of that *little* interest—I hold on to it as I would hold on to life."

From November to May the letter-writer remained silent; then followed her last outburst:

"The summer and autumn seemed very long to me; truth to tell, it has needed painful efforts on my part to bear hitherto the self-denial which I have imposed on myself. . . . I tell you frankly that I have tried meanwhile to forget you. . . . I have done everything; I have sought occupations; I have denied myself absolutely the pleasure of speaking about you—even to Emily; but I have been able to conquer neither my regrets nor my impatience. That, indeed, is humiliating—to be unable to control one's own thoughts, to be the slave of a regret, of a memory, the slave of a fixt and dominant idea which lords it over the mind. Why can not I have just as much friendship for you as you for me—neither more nor less? Your last letter was stay and prop to me—nourishment to me for half a year. Now I

need another and you will give it me; not because you bear me friendship—you can not have much—but because you are compassionate of soul and you would condemn no one to prolonged suffering to save yourself a few moments' trouble. To forbid me to write to you, to refuse to answer me, would be to tear from me my only joy on earth, to deprive me of my last privilege—a privilege I never shall consent willingly to surrender. Believe me, *mon maître*, in writing to me it is a good deed that you will do. So long as I believe you are pleased with me, so long as I have hope of receiving news from you, I can be at rest and not too sad. But when a prolonged and gloomy silence seems to threaten me with the estrangement of my master—when day by day I await a letter and when day by day disappointment comes to fling me back into overwhelming sorrow, and the sweet delight of seeing your handwriting and reading your counsel escapes me as a vision that is vain, then fever claims me—I lose appetite and sleep—I pine away."

The Daily Mail tries to imagine the Professor under the stress of these appeals:

"He was probably used to being fallen in love with by his pupils; he was bored rather than affected by Charlotte's fervor, and warned her not to become *exaltée;* and he tried to repress her excitement, taking the very sensible view that an unmarried young woman could do no good to herself by cherishing a passionate, tho blameless, regard for a man who could be nothing to her. Apparently he did not take the whole episode very seriously; he scribbled the address of a Brussels bootmaker on the margin of one of the letters! He did not suspect that the little English governess could confer on him the gift of immortality and turn his highly respectable figure into one of the great creations of imaginative literature."

Mr. C. K. Shorter, in the London *Sphere*, gives a paragraph upon the matter as a newspaper story:

"No one will deny, I think, that *The Times* was fully justified in assuming that a profound public interest would pertain to this revelation of the Brontë story, to which it gave eight columns and a leading article in one issue and three columns in another, yet it is amusing to note the attitude of its contemporaries. The London halfpenny papers made full use of the story the following day, and so did *The Standard*, but *The Morning Post* and *The Daily Telegraph* ignored it. Both these journals are brilliantly conducted, but I wonder whether they were quite wise in this."

YALE'S STATUE OF NATHAN HALE

—Is it because Yale men are too sentimental or too timid that they object to seeing Nathan Hale represented as bound and manacled? A vigorous discussion has been going on in the pages of *The Yale Alumni Weekly* (New Haven) about the proprieties of Bela Lyon Pratt's conception soon to be realized in bronze and placed on the Yale campus. Hale, who was captured by the British and hanged as a spy in 1776, is represented in this statue as standing erect in his uniform of the Continental Army, with his hands tied behind him and his feet bound. *The Weekly* thus comes out in defense of the sculptor:

"The purpose of the sculptor, Bela Lyon Pratt, as explained by those who discust the matter with him, was to present Nathan Hale at the supreme moment of his life, his death as a spy by hanging at the hands of the British troops. Mr. Pratt considered that to get the effect he desired, it was necessary, artistically, to show the figure bound at ankles and wrists. There were those who preferred to see Nathan Hale stand on the Yale campus unbound at ankles, but the sculptor's views prevailed."

NATHAN HALE AS A SPY.

The statue that Yale men object to because it doesn't blink the facts.

The New York *Sun* adds some interesting details of the work which is designed to stand on the old campus near the east front of Connecticut Hall:

"Hale's last words, 'My only regret is that I have but one life to give for my country,' will be inscribed on the pedestal. The lettering in which they will be cut has been designed by Henry Charles Dean, of Boston, from the lettering on the headstone of Hale's grave. The lettering of this old stone, which was erected by Deacon Richard Hale, father of the dead hero, has been pronounced by experts to be one of the most beautiful examples of Colonial lettering. It is planned to erect the statue on the campus not later than next June."

THE DRAMA LEAGUE IN ENGLISH EYES

BROWNING WROTE a poem called "How it Strikes a Contemporary," and the Drama League of America furnishes an interesting case in point. It has won the approving comment of the dramatic critic of *The Westminster Gazette* (London), who gives his fellow countrymen a detailed account of its features and discusses its availability for adoption as a British institution. THE LITERARY DIGEST has recorded its progress at various stages, sometimes quoting the not altogether favorable comment of its American critics. Its growth is apparently continuous and considerable. It has lately emerged from the comparatively provincial confines of its Chicago operation and joined with other theater clubs whose work has been cognate to organize into a country-wide sphere of activity. The object of the organization, as the English critic quotes from its literature, is "to crowd out vicious plays by attending and commending good plays and building up audiences for them." This is its primary purpose, but there are other and secondary ones, such as:

"To aid in the restoration of the drama to its honorable place as the most intimate, most comprehensive, most democratic medium for the self-expression of the people. It is a banding together of all the forces already working for better drama, a welding together into one united whole that shall control the situation in support of better plays. The League does not censor. If it approves a play, the League members are urged to support it—if it disapproves, it remains silent—aiming to kill by non-support. The purpose of the League is twofold—to create a permanent taste for good drama and to obtain larger audiences for the best plays."

The English critic is struck by the fact that the League works partly "by demanding good criticism from the press, by opposing to commercialism a practical scheme of cooperation between producers and the public which will tend to uplift, by organizing an audience out of a haphazard crowd." Tho recognizing that "this is brave talking," the critic seems to find "satisfactory evidence to show that in its life of three years and a quarter the League has done something

substantial to justify its existence." The critic goes on to sketch the history of the League for his countrymen:

"The origin is rather curious; it began in the city of Evanston, Ill., where it was founded by the members of a ladies' club who had been in the habit of attending the local theater in a group. Evanston, I believe, is an important residential suburb of Chicago, and is noteworthy for its educational establishments. In April, 1910, the ladies of Evanston called a meeting of representatives from all the women's clubs of Chicago, and then the Drama League was founded. Now it has members all over the States, and a large number of affiliated or local leagues, and I hear that a branch has just been born in Ottawa. I notice with interest that not only was the League founded by women, but a large number of its officials belong to that sex, and that the majority of the presidents of the American centers are ladies. We know that in the States women are more active, as a body, in many aspects of social life than are their English sisters; this may be due to the fact, if it be the fact, that the American man, as a rule, is more intensely engrossed in his business or professional work than the Englishman, and leaves almost entirely to his woman-folk matters which over here he would attend to himself.

"American women are commonly supposed to be prudish, and it might be feared that under the circumstances the working of the League, tho it would operate against the simply erotic forms of entertainment—and in that respect be preferable to our Censorship—would also follow the lines of our Censorship and exhibit an extravagant terror of indelicacy in the treatment of serious subjects. Certainly there would be some, if not great, danger of this if the Drama League were founded in England. So far as I can judge, the American League is broad-minded, but the materials are not sufficient to enable one to form a conclusive judgment. In fact, my chief basis for this view is the society's report, or bulletin, upon 'Blanco Posnet.'"

On the League's principal work—the issue of "bulletins," we read:

"On the production of a play its committee, sternly refusing the lure of free seats, inspects the piece, and either considers that it deserves no further discussion or issues a bulletin containing information under the following headings, or some of them: 'Play,' 'Author,' 'Theater,' 'The Company,' 'Comment,' 'General Idea,' 'Dialog,' 'Structure,' 'Production,' 'Value,' 'Quotation.' My belief that it is broad-minded is based upon the comment concerning 'The Showing Up of Blanco Posnet.' 'One of the few plays where Shaw ventures into a locale—the American Wild West—with which he is totally unfamiliar. The result is that the idiom of the characters works rather stiffly into the expression of Mr. Shaw's ideas. The ideas, however, are interesting. The play is a satire upon piety and a dramatic brief for a creedless religion of human kindness.' The piece is one of a group warmly recommended; yet it may be recollected that its public performance is prohibited in England and was forbidden in Ireland; but the prohibition was ignored, and the authorities did nothing. Judging by this and the bulletin on a play called 'Rebellion,' it may fairly be assumed that the American critical committees are not likely to interfere with the honest treatment of serious social questions, the bugbear of our authorities.

"It may be asked whether the work of the League is effective. There are substantial reasons for believing that it is. Apparently the outcome of fifteen bulletins issued in Chicago was—according to the statements of the 678 members who replied to a post-card on the subject—that they and their friends were induced to purchase 17,182 tickets for the fifteen works recommended by the bulletins."

The question whether England could profit by the adoption of this "Yankee notion" wins a rather favorable reply from the critic:

"Of course it might get controlled by the wrong people, and fall into the hands of cranks who would support nothing but fantastic experiments, and be captured by emissaries of the commercial drama, and exploited for the purpose of puffing the very class of work which the American society ignores. Probably in either case it would soon get 'smoked' and have little influence, so that there would be no bad result of importance. Its bulletins could never be quite as useful as those in America, since our touring system is necessarily much less important. On the other hand, a well-chosen committee could render very valuable service."

SOURCES OF OUR POPULAR SONG AND DANCE

THE COSMOPOLITAN CHARACTER of the popular songs and dances at present so dominant in America and Europe is brought out in Mr. H. E. Krehbiel's researches in Afro-American folk-songs. What may occasion the greatest surprize of all is that the most marked rhythmical characteristic of these songs, commonly known as "rag-time," does not derive from negro, but from Scottish sources. It is really a "Scotch snap" that marks these songs, when, in the musician's parlance, "the emphasis is shifted from the strong to the weak part of a time unit by making the first note of two into which the beat is divided take only a fraction of the time of the second." The repetition of this effect "becomes very stirring, not to say exciting . . . and leads to a sort of rhythmical intoxication exemplified in the use of the device, not only in the first beat of a measure, but in other beats also, and even in the fractional divisions of a beat no matter how small they may have been." Mr. Krehbiel, the music critic of the New York *Tribune*, finds this feature of to-day's popular music in even other environments:

"When this species of syncopation, known as the Scotch, or Scot's, snap, or catch, became popular in the Italian-opera airs of the eighteenth century it was held to be the offspring of a device commonly found in the popular music of Scotland. It is a characteristic element of the Strathspey reel, and the belief has been exprest that it got into vocal music from the fact that Burns and other poets wrote words for Scottish dance-tunes. 'It was in great favor with many of the Italian composers of the eighteenth century,' says J. Muir Wood (writing in Grove's 'Dictionary of Music and Musicians'), 'for Burney, who seems to have invented the name, says in his account of the Italian opera in London, in 1748, that "there was at this time too much of the Scotch catch, or cutting short of the first two notes in a melody." He blames Cocchi, Perez, and Jommelli, all three masters concerned in the opera "Vologeso," for being lavish of the snap.'"

What Wood here remarks about the pseudo-Scotch music of the eighteenth century as it was cultivated in the music-halls, declares Mr. Krehbiel, "may be said of latter-day 'rag-time,' which, especially in the 'turkey-trot' and 'tango' dances, monopolizes the music almost to the exclusion of melody and harmony."

"The rhythmical device under discussion is also found in the popular music of Hungary, where it is called *alla zoppa* (limping). Here it is unquestionably the product of poetry. Dr. Aurel Wachtel, discussing the music of the Magyars (*Musikalisches Wochenblatt*, July 5, 1878), says that the rhythmical construction of their ballads is most closely allied to the peculiarity of the Magyar language, which distinguishes the short and long syllables much more sharply than any other language spoken by the peoples of Germanic-Slavic-Romanic origin. The character of the Magyar tongue does not tolerate that prosodically long syllables in song shall be used as short, or vice versa.

"Now, whether the rhythms of dance music be derived from the songs which gave time to the feet of the original dancers or the rhythms of poetry were borrowed from the steps of the dance, it would seem as if the determining factor was the word. The most primitive music was vocal. Poetical song had its origin in improvisation, and improvisation would be clogged unless musical and verbal rhythm could flow together. The rhythmical snap of the American negroes is in all likelihood an aboriginal relic, an idiom which had taken so powerful a hold on them that they carried it over into their new environment, just as they did the melodic peculiarities which I have investigated. It was so powerful an impulse, indeed, that it broke down the barriers interposed by the new language which they were compelled to adopt in their new home. For the sake of the snap the creators of the folk-songs of the American negroes did not hesitate to distort the metrical structure of their lines. In scores upon scores of instances, trochees like 'Moses,' 'Satan,' 'mother,' 'brother,' 'sister,' and so forth, become iambs."

RELIGION AND SOCIAL SERVICE

THE POPE'S FIRST DECADE

THE HEALTH of the Pope has been so precarious during the past year that many observers of the world's life must have reflected upon the subject of his obituary. Defeating these expectations, Pius X. has celebrated the first decade of his pontificate (August 4), and the Roman correspondent of *The Morning Post* (London) has seized this anniversary occasion as a pretext to estimate the Pope's spiritual reign. Tho there remains in some minds the recollection of the long reign of his two immediate predecessors, yet ten years, as this writer points out, is an unusual period for a Pontificate. Of the 259 pontiffs who are recognized on the Vatican's official list, the average reign is only seven years. Moreover, the reign of Pius X. "has been so full of events as to seem much longer than it really is," and the present pontificate will be found to have left a considerable mark upon both the history of the Church and the history of Italy." Considering him from three points of view — as an ecclesiastic, as a diplomatist, and as a politician, the writer speaks first upon the last of these:

"Pius X. has been much more active than Leo XIII. Whereas the *Non expedit*, which prevented the participation of good Catholics in elections, prevailed throughout the twenty-five years' pontificate of the late Pope, at both the general elections held in the time of Pius X. the *Non expedit* has been suspended in all cases where the bishop of the diocese has so advised, *i.e.*, whenever a Monarchist of Clerical leanings required the aid of the Church to defeat an Anticlerical. For the first time in Italian history a compact little band of avowedly Catholic Deputies has sat in the Chamber, and it seems, on the whole, probable (tho the question has not yet been settled) that the policy of 1904 and 1909 will be repeated at the General Election of October, 1913. The younger and more practical men in the Clerical party would like to see the number of Catholic Deputies largely increased, as would easily happen, if the *Non expedit* were abolished, with an electorate of eight millions, largely illiterate. But the Pope and the reactionaries who dominate the Vatican fear the creation of a powerful 'Center Party' on German lines, for which the Vatican would be held responsible, and which might yet act on its own initiative. The papal ideal is, therefore, a nominally Liberal member, who has given pledges not to support Anticlerical legislation, and who depends for election upon Clerical aid. Under a system of multiple candidatures and second ballot such phenomena are very common. With Signor Giolitti at the head of the Government and Signor Tittoni (now Ambassador in Paris), as the *trait d'union* between him and the Vatican, 'deals' of this kind are peculiarly easy, and compromise becomes the order of the day. To the present Pope again the authors of the Libyan War should owe a debt of gratitude. Nowhere, outside of 'Nationalist' and Sicilian circles, was the war against Turkey in Africa so popular as at the Vatican. Some eminent divines regarded it as a crusade; others, more mundane, remembered that the Clerical Banco di Roma, in which they had put their savings, was largely interested in Libya. The Pope himself was less bellicose than some of his Cardinals, one of whom was publicly censured for his indiscreet allusions to the Battle of Lepanto and the relief of Vienna by Sobieski; but the 'patriotic' attitude of the Church in the autumn of 1911 has had the effect of taking the sting out of Anticlerical attacks. For the first time numerous chaplains accompanied the Army, while preachers offered up prayers to the God of Battles for the success of the Italian arms. Never since Pius IX., in his earliest manner, had supported the national movement, had a similar spectacle been witnessed in Italy."

If Pius X. has been "a much 'better Italian' than the cosmopolitan diplomatist who preceded him," the present writer regards him as "far less successful in his conduct of international relations." We read:

"A complete breach with France, difficulties with Spain and Portugal, the Borromeo Encyclical, so offensive to the German Protestants, the long exclusion (at last remedied in 1911, after an American protest) of all save Latin elements from the College of Cardinals have characterized the present Pontificate. For some of these errors the Pope is not responsible, for it was inevitable that a simple parish priest, ignorant of foreign languages and foreign countries, must rely (just as a Foreign Minister under similar circumstances) upon the advice of his subordinates. But every Pope, owing to the system of voluntary incarceration which has prevailed since 1870, deliberately cuts himself off from direct contact with the world of men and things. His information about foreign countries comes to him largely in the shape of reports *ad usum Delphini*. In the case of countries (such as Great Britain) which have no diplomatic representation to the Holy See, he has to rely upon the annual visit of a foreign Cardinal, the advice (in the case of ecclesiastical appointments) of a 'Consultor,' and such information as he may receive from the Monsignori of the particular country resident in Rome. But at the Vatican under the present reign the non-Latin element has been a very small minority. Just as Italian Government offices are largely manned by Sicilians—a fact which accounts for several idiosyncrasies of Italian policy—so the headquarters of the Roman Church are mainly occupied by Italians whose outlook is quite naturally different from that of other nationalities. In a word, under Pius X., the 'universal' Church has been more Italian and less cosmopolitan than under Leo XIII."

From the religious standpoint "the present Pope can scarcely fail to appeal to all unbiased persons as a type of sincerely honest and pious man, trying to do his best according to his lights." Furthermore:

"Since Pius V., a contemporary of our Queen Elizabeth, no Pope has been canonized; but doubtless one day his namesake will receive a similar honor from posterity. No Pontiff since Hadrian VI., the old tutor of the Emperor Charles V., and the last foreigner elected to the Papacy, has led so simple and modest a life. The present Pope has waged a continuous warfare against sinecures; he has diminished the numbers of the idle priests who used to infest Rome; he has, through his official organ in the Press, done much to combat obscene literature, vicious cinematographic shows, and similar evils, formerly rife in Italy. He has publicly exprest his sympathy with the Society for the Protection of Animals, thus throwing the influence of the Church on their side. No doubt, his policy toward the Modernists has been extremely reactionary, while at times, by enumerating their heresies in his Encyclicals, he has drawn attention to their views, and thus given them an advertisement which otherwise they would have lacked. But his position in this matter is that obedience ('To obey is better than sacrifice') is the basis of the Holy See; whereas the Modernists, while remaining within the pale, wished to interpret the doctrines of the Church in their own fashion.

"The quarrels of the Vatican with the Modernists are, however, matters of domestic concern which do not much affect the outside world; in Italy, at any rate, where theological controversy attracts less interest among laymen than in Northern countries, the masses were unmoved by this warfare of 'intellectuals' against tradition. Leo XIII. would probably have handled the Modernists differently; but then Leo XIII. was primarily a diplomatist, and diplomatists, from the nature of their occupation, seldom possess that faith which sometimes removes mountains and sometimes creates a St. Bartholomew's massacre. You must not expect Liberalism from a Venetian parish priest nor the principles of a mid-Victorian Whig from a man whose chosen confidant is the Spanish friar Vives y Tuto. After all, the Conclave of 1903 has got what it wanted; it wanted as Pope a godly man, and a godly man is elected; only, as all Papal history shows—Celestine V. and Hadrian VI. are the best examples—a godly man does not always make the best Pope. So long as the Papacy has a political side, that is likely to be the case. But, at least, Pius X. has proved that Roman Catholicism.

unlike some Churches, can make a peasant its High Priest and choose him for his own virtues rather than for his influential backing."

FOR INTERNATIONAL PEACE

PEACE HATH its reputed victories no less renowned than war, and some of these victories come about without the conscious aim for peace. One of these is declared to be the confraternity of students organized under the title of the International Federation of Students whose eighth congress will assemble in Ithaca in September as guests of the Cosmopolitan Club of Cornell University. Tho this society can take no hand in the settlement of international disputes, yet as its secretary, Louis F. Lochner, points out in *The Christian Work and Evangelist* (New York), it is "pregnant with tremendous possibilities for peace." It brings together at the most formative period of their lives picked young men from many different countries—"men foreordained to become leaders of thought and action in their respective countries"—and shows them that "the 'other fellow' is animated by the same high ideals for which they take credit, acquaint them with other peoples and civilizations, and teach them that humanity—all-embracing, all-including, linked with the idea of brotherly love, of sympathetic understanding, of good will toward all mankind—is a bond of union transcending national, racial, or color lines of demarcation."

The spirit of internationalism is furthered by the Christian Students' Federation which is an aggregate of 2,305 associations and 156,071 members. Its work is well known; but the other association whose purposes are not definitely religious is perhaps known to fewer, as likewise the fact that "Berlin, Leipsic, Paris, Oxford, Cambridge, Vienna, Madrid, Columbia, Pennsylvania, and Cornell Universities . . . have become so many melting-pots of nations because of the international composition of their student bodies." Mr. Lockner gives us an interesting sketch of the history of the international movement:

"As early as 1898 a fiery young Italian of Turin addrest an appeal to the students of the world. 'Let us fraternize,' he said, 'let us fraternize and unite in one vast, gigantic federation'; and he then proceeded to expound his plans for a world-wide federation of students. The student associations of Europe, especially of Southern Europe, responded generously to the invitation of their Italian confrères to meet in an international convention, and at Rome from the historic Forum Romanum was proclaimed the 'Fédération Internationale des Etudiants,' which bears as its motto the two Latin words, 'Corda Fratres' (Brothers in Heart), and which has for its principal aim that of 'favoring and protecting the idea of fraternity and solidarity among students.'

"In spite of numerous vicissitudes, such as any new organization is likely to encounter, the federation held its own, even founding branches in Argentina, Paraguay, and New York City; until in September, 1911, when the members met in their Seventh International Congress, a new element was introduced, which gave a tremendous impetus to the movement and put it on a world-wide scale. This element was the presence of delegations from the Cosmopolitan and International Clubs of North America and Germany and of the 'Liga de los Estudiantes' of South America, and the consequent affiliation of the bodies which they represented with the Corda Fratres movement.

"Briefly, the facts with reference to the Cosmopolitan Clubs are as follows: Since 1903 there have gradually sprung up in some thirty universities, colleges, and technical schools of this country cosmopolitan or international clubs made up of the foreign-born and a limited number of native students. The purpose of these organizations is to bring together into one brotherhood men from different countries, to learn the customs, viewpoints, and characteristics of other nationalities, to remove racial prejudices, and to establish international friendships. Since 1907 these clubs have allied themselves in a national association of Cosmopolitan Clubs. A monthly magazine, *The Cosmopolitan Student*, keeps the members in touch with each other and with the work confronting the federated body. Annual conventions afford picked representatives from the local units an opportunity to deliberate upon problems common to all the clubs and to listen to inspiring addresses by speakers of international fame.

"In 1909, at the invitation of the Central Bureau of the Fédération Internationale des Etudiants, 'Corda Fratres,' members of the Association of Cosmopolitan Clubs took part in the Sixth International Congress of that body at The Hague, Holland. They were so imprest with the similarity in aims and ideals between the 'Fédération Internationale' and the Cosmopolitan Association that they strongly recommended the affiliation of these two large student bodies—a recommendation which, however, was not put into complete effect until after the Congress at Rome in 1911, at which time the German International Clubs were also represented by a delegate. The League of South American Students has had a similar record of genuine usefulness. In 1908 the students of South and North America were invited to a Pan-American congress at Montevideo, Uruguay. That congress, at which students from the United States unfortunately did not take part, provided for the organization of a League of American Students, for the biennial holding of international congresses, and for the founding of a central bureau at Montevideo."

The proceedings of these congresses afford ample opportunity to discover the "similarity in aims and purposes of the 'Liga' with the aims and objects of the Corda Fratres of Europe and the Cosmopolitan Clubs of North America, even tho the organization is a less formal one." We read further:

"The spirit of internationalism breathes forth from every page. At the Corda Fratres congress at Rome in 1911, then, we find these three forces represented: the consulates or chapters of Corda Fratres, the Cosmopolitan and International Clubs of North America and Germany, and the League of Students of South America. It was no small thing to mold these three movements—each presenting a somewhat different plan of organization, each proud of its history and results—into a composite whole and to provide a form of international organization so flexible as to enable other movements which might exist in other countries, such as the East and West Clubs of England, to become affiliated. But good will and mutual concession wrought the seeming miracle, and for almost two years we have been working under a tentative and experimental platform of world confederation, the principal features of which are, first, the neutrality of the federation in matters affecting religious, political, or economic principles; second, the complete autonomy of the component groups; third, the composition of an international central committee of direction, consisting of two members from each country represented; fourth, the provision for regular biennial congresses; and, fifth, the stress laid upon the extension of hospitality upon correspondence between members of different countries, and upon the encouragement of mutual understanding as a means of promoting amicable international relations.

"Thus we have gone a great way toward uniting the students in an all-embracing world federation. We of the American group are especially happy that the Eighth International Congress, to be held in September, 1913, has been awarded to the United States, and that the Cosmopolitan Club of Cornell University, the strongest branch in our association, is to act as host during the official sessions. The preparations for the congress are now well under way. Invitations to the students of the world have been sent for circulation to all the foreign ministries, to all the student college papers of this and other countries, to all the student associations whose names could be learned by the Congress Committee headed by Carlos L. Locsin, of Cornell, a Filipino student of remarkable organizing powers, and to hundreds of individual students.

"Tho the official sessions are to be held at Ithaca, it is planned to take the foreign visitors to a number of places of interest, including New York City, Albany, Schenectady, Niagara Falls, Buffalo, Philadelphia, Washington, Boston, and Cambridge. I sincerely hope that the universities of this country will appoint delegates to this congress, and thereby embrace the splendid opportunity offered of encouraging the cause of international good will and humanity. Never before has an opportunity like this come to the students of this country to show their international-mindedness.

"Scholarship is in its very nature international. The scientist, the linguist, the technicist, the historian, the man of letters—each is dependent upon international cooperation for the achievement of the highest results in his particular field of endeavor. In short, it may truly be said of the scholar that 'every factor in his culture, every science which he knows, has been built up by the cumulative services of men in every nation in the successive ages.'"

Chalmers— 1

The Master Motor of The

What other makers are still striving for we give you in the New Chalmers "Six."

To the best features of the costliest cars we have added these crowning triumphs.

Silence at all speeds; silence that lasts.

Sustained power; even after years of use.

No vibration; comfort and long life.

Extreme flexibility, without intricate gearing.

These features mean far more than the luxury they bring. They mean no wear—no waste of power—no depreciation. A car that lacks them may cost you less to buy—but it will cost you more to keep.

When once you know the years of extra service these features add, you'll wonder how we give them at the price, $2175.

Go ride in this car. Let it tell its own story in deeds. It can neither over-rate its virtues nor hide its defects. It must tell the truth—nothing else.

Salient Features of the

Six-cylinder motor, T-head type 4″x 5½″,—40-65 h. p. All moving parts enclosed.

Bosch magneto.

Electric starter—Entz System, built in Chalmers shops.

Non-stallable motor.

Full electric lights—Our powerful head-lights also contain auxiliary lamps of moderate power for city driving.

132-inch wheel base.

Molded oval fenders.

Roadster	**$2175**
Four Passenger	**$2175**
Five Passenger	**$2175**

(*Fully equipped, f.*

Silent at All Speeds

Many cars that are quiet at ten miles an hour, kick up a lot of noise at thirty.

Let us see what the New Chalmers "Six" will do. Watch the speedometer; 30—40—50 miles an hour and not a murmur from cams nor valves.

We have discarded the noisy little wedge-like cams so widely used. They knock the valves open with a blow and close them with a snap. The big oval cams of this motor push open the valves and slide them shut with the smoothness of velvet.

What Silence Tells You

The silence of the Chalmers "Six" means more than the mere luxury of quiet.

It tells you that your motor is working with the perfection of a watch—without the slightest wear; that your car has not depreciated one iota; that it is as good as the day you bought it.

And this silence continues for years. 30,000 miles of hard road service, equal to three years of average use, left this motor as good as when it started.

$80,000 Extra Cost to Us—An Enormous Saving for You

This motor, like the trained athlete, grows better by action.

Our valves of Tungsten steel cost us $80,000 extra per year. But Tungsten steel is not affected by the cylinder heat. So there's no warping—no leaking—no power wasted, as happens with the ordinary cast iron and nickel steel valves. Our Tungsten steel valves almost never need regrinding.

This means an enormous saving of power to you. It means no wear—no depreciation. Think of the years of extra service this master motor will give you.

Power—Supple as a Fencer's Wrist

The power of our New "Six" is so flexible that you can throttle it down on high to a creeping gait in the crowd; then away swift as a swallow, mounting quickly to twenty, thirty, forty miles an hour without stress or effort.

This wondrous flexibility is due to our big, roomy valves, they open 40% wider and shut tighter than common. This gives freer passage to the gases.

The wonderful flexibility of this motor is amazing. You'll find you can do nearly everything on "high." It does away with gear shifting almost entirely. With this

Chalmers Motor C

914 The New "Six"

m All

New Chalmers "Six"

Gasoline tank and tire carrier on rear—clean running boards.

Left drive and center control—enter from either side.

36 x 4½-inch tires and Continental demountable rims.

Four forward speed transmission.

Underslung rear springs: main leaf of vanadium steel.

Tapered bonnet and stream line, bell backed body.

Chalmers patented doors—unusually wide.

Six Passenger	**$2275**
Coupe	**$2850**
Limousine	**$3600**

. o. b. Detroit)

"Six" any supplementary gear mechanism would be useless. The motor itself gives a suppleness of power unknown even in costlier cars.

A Non-Stallable Motor

This motor will never go dead in the crowded city traffic. The electric starter won't let it.

Even if the driver should cut off the gas accidentally, the electric starter, which is always on duty, keeps the motor running—won't let it stop.

It prevents stalling under sudden overload.

This is the greatest feature of safety and convenience put on a car in the past five years.

Company. Detroit

An Electric Starter That Never Quits

The simplest and surest starter ever made. A little motor spins the engine to start it. Then it automatically reverses itself, becomes a generator and stores up power in the battery for electric lighting and future starting purposes.

That Vibration Jinx

After a long ride you are often tired and you don't know why. It's the vibration jinx in the crank case. It means the moving parts are too heavy or a fraction out of balance.

We overcome vibration by forging our connecting rods stronger and yet 40% lighter than the average; by giving the motor an extra long stroke and so reducing the number of strokes; by balancing all moving parts on a delicate scale. Even the clutch and the timing gears are balanced with the rest of the motor.

The smoothness of the "Six" saves wear on the car as well as on the passengers. The interval between the explosions of any "four" makes a gap in the power stream. It produces a vibration that hammers constantly at the life of the car. There's no escape from it. The explosions of the "Six" give an unbroken stream of power. It gives smoothness and economy that no "four" can equal. It adds years to the life of the car.

The Beauty of the Car

As we make the motor better we make the car handsomer.

We spent $75,000 in new equipment to give you its long oval fenders; not alone for the added beauty, but for their utility as well.

Bodies are big and bell-shaped. Plenty of room to stretch your legs in either seat. Doors are wider than usual, with concealed hinges. They fit so snugly that all mouldings are dispensed with.

Extra tires are carried in the rear, leaving the running boards clean as a quarter-deck. Everything about it tends to give the New Chalmers "Six" the flowing, stream-line effect of a graceful steam yacht.

Unsurpassed at Any Price

It is impossible to get more real value than we give you in the New Chalmers "Six." The wonder is that we can do it at the price.

But this car is the product of a $7,000,000 factory where economy of production has been perfected as never before; where parts makers' profits have been eliminated; where enormous output reduces cost to a minimum.

In the New "Six," you get features that mean your car will run year after year as smoothly and silently as the day you bought it; features that keep operating costs down to a minimum.

To buy a car that lacks these features—even though the first cost be less—is short-sighted. To pay more is an extravagance.

Send for the Facts

Send us this coupon and we will mail you the most valuable book ever written about motor cars. It tells by pictures and words facts that every one should know. Mail the coupon now.

Send me literature explaining why the New Chalmers "Six" is the Master Motor of them all.

MOTOR CARS

WISCONSIN'S MODEL AUTOMOBILE LAW

WISCONSIN, which is often credited as the most progressive State in the Union, has just enacted a new automobile law which is welcomed by many authorities as a model act.

The Automobile says:

"A feature of the new code is that it prevents cities, counties, town boards, park or highway boards from passing or enforcing any ordinance or resolution fixing requirements upon drivers and operators of motor vehicles. The State law is supreme. and for two years at least Wisconsin motorists and outside motorists who tour in Wisconsin will not be harassed by sundry local ordinances that every cross-roads settlement may wish to pass, as in many other States. The outside motorist who comes into Wisconsin will need only to comply strictly with the compact State law and disregard local restrictions entirely.

"The law reads:

"'The provisions of section 1636–47 to 1636–57, inclusive, shall be uniform in operation throughout the State, and no city, village, county, town, park board, or other local authorities shall have power to enact, pass, enforce, or maintain any ordinance, resolution, rule, or regulation requiring local registration, or other requirements . . . or in any manner excluding or prohibiting any automobile, motorcycle, or other similar motor vehicle, whose owner has complied with the provisions of said sections, from the free and unobstructed use of all public highways, driveways, and parkways within the State. . . . . .

"The asterisks in the above represent the words dropt from the old statute in

From "Horseless Age," New York.

JOHN BURROUGHS AND HENRY FORD IN THE FIRST FORD CAR, TAKEN IN DETROIT RECENTLY.

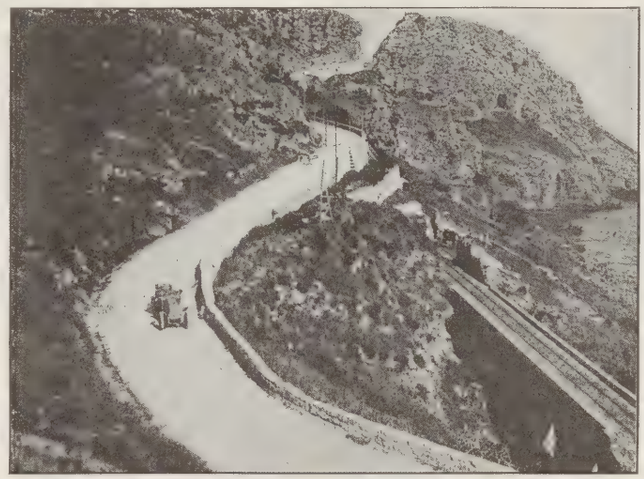
making up the new law, which were 'inconsistent herewith.'

"Among the requirements in the new law which have heretofore appeared only in local ordinances in various cities are the following:

"'Prohibiting the use of the muffler cut-out within the limits of any incorporated city or village.

"'Reducing speed to 8 miles an hour while passing through parks and cemeteries, in the highway. The old speed limits of 15 miles an hour in cities and villages, and 25 miles an hour in the country are unchanged, excepting as provided above.

"'Requiring every motor vehicle to be equipped with an "adequate signal device."



From "Automobile Topics," New York.

PART OF A ROAD THAT SKIRTS THE COAST OF SICILY FOR 650 MILES.

"'Dealers or manufacturers who knowingly permit the use of their number-plates on cars owned or controlled by others are liable to a fine of from $10 to $25.'

"The law was drafted by James T. Drought, president of the Wisconsin State Automobile Association and a well-known attorney of Milwaukee, who was mainly responsible for the organization of the Milwaukee Automobile Club, the first organization of motorists in the Badger State, and who is still counsel of this club. It was introduced by Senator Alex. R. Martin, of Milwaukee, and was one of the final bills to be passed and signed at the 1913 session of the legislature."

MACADAM ROADS OBSOLETE

"The movement for a more durable type of road construction for the main roads of the country is rapidly gaining strength," says *American Motorist*. "Roads which will not only stand heavy travel from the standpoint of the number of vehicles passing over them, but which will also stand the stresses of heavy trucks carrying loads of eight and ten tons, are required by the conditions of modern traffic." The article continues:

"That new macadam construction has been practically eliminated from consideration by traffic requirements on the principal highways, is admitted by the foremost highway engineers of the country. California has adopted concrete with a bituminous surface for almost its entire mileage of State roads now being constructed. The State Highway Engineer of Illinois has recommended concrete or brick —preferably concrete on account of low cost—for its recently established system of State aid roads. The Board of Consulting Engineers of the New York Highway Commission has recommended concrete for 146 miles of State roads now being built under inadequate specifications, 'to prevent the waste of the money already expended.'

"The Lincoln Highway Association is reported to have adopted concrete construction for the transcontinental Lincoln highway. The Chambers of Commerce of Chattanooga and Knoxville, Tenn., are promoting a concrete highway between those two cities, as a section of a through route to the South and Southwest; and innumerable counties and other subdivisions are adopting a similar type of construction for their roads of heaviest traffic.

"Portland-cement concrete seems at present to have the lead among the various types of road which may be considered durable by reason of its comparatively low first cost, and its excellent record as a paving material. Most of the other surfaces which might be available, such as brick, or broken stone mixt with bituminous substances, require for durability and strength a concrete foundation, so that the cost of the surfacing would be added to that of the concrete.

"A bituminous concrete is much in favor for roads in some sections of the country, but its use is limited by the expense of its construction. Liquid asphalt has been used to some extent, but the supply of this material is limited. Refined tars and asphaltic oils, while making excellent top dressings, preserving and making dustless road surfaces, do not add materially to the structural strength of the roads on which they are used; it is, therefore, to concrete, either as a foundation or for the whole road structure, that those engineers are looking who recognize the present and approaching traffic conditions on the main highways of the country.

"It is always possible that a new material or combination of materials may be discovered or invented which will enable durable roads to be built at a lower cost even than concrete."

KILOWATT INSTEAD OF HORSE-POWER

Leading engineering societies abroad are endeavoring to substitute the term kilowatt for horse-power. The unit of measurement in electric power is the watt. A kilowatt, which is one thousand watts, equals practically 1.34 horse-power. *The Automobile* advocates the universal adoption of the new designation.

Says an editorial writer in this journal:

"In the matter of sound, kilowatt is far superior. It has no ugly hiatus in the middle, but runs trippingly from the tongue. It has a plural, too, while the plural of horse-power has always been doubtful and awkward. Its abbreviation—kw, without a point—has been thoroughly established by the electrical-engineering fraternity of the world. The value of kilowatt, as well as its spelling, is international and uniform, which could do no harm in the ever-growing export trade, while there is a small

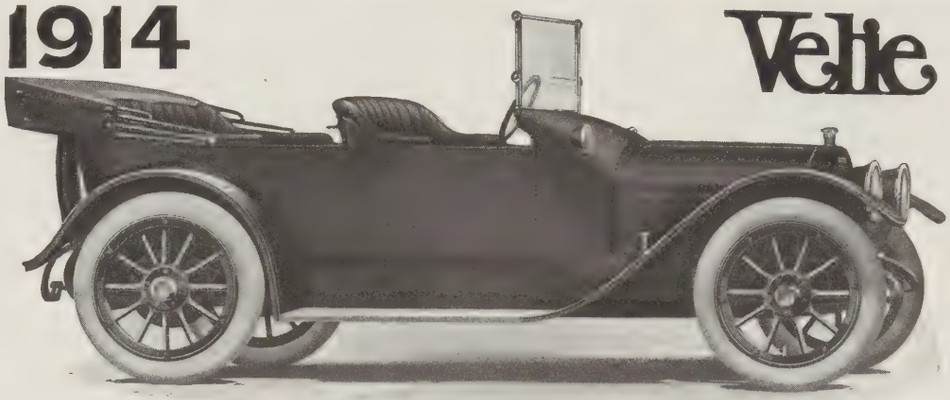
1914 Velie



Model 9
"4-45"

A new light "Six" with fifty horsepower

and two other equally remarkable Velie models—the utmost in real, usable value that can be built in an automobile!

Velie Model 10—The new Velie "6-50," nearly 1000 pounds lighter than the usual car of its size and power. Easy riding, easy to drive, remarkably economical on tires and gasoline. Price **$2350**

Five-Passenger Touring, Four-Passenger Torpedo, Two-Passenger Roadster

Velie Model 9—The new "4-45." A continuation of the famous Velie "4-40," with more power, more room, more comfort. Highest possible quality, even to use of hand-buffed leather in upholstery. Price **$2000**

Five-Passenger Touring, Four-Passenger Torpedo, Two-Passenger Roadster

Velie Model 5—The new "4-35." An exceptionally powerful small car, with equipment including the most advanced type of electric starter and electric lighting—identical with that used on the bigger Velie models. Price **$1500**

Five-Passenger Touring

These Specifications Are Common to All Velie Cars for 1914

Motor—"L" head, long stroke. Stromberg carburetor. High power on low gasoline consumption.

Ignition—Bosch dual system. All wiring enclosed and protected by brass conduits.

Lubrication—Positive feed. Cylinders and pistons lubricated by splash. Oil pump completely enclosed, protected in engine base.

Cooling System—Extra large radiators. Centrifugal pump on "4-45" and "6-50." Thermo-syphon on "4-35."

Transmission—Heat treated, nickel steel gears, four speeds on "4-45" and "6-50." Three speeds on "4-35."

Springs—Exceptionally long springs with extra wide leaves. Semi-elliptic front and three-quarters elliptic rear. Pullman-like riding ease on all roads.

Clutch—Velie special dry-plate clutch, positive but smooth in action, no grabbing.

Electric Starter—Gray & Davis electric starter. The highest grade of starter built today—with record of unfailing service.

Electric Lighting—Gray & Davis electric lighting. Current supplied from storage battery used in the starting system.

Tires—Quick-detachable, demountable rims. Velie light-weight on tires of ample size guarantees freedom from tire trouble.

Clean Body Lines—High side bodies with deep cowl dash and concealed door handles. Running boards free from battery box or other incumbrances. Clear running boards, with wide door, make the car especially easy to get in and out of. Spare tires carried at the rear, where they help to balance weight of the car.

Deep Upholstery—Deep seat cushions and especially deep back cushions. Finest leather used throughout.

Equipment—Mohair top and envelope, ventilating windshield, Warner speedometer, extra demountable rim, concealed electric horn, foot rails, robe rails and complete tool kit.

What the Name Velie Stands for Among Automobile Owners

For five years the capacity of the Velie factory has been taxed to its utmost to supply the constantly growing demand for Velie cars. The mechanical perfection of the car, backed by the tremendous prestige of the Velie name, has won and held the confidence of thousands of automobile buyers.

Today the Velie ranks well up with the leading twelve cars in the number built and sold each year.

Now we have greatly increased our facilities for manufacture. Velie output for the next year will rank with the highest. We are ready to give automobile buyers everywhere the benefit of our five years of successful motor car building.

We have developed a car that—for real service, for all that goes to make the owner satisfied—admits of no superior. And we have built it at a price well within the reach of all buyers of motor cars.

Let us show you what five years have brought forth in the Velie. It is an interesting story. Write for it.

Velie Motor Trucks

Built in one-ton, two-ton, three-ton capacity, with special bodies for individual requirements. Write for details.

(*Continued from page* 328)

difference between the horse-power and the *cheval-vapeur* in France or *Pferdestärke* in Germany. The kilowatt equals exactly 1.36 of either of these units, which are only metrical units in disguise and now slated to disappear, if the engineers can have their way.

"The Society of German Electrotechnicians has decided, in full accord with the Society of German Engineers, the International Electrical Commission, and all other associations whose voice counts in matters of this nature, that from and after January 1, 1914, the power output of an engine, whether it is electrical or of any other type, shall be designated in kilowatts and that the horse-power (*Pferdestärke*) unit shall not be used or placed before the public any more, after that date.

"Now that this example has been set, it may be worth considering whether the American automobile industry should not feel itself peculiarly called upon to jump into the lead in the matter by placing the proposed innovation before a very broad, untechnical, but highly influential public first of all, thereby greatly assisting the introduction of the change in the industries where any change in terms and their values, be it ever so slight, means considerable bother with the remaking of tables and calculations. For American cars, with their motor-starters and lighting equipments whose capacity must even now be designated in kilowatts if they shall be discust at all conveniently, it would be an outright comfort to have the power of the main motor judged by the same unit.

"The dear old horse-power, meaning little for designating power, anyway, unless the actual motor speed is mentioned in the same breath, probably never would be missed. Electricians have shown how easily it can be spared. To the public that wishes to compare one motor or one car with another, it is the figure and not the unit which counts, while the engineer is well aware that, so far as the car as a whole is concerned, neither horse-power nor kilowatt can give a mental conception of its traveling capacity, so long as the weight, the mechanical efficiency of the gears, the spring suspension, the bearings, the tires, and several other factors remain undetermined.

"British engineers have devised the coefficient 'K' and the coefficient 'Sigma' in order to have a unit for judging car capacity, logically assuming that the intelligent car owner should be much more interested in such a unit than in horse-power, but the proposition to replace horse-power by kilowatt, while not aiming so high, has the advantage of simplicity in its favor and may do a great deal, through the revisions of formulas and tables and curves which it will necessitate, to weed out antiquated views and set ideas to work in new channels.

"The committee on standardization of the S. A. E. is, within the ranks of this society, usually considered as having a thankless and irksome task. Might it not now, with this opportunity for establishing the same unit for measuring power in the electrical and the mechanical fields—which fields are singularly well and intimately blended in the automobile—call a special session for the purpose of presenting succinctly and attractively to the automobile industry the advantages to be gained by dropping horse-power for good and ever from automobile nomenclature and catalogs and adopting the euphonious and comprehensive kilowatt, instead?

"The poncelet is the only competing unit, and it is rather deep below the surface of actual events, besides leaving electricians and electrical appliances out in the cold."

FOR UNIFORM MOTOR LAWS

A movement for unifying automobile laws in a number of States is gaining headway. The committee appointed by Governor Sulzer in accordance with an act passed last spring by the New York legislature is about to begin its work. This committee will confer with commissioners to be appointed by the Governors of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, Pennsylvania, Delaware, and Maryland. It is expected that other States will appoint commissions to confer with those already named. Ultimately the State officials will probably confer with the National Government.

The New York Times explains:

"The endeavor of the New York Committee will be to frame a law which will both serve the interests of the public and leave the automobile industry unharmed. Its first step, like that of the other commissioners, will be to examine the present law in its own State and draft such suggestions for change or amendment as may seem advisable.

"After this work has been accomplished, a joint conference with the representatives of the other States is planned and a uniform regulation of automobile operation and taxation is hoped for as a result. A report based on this conference is to be submitted to the next legislature. Motorists have long felt the annoyance of different or contradictory laws in the various neighboring States, and uniform regulations, if wisely drawn, would be welcomed by the great body of automobile users. Matters such as speed limits, license fees, loads, and general operation will be the study of the committee."

EQUIPMENT FOR A LONG TOUR

Transcontinental automobile trips are becoming more and more frequent. The selection of adequate equipment and supplies for a tour of several thousand miles, whether across the country or in other directions, is of great importance.

"To make a proper selection of equipment," says *Motor Age*, "requires actual experience in cross-country touring, such experience as has been the lot of drivers of the cars in the Indianapolis-to-the-coast tour which ended at Los Angeles August 4. Most of the drivers or entrants had been in previous tours, some of them of transcontinental scope, and their cars may be taken as criterions of the highest efficiency in special arrangements for safety and comfort on long tours where a wide variety of conditions are to be met.

"It must be remembered that in this tour almost every class of road conditions possible was met. . . . . .

"Certain features of equipment not necessary for ordinary tours, therefore, were essential and were a part of the load of every car on the run. First and most important of these are the means for carrying spare supplies of water. In the desert, where one must travel 50 miles at a stretch between water holes, their value is obvious. . . . The most convenient way to carry extra water supplies and one which is universal among tourists through the desert countries, is by means of water-bags. These are made of closely woven canvas and hold anywhere from 1 to 5 gallons. They are closed with a cork which fits into a porcelain mouthpiece. The bags are not completely waterproof, for the evaporation of the slight quantity of water that seeps

(*Continued on page* 332)

Detroit Electric Cars for 1914 offer:

1. **Substantial price reductions together with equally remarkable improvements in quality, made possible by our large production, *two to one* over that of any other electric car manufacturer.**
2. **Your choice of either *Worm* Gear (mounted the correct way) or our new *Bevel* Gear axles; also your choice of front seat drive, rear seat drive or Detroit Duplex Drive (permitting car to be driven from *either* seat).**
3. **A line which for *completeness* has never been approached even by this company—for years the *leader* in the electric car field.**
4. **Greater battery capacity in all models, giving *still greater mileage.***
5. **Larger tires, *electric brakes,* and many other refinements in details of construction and equipment.**

(Details as to prices and models will be announced in this magazine in September and in the October monthly magazines.)

OUR 1914 line, as always, will *establish the style* in electric automobiles for the coming season. Every accepted feature of construction that is worth while will be found in our 1914 cars—and a number of new features not obtainable elsewhere.

The 1914 line will be exceptionally comprehensive. It will include *every type* of electric vehicle that a purchaser could possibly desire.

The buyer who wants a *double lever control* (for operating the car from either front or rear seat) can get it in the Detroit Duplex Drive. The buyer who wishes a *front* seat single drive or a *rear* seat single drive can have his choice of either. All bodies Clear Vision.

The person who wants a worm gear axle will find in the Detroit Electric a new and improved *application* of this well known principle—correctly mounted to insure positive lubrication. This method of power transmission has been used on some of our models in owners' hands in various cities for three seasons.

The purchaser who prefers a bevel gear axle can select a Detroit Electric with our famous true, direct shaft drive (chainless), originated by us and now in its fifth successful season. Both open and closed cars (Clear Vision bodies) are offered.

Greater Values—Lower Prices Because of Larger Production

All 1914 Detroit Electric models will have finer quality, many improvements, longer wheel base, roomier bodies, deeper and wider seats—greater value throughout than it was ever possible to offer before. And the prices will be *lower* than the prices previously asked for cars not as advanced as these.

Increased production, quantity buying, cutting down of distribution expense and improved manufacturing methods make possible not only substantial price reductions, but—even more interesting—substantial increases in *quality.*

This is our policy for 1914: *More* cars, *better* cars, *lower prices.* Detailed announcement of models, specifications and prices will be made later. Meantime, if interested in motor cars of *any kind,* we suggest that you call upon our dealer in your city.

BUFFALO LITHIA SPRINGS WATER

For Uric Acid Diathesis or Lithæmic Conditions, Gout, Rheumatism, Renal Calculi, Stone in the Bladder, Gall Stones, Bright's Disease.

DR. GEO. BEN. JOHNSTON, M.D., LL.D., Richmond, Va., Ex-President Southern Surgical and Gynecological Association, Ex-President Virginia Medical Society and Professor of Gynecology and Abdominal Surgery, Medical College of Virginia: "If I were asked what mineral water has the widest range of usefulness, I would unhesitatingly answer, Buffalo Lithia Water. In Uric Acid Diathesis, Gout, Rheumatism, Lithæmia and the like its action is prompt and lasting. . . . . Almost any case of Pyelitis and Cystitis will be alleviated by it and many cured. I have had evidence of the undoubted Disintegrating, Solvent and Eliminating powers of this water in Renal Calculus, and have known its long-continued use to permanently break up the gravel-forming habit."

DR. J. ALLISON HODGES, President and Professor of Nervous and Mental Diseases, University College of Medicine, Richmond, Va.: "Each year I am more and more impressed with the value of Buffalo Lithia Water, Spring No. 2, in the treatment of that class of diseases dependent upon a Uric Acid Diathesis, Rheumatism, Gout, Urinary Calculus, Vesical Irritations, etc., for I have time and again witnessed its undisputed efficacy in relieving these cases, and in many instances curing them, by disintegrating and eliminating Urinary Calculi when they were present."

Buffalo Lithia Water is sold by all druggists and everywhere mineral waters are sold.

BUFFALO LITHIA SPRINGS WATER Co BUFFALO LITHIA SPRINGS, VIRGINIA

MOTOR-CARS

(*Continued from page* 330)

through them is relied upon to keep their contents cool. When the air is the hottest, evaporation takes place most rapidly, and the water therefore always is refreshingly cool. The bags are hung on the outside of the car, usually from the top brackets.

"In addition to the bags, most tourists prefer to carry vacuum bottles for the drinking water."

Next in importance to the water supply is the spare fuel supply. Arrangements for carrying extra fuel are essential, for it sometimes is a full day's run between points where gasoline may be obtained. Then, too, it is a matter of economy, for gasoline that sells for 45 cents a gallon at a point on the railroad costs 60 cents 75 miles inland, a 3 days' haul for a team. Probably the best arrangement is to fit the running-board with special steel, hinged straps which will clamp over the can. It should be arranged to fit the 5-gallon rectangular tin cases in which much of the western gasoline is sold.

Of equal importance with the fuel supply on a tour of this sort is the food supply. A breakdown on the desert or in the mountain may mean a wait of a day or more before help comes, and it is very comforting at such a time to realize there is plenty of rations in the locker and it will not be necessary to run down a coyote for one's dinner.

Canned foods and dried fruits and dried meats will serve. Everything must be air-tight and of such shape that it will pack away without waste space. An outfit of cooking utensils of the lightest and simplest kind should be amplified by aluminum dishes. Special camping sets are most in favor with experienced tourists, as they are designed to take up least space. Emergency rations in tablet form sometimes are carried as an extra precaution. This all can be packed in a chest strapped on the running-board or in a section of a trunk at the rear. . . . . .

Camping equipment proper can be arranged to take up little space. Light waterproof tents which can be rolled into a bundle four inches in diameter and 30 inches long are most in favor on account of their compactness. These slip into a waterproof cover which keeps them dry and clean. Bedding is simple. It consists of a pair of wool blankets and a rubber blanket for each one in the party.

Clothing must be of the strictly outing variety and of a color and material not affected by the dust. There should be heavy clothing, for the nights, even on the desert, are chill and in the mountains cold enough to freeze up the radiator in July.

Rough clothing for every-day touring can best be carried in waterproof canvas bags known as duffle bags. For dress-up occasions the touring trunk or suitcase rack usually is reserved. A favorite type of waterproof coat is a very light rubber affair which slips over the head—it is more of a shirt than a coat—and collar and wrists fit tightly. To go back to the special equipment needed for the car itself. A first thought is a plentiful supply of spare tubes. It is not necessary to load the car down with more than two extra casings because one is never more than 2 or 3 days from a town where the ordinary sizes of tires may be obtained. Spare parts to carry vary with the car and the versatility of the driver. Rear axle shafts are frequent offenders in the matter of breakdowns and a spare shaft or two often is advisable. An extra spring is one of the spare parts that often is needed and can be carried very nicely under the cross members of the frame or under the running-board apron. Wheel bushings, too, sometimes are needed.

For the sake of the engine it is well to fit some sort of an indicator by which overheating will be shown before the engine gets too hot or too much water is allowed to boil away. The cars on the Hoosier tour all had either one of two different fittings for this purpose.

Most of the carbureters were supplied with a steering column control of the air intake. This was found to be particularly useful in crossing the mountains. The small proportion of oxygen in the atmosphere at altitudes from 8,000 to 12,000 feet made frequent changes in the air adjustment necessary, gradually giving more air as higher altitudes were reached and less air on descent.

Protection of the various parts of the car from the effects of dust and water particularly is necessary. If there is not a permanent waterproof case for the magneto, an oilcloth or leather one is needed.

Lighting facilities must needs be particularly dependable on a transcontinental tour, for night running sometimes is unavoidable. With electric-lighted cars on a long tour, care must be taken that the charging apparatus is regulated properly, because the long steady charge of day running is likely to overcharge the battery.

Oil lanterns, too, are a necessity on a transcontinental tour, for they will be needed in making camp, perhaps in digging a car out of the mud in the middle of the night, etc.

Oil can be obtained wherever gasoline is sold, so that a reserve gallon or so is all that is necessary.

With two exceptions, all of the cars in the tour were equipped with shock absorbers, and the rough country which was covered between Indianapolis and the coast demonstrated their usefulness.

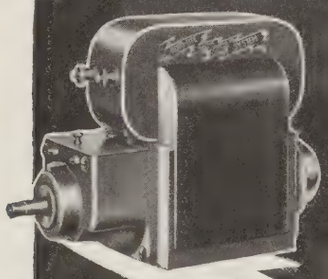
A definite list of the equipment necessary should be made up before the tour is started, so that the tourists will not discover that something important has been omitted when it is too late.

Below is a sample list of equipment which might be followed for a transcontinental tour of four persons.

One touring tent with waterproof cover.
Four pairs of woolen blankets.
Four rubber blankets.
One touring trunk holding four suitcases.
Four 2-gallon water bags.
One running-board chest with aluminum dishes and canned food.
Two vacuum bottles.
Two duffle bags.
Four pair of goggles with amber lenses.
One robe rail bag.
Two spare casings, tubes and tire repairs.
Two jacks and several broad wood blocks to rest them on.
One block and tackle with stout sharpened stake.
One each of spade, ax, and oil lantern.
Spare springs, and other parts with complete set of tools.
Assortment of ignition, lighting and binding wires and straps.
Camphor ice and cold cream.

"AS SURE AS THE WHIRL OF THE WORLD"

THE BIRTH OF A BETTER LIGHT



Built with magneto dimensions - designed to be connected direct to magneto or pump shaft - operates at 6 volts - begins to generate at 200 revolutions per minute - attains maximum output at car speed of 17½ miles per hour.

AUTO-LITE ELECTRIC STARTING and LIGHTING SYSTEM

The AUTO-LITE Electric Generator - a simple, positive, convenient source of current for motor car electric lighting.

YOUR 1914 car should carry the ***Auto-Lite*** system as standard equipment—no matter what price you pay.

Due to its already widespread adoption, car manufacturers can equip with the ***Auto-Lite*** if you so specify.

For the ***manufacturer*** who desires lighting, starting and ignition in one system or separate units, we are able to provide the best recognized equipment now in use.

MOTOR TRUCKS

BONUS SYSTEM FOR TRUCK-DRIVERS

THREE requirements intended to eliminate careless and irresponsible men from the ranks of motor-truck drivers and to make drivers responsible for damages were proposed in a paper read before the Motor-Truck Club of New York recently by Alfred Aram.

One of the suggestions was to require every driver to undergo an examination as to competency and dependability. Another was to have the man's record investigated by a surety company and then require the driver to file a bond with his employer.

From "Motor Age."

FIVE-TON TRUCK CONVERTED INTO A PASSENGER CARRY-ALL AT CONVENTION IN PROVIDENCE.

In the opinion of Windsor T. White, second vice-president of the Automobile Chamber of Commerce and chairman of the commercial-vehicle committee, the author of these suggestions does not seem to have struck the right note. A bonus system by which a driver would receive extra compensation for good care of his truck and long tire mileage would be much more certain to bring the desired results than restrictions which would have a tendency to deter men from going to work as truck-drivers.

If the driving of motor-trucks can be made attractive enough in compensation and otherwise, the competition for positions will be greater and owners will have a choice of the better drivers, thus eliminating the bad ones.

The bonus system is already in use in England and has proved very successful, according to A. E. A. M. Turner, of London, in a report to the *Commercial Vehicle*. Whereas a few years ago the expenses for motor-bus repairs in London were very heavy, and there was a great deal of public complaint regarding the reckless operation of these cumbersome vehicles, there has since been a great improvement in both respects.

Part of this improvement is due to the experience gained by the drivers, but the motor-bus companies and some private business companies have put into practise various plans that offered an incentive to drivers to avoid damages to the vehicles and excessive tire wear. One of these plans is the payment of a bonus of $25 or more to each driver who takes his vehicles through the year successfully, provided the annual or semiannual overhauling shows that it has been handled carefully by the driver. Another plan is to establish an accident-insurance fund, contributing a certain amount—say 12 cents a week—as premium for each driver, and at the end of the year, if he has come through without collision or other avoidable accident, to return the money to him with a small addition representing interest.

Some of the leading tire manufacturers also offer bonuses to drivers who get unusual mileages from their tires. In event of accident, the driver loses his insurance money and the bonus offered by his employer, while unless he handles his machine more carefully, he will have no chance of winning the tire bonus.

The result is that a majority of the drivers are steady, level-headed fellows who are not only intent upon increasing their wages to the extent of the bonuses, but who take personal pride in establishing clean records for the year. Even the best-paid drivers are not indifferent to the additional money to be made in this way.

On the other hand, the bus company or truck-owner is a gainer through the reduced repair bills and increased tire mileage, while the public gains in safety and quiet.

The fundamental idea of the bonus system is to give the driver an incentive in the nature of a reward to do his best, and all parties at interest are benefited, whereas any plan of bonding exacts beforehand a fee for expected carelessness and has a tendency to engender feelings of resentment. The bonus system should be used in conjunction with the establishment of the driver's competency to operate the vehicle and a private inquiry as to character, habits, etc., the same as in hiring an employee for any other position of responsibility.

Drivers have more to do with the success of motor equipment than any other factor. For this reason it is not good economy to hire cheap men or discourage good ones. In establishments where it has been the practise to break horse-drivers in as truck operators, it has been found that the possibility of getting on a truck has been an incentive to better work as horse-drivers, so it is almost certain that rewards for good service on the trucks would be effective. And, inasmuch as one man on a motor-truck can do the equivalent in work of two or three men with horses, the employer can well afford to pay him better wages and offer bonuses for careful driving.

From "Motor."

TRUCK USED IN MARKING ROADS IN CALIFORNIA.

OVERLOADING SOLID TRUCK TIRES

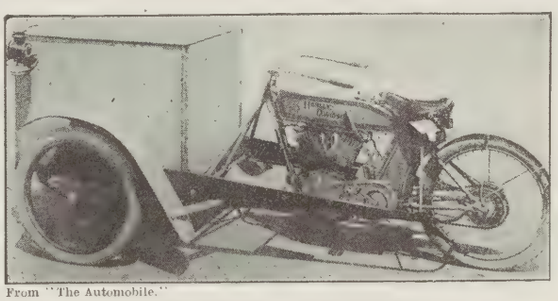
The prime requisites in tire economy are declared by *The Automobile* to be a moderate load and moderate speed, but the average truck-driver does not understand this. To all intents and purposes, a solid rubber tire seems proof against injury, which fact is one of the greatest

(*Continued on page 336*)

From "Motor."

AN AUTO-DRIVEN CEMENT-MIXER.

Motor, in presenting the above illustration, explains that the automobile used to supply the power was purchased by its owner for a nominal sum, the remaining equipment having been purchased from a scrap-pile, his total outlay being thirty dollars.



From "The Automobile."

A THREE-WHEELED CYCLE-TRUCK.

The application of the motor-cycle for the quick delivery of light parcels, particularly in cases where the business would not warrant the purchase of a regular motor-truck, is gaining rapid headway throughout the country.

Garford TRUCKS

Some record truck transactions

DURING the last six months, New York City—the most difficult, exacting, and over-solicited truck market in the world—has purchased over $1,300,000.00 worth of Garford trucks. Listed below are the individual transactions. Over 66% of these sales are repeat orders.

Watson Contracting Co., Fordham, N. Y.,	10 five-ton Garfords	Piel Bros. Brewery, New York City,	6 Garfords, various sizes
Texas Oil Co., New York City,	5 Garford Tank Trucks	Dayton Hedges, Contractor, New York City,	3 six-ton Garfords
New York Police Department,	10 Garford Patrol Wagons	F. L. Cranford, Inc., New York City,	2 ten-ton Garford Tractors
New York Mail Co., New York City,	8 three-ton Garfords	Public Service Corp., Newark, N. J.,	2 two-ton Garfords
Pittsburgh Contracting Co., New York City,	2 six-ton Garfords	Farmers Feed Co., New York City,	2 ten-ton Garford Tractors
Holbrook, Cabot & Rollins Corp., N. Y. C.,	2 ten-ton Garford Tractors	D. W. Kaatze Milk Co., Brooklyn,	1 six-ton Garford
John Bell Co., New York City,	5 six-ton Garfords	Westchester Lighting Co., New York,	1 three-ton Garford
Colwell Lead Co., New York City and Brooklyn,	6 three-ton Garfords	Frazer & Burchenal, New York City,	2 six-ton Garfords
Greenwood Cemetery, Brooklyn,	5 Garfords, various sizes	R. A. Funger Motor Trucking Co., N. J.,	3 six-ton Garfords
Eastern Asphalt Paving Co., New York City,	3 six-ton Garfords	L. Wertheim Coal and Coke Co., N. Y. C.,	1 six-ton Garford
N. J. Ice Cream Co., Newark, N. J.,	3 three-ton Garfords	Monarch Auto Trucking Co., Brooklyn,	2 six-ton Garfords
H. C. Bohack Grocery Co., Brooklyn,	2 five-ton Garfords	Empire State Dairy, Brooklyn,	1 ten-ton Garford Tractor
Cranford Co., Brooklyn,	7 six-ton Garford Tractors	Peter Breidt Brewery, Elizabeth, N. J.,	2 five-ton Garfords
Interboro Brewing Co., Brooklyn,	11 five-ton Garfords	Thos. Wood Sons Coal Co., Brooklyn,	1 six-ton Garford

Such an unusual volume of business is only another indication of Garford efficiency and should make a marked impression on those who are figuring on commercial vehicle equipment.

THE GARFORD COMPANY, ELYRIA, OHIO

Next Week is "Jack-Knife Safety" Week

15,000 Dealers Will Participate in this Big Sales Event — September 1st to 6th

Jack Knife Safety Week—September 1 to 6—is your special time to decide the fountain pen question; 15,000 live dealers will meet the tremendous demand for Parker Pens. Thousands of pens have been shipped to complete assortments. You will find the selection ample. Step in and make a choice next week. *Geo. S. Parker.*

PARKER LUCKY CURVE

Jack-Knife Safety Fountain Pen

Handiest pen made. Writes like a fresh dipped pen—smooth as glass—and can't leak in any pocket or in any position—flat, rightside up or upside down—because of the "Lucky Curve" and the patent vise-like ink lock.

The Lucky Curve

The big idea that removes the leak and makes the Parker the cleanly pen.

FREE TRIAL

During Jack-Knife Safety Week any Dealer will sell you a Parker Pen with "money back" privilege if not satisfactory. We authorize this. Next week 15,000 good stores will be showing the Parker Jack-Knife Safety, Standard and Self-Filling Pens in many styles and sizes at $2.50, $3, $4, $5 and up. If you can't locate a dealer write us.

No. 23½ (ring) $3.25 No. 20 $2.50

MOTOR-TRUCKS

(*Continued from page* 334)

dangers attending its use. There is serious wear and tear on tires when a truck has been overloaded, when hard and quick braking are indulged in, when excessive speed is attained, and when skidding occurs. The writer says:

"Speed is the most important of all the deteriorating influences to which tires are subjected. It has been determined that at an average of 12 miles an hour, the life of a solid tire approximates 10,000 miles, while at an average speed of 20 miles an hour it would be a candidate for the scrap-heap at the end of about 4,000 miles.

"The dangerous effect of overloading can not be overestimated. Tires are constructed to carry certain loads which, if exceeded, will result in premature failure of the tire unit. Rubber comprest beyond its safe limit of elasticity will break down just as any other material will do. Skidding, starting, and stopping, tractive effort, are in the nature of natural causes of wear; in truth, are causes of ordinary abrasion under practically normal conditions. Habitually running in car-tracks has its invariable ill result in a similar manner. For the edge of the tire, the small portion which runs on the rail, is carrying the load intended for the whole tire. A further shearing effect is produced, too, that is most injurious to the tire's fastening.

"The solid tire is essentially a low-speed tire, and when a pace faster than from 15 to 18 miles an hour is maintained the tires are bound to suffer. In the first place, excessive speed generates extreme frictional heat, which in turn produces disintegration. Either the rubber tread will separate from its semihard rubber base or the whole tire will become loosened from the steel foundation, rendering it practically worthless.

"Solid tires are designed by the manufacturer to carry a certain weight, and when the specified limit for each tire is exceeded it is a case of overloading. The effect of this is to break down the tire completely. In a majority of cases it will separate from the steel base."

THE TRUCK IN THE GROCERY BUSINESS

Morris A. Hall contributes to *Motor* a paper showing the efficiency of motor-trucks in increasing effectiveness in areas of delivery for the grocery business. His statements refer to the wholesale as well as the retail trade. Among the interesting facts set forth by him are the following:

"Very recently the writer heard a wholesale grocer from a city in central eastern Massachusetts make the statement that the 3-ton truck which he had purchased had been worth $50,000 to his business in the year. This, he explained, was not alone in the big savings, the advertising value, and the enhanced reputation of being up-to-date, but was mainly in the vastly larger amount of territory in which he could get and hold business, this being made possible only by the much greater speed and endurance of the motor-truck as compared with horses.

"He still uses the horses for retail work, in which he explained they could work a 6-mile circle, but uses the truck for suburban work and deliveries in neighboring cities, in which it has a working radius of more than 9 miles, or can work an 18-mile circle. The area of the 6-mile circle is 28.3 square miles, of the 18-mile circle 254.5 square miles, a gain of 236.2, which on the merchant's own valuation would be worth $212 a square mile to hi n. As the cost was in the neighborhood of $3,000 a year, the actual net gain was $200 a square mile.

"In another business, a test covering three months showed that a small truck could make 25 deliveries a day, these averaging 426 pounds each, at the rate of 17 minutes a delivery and at a cost of 2 cents a mile. In another similar test, against a horse, the motor made 418 deliveries, covering 500 miles in 114 hours, at a total inclusive cost of $8.76. The horse-wagon of equal capacity made 132 deliveries, covering 110 miles in 133 hours at a cost of $7.49. The former is 2 cents a delivery, while the latter figures out to 6 cents each.

"With so many different quantities, it is difficult to make a reasonable comparison, so considering a unit of time as 100 hours, both results may be reduced to this. In 100 hours, the horse would make 99 deliveries, cover 82.6 miles, and cost $5.63. In the same period, the motor would make 366 deliveries, cover 438.5 miles, and cost $7.68. The merchant's gain by the change (in 100 hours) would amount to 267 extra deliveries, covering 355.9 additional miles at a cost of only $2.05. The extra work done, then, considering the horse work at the same cost, as before, would cost but 76 cents a delivery and 57 cents a mile. That is, the merchant can do his usual work at the same cost but at the same time can add deliveries at the rate of three-fourth cent each and miles at the rate of one-half cent each.

"That the light car is successful in retail grocery work is shown beyond dispute by the experience of a prominent Providence, R. I., firm, employing several well-known 3,000-pound wagons. This firm makes deliveries down both sides of Narragansett Bay, two of the long routes being selected for special illustration. These are called, from the towns which they cover mostly, the Warwick and Buttonwoods routes. While the former is but 12 miles and the latter 14 in a direct line, the distances covered by horse averaged 28 and 34 miles a day. Doing distances like these required alternate horses on the next day in both cases, so altho it was a one-horse wagon two horses must be figured in. Starting to load at the store at 7.30 in the morning, the usual time for reaching the stable on the return at night was 10.30. This made a 15-hour day for both horse and driver.

"When the 3,000-pound wagon was put on these two routes, slightly more time was consumed in loading its greater capacity, but the car covered the previous routes twice in a day, once in the morning and once in the afternoon, finishing before 6.30 regularly. The mileages average 78, some days showing as high as 90, others as low as 70. While local conditions are, of course, the determining factor in finding the exact gain offered by motor transportation over the archaic horse-drawn wagons, still the conditions obtaining in this Rhode Island case are near enough to the average to make the findings unusually interesting and significant.

"Summed up, this conversion from horse to motors means delivery to twice as many families, which means approximately double the revenue, covering a greater area twice as frequently, traveling 16 miles a day more (equal to 26 per cent. increase over 2 teams), and doing all this in 11 hours, as compared with 15, a saving of 4 hours, or 26.7 per cent. in time, and at a cost of $14.26 less a day, without capitalizing the better service.

"It is seldom considered the province of the commercial car to compete with the railroad, but that is what a 3-ton truck, in the service of a wholesale grocer of Springfield, Mass., is doing. Northampton is twenty miles from Springfield, with a direct

(*Continued on page* 338)

"His Chauffeur put one over on him"

No wonder Mr. Tire-Trouble-Ridden Motorist was so disgusted that he wanted to sell the car.

Punctures—inner-tube replacements, delays—annoyances without end had been his lot.

But Mrs. Tire-Trouble-Ridden Motorist demanded at least "one more cross country trip," so he pitched in to get ready.

Getting ready consisted largely of telling James—the chauffeur, to buy what was needed, and resolving no matter what happened, to blame it on James.

We see them at their home on their return.

They have been away for over three weeks.

There is a smile on every face.

The car is not going to be sold.

For the whole tour has been one continuous "joy ride"—in the right sense of the word.

Not a puncture have they had.

No delays—despite as bad roads as any car is likely to encounter.

The chauffeur had put one over on Mr. Tire-Trouble-Ridden Motorist—he had equipped the car with

LEE Puncture-Proof Pneumatic TIRES

Regular Tread on Front ***Anti-Skid on Rear Wheels***

These are the tires that every motorist should investigate. They are the only pneumatic tires that *must* protect you against punctures, or you get

A Cash Refund

of every penny that you paid for puncture insurance.

There isn't a single way you can lose.

We guarantee that you will not puncture your tires.

The experience of users who have averaged 6026 miles per tire on 140 tires under the hardest kind of service—without a single puncture or inner-tube replacement—warrants that guarantee.

You must gain, you must get more than your money's worth.

Can you afford to delay longer—when absolute freedom from punctures is yours?

Write today for Descriptive Booklet "L," explaining the Lee Guarantee and the unique steel-disc-in-rubber-cushion construction that makes this tire guarantee possible.

Remarkable testimonial leaflet, too, for the asking.

CAN YOU OPERATE A MOTOR TRUCK?

For the manufacturer or merchant who is interested in the subject of motor commercial vehicles, we maintain a Motor Truck Inquiry Bureau.

The object of this Bureau is to give information and advice to our readers on these questions:

- Can a Motor Truck or Trucks handle my transportation?
- Can Motor Trucks move my goods at less cost than horse-drawn vehicles?
- What make of Truck is best suited to my needs?
- What capacity Trucks would be best suited to my haulage?
- What would be the approximate cost of operation?

If you will give us as complete information as possible on:

- Nature of goods hauled
- Average distance covered
- Average number of loads
- Average weight per load
- Character of roads or streets
- Total investment in horse-drawn vehicles
- And if possible give us the Average operating cost of horse vehicles

We shall be glad to advise you regarding the trucks best suited to your requirements and also put you in touch with traffic engineers who will give you accurate data on motor transportation of your goods. This service is without charge.

MOTOR TRUCK BUREAU

The Literary Digest

MOTOR-TRUCKS

(*Continued from page* 336)

railroad connection. The company does considerable business with retail grocers in the latter town. When these have their goods shipped by rail, the charge is 12 cents a 100 pounds. Added to this is the charge for teaming at both ends. More important than this cost is the delay everywhere; delay in loading and teaming, also unloading, in Springfield; delay in loading the goods into freight-cars; delay in making these cars up into a train and forwarding them."

FIVE-CENT MOTOR-BUSES

The successful operation of ten-cent motor-buses on Fifth Avenue and Riverside Drive, New York, promises soon to be followed by an invasion of five-cent buses, propelled by electricity. Three companies are seeking an opportunity to operate buses of this kind. One of these which has already applied for a franchise, has offered to put into service 1,040 buses and to operate them over twenty different routes, mainly up- and down-town, with plentiful cross-town transfer lines, including three through Central Park. These buses are of the electric-coach model and are the invention of a Swedish engineer. Successful use has already been made of them in some foreign cities. They have four motors—one for each wheel. They are put in charge of women who are called cashiers, instead of conductors. A writer in the New York *Evening Post* explains:

"Passengers enter a bus from the rear, passing the cage of the girl cashier and paying their fares, and leave by a front door, beside the driver. When either of these doors is open, the current is automatically broken, and the bus comes to a standstill. The reason for employing women instead of men as cashiers is that the officers of the company, some of whom are practical transportation men, have been persuaded by experience that women make more courteous and conscientious employees for this kind of work, and so long as the physical requirements for conductors on street-cars are eliminated, nothing could be gained by employing men. The first three girl cashiers have already been selected."

This company proposes to make an initial investment in this enterprise of about $5,000,000. That sum has already been secured. It is claimed that this type of bus does away with all danger of skidding or breakdown. In case one of the motors, or even two of them, should fail to operate, the coach can still be driven by the others.

The scheme of this company is extremely comprehensive, as the number of coaches above-mentioned indicates. The company is prepared to cover the principal thoroughfares of Manhattan from the Battery as far north as 155th Street. Cross-town lines will reach all the principal ferries. Lines will also run to railway terminals, steamship piers, etc. The idea, in fact, contemplates a regular transportation system, with transfer facilities covering the whole borough. Some years ago this type of bus was tried in Philadelphia, but it ceased to operate. The reason has been said to be successful opposition from other transportation interests.

BRAINS SPELL TRUCK SUCCESS

Under this caption an editorial writer in *The Commercial Vehicle* comments as follows on the intelligent, businesslike management of motor-trucks.

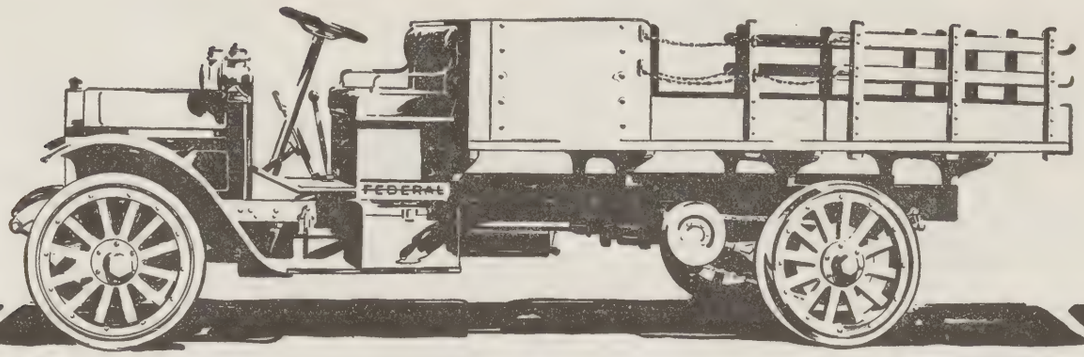
"The Chicago Public Library management has announced that one of its old air-cooled motor-trucks purchased in 1904 has already covered 108,000 miles and that it is still running on a daily schedule with practically as great regularity as any of the most up-to-date railway-trains. Personally we have followed this and other trucks operated by this management for seven or eight years, and the trucks are performing as well to-day as they did then and over practically the same routes and on the same schedules of delivery. These trucks, and there is a fleet of them, are delivering books and collecting same from the various branches of the library scattered throughout the city, their work being on the same basis as that of other Chicago motor-trucks with the exception that these library vehicles use the city boulevards, whereas all other trucks as well as horse freight-wagons are barred from the boulevards. . . . . .

"What the Chicago Public Library can do in truck operation tens of thousands of firms throughout the country can do if they only so determine. They can have their trucks work on a schedule that equals the regularity of our best railway-trains, and they can have these same trucks do their 100,000 miles or more and still be in excellent working condition. But to do it means determination, it means purpose, it means a man for the job. It does not mean putting the truck in the hands of a driver who becomes a law unto himself; it does not mean leaving the operation of the truck up to some shipping-clerk who may be here this year and gone the next; it does not mean leaving the repairing of the truck to some night garage foreman, whose interest centers entirely in his weekly pay-envelop; it does not mean the installation of a go-as-you-please system of operation; but it means real work; it means work every day in the year; it means head work; it means the exercise of gray matter; it means high-priced effort day after day and year after year. It is a long job. It is a hard job. It is not boy play but real man work. . . .

"Making motor-trucks pay is a man's job and not the occupation of a boy or a driver. Outside transportation to-day demands greater intelligence and executive ability than ever before. Do not turn this important position over to an underling, but place it under the direct supervision of one who knows, one who is capable of analyzing existing conditions and one with executive ability enough to work out and build according to the thread of endeavor as developed by the analysis.

"It is too much to expect that each individual house will be able in a few short years to work out its own solution of its transportation problems. Some will succeed; others fail. The truck-maker and dealer must cooperate. They must study the warp and woof of success as obtained by those mercantile houses that have achieved the highest attainments. The dealer must be able to suggest the rudiments of installation, garaging, and maintenance. It is not to be expected that he will work out the finer details, but he should be capable of offering the elements of system. . . . . .

"No matter how perfect the truck is mechanically, it will prove a signal failure if it is not manned by a qualified driver; if not inspected daily by a qualified repairman; and if not operated by a qualified transportation expert, who keeps its idle time down, who arranges schedules to the best advantage, and who has gray matter enough to look upon the truck not as an experimental burden but as a legitimate investment that calls for direction the same as any other department of his business."



One Model, One Purpose, One Price

The FEDERAL

Isn't it a significant fact that *the* successful truck is *the* truck of moderate price? It is The Federal.

The Federal truck has been successful because the Federal Motor Truck Company is sucessful. It is a sound, substantial organization of experienced motor engineers and representative business men. The Federal is successful because every Federal owner and every Federal dealer is satisfied. We have the report and figures to prove that.

The Federal, a 3,000 pound truck, dominant throughout the country, can be manufactured and sold for $1800:

Because the Federal was a demonstrated scientific success before it was offered for sale.

Because we make one model.

Because simplicity of construction, simplicity in the manufacture of parts, enable us to give Federal owners and Federal dealers maximum service at minimum cost to us.

Because the success of the first Federal has enormously increased Federal demand, and that enormous demand has enormously increased Federal production.

Because we buy materials in enormous quantities.

Because—and most important of all—we have specialized in one model, one purpose, one price; concentrated all our factory equipment, energy, experience, capacity and success in the 3,000 pound Federal.

That price—$1800—is the Essence of Federal Success—the Achievement of Federal Specialization.

That is the Reason the Federal is the Most Successful—and the Least Expensive.

PERSONAL GLIMPSES

"THE RED NAPOLEON"

AUGUST BEBEL, the German Social Democratic leader, was pretty generally acknowledged to be the most distinguished Socialist after Karl Marx. His death the other day was mourned by Socialists all over the world, not only because of his greatness as a party leader, but because of his extraordinary personal popularity. It is said, however, that his death will not cause any setback to the Socialist movement in Germany, as the party is well organized and has able leaders who will carry on the fight with the usual vigor. Bebel's somewhat stormy career is reviewed by the New York *Evening Post*, from which we quote:

Ferdinand August Bebel—the "Red Napoleon" he has been called—the leader of the German Socialists, was, notwithstanding the views which made him the idol of the working classes of Germany, a wealthy man. As the uncrowned head of the German Social Democracy, which is the strongest political body numerically in Europe, casting 4,250,000 votes, or enough to give it far and away the largest party representation in the Reichstag, the power he exercised for years in Germany can hardly be exaggerated. It was acknowledgedly second only to the Kaiser's.

Bebel was born in Cologne on February 22, 1840, and while a rich man at the time of his death, he began life as a carpenter and joiner in Leipsic. He was a friend and confidant of Karl Marx and Friedrich Engel. In 1867 he was elected to the North German Parliament, and four years later to the new German Reichstag. In 1872 he was accused, with his friend Liebknecht, of an attempt at high treason, and was condemned to two years' imprisonment, and to nine months for insult to the German Emperor. He was reelected, however, to the Reichstag, and maintained his place there.

At an early date Bebel's political duties left him no time to attend to his business, so he sold out in 1883, and since that time many wealthy friends who have died have left him large sums in their wills. He owned a fine villa in Zurich on the lake shore, where he spent a great part of the year. He also had a small apartment suitable for an artizan in Berlin, at 84 Haupt Strasse, and there he was accessible to every caller of whatever rank or class.

The man himself was thus described by a writer who visited him a couple of years ago in this modest apartment:

"At first sight there is nothing remarkable about Herr Bebel's appearance. He is thin and somewhat below the medium height, and is drest as neatly as any prosperous mechanic is on Sunday. His mustache and pointed beard are silvery white in color, and carefully trimmed, giving him a determined expression about the mouth. Altho seventy years old, he is remarkably lithe and active in all his movements, and appears to be in the best of health. He has a strong, prominent nose

(*Continued on page* 342)

To Save Blow-Outs

On No-Rim-Cut Tires We Spend $1,500 Daily No Other Tire Maker Does That

This "On-Air Cure," — done to save blow-outs — costs us $1,500 daily. And no other maker employs it.

It is one of the three features — used in No-Rim-Cut tires alone — which have saved tire users millions of dollars.

It is one of the three reasons why No-Rim-Cut tires far outsell any other.

All these tires are final-vulcanized on air bags, shaped like inner tubes. They are cured under road conditions.

Cured in this way—on elastic air — the fabric doesn't wrinkle. Every inch shares the strain.

All other tires are vulcanized on iron cores alone. The fabric often buckles. See the picture. This buckled fabric shares no strain, and that leads to countless blow-outs.

Loose Treads

Tread separation near the breaker strip is another costly ruin.

We use for this strip—at the base of the tread—a patent fabric which is woven with hundreds of quarter-inch holes. The tread rubber is forced down through these holes, forming countless rubber rivets. Then the whole tire is vulcanized en masse.

No other tire thus fastens on the tread.

No Rim-Cutting

Then rim-cutting is made impossible by a method which we control.

With clincher tires—the hooked-base tires—rim-cutting ruins almost one tire in three. This is proved by careful statistics gathered by public accountants.

We save all that ruin. And the way we control is the only satisfactory way known to do this.

No Extra Price

In No-Rim-Cut tires you get these three features which no other maker uses. You save blow-outs, save loose treads; and you end rim-cutting completely.

Yet these tires now, because of mammoth output, cost you no extra price. No standard tire made without these features costs less than No-Rim-Cut tires.

That is why No-Rim-Cut tires hold the leadership of Tiredom. No other tire in all the world has nearly so many users.

And you will be one of this army of users when you once make a mileage comparison.

Our dealers are everywhere.

This shows how the fabric wrinkles unless tires are cured on air. This buckled fabric bears no strain at all. That's the main cause of blow-outs.

"TRAVEL MONEY"

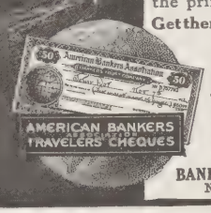
Actual money is unsafe to carry, and you have the annoyance and expense of changing it whenever you pass from one country to another.

The safest, most convenient, most economical form of "travel money" is "A.B.A." Cheques. They are accepted in all parts of the civilized world. They are *safe to carry*, because your signature is required to make them good.

"A.B.A" Cheques

are issued in $10, $20, $50 and $100; each cheque plainly engraved with its exact value in the money of the principal nations.

Get them at your Bank. *If your bank is not yet supplied with them write for booklet and information as to where they can be obtained in your vicinity.*



BANKERS TRUST CO.
New York City

A Popular new book on the Science of EUGENICS

"A popular work on Eugenics in which an appeal is made to the intelligence of ordinary men and women, rather than to the scientific student. The author says it was written in the hope it might help in the erection of 'the national standards of what parenthood and the production of offspring ought to be.' He pleads for more marriages among those biologically and morally fit for parenthood."—*New York Times.*

"A strong and earnest plea for the dignity and duty of parenthood."—Dr. H. S. Pomeroy, Boston, Mass.

The Right of the Child to Be Well Born

By GEORGE E. DAWSON, Ph.D.

Prof. of Psychology, Hartford School of Religious Pedagogy

"The reasonable tone of Dr. Dawson's presentation of his subject, and a total absence of the controversial spirit make this one of the most admirable and informative essays on Eugenics that has appeared as yet in this country."—*The New York Press.*

Puritan Pub. Co., 777 Perry Bldg., Phila., Pa.

PERSONAL GLIMPSES

(*Continued from page* 340)

and a high forehead, but at first it is difficult to believe that this is the man whose will is law to more than three million workmen, and who is the all but absolute boss of one of the greatest political parties in Germany.

"It is strange to think that this man, who is so decidedly unobtrusive in appearance, is the most powerful enemy of the mighty Kaiser, whose martial person is the utmost expression of energy and strength. Herr Bebel's eyes are deep-set and marvelously bright and piercing. They seem to read you through and through, not unkindly, but unerringly. They are full of the fire of intelligence and energy. It is easy to imagine them blazing with almost fanatical enthusiasm, when their owner hurls one of his thundering speeches at the supporters of the German monarchy in the Reichstag, but in private conversation, at least, they are no strangers to the kindlier twinkle of humor and sarcasm."

In addition to his published writings, which are numerous, Bebel enjoyed the highest reputation as an orator. After taking Liebknecht's place at the head of the German Socialists, he successfully opposed in Socialist Congresses at Lubeck and Dresden the tendencies represented by Bernstein, which looked to practical cooperation at given points with the old Liberal parties. Of that he would have none.

For fifty years his denunciations have been unsparing. His magnetic voice and mastery of irony have time and again imprest the Reichstag at government crises. He actively opposed Bismarck's anti-socialist laws, and was often fined and arrested when they were in force. Another move which he hotly contested was the annexation of Alsace and Lorraine, which he called "Bismarck's fatal crime." Some years ago when the aged Von Bülow was stricken with apoplexy under the tongue-lashing Bebel was giving him in the Reichstag, the leader of the Socialists stood with folded arms and sneering smile as the Premier slid limply out of his chair.

A RAILROAD PRESIDENT'S "FEELER"

THE railway executive who disregards the wishes and the opinions of his traveling public is getting to be as old-fashioned as the red-flannel petticoat. He may not be totally extinct, but his type is rapidly being relegated to the place where good old wagons go when they break down. The wide-awake railroad president or general manager knows it is poor policy to allow his company to get on bad terms with the people who pay in the wherewithal, and he never neglects an opportunity to find out what his patrons think of the accommodations he is giving them. One railway head recently hired a young man to do nothing but find out what the patrons are thinking about the service and to report to the main office of the company cases of negligence on the part of employees. The man in the new position is to the railway executive what "whiskers" are to the cat tribe. He is a feeler who warns when there is danger of getting "in bad" with the public. We read about his duties in *The Railway Age Gazette:*

His instructions are to ride up and down the railroad wherever he pleases, get on and off trains wherever fancy suggests, but to keep his eyes open and report to the president by letter whenever he observes anything in connection with the operation of the road which, from the standpoint of the traveling public, seems inexplicable or wrong. If he hears criticisms of the dining-car service, or notices dirty, poorly kept stations, or receives discourteous treatment from employees, or observes any of the little things incident to a railway journey that so often leaves the traveler with a feeling of resentment, he is to sit down and write the president a letter about it. Likewise, if he receives unusually courteous treatment, or notices instances of conspicuously good service, he is likewise to write the president a letter. Every railway, of course, receives reports from its own officers and employees on such matters, as well as many criticisms from patrons. But railway men do not always view such things from the standpoint of the public, while many of the complaints received are written by habitual kickers, who frequently blame the railway for the results of their own negligence, or fail to appreciate the conditions, thus making their statements useless without an independent and often futile post-mortem investigation. The young college man, in his personification of the general public, will, in the circumstances, hardly start out in a captious spirit, or with any preconceived prejudice against the road, and while probably unsophisticated as to the technicalities of railroading, he will naturally be sufficiently imprest with a sense of responsibility to refrain from making criticisms without having been careful to ascertain the facts and conditions. If he is at all observing, the information he will collect will yield a handsome return on the investment involved.

Valor of Ignorance.—Mr. Snibbles got out of bed and slipt on his shoes.

"This must stop," he muttered irritably to his wife. "I'm going down-stairs to teach that young man to keep away from my house in the future."

"John," cried his wife, "stop! Don't go——"

But before she could say more he had slipt out of the door. She heard him steal down-stairs to the drawing-room; she heard sounds of a struggle and of the breaking of glass; she heard him drag his adversary to the hall and kick him down the front steps. Then when he returned she flung herself upon him and clung to him admiringly.

"What's the matter?" he demanded.

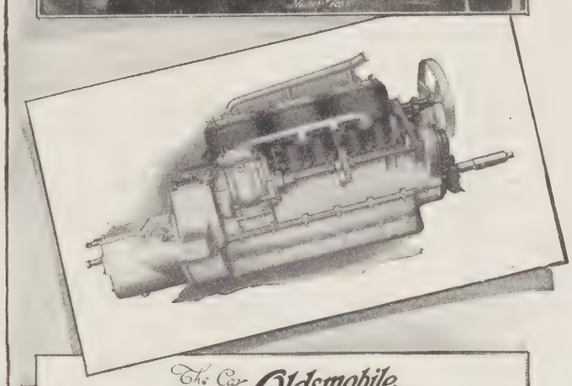
"Don't you know?" she answered. "That was a burglar!"

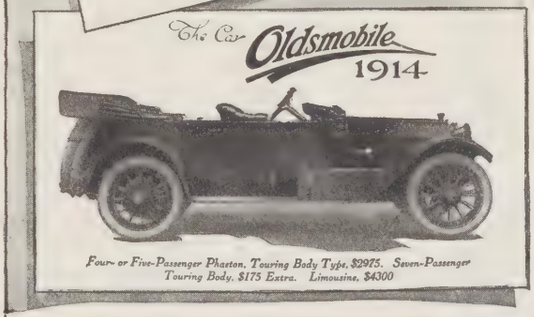
"Great Scott!" he gasped, turning pale. "Why didn't you tell me before? I thought it was Ethel's sweetheart."—*Harper's Magazine.*

Established 1880 Incorporated 1899

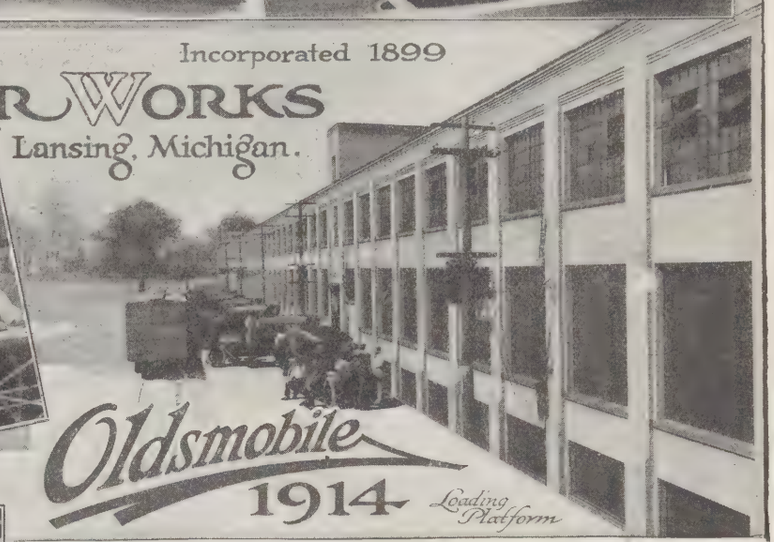
OLDS MOTOR WORKS

Lansing, Michigan.





Four- or Five-Passenger Phaeton, Touring Body Type, $2975. Seven-Passenger Touring Body, $175 Extra. Limousine, $4300



OUR entire sales organization, engineering department and factory managers believe the 1914 Oldsmobile to be the greatest six-cylinder motor car ever produced, and insist upon advertising it as such—there is no other expression which so adequately and truthfully describes the new 1914 Oldsmobile Model 54.

While this new model was not given any extensive publicity until August 1st, the inquiries already received indicate an interest among dealers and prospective owners which has never been quite so keen over any other model in the history of Olds Motor Works.

The facilities for manufacturing this wonderful car are the outgrowth of an experience in the production of gasoline motors which dates from 1880.

One standard which has been maintained through all the years, without a single deviation, is the Oldsmobile standard of quality and finish. This is at once apparent to the casual observer, and is a source of continual satisfaction to owners.

An infinite capacity for taking pains is the distinction between the manufacture of a good car and an inferior one; even though the specifications may read alike in type, hard usage uncovers the difference in actuality.

It is a safe prediction that there will be more Oldsmobile Sixes sold in 1914 than any other car in its class. The reason lies in the Oldsmobile traditions for quality, stability, and power—brought to the point of perfection in the Model 54.

Equipment 1914 Oldsmobile, Model 54.—Combination electric and oil side and tail lamps, special Oldsmobile design. Special design Oldsmobile electric head lamps. Special design three-way adjustable ventilating windshield. Top, boot, and patented adjustable side curtains. 60 miles speedometer. Adjustable stem setting and winding Waltham clock. Rear tire irons, capacity for two tires. Demountable rims, one extra. Imported horse-hair tonneau mat. Noil motor-driven air pump. Famous Delco starting, lighting and ignition system. Electric light in tonneau. Extension electric trouble lamp. Tools, jack. Patented bow separating top holders. Adjustable auxiliary seats in seven-passenger. (Extra at additional cost, wire wheels; special Oldsmobile touring trunk.) Motor: 50 horsepower, six cylinders, unit power plant, three point suspension. Bore 4¼, stroke 5¼. Extreme length of four and five-passenger models, 16 feet. Extreme length of seven-passenger, 17 feet. Springs front, semi-elliptic. Springs rear, ¾ elliptic. Tires, 36 x 5 both front and rear. Gabriel snubbers (rear).

Four- or Five-Passenger Phaeton, Touring Body Type, $2975. Seven-Passenger Touring Body, $175 Extra. Limousine, $4300

OLDS MOTOR WORKS, Lansing, Mich.

The 1914 Oldsmobile can be seen at any of our factory branches, located in all principal cities, and dealers from coast to coast. Catalog sent on request.

THE SPICE OF LIFE

Helping Him.—He (facetiously)—"It's too hot to propose."

SHE—"Not to propose an ice-cream or an automobile ride."—*Boston Transcript.*

No Offense Meant.—STUDE—"I wonder what makes my hair so thick?"

BARBER—"Perhaps it's this going around with your head so much."—*Cornell Widow.*

No Wonder!—"What made the canoe tip over?"

"Cholly carelessly placed his pipe in one side of his mouth."—*Louisville Courier-Journal.*

Well Supplied.—ANXIOUS MISTRESS—"Jane, have you given the fish any fresh water lately?"

JANE—"No, mum. They haven't drank the water I gave them last month yet."—*Puck.*

Business Tip.—RAGMAN—"Any old bottles to-day, mum?"

WOMAN—"No, but you might try Mr. Soakem's next door; his wife's coming back from the seashore to-morrow."—*Boston Transcript.*

Outclassed.—"Did she come to the door when you serenaded her with your mandolin?"

"No; but another fellow came along and brought her out with an auto-horn."—*Louisville Courier-Journal.*

Its Deepest Meaning.—"What does autosuggestion mean?" asked Binks.

"That's when your wife begins to figure out how much you would save in car fare if you had your own machine," replied Jinks.—*Cincinnati Enquirer.*

The Easier Way.—"How did Calkins get the right to stick that 'Hon.' in front of his name? He never was in Congress, was he?"

"No," but he once impersonated a member of Congress over the telephone."—*Buffalo Express.*

Will Resume.—MRS. NEWROCKS—"Dear me. We must leave Paris to-morrow, and we are only up to page nineteen of the guide-book."

MR. NEWROCKS—"Mark the place, and we'll come back next year, and begin at page 20."—*Puck.*

"Hoss" Sense.—A traveler in Indiana noticed that a farmer was having trouble with his horse. It would start, go slowly for a short distance, and then stop again. Thereupon, the farmer would have great difficulty in getting it started. Finally, the traveler approached and asked solicitously:

"Is your horse sick?"

"Not that I know of."

"Is he balky?"

"No, but he is so danged 'fraid I'll say whoa and he won't hear me that he stops every once in a while to listen."—*Saxby's Magazine.*

What Users Say About *Woodworth Treads*

Time savers for a Doctor

I have travelled at all times of day and night, over indescribable roads, and have changed tires just twice this year while on the road. I tell my friends who complain of tire troubles, "Get Woodworth Treads and forget it."

H. M. FRYER, M.D., Riverside, Wash.

"No punctures—always on the go"

I bought two Woodworth Treads from you in 1911, and have run over 8000 miles with them, and they are good yet. I have been running all the year round with the same tires since I put on the Treads, and the tires are just as good as new. No punctures, always on the go with the Woodworth Treads.

PETER KOOPMANN, Fulda, Minn.

Three years—tires still good

I have used one set of your Treads on my auto, and have run them about 5500 miles, with excellent results. I have never had a single puncture in the 5500 miles use. I have had them on my car for three years; I have used them all the time, summer and winter, and the tires are just as good as new as far as being worn is concerned.

CHAS. H. FARIS, Lerna, Ill.

On the Rocky Mountain trails

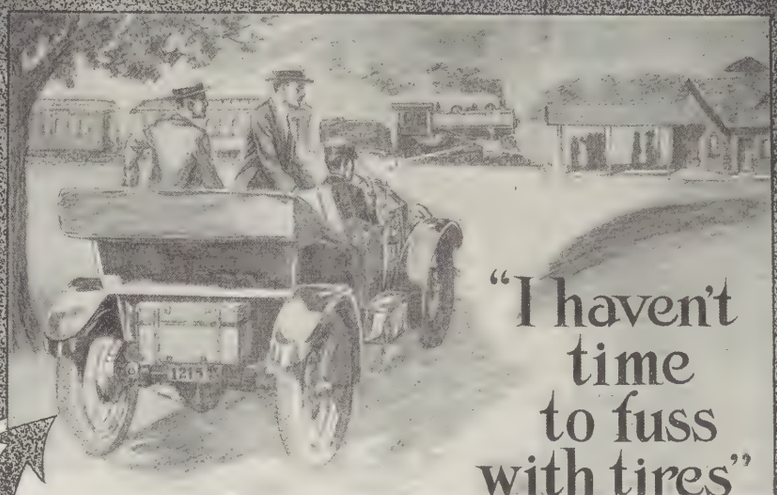
This is the fifth full set of treads I have bought. I have never had a puncture. I have the same casings and the same inner tubes that I got with my car. I have run a little over 13,000 miles over very bad roads, which speaks pretty well for the treads.

CLAYTON RICH, Hebron, Colo.

Saving old tires

Last July you sent me a pair of shoes for 32 x 3½ tires, for a doctor. They were put on old tires that were about worn out. He has run them fully 6000 miles on the same old tires, and bought a new set.

A. C. RICE, Worcester, Mass.



"I haven't time to fuss with tires"

Suppose you *never* had a puncture—*never* had a tire give out prematurely from fabric decay—*never* had to potter with a home vulcanizer or send a tire for repair. Suppose you could just depend on the tires always being ready and never mulcting your pocketbook for neglect! Wouldn't you use your car more than you do now? Couldn't you *afford* to do so?

But you must use pneumatics; and you can't just cover them with anything handy. Tire protectors, like tires, have their natural laws.

The Natural Laws of Tire Protectors

(1) *They must fit tightly.* Loose covers would chafe and damage the tires, just as loose shoes chafe your feet and wear holes in your stockings

(2) *They must be flexible.* Untreated chrome leather would gradually fill with dirt and grow stiff.

Leather and fabric cannot help stretching, even when labeled "tire protector." How then shall looseness and chafing be avoided?

Woodworth Treads

give the answer. They are *not* attached to the rims, but are drawn permanently tight by strong coil springs around each edge. The springs take up all stretch: the Treads are as snug on their last day as their first.

We adopted the patented Woodworth Spring Attachment in 1909, after testing and rejecting all other methods of fastening. Because the springs overcome looseness, the Treads are only thick enough to hold the rivets properly. By a secret process the leather is waterproofed and made permanently soft.

TIRE TROUBLES BANISHED

Woodworth Treads eliminate punctures, cuts and road wear—the greatest nuisances of motoring. They prevent skidding, and are not affected by road oil. They give new tires a life of from 10,000 to 20,000 miles, without repairs or attention. They cost less than nothing in the end, because of the added life of the tires.

WE GUARANTEE

Woodworth Treads not to injure the tires, and we will repair or replace free any tire so damaged. We guarantee them to outlast any other style of protector; and we will refund the full purchase price within 60 days after purchase on any pair that does not do all we claim.

Woodworth Treads are sold by all the large supply houses. If not convenient to order of them or of your dealer, we will ship direct, express prepaid.

BEGIN NOW to eliminate tire troubles! Fall roads are wet and slippery; icy winter roads are hard on tires. With Woodworth Treads instead of chains, your non-skids are always in place, and your tires saved.

Write your name and address on the margin of this page, and mail to us for a booklet on tire preservation, useful to any motorist.

LEATHER TIRE GOODS CO.
2006 Whirlpool Street
NIAGARA FALLS, N.Y.

THE TIRE COVER THAT DOES NOT CHAFE

Let that NEW Cow be a Jersey

To own your own cow, and that cow a Jersey, has been the expressed wish of almost everyone who likes milk and has had to buy it. It is being realized more and more by those who have a place for a cow.

A Jersey cow and Jersey milk are the conceded standards by which all others are compared.

Perhaps you are figuring on buying a cow. A Jersey will give you the most milk and the richest milk, the most butter and the best butter, at the least cost for feed. For a hundred years the Jersey has been bred as a family cow. She is gentle, healthy, and easy to manage.

While you are "taking" milk, it will pay you to look up a Jersey dairy. If you want some facts on Jerseys and Jersey milk, write us.

"Jerseys—always."

The AMERICAN JERSEY CATTLE CLUB
324 W. 23d St., New York City

The Walled City

By EDWARD H. WILLIAMS, M.D.

A book unlike any other for general reading.

The author says in his introduction: "So far as I am aware no true story of the life of the insane criminal has ever been written for the general public. It has been told in a technical manner, of course, for the benefit of those interested in the scientific and sociological aspect of the subject, but such writings have little popular interest, and do not convey a correct picture to the mind of the average reader." This book is

A *Story* of The Criminal Insane

which describes and pictures the everyday life of those within the Walled City—any Hospital for the sick-minded of criminal tendencies.

Brims with humor and anecdote; shows the varied methods of amusement; recites many stirring efforts to escape; tells of types, of social position, of the law's outreach, the shortcomings of rulers, injustice, etc., etc.

Marriage and Its Advantages. Age at Which to Marry. Law of Choice. Love Analysed. Qualities One Should Avoid in Choosing. Anatomy of Reproduction. Amativeness: Continence. Children. Genius.

Conception. Pregnancy. Confinement. Nursing. How a Happy Married Life is Secured.

Descriptive circular giving full and complete table of contents mailed FREE.

Special Offer

The regular price is $3.00. In order to introduce this work into as many neighborhoods as possible we will, for a limited time, send one copy only to any reader of this Magazine, **postpaid, upon receipt of $2.00.**

J. S. Ogilvie Publishing Co., 57-I Rose Street New York City

Their Job.—WILLIE—"Paw, what is a jury?"

PAW—"A body of men organized to find out who has the best lawyer, my son."—*Cincinnati Enquirer.*

Putting it Clearly.—"Rastus, what's a alibi?"

"Dat's provin' dat yoh was at a prayer-meetin' whar yoh wasn't, in order to show dat yoh wasn't at de crap-game whar yoh was."—*Life.*

More Interesting.—"I see that the new British ambassador's name is Spring-Rice," said Bildad.

"Well, what of it?" growled old Money-bags. "What interests me is September wheat."—*Judge.*

Sleuthing.—"I asked her if her husband smoked," said the woman with an inquiring mind; "and what do you think! She said she didn't know!"

"I don't see what difference it makes to you."

"Oh, I don't care whether he smokes. I wanted to find out if he kisses her."—*Washington Star.*

A Humane Mayor.—The mayor of a little commune in the Pyrenees has just issued the following decree: "Whereas the young people of the commune are wont to meet and dance every Sunday after mass, and the noise they make frightens the cocks, hens, and other animals of the village, and whereas the result is prejudicial to agriculture; we hereby prohibit dancing within the bounds of the commune during the hours in which the domestic animals take their repose."—*Westminster Gazette.*

A Boy with a Future.—"Ma," exclaimed young Teddy, bursting into the house, "Mrs. Johnson said she would give me a penny if I told her what you said about her."

"I never heard of such a thing!" said his mother indignantly. "You're a very good boy not to have told! I wouldn't have her think I even mentioned her. Here's an apple, sonny, for being such a wise little lad."

"I should think I am, ma! When she showed me the penny I told her that what you said was something awful and worth sixpence at least!"—*Answers.*

Preferred the Bear.—A gentleman from the North was enjoying the excitement of a bear hunt down in Mississippi. The bear was surrounded in a small cane thicket. The dogs could not get the bear out, and the planter who was at the head of the hunt called to one of the negroes.

"Sam, go in there and get that bear out."

The negro hesitated for a moment and then plunged into the cane. A few moments later the negro, the bear, and the dogs were rolling upon the ground outside. After the hunt was over the visitor said to the negro:

"Were you not afraid to go into that thicket with that bear?"

"Cap'n," replied the negro, "it was jest dis way: I neber had met dat b'ar, but I was pussonally 'quainted wid de old boss, so I jest naturally took dat b'ar."—*Montreal Herald.*

CURRENT EVENTS

Foreign

August 14.—England refuses to release China from her obligation to buy more opium from India.

August 16.—Germany decides not to participate in the Panama-Pacific Exposition at San Francisco.

A Caracas dispatch says the Castro rebellion has been checked.

August 17.—Twenty thousand Socialists, including representatives of the party from most of the countries of the world, attend the funeral of August Bebel, the German Socialist leader, at Zurich.

August 18.—Venezuelan Government troops capture Coro, the stronghold of the Castro rebels, after a fierce battle.

The 83d birthday of Emperor Franz Josef is celebrated with festivity throughout Austria and Hungary.

August 19.—Nearly 200 persons are killed or injured in Mexico City when a carload of dynamite explodes following a collision with a telegraph pole.

The Kongkong agents of the Krupp Company obtain concession for a 250-mile railway in Yunan, China, a monopoly for 20 years on Government contracts for arms and ammunition, and extensive mining privileges.

August 20.—The Twentieth Universal Peace Congress at The Hague adopts a resolution recommending that the Panama Canal tolls controversy between Great Britain and the United States be referred to The Hague Court of Arbitration.

A Milan dispatch says Mt. Numzkum, a Himalayan peak 22,000 feet high, has been scaled for the first time by Dr. Mario Piacenza, an Italian Alpinist.

Domestic

WASHINGTON

August 14.—President Wilson instructs Ambassador Page to express regret to Great Britain for Ambassador Wilson's statements on the Mexican situation.

August 16.—The Department of Agriculture reports that the decrease in the number of cattle in the United States since 1907 has been 16,000,000.

August 19.—Amendments to the original Democratic free-sugar schedule of the Tariff Bill are defeated in the Senate.

August 20.—Postmaster-General Burleson orders the sale of one-cent parcel-post stamps discontinued because they resemble two-cent stamps, and the Government is cheated by persons using them on first-class mail.

Representative Francis Burton Harrison, of New York City, is nominated by President Wilson to be Governor of the Philippines.

GENERAL

August 14.—The San Francisco *Call* is purchased of W. W. Chapin by M. H. De Young, owner of the San Francisco *Chronicle*, and will be discontinued.

In response to a call by Governor Majors, about fifty thousand men volunteer to work two days on the country roads of Missouri.

August 15.—The Federal Government abandons its suit in the District Court at New York for the dissolution of the Periodical Clearing House under the Sherman Antitrust Law.

August 16.—A serious drought in parts of Missouri, Kansas, and Oklahoma is partially broken by light rains. Thirteen days of excessive heat is said to have damaged crops to the extent of many millions.

August 17.—Thirty-two persons are drowned when the steamer *State of California* sinks off the Alaskan coast.

Cautious.—A negro woman in Savannah was preparing to get married. For four weeks before the ceremony she saved her wages and immediately after the wedding she hunted up her mistress and asked her to take charge of the fund.

"I'll take it, of course," said the puzzled woman, "but, Mandy, won't you need money to spend on your honeymoon?"

"Miss May," said the bride, "does you think I'se goin' to trust myself wid a strange niggah an' all dat money on me?"—*Jones's Magazine.*

Funk & Wagnalls Company, Publishers, New York and London

"I count my knowledge of Socialism as my most priceless intellectual treasure."—Upton Sinclair.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnalls Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"H. B. A.," Ft. Lupton, Colo.—"Is the following use of *every place* correct? 'I have searched *every place* for it.' Is not *everywhere* better? Is it ever correct to use *every place* without a preposition?"

One meaning of the word *search* is "to explore thoroughly"; as, "to search the premises." In this sense one may say "search the place," "search every place." But here *place* has a somewhat more concrete application than in the sentence you quote. Your sentence should run: "I have searched for it *in* every place (searched *everywhere*)." It would not be correct to use *every place* without a preposition in such a sentence as "You meet them *every place*." Say, "*in* every place" or "everywhere."

"C. E. P.," Prescott, Ariz.—(1) "Kindly indicate the proper plurals of the words *dozen* and *pair*. Should one say 'two dozen of eggs' or 'two dozens of eggs'; 'two pair of stockings' or 'two pairs of stockings'? (2) In the word *houses* (plural of *house*) should the first 's' be given the sound of 's' or 'z'? Is there any dictionary that gives authoritative decisions on points like the above?"

(1) In its section on Faulty Diction (p. 2372 of the 1911 edition), under the term *plurals*, the STANDARD DICTIONARY says: "Certain words denoting a quantity, measure, weight, or the like, are used in the singular after a numerical adjective; as, *brace, couple, dozen, grass, head, pair, score, yoke*. We say, 'three *dozen* eggs'; 'twenty *head* of cattle'; 'five *yoke* of oxen.' The number of words so used is much less than formerly, and tends to diminish; three *pairs* of shoes would by many persons be preferred to three *pair*." (2) Both *s*'s in *houses* are pronounced with the sound of *z*. The STANDARD DICTIONARY gives this information.

"E. P.," Surrey, Cal.—"Kindly inform me who *Queen Mab* is, and in what literary production she figures."

Queen Mab is best known to English readers from Mercutio's speech in Act I, Scene iv, of Shakespeare's "Romeo and Juliet." That speech tells who she is: "she is the fairies' midwife." Shelley, in his poem "Queen Mab," assigns her a wider sphere.

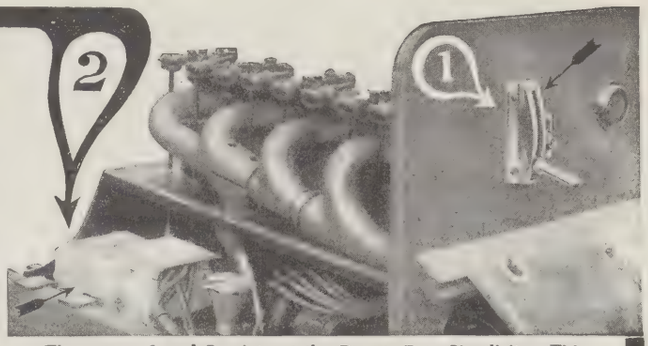
"G. W. J.," McAlpin, W. Va.—"Kindly tell me if the following sentences are correct: 'We are *getting* company for dinner on Sunday'; 'I don't have enough butter for breakfast.'"

Your first sentence is not correct; *getting* is not thus used. One should say, "We are *to have* company at dinner," or "we shall have." In your second sentence, it would be better to say "haven't" instead of "don't have." "We don't have" is not incorrect in "We don't have cream with our coffee"—that is, it is our custom not to have cream. But if on a given day we should be without cream, we should say, "we *haven't* cream with (or *for*) our coffee to-day." "In our boarding school the food is good, but we *don't have* butter enough" (the customary thing not to have enough); but "we *haven't* butter enough (for a given occasion)."

"H. A. S.," Mayburg, Pa.—"(1) Are both 'resawed' and 'resawn' correct for the perfect participle of 'resaw'? (2) Is the sentence, 'We can not fill your order for the reason that we do not carry that grade of goods in stock,' good English, and is it correctly punctuated? (3) Is it correct to begin a sentence with the word 'also'? Should the word be separated from the rest of the sentence by a comma?"

(1) Both *sawed* and *sawn* are in use as the past participle of the verb *to saw*. (2) The sentence is correct; but it would be better to say *because* instead of *for the reason that*. A simpler expression, if otherwise adequate, is always a better expression. (3) It is not commendable to begin a sentence with *also;* a better position can be found for the word—a position which will make its application more clear and effective.

KICK the Switch On and Leave It On



The arrows 1 and 2 point out the Dyneto-Entz Simplicity. This simplicity makes installation possible on old cars; pleasure or commercial. Ask your garage man.

No Plug. No battery or magneto switch to bother with. Just *one* control. The Dyneto-Entz spins the engine. She can't help starting every time. And she never stops till you throw switch off. When the engine speeds up, the Dyneto-Entz turns from a motor into a generator and recharges the storage battery. When the engine speed drops to a point where it is liable to stall, the Dyneto-Entz turns from a generator into a motor and *absolutely prevents stalling.* This change takes place without any action on the part of the driver as long as the switch is left on.

Dyneto-Entz

TRADE MARK

ELECTRIC STARTER and LIGHTING SYSTEM

For All Pleasure Cars and Commercial Trucks

A Single Unit

The Dyneto-Entz is a generator and a motor combined in one motor-generator with but one moving part—the armature of special design, moving in a magnetic field so designed that no possible damage can be done to either starter or battery no matter how fast the engine is running.

Most self-starting and lighting systems consist of a separate motor and a separate generator with necessary extra wiring and controls.

Single Control

The Dyneto-Entz requires only one control, the knife switch at the dash; —no ammeters, voltmeters, solenoids, gears, extra coils or controls of any kind.

Compact Storage Battery

The storage battery is of high efficiency that cannot be injured by over-charging. It may be charged continually when the motor is running.

There is ample power in this storage battery to operate all lights and starter at the same time. This battery will carry full lamp load 35 hours; side and tail lights alone 100 hours.

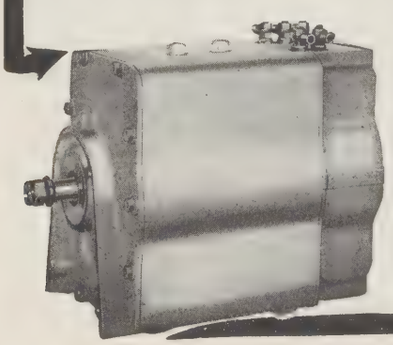
Powerful Lighting System

The Dyneto-Entz Lighting System is as simple as the starter. It is entirely independent. The lights are operated by button switches on the heel board of the driver's seat. Simple, small size wiring.

Simplicity That Means Economy

Think what the simplicity of the Dyneto-Entz System will mean to you on your car. Never a stalled engine, never a weak light, never any heart-breaking work at the crank. The cost of maintenance is practically nil.

SIMPLICITY OF ONE UNIT—AN ELECTRIC MOTOR AND GENERATOR COMBINED INSTEAD OF SEPARATE UNITS. SIMPLICITY OF A HIGHLY EFFICIENT STORAGE BATTERY THAT CANNOT BE OVER-CHARGED. SIMPLICITY OF WIRING. SIMPLICITY OF CONTROL, AND CORRESPONDING SIMPLICITY IN UP-KEEP.



Owners of Motor Trucks

This simple unit is as rigid as the frame of your car. Easily installed on old or new trucks by garage men or manufacturers. Don't let your drivers leave engine running when unloading. Keep up-keep cost down.

Owners of Pleasure Cars

Garage men and mechanics have made installation for individuals on Cadillac, Stoddard-Dayton, Pierce, Peerless, Chalmers, Lozier and other cars. If the Dyneto-Entz can be placed on your car it will give perfect satisfaction. Any manufacturer can place it on a new car.

DYNETO-ENTZ is Standard Equipment on Franklin and White Cars. With the Dyneto-Entz on your car, you cannot stall the engine. Write for booklet and full particulars.

DYNETO ELECTRIC CO., Dept. D, Syracuse, N.Y.

Entire Plant devoted to the manufacture of Electric Starting and Lighting Systems

Sales Agent: T. J. WETZEL, 17 W. 42d St., New York City

6% BONDS

The security is real estate and a modern fireproof store and office building in the center of a prosperous, growing city.

The value of land alone is over 80% of the amount of the bond issue.

The total value of security is nearly twice entire bond issue.

The building is being erected to meet a known demand and will be occupied largely by companies controlled by the owners of the property.

Earnings will show substantial surplus over principal and interest requirements.

All leases will be assigned to the Trustee.

The ownership is in unusually strong hands.

INVESTMENTS AND FINANCE

PUBLIC-SERVICE BONDS

IN the judgment of H. Prentiss Taylor public-service bonds are growing in prestige beyond any others. He writes at length of them in *Investments*. These bonds, he says, "are to-day enjoying marked favor among judicious investors." A careful study of fluctuations for various classes of securities during recent years discloses abundant grounds for partiality toward them. While wise discrimination is necessary when buying, experience shows that they give greater promise of satisfactory yield and a favorable market than do bonds of railroads or industrial corporations.

All things considered, Mr. Taylor finds that even municipal bonds have not proved as generally satisfactory as public utilities. In fact, in their power to resist a general downward tendency, they "have almost seemed to be in a class by themselves." Statistics show that, while twenty-five standard railroad bonds went down an average of 5.1 points in the year ending May 1, 1913, the average decline in twenty-six public utility bonds in the same period was only 1.54 points. When railroad and industrial stocks are considered, the declines are found to have been even greater. Hence the showing is still more favorable to utility bonds. Twenty-one standard railroad stocks in the same year declined an average of 13.75 points, while twenty-seven industrial stocks declined an average of 17.18. Public-service stocks also stood up better than railway stocks or bonds, or industrial stocks or bonds. The average decline of twenty-two such stocks was only 2.72 points.

There are several reasons for stability in public-service bonds. In times of depression, the business of railroads and industrial corporations falls off, but there is just about the same amount of gas, electricity, and water consumed then as in good times, and almost as many people ride on trolley-cars. These bonds, therefore, suffer less from periodical reactions in trade than almost any other class of securities. Another point to keep in mind is that, in various States of the Union, public-service commissions carefully watch and regulate utility companies. Many commissions have come to recognize and enforce as a principle the contention that rates for gas, water, and trolley-rides, must not be below the point where a reasonable profit can be secured for capital. Commissions protect investors in another and perhaps more important way by supervising issues of new stocks, and thus prohibiting absolutely the old-time watering processes.

THE PARTNERS AND THE CREDITORS OF CORPORATIONS

The disproportionate relation of bonded indebtedness to capital stock in the St. Louis & San Francisco Railway, which recently passed into the hands of receivers, has been widely commented on as a fundamental source of the road's difficulties. The bonds of this company represented 81 per cent. of the capital; the stock represented only 19 per cent. Had the bonds represented not more than one-half and the stock the other half, a receivership might have been averted, provided the stock had been paying dividends. Once a road defaults on interest, there is nothing left but a resort to the protection of the courts. Dividends, on the other hand, may or may not be paid, according to the will of the boards of directors. Interest, however, must be paid, provided solvency is to continue. As bearing on this question, the *Odd Lot Review* has compiled a little table showing for several railroads the proportion of bondholders (who are the creditors of a road) to the stockholders (who are partners in its ownership); bonds represent debt and stocks equity. Following is the list:

	Bonds	Stocks
Pennsylvania R. R.	30%	70%
Norfolk & Western	47	53
Kansas City Southern	47	53
Chicago & Northwestern	54	46
Southern Railway	54	46
Erie R. R.	54	46
Great Northern	55	45
Atchison, Topeka & Santa Fé	55	45
Chicago, M. & St. Paul	57	43
St. Louis Southwestern	59	41
Missouri, Kansas & Texas	59	41
Baltimore & Ohio	61	39
Missouri Pacific	62	38
Chicago & Alton	66	34
Rock Island	67*	33†
St. Louis & San Francisco	81	19

* Chicago, Rock Island & Pacific Railway bonds.
† Rock Island Co. stock.

It will be seen from this table that the Pennsylvania has the smallest percentage of bonds and the St. Louis & San Francisco the largest. Norfolk & Western and Kansas City Southern rank next as having the smallest percentage of bonds. The Pennsylvania has long been exceptional among roads for its ability to raise money by selling stock to its stockholders. Had it been burdened with a high percentage of bonded debt (that is, with heavy obligations to creditors) it could not have done this.

EXAGGERATED FORTUNES

The appraisal for the inheritance tax early this summer of the estate of D. O. Mills, placing it at $36,000,000, once more called attention to the exaggeration which commonly attends statements made as to the extent of men's fortunes at the time of their death. When Mr. Mills died the amount of his estate was generally estimated at much more than that; some of the estimates made it twice as much. Another recent case of exaggeration was the estate of Edwin Hawley, who, according to popular belief and some newspaper statements, left a fortune of from fifty to sixty million dollars. *The Wall Street Journal*, commenting on the matter, says that when "subjected to the acid test of the appraisers," Mr. Hawley's estate was found to be less than $3,000,000. So again, when James R. Keene died, his fortune was sometimes placed as high as $15,000,000. An authoritative estimate has since given as the correct figures less than $5,000,000. John W. Gates, king of plungers and chief of spectacular operators, was said to have left $40,000,000. The writer in *The Wall*

BELLE ISLE

50-60 Six Cylinder 130 Inch Wheelbase.
Price $2190.00 F. O. B. Detroit.
Top, Top-Boot, Windshield and Stewart-Warner Clock Speedometer $100.00 Extra.

Real car value that **insures Performance, Service, Satisfaction** and **Economy** is not to be secured by wishing nor advertising quality into an automobile any more than real goodness can be legislated into people.

Herewith are some of the things we **USE** and **DON'T USE** which have made and maintained **ABBOTT-DETROIT** reputation.

WE USE

1—**CONTINENTAL STANDARD MOTORS,** to insure power, flexibility, quiet and freedom from engine troubles.
2—**MULTIPLE DISC DRY PLATE CLUTCH,** to save strain on gears and car and make driving more pleasant for the passengers.
3—**Warner Gear Company's Transmission,** because made by high grade gear specialists from **chrome nickel steel,** thoroughly **heat treated** and mounted on **Timken** Long Series **Roller Bearings.**
4—A **drop forged** front **axle** with thoroughly **heat treated spindles** and steering connections mounted on **Timken** Long Series **Roller Bearings** to insure against breakage, when put to the test.
5—A **full floating** flange driven **rear axle,** with **alloy steel, heat treated** drive bars and gears mounted on **Timken** Long Series **Roller Bearings** and **imported Schafer annular bearings,** because they lack friction, are extra strong, very quiet and accessible for adjustment.
6—**Large equalized brakes,** both internal expanding and external contracting, insuring perfect safety when driving in hilly sections, preventing impending collision and lessening greatly the danger of skidding.
7—**Independent dual magneto ignition** to **insure** most **power** and **speed** as well as greatest **freedom from ignition troubles.**
8—An **extra size and quality** of **selected hickory wheel** with bossed spokes in the rear, and varnish finish in natural wood so you may see the real quality that you are getting.

WE DON'T USE

1—**Cheaper** or especially designed **motors** with **smaller bearings,** crank shaft, etc., because they are less satisfactory.
2—A **cone clutch,** even though much less expensive for us to buy, because **it grabs, strains** the balance of the **machinery** and **jerks** the **occupants** of the car.
3—**Carbon steel** gears **not heat treated** and mounted on low priced bearings, because **they chip, strip** and are costly to maintain if put to severe service.
4—An **ordinary** forged or tubular **axle** with **common spindles,** etc., mounted on **cup** and **cone** or **cheaper roller bearings,** because they are too expensive to maintain, besides being unsafe.
5—A **live or** so called **semi** or **half floating rear axle** and **cheaper bearings,** because **they cut down** motor **power** and do not and **cannot give satisfaction** under hard service.
6—**Narrow brake bands** on **small drums, cheap** brake **linings** or **unequalized** brake **assembly,** because they are neither safe nor satisfactory.
7—**Battery ignition** from the electric lighting battery, because while very much cheaper to install, it nevertheless is **less efficient** and **satisfactory** and goes back to ten years ago.
8—**Light** types of **wheels** of **second grade stock** with painted finish, giving less service and making it impossible to determine the quality.

We could continue on through radiator, electric lighting and starting systems, steering gears, universal joints, etc., etc., but the story would be too long.

See our dealer. Get a demonstration and ask any one of our several thousand satisfied users (we will furnish a list), and you will not be satisfied with anything less than an **ABBOTT-DETROIT.**

Let us send you some interesting literature.

Detroit, ABBOTT MOTOR CO. A DETROIT U.S.A. **Mich.,U.S.A.**

The Safety of the Bonds that Savings Banks Buy

State laws governing the investments of Savings Institutions are drawn with a view of limiting the securities which are eligible, to bonds regarding the safety and soundness of which there can be no question.

We number among our clientele throughout the country, Savings Banks, Trustees, and other institutional investors who are restricted to securities conforming to and available under existing statutes.

It follows that considerable attention is given by our organization to the selection of bonds legal in various states.

In view of the nature of the funds demanding legal investment, we are especially exacting in our selections.

Security—Yield—Appreciation—Market—are the salient features to be considered.

Rates for capital, the world over, are now the highest for many years. Because of these conditions, the investor has a rare opportunity to now buy the soundest bonds at prices seldom realized in the past.

Our present offerings of savings bank bonds legal in one or more states vary in yield from 3½% to over 5%.

Send for our booklet, "Savings Bank Bonds—New York State," or special list of bonds available in your state, No. D-6.

INVESTMENTS AND FINANCE

(*Continued from page* 350)

Street Journal understands that this estate has shrunk three-fourths.

It remains to be added that these exaggerations would not have been so great if the owners of the estates had died in boom periods. Mills, Hawley, Keene, and Gates, all died since the panic of 1907. Had they died in 1906, their fortunes, while not equal to the newspaper estimates, would certainly have been very much greater than they are at present prices for securities. "With prices down fifty to one hundred points from the high of 1906," says this writer, "some of the richest men in the world, including New York multi-millionaires whose names are constantly on the public's tongue, find that to-day they are worth not much over half what they were in the year of the Harriman boom."

HEAVY TRANSATLANTIC TRAVEL

The east-bound first-class travel to Europe this season has been notably large since May. After the panic of 1907 there was a sharp drop in the movement, and this, in spite of the cut rates which prevailed in that year. For example, one could go to Europe in that year on the *Adriatic* for $50. It appears that the present year "bids fair to compare most favorably with the record exodus of 1906." So says a writer in *The Wall Street Journal*, who gives the following statistics:

"From January 1 to July 5, inclusive, the transatlantic steamship companies carried 36,013 first-class passengers, the largest in that period since 1907. At the present rate of increase the total shortly bids fair to pass the 40,000 mark. The second-class west-bound movement shows even a greater ratio of increase.

"That steamship companies are quite satisfied with the 1913 tourist movement is evidenced from the following official figures showing the steady growth in east-bound and west-bound first- and second-class movement from January 1 to July 5, since 1908:

	East-bound		West-bound	
	1st Class	2d Class	1st Class	2d Class
1913...	66,394	78,407	36,013	155,022
1912...	64,604	69,499	34,505	127,641
1911...	67,739	73,474	33,982	125,397
1910...	74,978	69,295	34,831	120,035
1909...	65,014	59,187	32,658	95,949
1908...	61,124	65,354	30,332	68,965

"That the foreign laboring element find business conditions in this country good, and chances for employment many, is evidenced by immigration figures and the light outward flow of travel. From January 1 to July 5, inclusive, 733,512 third-class passengers arrived in United States ports, the largest for any corresponding period since the boom days of 1907.

"On the other hand, third-class emigration from January 1 to July 5, at 189,279, was the smallest since 1910, when the total was 155,378. The east- and west-bound alien movement from January 1 to July 5, inclusive, compares for a series of years:

	East-bound	West-bound
1913.....	189,279	733,512
1912.....	197,401	539,268
1911.....	218,071	454,982
1910.....	155,378	647,880
1909.....	133,682	567,730
1908.....	405,723	200,314
Total.....	1,299,534	3,143,686

"From May 31 to July 5, 39,657 third-class passengers landed in this country, as compared with 17,913 during the same period in 1912. Since July 1, 23,542 third-class passengers have come to this country."

PROSPERITY IN ARGENTINA

C. T. Mason, writing in *Hardware Age*, cites the action of the Chicago Association of Commerce in having established a permanent office in Buenos Aires, as notable evidence of the tremendous growth in business now going on in the Argentina. This Chicago Association represents about 4,000 business houses, who have been imprest with the belief that Argentina offers a wonderfully large and growing market for American products. That country within half a century has "developed with astonishing rapidity." More foreign capital has been sent there than to any other part of America, north or south. Great Britain alone is believed to have invested within fifty years $500,000,000. Buenos Aires is fast becoming one of the richest and largest of the world's cities, and aspires with reason to the elegancies of Paris and the business activity of London and New York. Her docking facilities are comparable to those of Hamburg and Liverpool. All this has been due, not so much to activity in Buenos Aires itself, as to the development of the country tributary to it. Mr. Mason says:

"Until 1850, when the country began to emerge from the lethargy of Spanish dominion and from the troublous years of revolutionary distractions, but little advance was affected either in the imports or the exports of Argentina; after that, however, when the country had settled down to a serious consideration of its advantages, its development was rapid. To what degree may best be shown by the following table, which represents its gross business between the years 1870 and 1909:

1870,	exports	and	imports	$76,500,000
1880,	"	"	"	100,500,000
1891,	"	"	"	170,043,000
1900,	"	"	"	268,687,500
1909,	"	"	"	705,009,000

TRADE OF ARGENTINA WITH GREAT BRITAIN, GERMANY, AND THE UNITED STATES, 1905 AND 1909

	1905	
	Imports	Exports
Great Britain.....	$68,391,043	$44,826,670
Germany.....	29,983,927	37,058,221
United States.....	28,920,443	15,717,458
	1909	
	Imports	Exports
Great Britain.....	$99,198,269	$80,745,966
Germany.....	44,555,770	41,353,332
United States.....	43,068,829	20,966,790

"Especially noticeable is the advance made during the period between 1900 and 1909. In this last year the value of the exports amounted to $395,000,000, and that of the imports to $300,000,000, the total being one-sixth that of the United States, with twelve times the population of the Argentine, and exceeding the trade of Canada by fully $1,500,000.

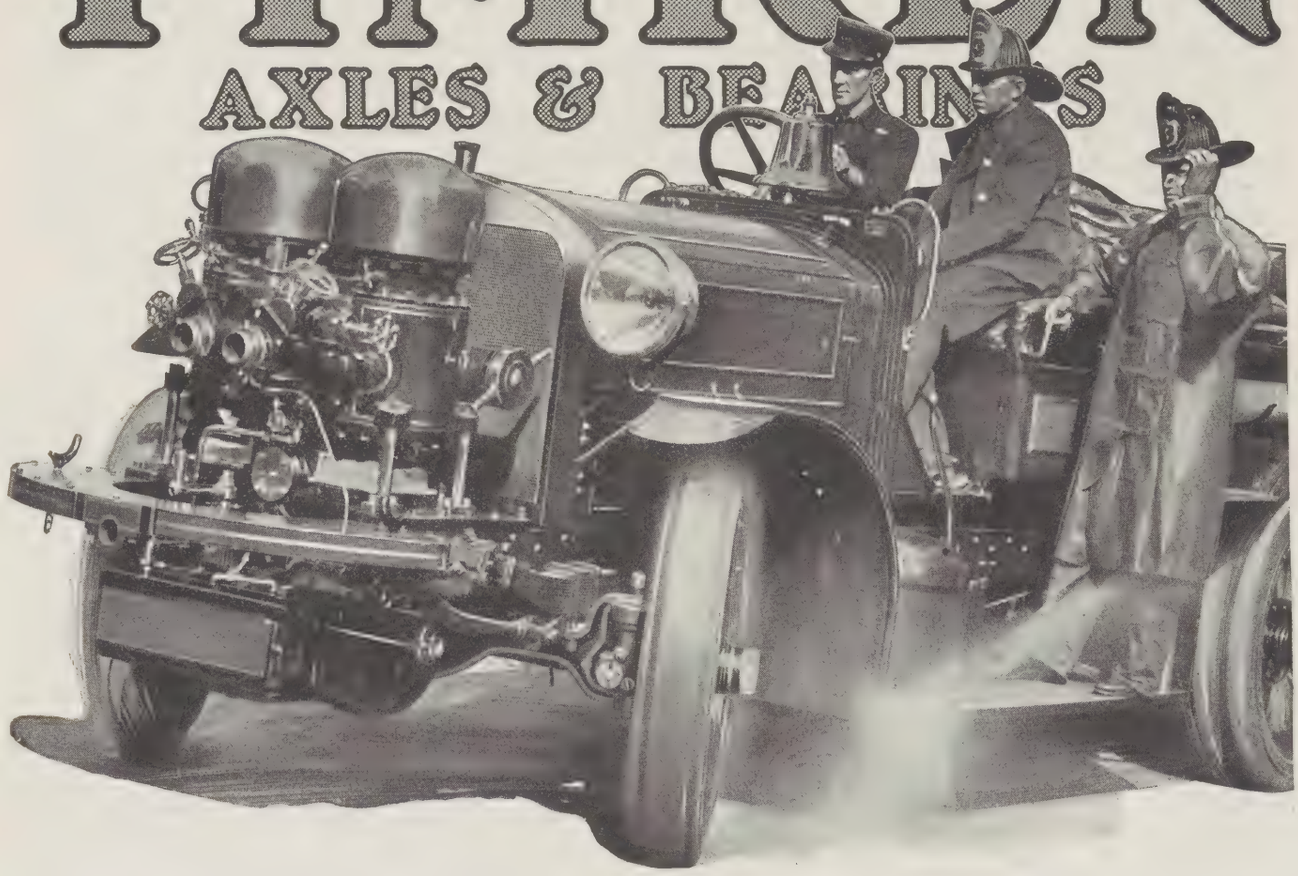
"It is interesting to contrast the Argentine's trade (in the year 1909) with that of Brazil, which had so long been its rival in South American progress. In that year the trade of the Brazilian Republic amounted to $508,000,000, or a superiority in favor of the Argentine of $197,000,000. This is more remarkable, when it is recalled that as recently as 1903 the two Republics were on an equal footing regarding export business, while prior to that year the trade of Brazil, which has three times the population of the Argentine, had been greatly in excess of its southern neighbor.

"It will be remarked that, while the business done by the United States was not as large as that of Germany, the proportional increase has been in favor of the

(*Continued on page* 354)

TIMKEN

AXLES & BEARINGS



Out For Hard Service

CLANG the gong! Clear the streets! Rush over car tracks! Swing round corners! Take the shortest road no matter how rough! Put on full speed—get to the fire!

Human life is at stake—and property—perhaps the whole town.

Weight on the fire truck is heavy—pumps, hose, ladders and men—and speed is of utmost importance. Nothing can cause delay. The fire truck *must* be dependable. And the foundations of dependability are the axles and their bearings.

Wheel bearings are the buffers that meet the intense shocks, stresses and vibration as the massive engine plunges over rough pavements in its dash to the fire.

They must be better than good bearings, they must be the very best. Bearings that will carry tremendous loads, and in *addition* will meet the severe side-pressure when the heavy engine swings suddenly round a corner.

The Timken Tapered Roller Bearing is the one bearing that meets and withstands *both* these forces. That is why practically all successful builders of fire apparatus have adopted Timken Bearings.

The ponderous weight rests, too, on these bridges of heat-treated steel, the axles.

Head on the Timken-Detroit Front Axle meets every shock and jolt. The gears of the Timken Jack-Shaft transmit the power of the huge engine full force to the chains that drive the rear wheels.

Timken Radius Rods take the tremendous thrust between jack-shaft and rear axle. Their swivel connections enable the plunging vehicle to adjust itself to all unevenness of the road. They supply compensation for every stress from every possible direction.

THE TIMKEN ROLLER BEARING CO., CANTON, OHIO
THE TIMKEN-DETROIT AXLE CO., DETROIT, MICH.

TIMKEN-DETROIT axles are designed for the *extra* stresses that emergencies bring. Builders of trucks which have extra hard duty to perform turn naturally to Timken Axles and Bearings. Their uniform success under the most severe conditions of motor-car service—pleasure and commercial—has been unparalleled.

YOU can learn more of what good bearings and axles mean, of what Timken stands for in good motor-car construction, by writing for the Timken Primers, C-7 "On the Care and Character of Bearings," C-8 "On the Anatomy of Automobile Axles."

Buying Bonds for Income

Present market conditions—prices being at unusually low levels—offer an attractive opportunity for the investor who buys bonds primarily for income, with the intention of holding them to maturity. He is chiefly concerned with safety of principal and stability of earning power which assures prompt and regular payment of interest. These two requirements are fulfilled in the bonds of conservatively financed and well-located public utility companies. Earnings of public utility companies are largely independent of financial and industrial depressions, foreign disturbances or changes in the tariff.

Good public utility bonds can be purchased at the present time at prices to yield from 5½% to 6¾%.

We can recommend several issues as attractive investments of their kind.

former country to an encouraging degree. In the total volume of its exports, however, the United States is still far behind its rival, a nation that has put forward all possible effort to secure and hold a large share of the Argentine's trade.

"The following figures pertaining to the importation of machinery, tools, and hardware into Argentina in 1910 are given, viz.: Plows, $1,870,225; harrows, $219,320; seeders, $553,605; shellers, $93,792; reapers, $1,308,265; reaping- and heading-machines, $289,600; headers, $131,690; stripper threshers, $60,030; threshers with or without motors, $995,840; horse rakes, $219,740; other rakes, $8,274; plowshares, $245,436; binder twine, $1,636,066; seed planters, $1,394,383."

CAUSES OF THE YEAR'S DEPRESSION

Opinions as to the primary causes of depression in security prices during the summer of this year are summarized briefly in an editorial article printed in *The Banker's Magazine* for July. While the tariff and currency bills have been much in the public mind, economists and financiers have generally found elsewhere the underlying causes. *The Banker's Magazine* asserts that the chief part of the blame "must be laid upon European disturbances." War in Europe "has not only turned considerable sums aside from the customary channels of investment, but has been responsible for hoarding on a large scale." The seriousness of this war to the United States lay in the fact that there followed a heavy falling off in purchases of American securities by European investors. In this way our means of paying our foreign indebtedness were reduced.

The writer adds, however, that, if our own financial matters had been in better order, "we might have escaped unscathed." It so happened that the unfavorable European conditions were coincident with a disturbed financial and business situation on this side of the Atlantic. A radical reversal of the country's tariff policy led to anxiety and uncertainty such as are always attendant upon readjustments of this kind. At the same time, railroads found it difficult to borrow money on favorable terms and became "greatly concerned as to whether they would be allowed to raise rates to meet enhanced cost of labor and materials."

Defects in our banking and currency system, whether actual or fancied, have been long understood, and contributed "a psychological element of no mean importance." Many people had reached a state of mind where they could not believe the country would ever again have permanent prosperity until the banking and currency system had been thoroughly reformed. A further element was the lavish expenditures of governments and individuals, leading to an era of extravagance, such as had not been known for many decades, and to a menacing reduction of the supply of available capital. The country has stood very much in need of elementary economy.

The writer believes that, by the practise of economy and by the slow return of confidence that will come with the end of the war, of legislation, and of interference with corporations, "the reservoir will be gradually refilled and normal conditions will come again." He finds no signs anywhere of banking weakness. So far as could be judged from the usual indications, banks appeared to be in a strong position. Indeed, one of the causes of low prices in the stock-market was the preparations that had been wisely made by the banks to accumulate funds for moving crops. In this way, the available supply of funds for speculation was curtailed. No signs anywhere could be found of "a bank panic or any other kind of panic." All that could be seen was a period of depression, but that is something "just the reverse of a panic." Panics do not come in times of depression, but "are nearly always the culmination of a period of active trading and speculation."

CONDITIONS IN CANADA

Early in the summer reports from Canada led to anxiety in financial circles here. An era of unexampled prosperity, with much land speculation, had prevailed for some years, and predictions were sometimes made that a serious turn for the worse might come. A Montreal correspondent of *The Wall Street Journal* in July made diligent inquiries of leading bankers and railroad men as to the outlook. He found general testimony as to the tightness of money and the likelihood of its continuance throughout the autumn. Barring calamities such as can not be foreseen, bankers, however, were "satisfied that they had the situation well in hand." On July 1 the banks were less heavily extended than they were in 1907. Funds for legitimate needs were being supplied at an average rate of 6 per cent., "but virtually no money could be secured under any consideration for real-estate transactions or stock-market speculation." The speculation in land which had long been rampant had been checked, but many holders would probably "never see an opportunity to free themselves from their purchases at a profit."

Much of the money which went into this land speculation was British. Since the outbreak of the Balkan War, the British supply has been curtailed, however, because there was a better loan market in Europe than in Canada. It is believed that life insurance companies in Great Britain, Canada, and America have been large lenders, the rate of interest readily obtainable being 7. Probably $300,000,000 would not be an extravagant estimate of the amount of funds lent by these companies. Thoughtful students of the situation believe that good average crops, rather than bumper yields, would be the best thing that could happen this year in Canada, because bumper yields "would mean a renewed outbreak to land speculation." Other interesting points in this correspondent's letter follow:

"Canada is a rapidly growing country, with a large proportion of immigration of a class no other country has ever received. About 30 per cent. of last year's arrivals were from the United States, largely men of experience in the characteristics of farming in the West and with capital sufficient to tide them over lean periods. Of the balance of immigration, a large percentage is superior to the class of immigrant being received elsewhere.

"Estimates of the amount of money brought into the country annually by these arrivals converge around the $200,000,000 mark. This is actual capital brought into the country without any string attached;

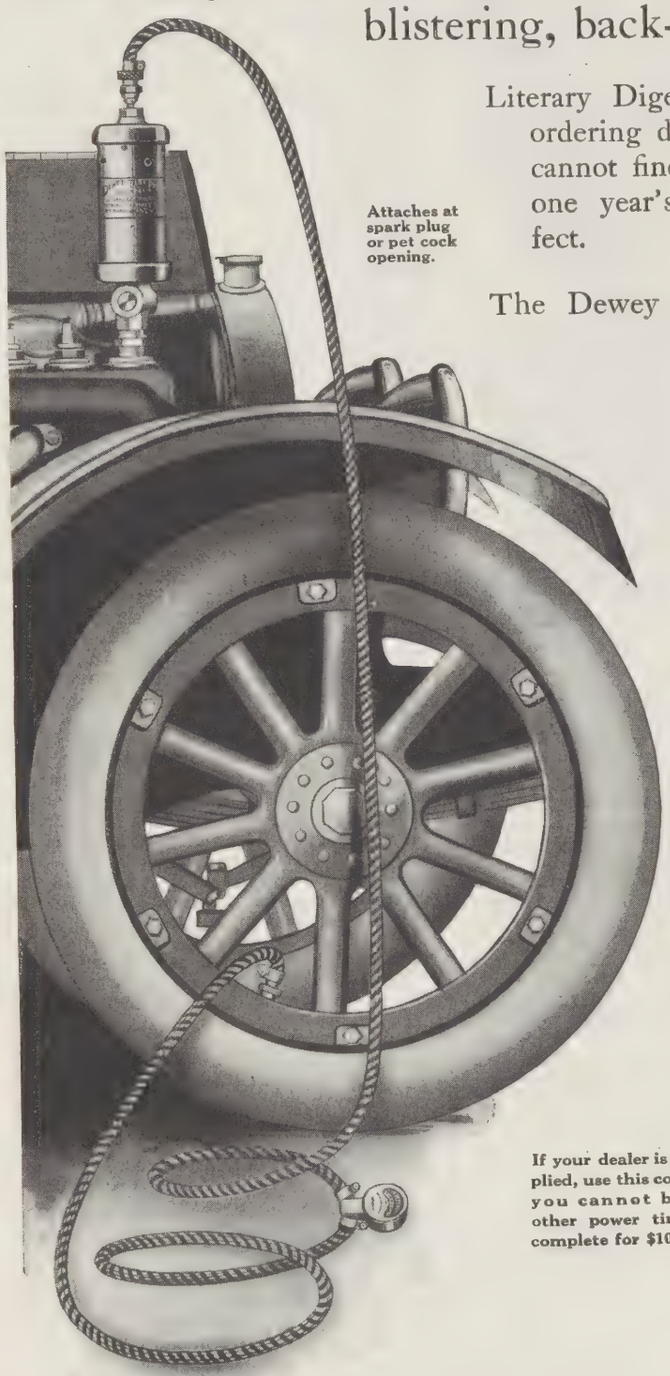
Save Tires and Labor With a Dewey Power Tire Pump

The Dewey insures *exact* inflation. Each pump is furnished with a table attached showing the air pressure demanded by the tire manufacturer as a basis for his guaranty. It inflates any size tire fully and quickly, and does away with the old hand-blistering, back-breaking hand pump.



Attaches at spark plug or pet cock opening.

Literary Digest readers know that they run no risk in ordering direct in reply to this announcement, if they cannot find the Dewey at their dealer's. It is sold on one year's rigid guaranty, covering any possible defect.

The Dewey is the only power tire pump sold *complete* for $10. Price includes Pressure Gauge, 12 ft. of Special Hose tested to 1,000 lbs., Self-Opening Connection and Adapter for any car.

The pump is 12 in. long, of highly polished brass. Weighs only 3½ lbs., and can be carried easily in tool box.

The Dewey is the only pump that is never oiled. It pumps chemically pure air only and can't grease-rot your inner tubes.

Use the Dewey 10 days. If it does not fulfill our claims, send it back collect and we will refund the price.

The DEWEY-ANDERSON CO.

TOLEDO, OHIO

If your dealer is not supplied, use this coupon, as you cannot buy any other power tire pump complete for $10.

THE DEWEY-ANDERSON CO., Toledo, Ohio.

Enclosed please find $10 for which send me one *complete* Dewey Power Tire Pump and Adapter for .....car, under your one year guaranty.

"The Dance of Modern Society"

Every young man and woman should read this book by William Cleaver Wilkinson. He handles without gloves the subjects of health, morality, intellect, etc.

A girl should know the risk she runs in resigning herself to the arms of acquaintances—sometimes chance ones—in the dance.

A man should consider the danger to his manhood in the close association of dancing with—mayhap—designing women.

CONVERSATION

What To Say and How To Say It

A new and widely commended book
By MARY GREER CONKLIN

"People who are perplexed over this necessary but difficult aspect of social life, will find sensible and valuable suggestions in this book."—*The Standard, Chicago, Ill.*

"Books like this perfectly delightful one, simply thrill one with the imaginary joys of conversation, real conversation, not breathless chatter or the martyrdom of enduring having somebody talk when you want to, but a fair and even deal, heart and mind alert, and a companion for whose opinions you really care. This eminently intelligent book has so much that is good sense, and so much valuable advice to give that it warms the heart and stirs the imagination."—*Elizabeth Daingerfield, in the Herald, Lexington, Ky.*

"'Conversation' shows that its author has thought deeply concerning her theme, and followed many lines in her endeavor to ascertain why talk is so seldom worth while." — *Detroit Free Press.*

INVESTMENTS AND FINANCE

(*Continued from page* 354)

no funds have to be sent abroad periodically to pay carrying charges, nor is it a debt which must be liquidated in a term of years.

"To house the additions to Canada's family, to provide means of transportation, streets, sewers, lights, water, and other accessories, millions of dollars' worth of bonds have been sold abroad, the proceeds of which appear in the foreign trade returns in the form of imports.

"The big transcontinental roads are supplied with funds for present needs in so far as the Grand Trunk Pacific and Canadian Northern are concerned, the two having secured together over $30,000,000 from the Government, and for a longer period of time as regards Canadian Pacific, which recently announced a $100,000,000 extension and development program. Prospects are for good average crops, materialization of which assures the railroads of very considerable traffic.

"So long as Canada continues a consuming country rather than a large exporting country—and so long as immigration holds at its present record pace her exportable surplus is bound to be small—her need of funds and materials will continue. Canadian bankers contend that it is better to supply a portion of her needs from foreign factories than for her business men to embark on a wholesale policy of expansion, with its consequent heavy consumption of capital, only to find that they had overreached their market and must wait years for demand to overtake them, if it did overtake them in advance of bankruptcy. Steady conservative expansion involves less capital and sees its market keeping pace with manufacturing capacity.

"While Canadian bankers refer in most caustic terms to real-estate promoters, to whom they apply the epithet parasites, they assert that much of the increase in the price of real estate is justified. Speculation in land they regard as an incident such as would accompany a similar condition of trade activity in any country. In some sections they feel that the advance in realty values is one to which the property is entitled and has been entitled for some years.

"In such prominent centers as Montreal and Toronto, bankers and real estate men agree, advance in prices has not been excessive. If the realty market is not at present active, there has been no slump in prices. In the financial section of Montreal, for instance, land values have doubled in about five years, while in the retail section along St. Catherine Street prices are said to have quadrupled in some cases. On the outskirts of the city buying of property by railroads helped to advance prices, and since the roads have ceased buying there has been some reaction."

THE FUTURE OF COMMERCE ON THE GREAT LAKES

The public is familiar with statistics of the enormous total of commerce on the Great Lakes. Through the locks of the "Soo" Canal has passed for years a volume of freight in excess of that which passed through the Suez Canal. Harry Coulby, a steamship president, of Pittsburg, believes that the growth of commerce on these lakes "will be just as great during the next twenty-five years as it has been in the past." Population is rapidly increasing in the country tributary to the lakes, and notably around Lake Superior. New business for water

(*Continued on page* 358)

Good-bye to Gear Levers

Have complete gear control under your thumb!

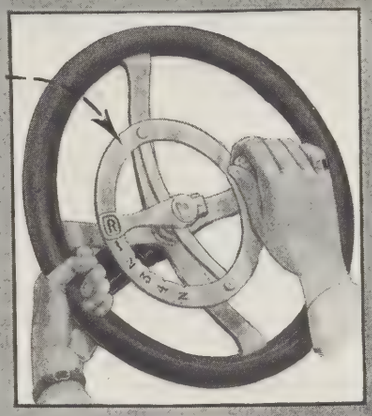
How It Works FIRST—Set the indicator on the wheel for "first speed." Then make one full stroke of clutch pedal. This accomplishes (a) The disengagement of the clutch. (b) The automatic stopping of the transmission shaft. (c) The automatic movement of all gears to neutral position immediately upon the stoppage of the transmission shaft. (d) The opening of the air valve that forces the selected gear into engagement. The return stroke of the pedal engages the clutch and starts car.

SECOND—The indicator is then placed for "second speed," and the clutch pedal depressed, whereupon the same operations take place as indicated for first speed.

THIRD—While in second speed indicate "third," and again make a complete stroke of the clutch pedal. (The four speed control can be had if wanted.)

A lock latch on the indicator obviates the danger of selecting the reverse position when car is moving forward.

Before passing from one speed to another, gears assume neutral position. Does not interfere with gas or spark control.



PICTURED above, at the right, is the Gray Pneumatic Shift which has replaced gear and brake levers.

It is the greatest recent improvement in car efficiency. It means that instead of having to trust speed and safety to levers, you now have complete and constant car control *literally under your thumb.* The "Gray Pneumatic" is right in the center of the steering wheel—either above or below it—*always* within instant thumb-reach.

For cars at present in use with throttle and spark control *above* the steering wheel we supply a selector quadrant which is placed *below* the steering wheel.

It marks the dawn of the *push-button era* in car operation. It has removed the one last great objection known to novice and expert driver alike—of getting into mixups through getting levers confused.

It gives to the youngest driver the assurance of the seasoned expert. Totally obviates all leaning over to grasp and yank levers. Makes it unnecessary to take the eyes off the road when changing speeds.

Does Even More

But the Gray Pneumatic Gear-Shift does even more. It enables you to *pre-set* any desired speed to be traveled at any *predetermined* point of the road. All accomplished *right in front of you* by simply adjusting a small wheel with your thumb. This done, all that then is necessary is to depress the clutch pedal the moment the new speed is desired, *and there it is.*

Whether you wish to go from "first" speed to "second" or "high," or back from "high" to "second" or "first," or if "reverse" is necessary, simply move the button to the required speed-point, and the clutch pedal does the rest.

Gears Can't Strip

The Gray Pneumatic Gear-Shift cannot "lose its head." The indicator is easily read — eliminating all chance of error in changing speeds. Also, when passing from one speed to another, the gears must—MUST—assume "neutral" position. That means no stripping, clashing or injuring of gears, in any way.

What Else It Does

While the prime object of the "Gray Pneumatic System" is to give this infallible speed-control, its utter convenience goes still further: The air supply also furnishes positive power for a rotary self-starter—one that gives you a quick start-off at the touch of a button, without a balk or demur, and is the only successful self-starter we know of that can be applied to a completed car.

Also, it furnishes the ready means of inflating tires and of pneumatically jacking up and cleaning the top and cushions—

All of which, together with the features of speed-control and self-starting, means the utmost in car convenience and comfort.

Quickly Adjusted to Any Car

Whatever your car, old or new, it can be quickly equipped with the "Gray Pneumatic," at any garage. Specify it for your next car without hesitation, for it has won the approval of the best authorities; over two hundred experienced drivers who have used it under all road conditions are loud in its praises.

Nine leading automobile makers have witnessed its successful performance, which means that thousands of 1914 cars will have it. One car, equipped with it, has traveled over twenty-five thousand miles *as a demonstration car*, without any gear troubles whatsoever.

Bring Your Car Up-to-Date

Equip your car with the Gray System and it's *ahead* of all cars not so equipped—because you have equipment which will be used on the advanced 1915 models. Another reason is that it enables your wife and daughters to drive with perfect ease, comfort and safety while you are absent at business. Think what it means to a woman or even to a good driver to absolutely *know* that any gear can be instantly engaged, just by a simple pressure of the foot. Then again the one movement of the clutch pedal not only disengages the clutch but engages the gear at the exact moment the clutch is free.

Send for the Book

Our District Managers or their agents will get a "Gray Pneumatic" for you and equip your car with it in a very short time. Then your car will be lever-free, speed-certain, and proof against gear trouble.

The subject of automatic gear-shift is one that is engaging the attention of the entire automobile industry—a subject that needs a book to tell its many advantages. We have that book! It is free to you if you will fill in and mail the attached coupon to us today.

transportation is constantly springing up there and contributions of growing importance are being made to this commerce by Canada. Three of the northwestern Canadian provinces produced last year 453,000,000 bushels of grain, or slightly more than ten times the amount they produced in 1900. The railroads alone have found themselves unable to transport this volume of freight; hence a resort to the Great Lakes water route to Buffalo, and thence by rail to the seaboard. Already in Canada serious attention is being given to the problem of enlarging the Welland Canal, so that boats from the Great Lakes of large size may pass through it. An estimate shows that the needed improvements would cost about $50,000,000. These improvements would give thirty feet of water and enable ships 300 feet long and 80 feet wide to pass through. Mr. Coulby believes our own Government in time will cooperate with Canada in further improvements, leading eventually to a waterway which will make it possible to load cargoes of grain at the northwestern end of Lake Superior and carry them to Europe in one bottom. He does not believe it possible to make an estimate of any value as to the volume of ore that will eventually be brought down from Lake Superior before the deposits are exhausted.

THE ELECTRIFICATION OF RAILROADS

Railroad managers, looking to the future, are giving much thought to schemes for electrification. Already much work of this sort has been done on the trunk lines for short distances from large cities. Notable among these roads are the New York Central, New Haven, and Long Island. Later enterprises are those which have been undertaken by the Norfolk and Western and St. Paul, in mountain regions where power is derived from running streams. A writer in the New York *Times Annalist* believes the country is "on the eve of big railway electrification." Managers may not be talking of immediate electrification—in fact, they are doing this only in a few instances. The talk in general "shades from mere curiosity to the point of getting advice about economics." A significant sign is the demand which has arisen for engineers who have already been engaged on steam railroad work, but are also skilled as electrical engineers. Among the interesting points set forth by *The Annalist* are the following:

"To do away with the smoke nuisance and the danger of steam locomotives in the half-tunnel, half-open line down into the center of New York, the New York Central and New Haven roads were forced by the local government to give up steam and adopt electricity. The railroads did not at first take kindly to the enforced change. To-day, with the great new terminal practically completed, with hundreds of suburban and distance trains running in and out daily through the two-decked tunnels, you will be told by the railway officials that steam operation into New York with present-day traffic would be impossible, and the nearest approach to satisfactory steam service would require real estate costing fifty times what electrification has cost.

"Because it can get long trains in motion quickly the electric locomotive can work them in and out of a terminal much more efficiently than a steam engine. But that is not the greatest difference in efficiency. The steam locomotive can run only a limited distance without having its fires pulled and an overhauling. The necessary getting about of the locomotive requires an addition to the trackage under the very best conditions. Electrification of a terminal that has reached its maximum capacity with steam locomotives is said to double and even treble its capacity. The steam locomotive has already given up the contest in congested terminal situations.

"Whenever the growth of metropolitan population has caused the capacity of terminals to be taxed, there is always a second reason for electrification; the reason for which the New York Central has electrified its suburban zone and for which all the railways centering at London are adopting the motive power. This comes out of the ability of the electric train to quickly stop and to quickly and smoothly get into motion again.

"The frank reason why the London roads are electrifying is that they must do it to get back traffic lost to the rival subway and omnibus system. The same thing has happened in a number of American situations. The Manhattan Elevated Railway in New York saved itself by electrification. The Long Island Railway met the competition of traction lines and built up a handsome income in the same way. The West Jersey and Sea Shore, owned by the Pennsylvania, turned deficits into profits by electrifying across New Jersey from Philadelphia to the coast resorts. The great steam locomotive has surrendered the operation of great tunnels to the electric locomotive. There

are now 27¼ miles of electrified tunnels on seven American steam railways.

"The fighting ground at the moment in this country between the steam and the electric locomotive is in such mountain situations as the two in which electrification has just won out. There are scores of big situations like them in the United States where similar change of motive power will come within a short time. Here electricity is invading the field of freight haulage, where it was but a short time ago believed that the steam locomotive could never be approached."

THE WORLD'S RAILWAY MILEAGE

Statistics of new railway mileage for all the world indicate that, while the United States leads in actual figures of increase, the relative increase is not greatest here. The statistics come down no later than the year 1911, when activity was great. The total for the world in that year was 17,151 miles, the total mileage in existence for all countries being 665,842. Of the 17,151 miles constructed in 1911 there were built in this country 5,394 miles. As to relative increase, however, it appears that during five years our showing was only 7.3 per cent. of increase, while the increase for the whole world was 10.5 per cent. Of course, all this means that in relative increases, new countries, in which railroads are matters of quite recent years, naturally make the better showings. A writer in the New York *Times Annalist* says in detail:

"In this relative growth, it is interesting to note, the leadership is being taken by railroads of Asia and Africa, and prospects are that in the next few years these continents will be more prominent in the world's mileage expansion. From 1907 to 1911, in comparison with our own gain of 7.3 per cent., Asia increased 15.9 per cent., and Africa 37.3 per cent., the largest relative continental gain in the world.

"Most of Africa's relative gain is due to the roads of the South African Union (Cape Colony, Natal, Central South Africa, and Rhodesia), which expanded 39.9 per cent. in five years, and those of the German colonies, which increased 87.2 per cent. Moreover, the largest relative gain in the world is in Belgian Congo, which grew in five years by 91.1 per cent.

"After Africa and Asia, the largest relative continental gains for five years are Australia with 13.3 per cent., and North and South America with 11.0 per cent. Europe is the smallest, with only 5.6 per cent.

"Only one country in North and South America shows a smaller relative five years' growth than the United States, that being Newfoundland, with only 2.1 per cent. Against our 7.3 per cent. growth, on the other hand, Canada shows 13.1 per cent., Central America 27.2 per cent., the West Indies (Cuba, Dominican Republic, Porto Rico, Haiti, and Jamaica) 35.6 per cent., and the South American countries from 7.8 per cent. in Bolivia to 47.4 per cent. in Paraguay, the largest in the Western Hemisphere. Argentina is a close second with 43.5 per cent.

"As to actual mileage, the rank of the world's nations is unchanged. America possest by far the longest mileage in 1911 with 335,437 miles, of which the United States alone, the foremost railway country of the world, had 246,000 miles. This was 36,000 miles more than all the railroads of Europe, which totaled 210,000 miles. Asia possest 65,000 miles of railroad in 1911; Africa 25,000, and Australia 20,000 miles."

A Magazine of Unusual Value to Investors

The **INVESTORS MAGAZINE,** published by this house, has been greatly increased in size and will henceforth be issued monthly instead of semi-monthly as heretofore. In spite of the fact that no subscription fee is asked for the magazine we have steadfastly endeavored to make each issue of genuine interest and permanent value to every conservative investor.

The increased size of the publication in its new form provides for the addition of new departments and a multiplication of the peculiarly interesting and informative features which have characterized it in the past. Every issue will contain one or more carefully prepared articles by men of prominence in the commercial or financial field, discussing those phases of the investment question upon which they are best qualified to speak with authority.

Experienced investors will appreciate the intelligent, conservative and unprejudiced treatment of the questions in which they are most interested. Those of less experience will find the INVESTORS MAGAZINE an easily understood and thoroughly reliable guide whether their investments be small or large. We will be pleased to add the names of actual investors to our mailing list without any charge or obligation whatever.

6% First Mortgage Bonds

Investors who are anxious to receive the highest possible returns from their capital, consistent with safety, will be interested in becoming fully informed regarding the 5½ and 6% First Mortgage Bonds owned and offered by us. Each issue is secured by a direct first mortgage lien on carefully selected, improved, centrally located real estate of the highest class. In no case is the total bond issue greater than one-half of the conservatively estimated value of the security. The bonds are issued in denominations of $100, $500, $1,000 and $5,000 and mature serially in from two to ten years without any release of the original security.

We call your especial attention to the fact that no investor has ever lost a dollar of either principal or interest on any security purchased of us in the thirty-one years in which we have been engaged in handling this class of investments exclusively.

Think Twice Before Investing

If your money has been accumulated by frugality, or if you are in receipt of funds from a life insurance policy, or if you are dependent upon the income to be derived from your investments, you certainly should demand, over and above everything else, *strong security and prompt interest payment.* Investments possessing these elements to a marked degree will inspire your complete confidence, thus giving you no occasion to worry about the safety of your principal.

Send for Circular 482

NORWALK
UNDERSLUNG
SIX

The Epitome of Engineering Excellence

Theoretical principles are reduced to practical demonstrable construction in the

NORWALK UNDERSLUNG SIX

The perfect conception of stability has always centered upon the unification of the axes of suspension, support and gravity.

Ideal motor power demands smoothness, steadiness, flexibility and reserve, which features have been brought to their maximum realization in the Six Cylinder Motor.

Theorists have conceived the possibilities of starting, lighting, and shifting the gears from power created by the engine itself—and the fertile mind of the practical idealist has made these things actualities.

In such an ideal conveyance, nothing but the very utmost in excellence of material could possibly belong.

And so—

The ideal car of the dreamer has been made the *real* car for the man who appreciates refinement both mechanically and materially.

The Norwalk Underslung Six is the result of the highest attainments of engineering and mechanical genius.

Being electrically controlled throughout and equipped with the

Vulcan Electric Gear Shift

the control of the Norwalk confines itself to the simple operation of pressing buttons and pedals—an attainment never before accomplished except in electric runabouts.

CONSTRUCTION—STABLE AND DURABLE
POWER—ABUNDANT AND FLEXIBLE
EQUIPMENT—LUXURIOUS AND REFINED
PRICE—CONSISTENT WITH VALUE

Write for booklet—ask for demonstration

THE NORWALK MOTOR CAR CO.

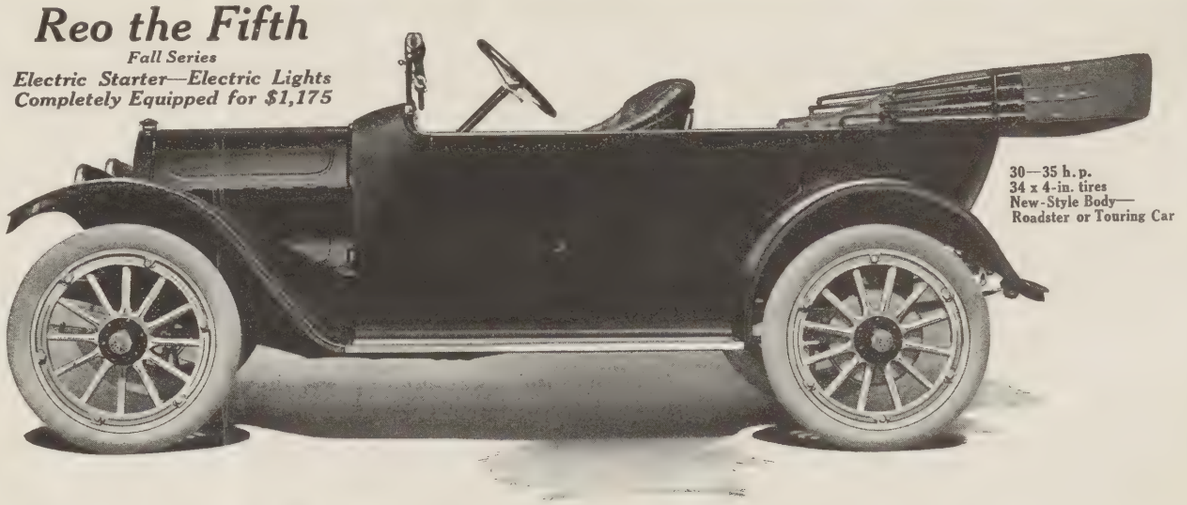
Reo the Fifth

Fall Series
Electric Starter—Electric Lights
Completely Equipped for $1,175



30—35 h. p.
34 x 4-in. tires
New-Style Body—
Roadster or Touring Car

Now $220 Less

Last season's model of Reo the Fifth, with electric starter and complete equipment, sold at $1,395. And the year was our record year, exceeding our previous year by 25 per cent.

Now we have added many improvements. And, without sacrificing one feature, without skimping one part, we are quoting the car at $1,175 complete.

This is how we have done it:

The best electric starters cost much less this year. Our chassis is standardized. Our capacity is largely increased.

All the special machinery, jigs and tools for this chassis have been charged against previous output. These items from now on are wiped out from our cost.

So we offer you now the best car that R. E. Olds ever built. We offer the handsomest car that ever went from this factory. And we offer a price $220 less than a car of this class ever sold for.

This is the greatest innovation which has ever been offered in the history of the Reo concern.

Reo the Fifth with Many Improvements

The New Things

Now comes this car with a new-style body—a low, rakish, low-hung body. A wider body. A cowl-front body with a gondola back—the very latest mode.

The instrument board, with all instruments set flush, is brought within the reach of the operator.

The windshield is ventilating, clear vision and rain vision. The searchlights have dimming attachment. The upholstering is deep and soft.

There's a new-style tire carrier on the back, which also holds the tail light and the number tag in a manner which complies with all laws.

We add an electric horn.

The transmission has been changed in ways which accomplish utter silence.

Electric Starter Electric Lights

Now Reo the Fifth comes completely equipped with all that modern cars require. No extras are needed.

Electric self-starter—electric lights.

Speedometer—windshield—electric horn.

Mohair top curtains and envelope.

Extra demountable rim.

Tools, robe rail, etc.

Our Exclusive One-Rod Control

This car alone has our center rod control. A rod which connects directly with the gears. No outside levers, no connecting links.

The gear shifting is done by moving this rod only three inches in each of four directions. And the rod isn't in the way.

No side levers, no brake levers. Both brakes are operated by foot pedals. The driver's entrance from either side is clear. These appealing features are found in no other car.

Every Feature Retained

We still retain every costly feature which made this car distinctive. It is still the best car R. E. Olds can build, after 26 years' experience.

The steel is twice analyzed, so the strength is made certain. Each vital part, at much added cost, is given 50 per cent overcapacity.

The gears are tested for 75,000 pounds per tooth—the springs for 100,000 vibrations.

The car is over-tired. We use 15 roller bearings and 190 drop forgings. The carburetor is doubly heated.

All the extremes, all the costly precautions which made this car famous are here. All the tests and inspections—all the margins of safety—all the utter exactness. This car is built for low cost of upkeep, and to run year after year as well as it runs when new.

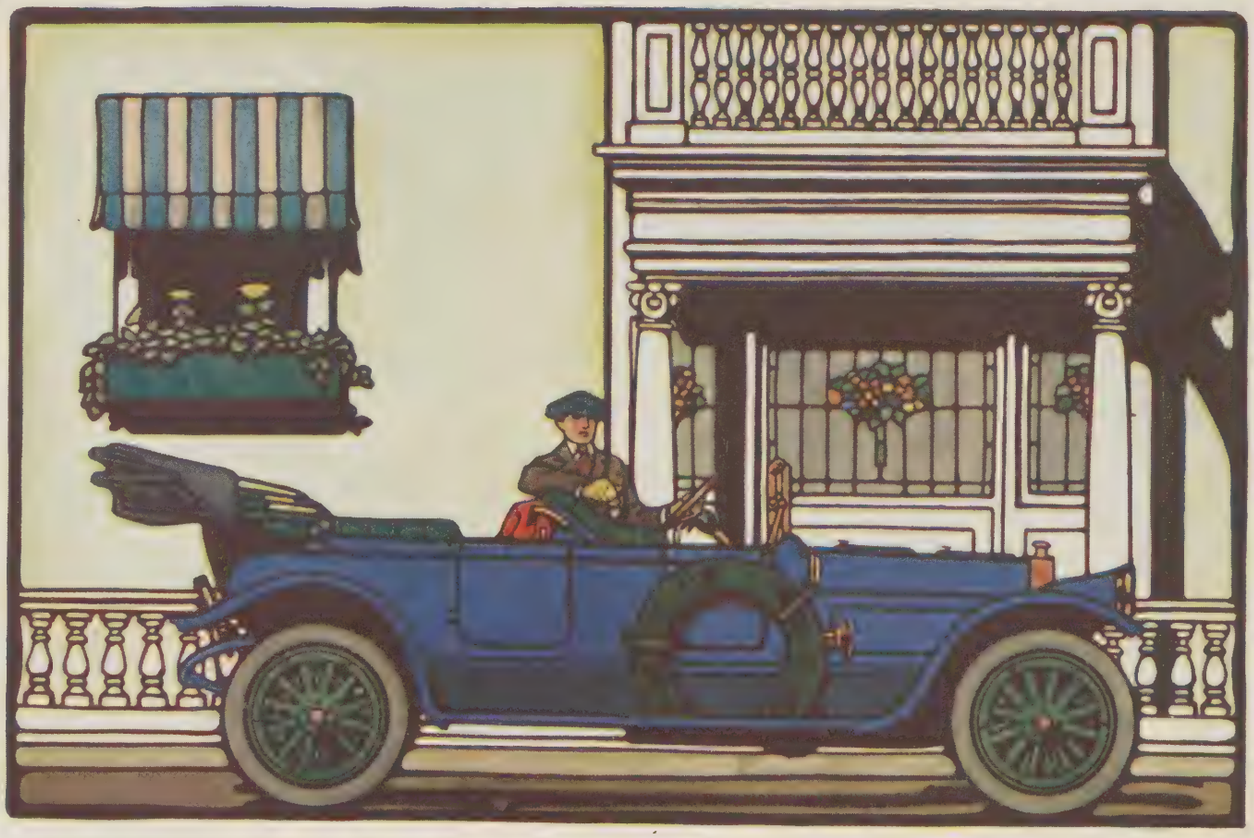
Now with all these unique features, with all these improvements, we quote you a saving of $220. That's the result of three years' concentration on a single model. Such a car at such a price would be otherwise impossible.

Look where you will, you will not find at this price—nor anywhere near it—a car you would think of preferring.

We have dealers in a thousand towns. Go see this new model and ask when you can get one. Also write for our catalog with full specifications, details and comparisons.

R. M. Owen & Co. General Sales Agents for Reo Motor Car Co., Lansing, Mich.

Canadian Price, $1,575. Factory, St. Catharines, Ont.



THE owner of a Pierce-Arrow Car comes as near having a car built to order as it is possible to come without losing any of the efficiency that has been put into the Pierce-Arrow. The individuality of the owner can be expressed in color and upholstery, giving him free play for his own taste in a car upon the really magnificent Pierce-Arrow chassis

NEW YORK · FUNK & WAGNALLS COMPANY · LONDON

Vol. 47, No. 10. Whole No. 1220

Price 10 Cents

Big Output *or* Big Merit?

WE could easily quadruple our output by selling a six-cylinder car around $2500. But it would be a gross violation of confidence.

To sell a Six at $2500, it would be necessary for us to cut down quality, to skimp on workmanship, or, worse still, to assemble parts from other factories, instead of **building the complete car ourselves.** There are a thousand ways to cheapen a car, and every one of them, in our case, would be dishonest.

Keeping Faith with Buyers

For a company that has a low-grade reputation, a $2500 Six might be a step upward. But for the Winton Company, whose Winton Six set the world's standard for six-cylinder quality and drove the best of fours into the second class, even the slightest cheapening of quality would be inexcusable—would be a betrayal of the confidence and good will of those thousands of Winton Six owners who believe in us and in our car, and, in good faith, urge their friends to buy Winton Sixes.

Millions of Good Will

This Good Will—the result of our producing highest-quality cars and of making good on every promise during our fifteen years in business—has a value, according to commercial reckoning, of millions of dollars.

Many companies list Good Will in their balance sheets as an **asset.** We don't. We regard Good Will as a moral liability and obligation — an obligation never to betray public confidence by marketing under the Winton nameplate anything less than the **utmost best.**

Caution

Be careful in selecting a car—this year more than ever before. There are startling reasons why. Read them in our Book No. 16

WINTON SIX

Long stroke motor, left drive, center control, electric lights, self-starter, finest mohair top, easily handled curtains, rain-vision glass front, best Warner speedometer, Waltham eight-day clock, Klaxon electric horn, tire carriers, four-cylinder tire pump, demountable rims, full set of tools, German silver radiator, metal parts nickel finished. Fully equipped, **$3250**

Always Quality First

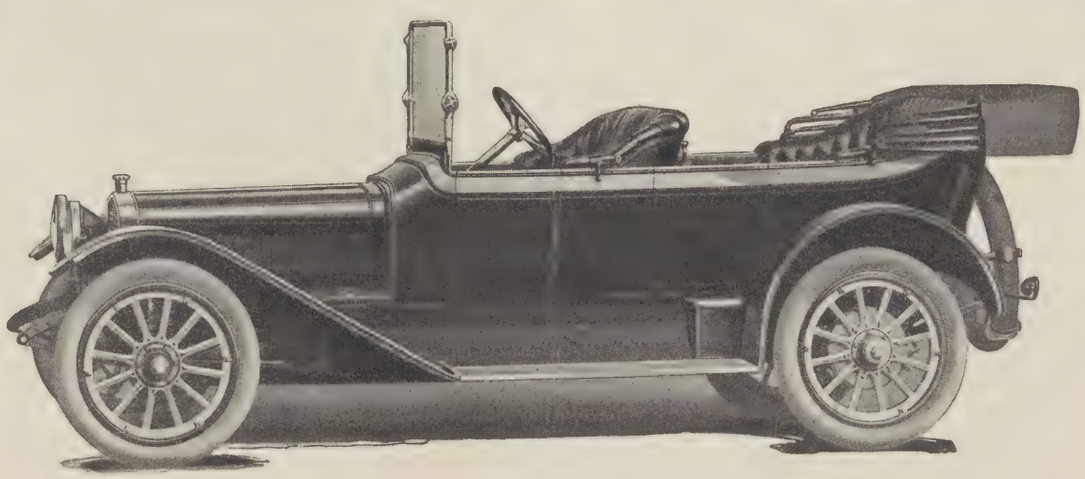
That's exactly why a big output has never tempted us. We make only as many cars as we can make **right.** And we make them **ourselves.** You'll never find a Winton motor in any other make, nor a Winton clutch or transmission, nor a Winton axle or steering gear. Winton Six merit is individual and exclusive.

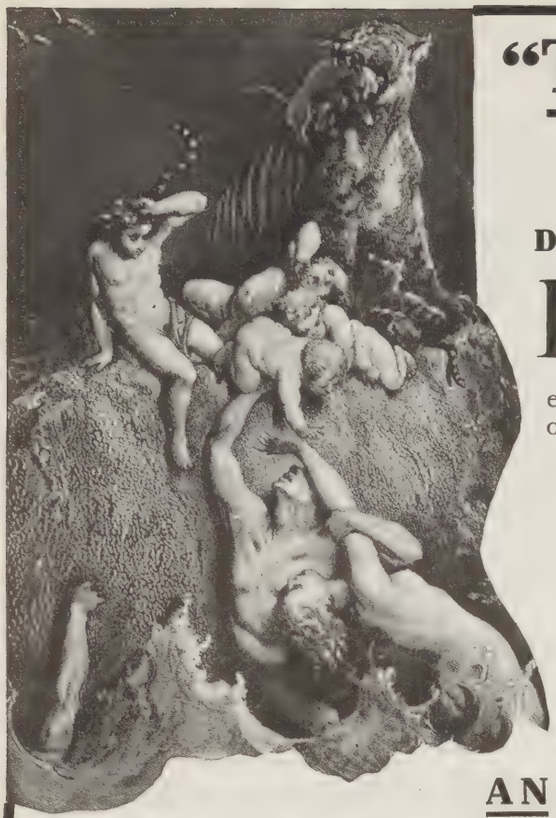
Why Price Stays Down

The Winton Six is sold at the lowest possible price that its merit can be sold for. We keep quality up because we will not abuse the trust of our patrons, and we are able to keep price down because we have no water in our stock, no bonds, no gold notes, no mortgages, no over-expanded plant, no excessive overhead, no wasteful executive methods.

Let us send you a catalog of the Six that leads them all.

The Winton Motor Car Co.
77 Berea Road, Cleveland, O.





"The Chaldean Story of the Flood"

Dug Up From the Ruins of Ancient Chaldea

DO YOU KNOW that the ancient Chaldean story of the Flood is the same in every detail as Moses' account in Genesis—and that it was written thousands of years before his version appeared? Hardly one in a thousand even knows of this startling fact. DO *YOU?* But it is one of the many thousand curiously interesting accounts in

The Library of Original Sources

now for the first time available to the general public. Up to the present this remarkable Library has only been sold by subscription, but *by taking over the entire unsold edition from the publishers we secured it at an absolutely unheard of bargain.* Therefore we are able to offer the few remaining sets to Literary Digest readers at

AN EXTRAORDINARY BARGAIN

Send us the attached coupon *at once*, and we will tell you how to get the Library on *easy monthly payments*, and mail you FREE a book of rare documents—showing inscriptions of the Ancients. Remember there are only a limited number of sets, so act quickly. Mail the coupon NOW. You assume no obligation. No salesman will call. The book is FREE.

THIS MARVELOUS WORK is revolutionizing modern thought. It's turning upside down all notions and ideas. It gives the authoritative, rock-bottom sources of our knowledge on ALL SUBJECTS OF HUMAN INTEREST from the earliest civilization DOWN TO TODAY—the inside facts which the average person has never even heard of.

OVER 100 RESEARCH SPECIALISTS spent 10 years gathering the contents of this great work. Ancient and remote and forgotten civilizations in all parts of the globe were uncovered, and age-buried hieroglyphics on monuments, tablets, sun-baked bricks and palimpsests yielded their secrets; untiring workers ransacked the hidden literature of every age, ancient, mediæval and modern, to find the "original documents" that shaped the civilizations and influenced the thought and life of the world. Nothing like it has ever been attempted or thought of before. You'll be amazed at the wealth of information this unique library contains.

DO YOU KNOW that the old Egyptians, 5000 years B. C., had a Bible which they called the "Book of the Dead"?—Do you know that the Assyrian sacred literature gives the story of the Creation?—Do you know that books and newspapers were printed in Asia thousands of years before printing was invented by Gutenberg? Did YOU ever read Columbus' personal log of his great voyage—filled with strange happenings and ominous forebodings? Do you know that there occurred in Mediæval England a great Socialistic protest—the first of its kind ever known? Do you know by what unique process Harvey demonstrated that the blood does not stand still in the veins, as everyone then thought? Do you know who Machiavelli was, or what world-famous treatise he wrote?

YOU'LL FIND THEM ALL—and thousands of others equally as curious and important—in The Library of Original Sources. Every document is in the exact words of the original, translated; every contribution is from the actual eyewitness or person who took part; every idea is in the words of the thinker, investigator, discoverer or inventor.

JACK LONDON SAYS: "It is a whole library in itself. I certainly never could spare these books from my shelves."

10 sumptuous, massive volumes, bound in rich, deep red Morocco; full-page illustrations, pure silk headbands, printed in large, clear type on hand-made paper, gold tops—a triumph of the bookmaker's art.

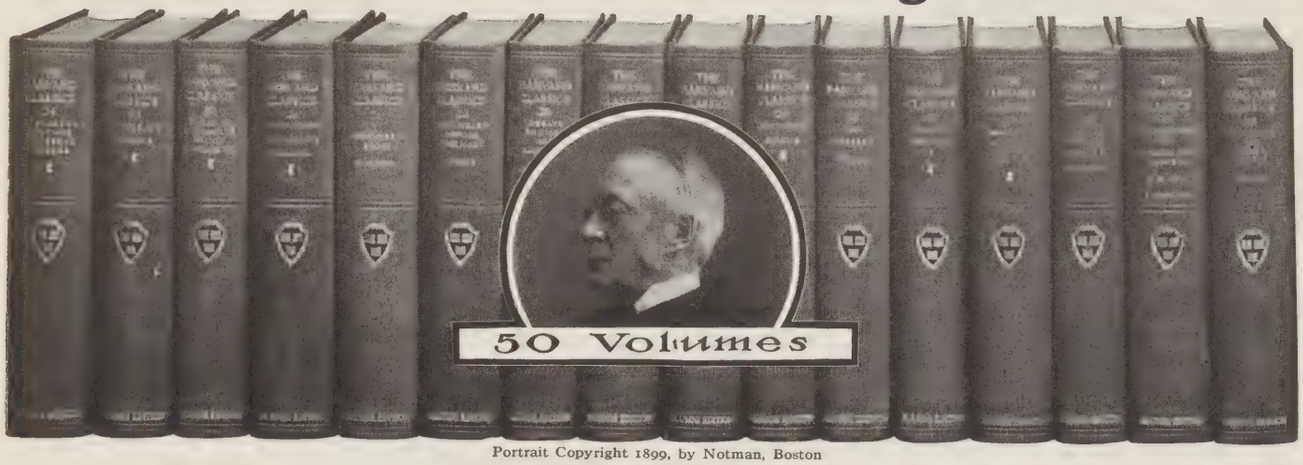
You Are What Your Reading Makes You



Portrait Copyright 1899, by Notman, Boston

What you read has a great bearing on what you earn, whether your job is that of a mechanic, office worker or millionaire banker.

Napoleon said, "Show me a family of readers and I will show you the people that rule the world."

For forty years Dr. Eliot has been training men to rule the world. Now he is guiding busy men and women to read for SUCCESS.

For you he has selected out of all the world's literature, just fifty volumes—418 masterpieces by 300 authors. Here, he says, are the essentials of a liberal education—just the books that the twentieth century man needs to read.

A free thirty-two page book tells the fascinating story of

Dr. Eliot's Five-Foot Shelf of Books

The Harvard Classics

Now Yours at Only a Few Cents a Day

Good reading marks the difference between a broad and narrow perspective of life—between a position in the lead and one in the line—often between *success and failure.*

That is why Dr. Eliot has gathered together and arranged in such splendid order the best of *all* the world's literature for today's busy men and women. In the Five-Foot Shelf you are given a picture of the progress of civilization. You live through every age with Dr. Eliot. Here he says are "the essentials of a liberal education, if you can read but fifteen minutes a day."

The Best Literature of All the Ages

Are you fond of travel? You can have Columbus tell you in his own words how he discovered America. You can travel around the world in the works of the great travelers with Dr. Eliot.

Drama? Here are all the great dramas of history from the days of Greece. Read them in your own library with Dr. Eliot to explain every movement of the actors.

Biography? The greatest men of history are waiting to talk to you and Dr. Eliot will introduce them to you.

Dr. Eliot is ever at your side with introductions and footnotes to make your reading still more profitable and enjoyable.

76,000 Reading Topics

Seventy-six thousand subjects are indexed for your instant reference in volume fifty. By simply turning to this magnificent index you find references to all that has been written by the 300 greatest writers of the ages on any conceivable subject. This index is a master key to all literature. No more sorting through dozens of books for information. Dr. Eliot has done the searching for you.

The Popular Edition at a Few Cents Per Day

The Popular Edition has been issued at about one-tenth the price at which the De Luxe Edition was sold at Dr. Eliot's request for men and women who want the matter rather than the binding. But these books are printed from the same clear cut type used in printing the costlier edition and the quality of binding and workmanship is the result of thirty-eight years' experience in the making of good books by P. F. Collier & Son.

The Steady Decrease in the Cost of Electricity

"THEY say you can prove anything with statistics," said the manager of a big Indiana manufacturing plant to the Board of Directors, "but when the statistics are on your own books you can believe them. And the figures show that since we installed electricity, seven years ago, electricity is the one item of costs that has steadily gone down."

The manager was arguing for an extended application of electricity in the plant—and he won his point.

This manager's declaration as to power cost was fully in accord with the remark of Thomas A. Edison in the matter of lighting. "Electric light," said Mr. Edison, "is the only thing I know of that has become any cheaper in the last ten years."

Why has electricity declined in cost when indisputable figures and the common experience of men show that "the cost of living" has been steadily rising?

It is plain that many of the commodities whose increase in cost is chiefly responsible for the increased cost of living enter into the production of electric light also—coal, labor, and copper for example. From 1902 to 1907 coal increased 6½ per cent. Within the same time labor advanced 8½ per cent. The cost of copper increased about 35 per cent. Yet the cost of electricity went *down* as steadily as the cost of living went *up*.

Mechanical factors have had much to do with this reduction. In the first place the more advantageous placing of electric plants beside water falls or coal mines. Then larger plants and great improvements in transmission systems have played a part. Improved generating systems, as with the Curtis Turbine Engine, and the cheapening of installations by new inventions, have added in an important way to this progress in economy of use.

Invention and price as factors appear in the case of light, for instance, when the sharp decline in cost between 1892 and 1898 was due largely to the reduction in the price of carbon lamps. New types of lamps effected a further reduction between 1899 and 1902, and the perfecting of the Tungsten and later the Edison Mazda lamp, which uses only one third of the current required for the old-style lamps in common use, has again lowered the figures since 1908

A fact of specific and striking interest is that all classes of users of electric light and power have not only shared in the reduction, but have *helped to bring it about.*

This has happened under the natural conditions of *extended use.* The wider use of electric power and light has enabled distributing plants to sell current for a greater number of hours in the twenty-four and in this way to reduce rates based on the twenty-four hour maintenance of the plant.

Thus in Chicago one dollar now almost buys eight times as much electric light as it did in 1886, more than twice as much as in 1909, just four years ago. Another illustration of progressive conditions as they are shown in large distributing centers is Boston's reduction of over sixty per cent. in a single decade.

The results of methods of *use* as well as method of *supply* —this is the story of the chart on this page.

And in all this growth of electricity from primitive experiment to world-wide usefulness, the General Electric Company has played a leading part. Just as electric lamps have been developed in the G-E factories for all uses from the lighting of automobiles to the lighting of factories—so numberless types and sizes of G-E motors are now available for driving all kinds of machines from dentist's drills to massive steel rolling mills.

To know how electricity may fit your particular business, consult your local power and lighting company, or any G-E dealer or agent in your vicinity. No matter how simple or how complex your problem may be, these agents have always at their command not only information of the latest developments, but also the co-operation of any part of the G-E organization that may be most helpful to them and to you.

TOPICS OF THE DAY

THE WILSON MEXICAN POLICY

GENERAL HUERTA'S contention that the people of the United States did not stand behind this Administration in its Mexican policy seems to have been demolished when President Wilson, in his message to Congress last week, for the first time fully laid bare that policy. Indeed, from the wide-spread and non-partizan approval that greeted this message, it might be surmised that while explaining to Congress his own attitude the President had at the same time clarified and interpreted to itself a hitherto somewhat confused public opinion. Altho here and there a paper continues to advocate the recognition of Huerta on the one hand or armed intervention on the other, the indorsement of the Administration's policy, both by Congress and by the press, is general as to remove all doubt as to the trend of national sentiment in this difficult matter. "All that the President said the nation says and the nation will back up," declares the Boston *Transcript* (Rep.). "While confessing a temporary failure of his Mexican policy, President Wilson has scored one great success; he has absolutely united the country behind him," remarks the New York *Evening Post* (Ind.). "The nation is behind the President," agrees the Chicago *Tribune* (Prog.). "With fine authority and understanding he has voiced the feelings of this country toward troubled Mexico," says the New York *Evening World* (Dem.), and adds: "Aggressiveness, impatience, unsatisfied vanity on the part of warring factions who think that power seized is power established, will beat in vain against the calm, friendly finality of the President's message." And the Indianapolis *News* (Ind.) notes that he has "not only public opinion in this country, but the civilized world, behind him," since "his attitude is now supported by Great Britain, France, Germany, Japan, and the nations of South and Central America." The hearty approval of his policy by "practically all" the other Latin-American countries, remarks the Charleston *News and Courier* (Dem.), is "among the most important developments of the whole Mexican affair," and one whose "beneficial effects will be felt long after the present Mexican crisis has passed."

The President's policy is one of strict neutrality toward the warring factions, stern insistence upon the protection of Americans in Mexico, and patient reliance upon "the steady pressure of moral force" to break down "the barriers of pride and prejudice" which frustrated his first efforts toward friendly mediation. When President Wilson addrest Congress, Huerta had already categorically rejected the suggestions submitted through ex-Governor Lind, and the latter had reached Vera Cruz on his return journey to the United States, his mission apparently a failure. When, however, the President's special representative was about to take ship, negotiations were reopened on the initiative of Mr. Gamboa, the Mexican Minister of Foreign Affairs, Mr. Lind decided to remain in Mexico, and the situation has taken on a new aspect of hopefulness.

In his message on the Mexican situation President Wilson expresses a conviction that "we shall yet prove to the Mexican people that we know how to serve them without first thinking how we shall serve ourselves." He tells how, after waiting in vain during many months, "months full of peril and anxiety," for conditions in Mexico to improve, he could discover no promise of a brightening outlook for our sister Republic. In fact:

"The territory in some sort controlled by the provisional authorities at Mexico City has grown smaller, not larger. The prospect of the pacification of the country, even by arms, has seemed to grow more and more remote; and its pacification by the authorities at the capital is evidently impossible by any other means than force. Difficulties more and more entangle those who claim to constitute the legitimate Government of the Republic. They have not made good their claim in fact. Their successes in the field have proved only temporary. War and disorder, devastation and confusion, seem to threaten to become the settled fortune of the distracted country."

Therefore, "as friends, we could wait no longer for a solution which every week seemed further away," and it became "our duty at least to volunteer our good offices—to offer to assist, if we might, in effecting some arrangement which would bring relief and peace and set up a universally acknowledged political authority there." It was to meet this situation that the President sent Mr. John Lind to Mexico City, as his "personal spokesman and representative." Mr. Lind was instructed to "press very earnestly upon the attention of those who are now exercising authority or wielding influence in Mexico" the following suggestions upon which "a satisfactory settlement seems to us to be conditioned":

"(a) Immediate cessation of fighting throughout Mexico, a definite armistice solemnly entered into and scrupulously observed;

"(b) Security given for an early and free election in which all will agree to take part;

TERMS: $3 a year, in advance; four months, $1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage $1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE,** or **CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect. *Both old and new addresses* must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Entered at the New York Post-office as Second-class Matter.

"(c) The consent of General Huerta to bind himself not to be a candidate for election as President of the Republic at this election; and

"(d) The agreement of all parties to abide by the results of the election and cooperate in the most loyal way in organizing and supporting the new Administration."

Of Huerta's rejection of these suggestions the President says:

"I am led to believe that they were rejected partly because the authorities at Mexico City had been grossly misinformed and misled upon two points. They did not realize the spirit of the American people in this matter, their earnest friendliness and yet sober determination that some just solution be found for the Mexican difficulties; and they did not believe that the present Administration spoke, through Mr. Lind, for the people of the United States.

"The effect of this unfortunate misunderstanding on their part is to leave them singularly isolated and without friends who can effectually aid them. So long as the misunderstanding continues we can only await the time of their awakening to a realization of the actual facts. We can not thrust our good offices upon them. The situation must be given a little more time to work itself out in the new circumstances, and I believe that only a little while will be necessary. For the circumstances are new. The rejection of our friendship makes them new and will inevitably bring its own alterations in the whole aspect of affairs. The actual situation of the authorities at Mexico City will presently be revealed."

Turning to the question of our duty in the meanwhile, he points out that "everything we do must be rooted in patience and done with calm and disinterested deliberation." And on the theory that for a little while "the contest of the rival forces will be sharper than ever," and the position of outsiders in Mexico "trying and full of hazard," "we should earnestly urge all Americans to leave Mexico at once, and should assist them to get away in every way possible." But on the heels of this advice comes a sharp warning to the Mexican leaders:

"We should let every one who assumes to exercise authority in any part of Mexico know in the most unequivocal way that we shall vigilantly watch the fortunes of those Americans who cannot get away, and shall hold those responsible for their sufferings and losses to a definite reckoning. That can be and will be made plain beyond the possibility of a misunderstanding."

In addition, the President goes on to say, "I deem it my duty to exercise the authority conferred upon me by the law of March 14, 1912, to see to it that neither side to the struggle now going on in Mexico receives any assistance from this side of the border." Therefore—

"I shall follow the best practise of nations in the matter of neutrality by forbidding the exportation of arms or munitions of war of any kind from the United States to any part of the Republic of Mexico—a policy suggested by several interesting precedents and certainly dictated by many manifest considerations of practical expediency."

"We shall triumph as Mexico's friends," concludes the President, "sooner than we could triumph as her enemies."

Appended to the President's message was Mr. Gamboa's reply to Mr. Lind, rejecting the "humiliating and unusual" proposals of the United States, and making the following counter-proposals: "One, that our Ambassador be received in Washington. Two, that the United States of America send us a new Ambassador without previous conditions." Mr. Gamboa also challenges the statement that no progress has been made under Huerta toward the establishing of a stable government in Mexico. On this point he says:

"The Mexican Republic, Mr. Confidential Agent, is formed by 27 states, 3 territories, and 1 Federal district, in which the supreme power of the Republic has its seat. Of these 27 states, 18 of them, the 3 territories, and the Federal district (making a total of 22 political entities) are under the absolute control of the present Government, which, aside from the above, exercises its authority over almost every port in the Republic and consequently over the custom-houses therein established. Its southern frontier is open and at peace. Moreover, my Government has an army of 80,000 men in the field, with no other purpose than to insure complete peace in the Republic, the only national aspiration and solemn promise of the present Provisional President."

Mr. Gamboa admits, however, that Mexico is "afflicted with an internal strife which has been raging almost three years," and he goes on to say:

"My Government greatly appreciates the good offices tendered to it by the Government of the United States in the present circumstances; it recognizes that they are inspired by the noble desire to act as a friend as well as by the wishes of all the other Governments which expect the United States to act as Mexico's nearest friend. But if such good offices are to be of the character of those now tendered to us, we should have to decline them in the most definite and categorical manner."

General Huerta himself, is quoted in a Mexico City dispatch as saying: "We never had any reason to doubt the friendship and disinterested motives of the United States." Yet the elimination of Huerta as a possible candidate in the approaching Presidential election is, in the opinion of many editors, the one point on which President Wilson is certain not to compromise. Mr. Gamboa says that it is the intention of the Mexican authorities to hold the election on October 26, "in accordance with the constitutional laws of Mexico," and in a later note he withdraws the demand for an exchange of Ambassadors, saying that Mexico will be content until after the election with the present arrangement—that is, a chargé d'affaires at the head of each Embassy. In a supplementary note Mr. Lind, in turn, drops for the present, the demand for an immediate cessation of fighting throughout Mexico—which Mr. Gamboa had characterized as impossible—but reiterated the proposal that Huerta pledge himself not to be a candidate for the Presidency. This is superfluous, argues Mr. Gamboa, since the Mexican Constitution declares provisional presidents ineligible for reelection. In a Washington dispatch to the New York *Sun* (Ind.) we read:

"It is acknowledged that this single proposition is practically the only stumbling-block in the way of the acceptance of the mediation proposals, and the Washington Administration will exert every effort to remove this one obstacle.

"Meanwhile, it was indicated, arrangements will go steadily forward for the enforcement of the embargo on shipments of arms into Mexico and for the transportation of Americans from the southern Republic. The policy proclaimed by the President in his message to Congress yesterday will be carried out in every detail until some vital change is wrought in the Mexican situation."

In explanation of President Wilson's attitude toward General Huerta the Springfield *Republican* (Ind.) says:

"This Administration's Mexican policy in its beginnings was undoubtedly shaped in no slight degree by the circumstances attending the rise of General Huerta to power. The statement of his general policy toward Latin America, published by President Wilson within a fortnight after he assumed office, reflected his abhorrence of the triple assassinations—of Francisco Madero, Gustavo Madero, and Pino Suarez, the highest officials in the Madero Government—which constituted the first acts of the Huerta régime. It was clearly intimated at that time that President Wilson would not give full recognition to a government founded on violence, unless it were clearly established that the military dictatorship had become, in one way or another, the real choice of the Mexican people. Nothing has happened since February to demonstrate that, from the President's point of view, Huerta should be recognized as the constitutional President of Mexico. For civil war has continued, and, while the Huerta Government has undoubtedly had the support of the conservative and wealthy classes, its chief claim to respect has been based mainly on its possibilities in the pacification of the country by iron-handed methods of military repression.

"Still deeper, doubtless, in the President's mind has been the thought that General Huerta has stood for absolutist reaction, as against all the democratic aspirations which were embodied in the Madero revolution, but which President Madero himself was very far from realizing in his brief term of power. In trying to understand the Wilson policy, we have to consider this

point. For it might play a part in American politics, in case the Mexican question became a football of partizan controversy. The sympathies of democratic America, without regard to party lines, were mainly with the Madero revolutionists."

BANKERS' IDEAS ON THE CURRENCY BILL

THE CHICAGO CONFERENCE of bankers, representing all sections of the country, to discuss the Administration Banking and Currency Bill, is described in a published statement of Col. Frederick E. Farnsworth, Secretary of the American Bankers' Association, as "the greatest meeting of the kind that has ever been held in the history of the United States, if not in the history of the world," while the prediction is ventured by him that the result of it may be "the financial salvation of the country." The immediate effect of the two-day session is the naming of a committee of seven, we read in the press, who are to lay before President Wilson, Secretary McAdoo, and Chairmen Owen and Glass "a complete set of recommendations for changes" in the Owen-Glass Currency Bill, which have been unanimously ratified by the consulting bankers. These are the members of the committee: James B. Forgan, President, the First National Bank, Chicago; George M. Reynolds, President, the Continental-Commercial National Bank, Chicago; E. J. Hill, President, the National Bank, Norwalk, Connecticut; R. F. Maddox, Vice-President, the American National Bank, Atlanta; Sol Wexler, Vice-President, the Whitney Central National Bank, New Orleans; Joseph Chapman, Vice-President, the Northwestern National Bank, Minneapolis, and Festus J. Wade, President, the Mercantile Trust Company, St. Louis. The schedule of changes to be recommended by the committee is summarized by the Chicago *Inter Ocean* as follows:

"That but one federal reserve bank instead of twelve be provided for. In case of an objection to this by the backers of the bill, the bankers stipulate that they will be willing to have five such banks established.

"The exclusion of the Secretary of the Treasury and the Secretary of Agriculture from ex-officio membership on the federal reserve board, and providing for seven members on this board, three of whom are to be appointed by the President, three by the American Bankers' Association, and the seventh by the Secretary of the Treasury.

"Limiting the power of the chairman of the reserve board, and giving him the title of federal reserve agent, and limiting the powers of that board regarding its right to force one reserve bank to rediscount the paper of another.

"The subscription of 10 per cent. of their capital stock by national banks to be voluntary instead of compulsory, and making it optional for them to join the federal reserve associations.

"Raising the rate of interest on the capital stock from 5 to 6 per cent.

"The abolishing of Section 13, providing for a federal advisory committee.

"The addition of another provision in Section 16 relating to government deposits, exempting certain funds which are to be held for redemption purposes.

"The modification of the bank-reserve provision and the rewriting of a portion of Sections 20 and 21 relating to central reserve city banks.

"The striking out of all of Section 27, which relates to the establishment of savings departments."

Adverting to the first proposition in the above list, the New York *World* (Dem.) remarks that the bankers "still talk of a central bank as the unwilling followers of Moses hankered for the flesh-pots of Egypt." Nevertheless *The World* finds a reason to congratulate the bankers on their decision to present their side of the case properly and "to abandon a rule-or-ruin attitude." Of like mind is the Springfield *Republican* (Ind.), which utters the caution that "stubborn insistence that the banking business is a private business to be run and controlled by bankers alone will not advance the cause of banking and currency reform." Moreover, in view of present tendencies, *The Republican* asserts, no important reorganization of the American banking system is "politically possible which does not start with government control—not actual government management—of the system as a primary principle," and *The Republican* adds:

"We have presented three reasons for this belief—first, the selfish interest of banks in the banking system; second, the tendency of monopoly in various lines to concentrate under a banking overlordship; third, the growing demand of the agricultural interest for a wider basis of bank credit than commercial banking has hitherto conceded. These reasons are the basis of

a public sentiment, especially pervasive in the West and South, that insists upon the final lodgment of supreme power in the Government itself. The banking interest can now obtain much that it desires in the way of reform if it will accept the principle of government control. It will obtain nothing much until it does."

Speaking of governmental control of the banking business, which it calls "the paramount object of the Glass-Owen Bill," the Pittsburg *Gazette-Times* (Rep.) points to the precedent of the Interstate Commerce Commission's "autocratic control over another business," and says:

"The country knows from experience that when railroad managers were in absolute control many vicious and inequitable practises prevailed in transportation. . . . The present move for greater public control of the monetary facilities of the country is in line with similar control of commercial and industrial facilities, and this is one fact that must be recognized by the Chicago conference."

Quite different is the tone of the New York *Times* (Ind. Dem.), which is unreserved in its commendation of the bankers' whole stand, and points out that:

"The deliberations and conclusions of the conference of the bankers at Chicago are of a sort to make it clear to everybody between President Wilson and the radical Representatives that the banking-reform bill would have been further advanced by now if the bankers had been called into consultation. It is true that the bad beginning has been bettered, but there is still some distance to go in the direction of the practical considerations advanced by the men without whose cooperation no effective action regarding banking is possible, not even if a law be placed upon the books. No victory at the polls, if any were possible along the lines of those resurrecting the granger fallacies, would give the country banking without the assistance of banks and bankers. Their action is as necessary as legislation."

Equally firm in its faith in the bankers is the Chicago *Inter Ocean* (Rep.), which says that without their "approval, assent, assistance, and cooperation," the Administration's currency-legislation program will fail. Rather more optimistic in its outlook, however, is the Chicago *Post* (Ind.), which notes a rising spirit of co-operation between the bankers and the Administration for the purpose of "getting the best bill that may be obtained and getting it now," and it proposes to have every reason for the belief that "a currency report backed by such men as James B. Forgan, A. Barton Hepburn, George M. Reynolds, and others in conference will win for itself the final support of public opinion."

THE FUSION DRAMA IN NEW YORK

FOR SWIFT-MOVING political drama, says one of the many interested papers in other cities, "a New York City Mayoralty campaign is hard to beat." And this year's campaign furnishes its full quota of thrills. Whether the observant editors think with the Indianapolis *News* (Ind.) that "the revolt against bossism is strong enough to win," or whether they have come to the Boston *Transcript's* (Rep.) conclusion that "they will never defeat Tammany in New York until the fusion forces are marshaled by men who know something of practical politics," their attitude is generally sympathetic with the fusionists. But they dare not prophesy. The campaign has still two months to go, and already the shifts and turns of the game have surprized these veteran watchers of political struggles.

They have seen the Committee of 107 choose for the head of the fusion ticket the youthful President of the Board of Aldermen, when city newspaper opinion was inclined to favor the successful District Attorney or the experienced Borough President of Manhattan. Mr. Mitchel's selection for Mayor, they inferred, was due in part to a desire to secure the support of William Randolph Hearst, the Hearst papers, and the Hearst following for the whole ticket. Now Mr. Hearst violently repudiates Messrs. McAneny and Prendergast, of the fusion ticket, and Mr. Mitchel in turn refuses the Independence League indorsement because it does not include his colleagues. At first, those sympathizing from afar with fusion, while admitting that the ticket might have its imperfections, expected at least a straight fight against Tammany. Mayor Gaynor they looked upon as certain of the regular Democratic nomination, despite his personal independence. But they saw instead the selection of Edward E. McCall, Chairman of the Public Service Commission, a former State Supreme Court Justice of high personal reputation and much ability, but an "organization" man. This nomination they hear denounced by certain New York papers as "brazen"—"Tammany might as well have designated Murphy for the Mayoralty as McCall," according to *The Tribune* (Rep.)—and praised and even supported by other dailies which can not be classed as Tammany organs. But its chief significance to these observers lies in the fact that it has brought the Mayor into the field as an independent candidate, with his motto "I have been Mayor," and his emblem, the shovel. Now that there is to be an anti-Tammany Gaynor ticket, Mr. McAneny and Mr. Prendergast are said to be willing to accept its indorsement. As a final twist to this sadly twisted situation comes Tammany's nomination of Mr. Whitman for District Attorney, and Mr. Whitman's acceptance of the nomination. Then there are rumors of Republican support for Gaynor, of attempts to substitute him for Mitchel upon the fusion ticket, and of a fourth ticket to be headed by Hearst. So the New York *Herald* (Ind.) concludes that "everybody is going to need a diagram in order to vote properly."

Should a Fusion candidate accept nominations from bodies of voters who will not indorse the entire Fusion ticket? The very idea of questioning the propriety of such action seems "absurd" to the regularly Democratic New York *Morning Telegraph*. But the New York *World* (Dem.), a strong supporter of fusion, thinks it a burning issue, saying:

"Unless the fusion candidates for city office make up their mind to stand together on the fusion ticket, and on that ticket alone, fusion is wrecked. The campaign becomes an individual scramble for place against all the cohesive forces of Tammany Hall, which is fighting for a principality of power and plunder. There can be only one outcome of such a campaign, and that is, make Charles F. Murphy Mayor of New York."

Yet to editors and others of this opinion, the New York *Journal of Commerce* (Ind.) puts the question: "What is fusion for?"

Why, it asks, should any candidate on the ticket "refuse support or repel votes?" Why, indeed, "should not each and all stand on their merits as candidates before the electorate and take all the support that comes to them?" "Common sense," agrees *The Globe* (Ind.), "suggests that impediments should not be thrown in the way of any one voting for any part of the fusion ticket."

The Tammany indorsement of District Attorney Whitman is considered a clever move, which is intended to take the police issue out of the campaign. As the Brooklyn *Eagle* (Ind. Dem.) remarks, it throws on Gaynor "the whole incubus of defense of existing conditions in the Police Department." *The Eagle* regrets that Whitman in accepting the office "is measuring himself for a Tammany uniform,"—"he has not kept the faith." So, too, *The Evening Mail*, *World*, and others feel that Tammany ought not be allowed to profit by Mr. Whitman's deeds and reputation. Yet *The Evening Post* (Ind.), another supporter of the fusion ticket, acknowledges that there are two sides to the question, but sees that Mr. Whitman's acceptance of the nomination will

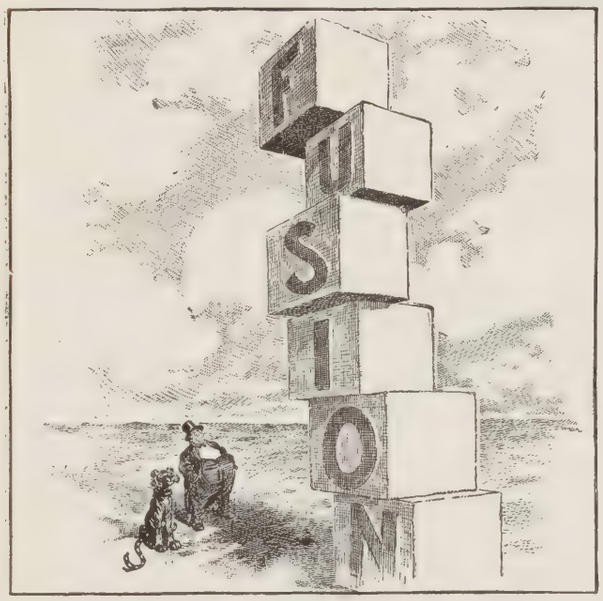
"insure another four years of honest administration in the District Attorney's office, and the keeping of its great powers free from any political influence, as they have been for the last twelve years—to the great benefit of the city."

Papers supporting Mr. McCall for Mayor can, of course, find no fault with the District Attorney's willingness to run with him, and Mr. McCall says he is "tickled to death." Mr. Whitman's point of view is set forth in a statement to the press. He stood ready, he says, "to lead in a general assault on Tammany Hall, if that service had been required. But it was not." With the situation as it is, he infers

"that the entire voting body of New York County, as represented by political parties, wished me to continue in this office, and to keep it as I have kept it, out of politics, and to make it as I have always tried to make it, the effective instrument of absolute, impartial justice. . . . I can see no other duty.

"So I accept the Tammany nomination, as I have already accepted the fusion nomination."

Thus Mr. Mitchel must share the limelight with his fellow-candidates on the fusion ticket and with his two rivals for the



WILL IT STAND?
—Macaulay in the New York *World*.

chief magistracy of New York City. Of these, Mr. McCall is a comparatively new figure in city politics. Yet his stand for the new subways as chairman of the Public Service Commission has made his name familiar to New Yorkers, and this in the opinion of the New York *Sun* (Ind.), *Commercial* (Ind.), *Herald* (Ind.), *Morning Telegraph* (Dem.), and Brooklyn *Citizen* (Dem.) gives him unusual strength as a candidate. *The Telegraph*, which supports the Tammany ticket, holds up this "man of personal integrity and temperamental stability of character" for comparison with Mr. Mitchel, the "idealist of impracticable

EDWARD EVERETT McCALL.

When he returns from his vacation to campaign as the regular Democratic candidate for Mayor of New York against John Purroy Mitchel and W. J. Gaynor, he is likely to find his hands just as full.

views." *The Commercial* offers him its support because it believes him an exceptionally well-equipped man "who can govern the city wisely and discreetly."

But *The Tribune*, *World*, *Times*, *Evening Post*, *Evening Mail* and *Daily People* (Soc.) insist that "McCall means Murphy." He stands, says *The Tribune*, "for the old order in East Fourteenth Street, under which Tammany chieftains have conducted the business of 'working for their own pockets all the time.'" If he is elected, adds *The Evening Mail*, "we shall have as Mayor the avowed champion of Tammany as a legitimate instrument of government, the proudly intimate friend and follower of Charles F. Murphy."

Why, ask the anti-Tammany press of the city, did Murphy refuse to renominate Mayor Gaynor? His personality and record, they declare, would have made him a strong candidate. The one answer that most of them can find is that he has been too independent to suit the "boss," tho Mr. Hearst's *American* would have it that he was too easy a tool, had suffered "in his good name and his popularity" and was therefore discarded. Many New Yorkers, represented by *The Sun*, *Press*, and *Evening Mail*, regret that the fusion committee could not have made the Mayor their candidate and *The Press* supports his independent ticket, because of "what he has done for the city." With him in the field, there is a three-cornered fight for the Mayoralty, with the relative strength of the rivals as yet unknown.

A NEW GOVERNOR IN MANILA

WHILE THE CHOICE of Francis Burton Harrison to succeed W. Cameron Forbes as Governor-General of the Philippines does not arouse much protest from opposition papers, neither does it call forth uniformly eulogistic comment from supporters of the Administration. Many simply take the appointment as a sign that President Wilson is now to work out his own Philippine policy, and they take the opportunity of setting forth their opinion of it. A Democratic daily like the New York *World* admits that this "is not a heavyweight appointment." The best that another friend of the Administration, the New York *Evening Post*, can say about Mr. Harrison is that he is a "consistent antiimperialist," and it is surprized that "Mr. Wilson should have chosen for this place one of the rich young men who have so long lent respectability to Tammany Hall and contributed so freely to the Boss's treasury." The Republican Rochester *Democrat and Chronicle* thinks it "would have involved a long and painful search" to have found a man with fewer qualifications; and Mr. Hearst's New York *American* declares the choice of Mr. Harrison to be an "unfit appointment"—"where there should be a man of initiative and sagacity, we give them a merest messenger-boy of money." Yet the Louisville *Courier-Journal* (Dem.) calls Mr. Harrison "a promising appointee"; the Indianapolis *News* (Ind.) is confident that he "will serve his country well in the Philippines," and the Washington *Post* shares this confidence. His "energy, character, and public services recommend him," in the eyes of the New York *Sun*, which is not afraid of his making an unworthy successor to the experienced Forbes, who before becoming Governor-General served on the Philippine Commission, as Secretary of Commerce and Police in the insular government and as Vice-Governor-General. The Harrison appointment, says the Chicago *Tribune* (Prog.) "augurs better than was feared of a Democratic Administration." So the Springfield *Republican* (Ind.), tho noting that "the unflattering comments" multiply, concludes that

Copyrighted by Harris & Ewing.

FRANCIS BURTON HARRISON,

Who, after several terms in Congress, enters upon a new career by succeeding W. Cameron Forbes as Governor-General of the Philippines. The choice of Mr. Harrison is commended by Manuel Quezon, the Philippine Delegate to Congress, and is said to be pleasing to the Philippine Assembly.

"in view of the fact that Mr. Harrison has his spurs to win in the Philippines, it is perhaps as good an appointment as could have been made. Senator Lodge is reported as pleased with the selection; so is Mr. Quezon, the Philippine delegate and advocate of independence. With persons so far apart as they are approving the choice, it may surely be accepted as a suitable one."

In selecting a competent successor to Mr. Forbes, observes *The Republican*, "President Wilson has labored under one obvious handicap":

"Scarcely any one could be found for the position who had already gained administrative experience in the islands, and, at the same time, was in sympathy with the President's views concerning the future of the archipelago. Our 'colonial' civil service has had Democrats in it; several, in fact, have attained high positions. But, like former Governor-General Luke Wright, they were promoted to responsible places by Republican Presidents because of their sympathy with the Republican policy in dealing with those dependencies.

"On the other hand, there have been Democrats in the Philippine service who have returned home strong partizans of independence for the islands, but evidently President Wilson has not desired the services of any of these. His own mind is more open, and he desires reports from a Governor-General who has not been deeply committed one way or another. The President stands on the Philippine plank of the Baltimore platform, which demands a declaration by our Government in favor of Philippine independence as soon as a stable government can be established there under an act of international neutralization, but he is not yet committed to any particular plan for establishing an independent Philippine government, or committed to any particular time for carrying the Democratic policy into effect."

As Mr. Harrison himself says in a statement appearing in the New York *Times:*

"I shall go to the Philippine Islands with an open mind as to the general proposition of Philippine independence either immediate or ultimate. I have not devoted, heretofore, special attention or study to the internal policy of the Philippine Islands or to the relations between the islands and the United States except in so far as the tariff between this country and the islands is concerned."

Yet the New York *Evening Mail* (Prog.) believes that "the function of Governor-General Burton Harrison in the Philippines is expected to be to teach the Filipinos how to let go." *The Mail* adds, however, that after a few months in office, Mr. Harrison will have learned a few things and "his zeal for independence will abate with his knowledge." But the Republican New York *Tribune* is without even this solace. To its mind, Mr. Harrison appears as "the representative of those who have been doing their utmost to embarrass our Government in its work for the islands and to get it to scuttle out incontinently and let the Filipinos 'stew in their own juice.'" *The Tribune* adds gloomily:

"Nor is substantial good to be expected from a four-years' campaign of 'bending every energy to prepare for independence,' which savors of an undergraduate's desperate coaching and cramming to pass his examination. The true policy is not to trump up some superficial semblance of ability to go through the motions of self-government, so as to find a pretext for setting the islands adrift at some artificially selected date; but rather to develop not merely in a small ruling caste but in the whole Filipino people an intelligence, a civic spirit, a familiarity with government and a substantial prosperity—in brief, a civilization—that will make them fit for self-government whether as an American colony or as an independent state. That is the policy which has thus far been pursued. If President Wilson departs from it with his Tammany-trained and Tagalog-chosen Governor-General the outcome will be regarded with grave apprehensions of calamity."

But the Providence *Journal* (Ind.), as averse to Philippine independence as *The Tribune*, is encouraged by the evidence "that the Administration does not intend to move blindly," and by Mr. Harrison's "exceptional intelligence." Yet the appointment of an untrained man to a position like the rulership of the Philippines brings forth these editorial reflections:

"It is a very unfortunate consequence of American political practise that there is no security of tenure for expert men in administrative or diplomatic positions. How the President justifies the shameful looting of the diplomatic service can only be guessed; he has not attempted to defend himself or his Secretary of State. But he should reflect long and carefully before he displaces, either on party or personal considerations, faithful public servants in our island dependencies. . . . It is not wholly a question of ability. A very brilliant man without experience might be far less valuable to the nation than one of moderate

talents with it. Mr. Forbes is a brilliant man with experience. His work has won golden opinions from all sorts of men. His departure is an irreparable loss."

MISSOURI "PULLS OUT OF THE MUD"

THERE IS A CONSIDERABLE variety of opinions regarding the value of the actual labor performed by volunteers during Missouri's spectacular road-repairing campaign, but nobody seems to doubt that Governor Major's idea of how to "pull the State out of the mud" was fruitful of a great deal of publicity for the good-roads movement through the nation, and was a fine bit of advertising for Missouri. "It means the awakening and organization of the good-roads spirit in the State," says the Kansas City *Star*, which adds that next year a similar performance will accomplish more than this one accomplished, because "everybody will have faith in the movement." In the opinion of the St. Louis *Globe-Democrat*, "the chief merit of Governor Major's plan, or what might be better called 'the Missouri idea,' is that it magnifies to much greater proportions the pioneer idea of cooperation in road-making and mending." "The frolic is very much like the 'Christmas' spirit," says the Kansas City *Journal*, "which for the most part is concentrated into a few days of practical charity, leaving the beneficiaries thereof largely to their own devices the rest of the year," but "when it has been shown how much can be accomplished by a couple of days of united effort, it may be hoped that a really systematic and effective effort will be made to keep the good work going." *The Globe-Democrat* comments:

WHEN GOVERNORS GET TOGETHER.

Governor Major of Missouri, at the reader's left, and Governor Hodges of Kansas, setting the example by contributing their labor to improve Missouri's roads.

"It used to be that when roads got to their worst, and had to mend, there would be a rally of men in a township, a school district, or a road district, to mend them. In such small fields of effort permanent results could not be hoped for. Nor could such results in a much wider field be hoped for now, if opportunities of much larger and more effective cooperations were not to be seen growing out of new conditions.

"That is the chief significance of 'the Missouri idea.' It stands for the spirit of cooperation in a great and wealthy community, capable of carrying cooperative effort in road-making to points undreamed of by the pioneers. Road-dragging and patching can not make permanent roads now more than such methods could a century ago. Should torrential rains come this autumn, as may be expected after a long drought, it will be seen how little the cooperative labor of many thousand men, turning over, leveling, and grading the soil of roadways and leaving them without firmer foundation or support, can do to meet emergencies. Dirt roads will be dirt roads still. And dirt mixt with much water makes for deep mud."

Estimates of the number of volunteer workers vary from 50,000 a day to 300,000, the latter figures being the guess of Governor Major, based upon reports sent to him from all parts of the State. One of the spectacular features of the "good-roads days" was the appearance of the Missouri Chief Executive and Governor Hodges, of Kansas, who contributed two days' labor, in jumpers and overalls. Additional facts are found in these paragraphs from press dispatches:

"Women took an important part in the campaign. The 6,000 members of the Missouri Federation of Women's Clubs throughout the State aided the movement in every way possible, and thousands of farmers' wives and other women prepared and served meals.

"No army ever was better prepared for a campign than that which marched forth to 'pull Missouri out of the mud.'

"Eight thousand road overseers for weeks have been assembling and laying out the work to be done so systematically that every squad of men was put to work without delay or confusion. Every city, town, and hamlet were represented in the movement, and in the farming district nearly every able-bodied man enlisted.

"Four Kansas City men abroad each cabled from Paris to local road organizers money sufficient to hire a squad of substitutes to do their share of road work."

Governor Major estimates that the work on the roads is worth $1,500,000 to the State. Governor Hodges was delighted with the results of the Missouri experiment, and on his return home he announced that he would proclaim two good-roads days for Kansas. "Governor Major," remarks the Buffalo *Enquirer*, "has recalled the fine old spirit of other days when the people did things for themselves and helped each other in jobs that required cooperation"; and "it would be glorious if all the people would get together in national larks of this kind every year with a general hurrah for the workers and a general hoot for the shirkers." The Chicago *Record-Herald* is less enthusiastic in its comment:

"There is such a flow of soul over Missouri's road-mending picnic that every one must feel impelled to join the innumerable throng of those who are sending congratulatory telegrams to the Governor. But the precedents for the picnic are not reassuring. And there have been many of them.

"Every once in a while in some down-at-the-heel village a fierce reformer will call for a turbulent exhibition of public spirit in the patching and mending line. The citizen who has a shovel and a hoe but no cash is expected to give himself and his tools to the work of improvement. The rich and great are asked for cash contributions. Up to the arrival of the picnic day the enthusiasm seems a growing and a swelling thing. But it is seldom up to specifications on the day itself, and there is apt to be a melancholy reaction thereafter.

"Missouri claims that the work done on its day was worth $1,500,000, and perhaps it was. Nobody knows. But road bonds and taxes would seem to be more promising and effective. Perhaps the 'unquenchable desire for better highways' that is said to have been aroused was the desire to have the bonds issued and the taxes raised. The State will have a chance to show us any and every year hereafter."

A GOVERNOR LOST TO DEMOCRACY

THE abandonment of the Democratic party by a Governor who is serving his third successive term under its banner in a normally Republican State, and who was a candidate for the Presidential nomination last spring, would have elicited gasps of wonderment from the faithful editors of Republican and Democratic papers a few years ago. Today, however, the action of Governor Foss of Massachusetts seems but a rather interesting incident which helps to prove that party ties, in the Springfield *Republican's* (Ind.) phrase, "are about as substantial as the mists of the morning." Governor Foss, it will be remembered, was a regular Republican up to the beginning of his somewhat meteoric political career. It now appears to most observers that he is simply on his way back to the old love. Yet Mr. Foss himself studiously refrains from any announcement of the fact, tho steps were taken toward his entrance in the race for the Republican gubernatorial nomination, and tho he still has good words and good wishes for the party and is frequently on hand at Republican gatherings. He has definitely broken with the Democrats and prefers to call himself an independent, and if he takes the field as a candidate for reelection, it will be upon an independent ticket, as it is now too late to enter the party primaries. Governor Foss announces that he is through with the Democratic party till it has "got back to the people." His dissatisfaction with the tariff policy at Washington has been set forth in these pages. At home, he has found his policies unsupported by Democratic members of the State legislature, and even opposed by party leaders. "Under such circumstances," says the Governor,

"I told them some time ago that I could not go with them longer. Just as long as they are with the people I am with them. But they have taken a stand that is not with the people, and I can't longer be with them."

While most people would hardly like to change so often, thinks the Baltimore *Sun*, "the Fossian style at least has the merit of frankness and directness."

"When the Governor does not see what he wants in one party, he goes to another after it, and if he can't get it there he has no hesitation in going back to the first. There is one thing to be commended in his relapse, at any rate, and that is that he goes where he belongs and that he does not continue to try to sail under false colors. If a man must be wrong in his political and economic theories, it is at least something that he should be honest enough to throw away the mask of pretense."

If Governor Foss "goes back to the Republican party, which he deserted in 1909, when the first signs of the Democratic tidal wave appeared, it will be," explains the Indianapolis *News* (Ind.), "because he is naturally a Republican, and naturally a New England protectionist." Tho Mr. Foss became prominent as an advocate of reciprocity and tariff reform as early as 1902, it was not until 1909 that he "flopped into the Democratic ranks," as *The News* puts it. In the following year, he "ran for Congress as a Democrat and was elected, and that in the ultra-protectionist Fourteenth District of Massachusetts. And then he ran for Governor and has been running, and been elected, ever since." But, continues the Indiana editor:

"As the homely saying runs, 'Blood will tell.' Reciprocity, the high cost of living, and tariff revision were all right as long as they were in the future, and as long as there was a possibility of the Foss views becoming the Democratic views. But things grew irksome for this versatile campaigner when it became apparent that it was just the other way about—that Foss views on the tariff must become Democratic views or else perish. . . . . And now the Governor is going home, home to the Republican fold, it seems, which bred him and nourished him in the principles that he never could entirely forsake. This will remind a great many persons who read of the Governor's spectacular flop in 1909 that they never did believe he was a Democrat anyway."

Massachusetts politicians are naturally wondering how the Governor's independent candidacy would affect the chances of the other candidates. Republicans are quoted in the Boston *Transcript* (Rep.) as fearing that it would cut seriously into their vote. Republicans beyond the borders of the Bay State, looking upon the return of Foss as a symptom of general uneasiness among recent Democratic converts, find grounds for hope and confidence. The Chicago *Inter Ocean* (Rep.), for instance, quotes these words of Governor Foss: "The State and nation need the return of the Republican party to power, and the Republican party is justly entitled to success, altho its leaders in the past have been faithless to the pledges of the party." *The Inter Ocean* is persuaded that the Governor is on his way back to the Republican party. It hears, too, that "progressive as well as Republican leaders in Congress expect to see Theodore Roosevelt again a third-term candidate in 1916, and at the regular Republican primaries." So this stedfast Republican journal is moved to comment:

"Evidently both these ambitious gentlemen, who have given such signal proofs of their impatience with the Republican party, have found that when all is said and done they can not really get anywhere or do anything without it."

FOREIGN COMMENT

FATEFUL DEVELOPMENTS IN HINDU SECRET SOCIETIES

THO FABULOUS REWARDS and the vigilance of a secret service unequaled even by that conducted by the ex-Sultan Abdul Hamid of Turkey have utterly failed to detect the men who very nearly killed the Viceroy of India about a year ago, the increased vigilance of the East Indian police has led to discoveries which, to say the least, show that, tho the Hindus borrowed the institution of political murder from the Occident only six or seven years ago, they have organized the propaganda to assassinate British officials so ingeniously that they can give clubs and spades to Western revolutionists and still beat them at the game of terrorism.

The most astonishing detail worked out by the East-Indian anarchists is the method they have adopted to fill the war treasury. Groups of Hindu nihilists go into the village of Bengal —where this political crime originated and where it has remained most active—enter the houses of wealthy landlords (zemindars, as they are called), terrorize the men at the points of revolvers and daggers, and make the women give them all their gold and silver ornaments and show them where the family fortune is buried in the earth. Usually they carry on these depredations in the dead of night, with their faces masked, tho some of these plundering operations (dacoity) have been carried on in broad daylight. The two most curious things about these robberies are: (1) that all the money thus obtained is used in waging war against the British; and (2) that only young men with college education, who would be considered among us to belong to the most respectable stratum of society and who would be regarded in England as the sons of the gentry, engage in the looting. Tho for some time past these dacoities have been the order of the day in Bengal, only just recently has the Government been able to capture a large body of Bengali youths who are now being tried in Barisal, where, bit by bit, the public prosecutor has drawn out from Rajani Kumar Das (one of the accused, who has turned approver) the complete story of one of the worst dacoities, of which we quote the following from *The Statesman* (Calcutta):

"At dawn I found we were in a big river called Kalabadar. There were six or seven men in the boat at that time. They were Nishikanta Dutt, Jatin Ghose, Bhuban Bose, Rohini Guha, Taruk Babu, and a man of the village, Sarmahal. Nishikanta, a teacher, was the leader of the Barisal *samity* (secret society).

"At dusk we heard the report of a gun from inside a jungle opposite the river. We took the boat to the place from where the report was heard. We landed and met Jatin Roy, Devendra Ghose, Madhu Patitandi, Nibaran Ker, Chandi Ker, Nishikanta Gupta. . . . . .

"Nishikanta Dutt took down the names of all six men in the jungle, and also those who were in the boat, and against the name of each he put down what articles each would carry. The articles consisted of guns, torches, daggers, hammers, swords. . . . . .

"Nobody said anything, but I understood clearly that the preparation was for committing dacoity.

"Nishikanta Dutt, captain of dacoities, settled what each of us had to do. He then threatened that if anybody failed in his duty, he would be shot. He also warned us not to call anybody by name.

"Every one of us was supplied with a bag and a mask. The bag was intended for carrying loot. . . . . .

"We entered the house and lighted our torches. . . . Our Captain, Nishikanta, blew a whistle and each man took up his position and began work. Captain Nishikanta, Jatin, myself, and two or three others entered inside by breaking open the door. . . . The Captain and another started breaking an iron safe. Jatin Roy assaulted the owner and demanded the keys. . . . . .

"Captain Nishikanta broke open the iron safe. . . . Then a wooden chest was broken in which some money and silver were found. The articles were taken. . . . . .

"About a month after this, about the middle of June, Jatin Roy wrote to me a letter asking me to meet him at Kusungal. I went there and Jatin told me to put up with him as they would have to commit another dacoity. I said I was afraid of these things, when Jatin said:

"'We will have to do these dacoities. There is no getting out of it. We will have to collect arms and money.'"

Asked to tell the reason why money was collected by such infamous methods, the same witness said that he was taught by his leaders that "in order to protect the Hindu religion, the establishment of Hindu sovereignty was absolutely necessary."

The police have unearthed these rules of the secret society which conducts political murders with money obtained by highway robbery:

"The district organizer should first ascertain the number of . . . English schools or colleges in a center and then try to get into his hand at least one boy of each class in every school or college and through them diffuse the idea in their respective classes. If unable to meet publicly . . . for discussing and settling business, selected numbers should meet on pretext of semireligious ceremony. The district organizer should not miss the opportunity of mixing with all classes of people. He will have to learn something of trade, medicine, engineering, etc. No emissary should be allowed to make a copy of the organization scheme or rules. The district organizer should make arrangements for diffusing the idea in schools and colleges because unmarried youths are the repository of energy, enthusiasm, activity, and self-sacrifice. Disclosure of even unimportant matters should be considered as a breach of the rules of discipline. The district organizer, with permission of headquarters, should anyhow take possession of arms. This work should be done very carefully so that the other party might not know of it. No member of the inner circle should write letters to relations and friends except with the special permission of the head organizer.

"The names of those who are in charge of arms or documents should not be entered in the report. . . . No one in charge of arms or documents should take part in any violent work, . . . that is to say, they should not go to such place or do such work in which there is apprehension of danger."

FRENCH WOMEN SOLDIERS—The women of France are not content with merely serving as nurses on the field of battle and attendants on the wounded or dying. They have in their minds the example of Joan of Arc and other heroines of France, and they are confirmed in their aspirations after military service, according to the *Journal des Debats* (Paris), by the example of the ancient Amazons of Greek mythology. They affirm that the law of three years in France will not produce forces of reserve sufficient to defend the frontier of their well loved country. They have accordingly through the hands of Colonel Driant, commanding the troops in Paris, sent a petition, carrying about a thousand signatures, to President Poincaré in which they say:

"The French women who have illuminated our history with so many beautiful examples of self-denial and self-sacrifice do not wish in the present generation to be surpassed by the women of other countries in which the question of female rights is being so earnestly agitated.

"The members of the Red Cross company have already obtained leave to serve in the ambulance corps. But a great number of us, not having the leisure to pass the infirmary examinations, would like to make ourselves useful to their country, and would desire that a law should be passed in Parliament giving them this privilege.

"Our dearest hope is to obtain an opportunity of offering to France some part of our youth, and so to cooperate with our brothers in the national defense."

CHINA FORCES ENGLAND'S HAND ON THE OPIUM QUESTION

THE DUTY on opium enforced by the British Government at exporting centers such as Canton and Shanghai, added to the sale of "Black Poison of the East" as Saint Nihal Singh calls it, "enabled the Government of India to apportion large sums for education and sanitation," says that writer in the *Hindustan Review* (Allahabad). But this is now a thing of the past. China saw how Japan rose to the rank of the great Powers in a great measure through her increased vigor and capacity consequent on the prohibition of opium, and now, in spite of English influence, "China has been able to force the hand of the powerful British Administration, tho this is bound to cause some anxious thought to the Indian Finance Minister." Mr. Singh feels confident that, in following the example of Japan, China has taken a step which is "bound to conduce to the betterment of a populous nation which is making herculean efforts to rid itself of a social evil which has been sucking its vitality and restraining its progress."

This writer gives an account of the progress in China of the opium evil which by her famous edict the Dowager Empress Tou Hsi, in 1906, constituted a systematic effort to check "so that, by 1916, it would altogether cease to exist." The motives of this good and wise ruler are thus set forth:

"The defeat which China suffered at the hands of the great Powers of the world in the early years of this century led it to realize its inherent weakness, and made it anxious to regenerate itself by throwing off its conservatism and removing its social evils, most prominent among them being the national indulgence in opium. Across the narrow sea their neighbor Japan, who centuries before had learned wisdom from them and whom they had always regarded as their inferior, had risen until it had become a Power among Powers. One essential reform that had helped the Daybreak Empire to rise had been the crushing of the power of the poppy."

The stipulation made in a subsequent convention between England and China was based on the condition that in proportion as England reduced the Indian export of opium, China should cease the cultivation of it on her own soil. This arrangement was brought to an end automatically by the rise of the Chinese Republic, which did not recognize the decrees and conventions of the extinct Empire. But, as Mr. Singh says, while

"In the chaos that followed a great deal of opium was smuggled in, and some of the land that had been reclaimed from the poppy was again devoted to its cultivation; as the new Republic gathered its forces together it sought to put down this retrogressive movement. The weakness of the Central Government to enforce its will in this matter really did not make much difference, for the cause was dear to the hearts of the provincial and civic authorities who were eager to carry on the crusade against the opium habit, irrespective of what the Federal Administration did or ordered. The movement, therefore, survived, and each succeeding day saw it gain fresh momentum. During recent months the reformers have not hesitated to visit the extremest punishment on those who wilfully disobeyed the edicts, and have destroyed their property by fire and pillage. In some cases capital punishment has been meted out wholesale to flagrant offenders. Comments on such excesses are obviously superfluous. But to say the least, they demonstrate an earnestness to reform a social evil which has rarely before been shown by any community anywhere in the world."

In short, the new Republic set itself to work to checkmate the English Government in its efforts to increase its revenue by poisoning the Celestials. But the claims of the opium-shippers of Canton and Shanghai were warmly supported by the London press. When, however, the British merchants of China, fearing the ruin of their trade, appealed to the British Minister at Peking, he remained deaf to their protests. They then called upon the Government of India, that had sold them the stuff, to force the Chinese to buy it, by taking "stern measures to insure its consumption." But how did China stand all this? Our author proceeds as follows:

"The Chinese heard these complaints and listened to the protests of diplomats with 'the smile that was childlike and bland' and kept up their silent but effective obstruction to prevent Indian opium from finding its way into the Chinese markets. This was a marvelous achievement in itself, in view of the fact that the Flowery Republic had just passed through the throes of revolution, and the new régime stood in dire need of the moral support of the whole world, and had to rely upon the aid of the Western financiers to replenish its treasury. Indeed, there never had been a time in the history of China's intercourse with the Occident when the Celestials had been less prepared to brave the wrath of the powers that decree the financial fate of nations, or to circumvent the maneuvering of diplomacy, ruthlessly employed at the instance of commerce, than it was at the time when it was resisting the carrying out of the provisions of the opium conventions. But it withstood diplomatic and financial bullying without giving way, shutting its eyes to the beclouded horizon and ignoring all threats, whether outspoken or merely implied, saying nothing, but all the time seeing to it that the Indian opium was kept out of its market, preserving a

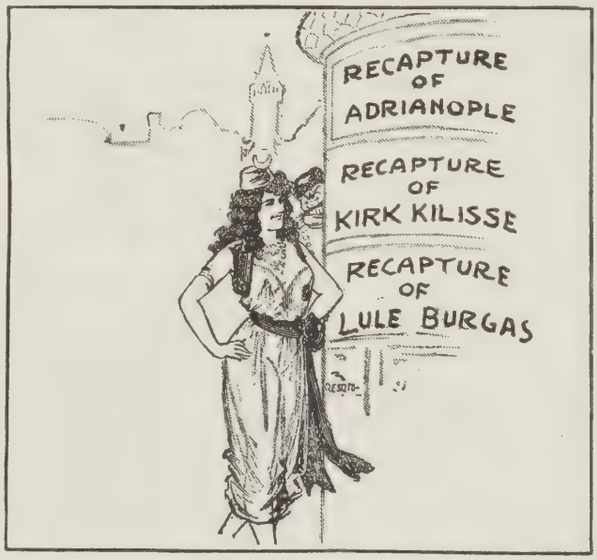
RIDDLES OF PEACE AND WAR.

calm, dignified attitude through all the stress and storm of the controversy."

The brave and persistent opposition of China to the importunities of British trade interests has had its reward. *The Times* (London) made an appeal not only to the instinct of fair play, but to the conscience of the English people. We quote the conclusion of a powerful article as follows: "We are unable to force Indian opium upon China. The public conscience of this country would forbid vigorous action, and rightly forbid it." The end of China's struggle for emancipation is thus stated by this impartial and lucid Hindu journalist:

"Nothing was, therefore, left for the British Indian Government to do but to suspend the future sales of opium and to boldly declare that it would no longer force the noxious narcotic on the Chinese. This is what it did when, on May 7, the Honorable Mr. E. S. Montagu, Under-Secretary of State for India, speaking in the House of Commons, announced that:

"' . . . For the first time in the modern history of India we are selling not an ounce of poppy for the Indo-Chinese opium trade, notwithstanding the treaty which China made with us, notwithstanding that from the opium we were entitled to send China under the treaty, £11,000,000 sterling might be derived. Notwithstanding that we have a right to go on selling opium to any province in which the opium was still being grown, we are prepared to undertake to revise the treaty of 1906, and not send any more opium to China, not only this year, while the stocks are being absorbed, but never again, with the single exception that we desire to be satisfied that China, as we believe her to be, is stedfast in the pursuit of her present policy, and determined to get rid of the indigenous poppy.'"



TURKEY'S NEW THEATRICAL SEASON.

—*Comoedia* (Paris).

WHY THE TURKS CLAIM ADRIANOPLE

THE TURKISH AND GREEK papers, both adversaries of Bulgaria, have at length come out with a defense of the Turkish occupation of Adrianople. That Turkey is justified in snatching the city from the Bulgarians is maintained on several grounds. The Moslem reoccupation is a step toward the maintenance of the balance of power in the Balkans—which preserves to the Turks their right position as a ruling race like the other four monarchies concerned. It is absurd, we are told, to talk of the heinousness of breaking the Treaty of London. The Powers should recollect that treaty-breaking "is the badge of all their tribe." Then the city and province of Adrianople are inhabited by Mussulmans, not by Slavs, so that Russia really has no interests at stake there, and her protest on behalf of Bulgaria can have no validity. Finally, if Turkey is forced to evacuate Adrianople the whole Moslem world will rise up in revolution. But perhaps the best solution of the question would be to learn by a plebiscite to which of the two disputants the population wishes to belong. The Greek daily, the *Neologos* (Constantinople), thus states the argument for Balkan equilibrium:

"Certain Powers would go so far as to exercise pressure on Turkey so as to compel her to renounce Adrianople and give up this city. But by what right? By virtue of what principle do they establish this pretension? If their principles are right and equity, the Treaty of London is the most lively example of injustice. If the Powers actually wish the definite establishment of peace and order in the Balkan peninsula, they should act in conformity with the principle of the equilibrium of forces. This equilibrium demands positively that Adrianople remain under Ottoman sovereignty. Let us hope that right and logic will prevail, and that the injustice they wish to commit to-day may not assume the form of an act of tyranny suited to the dark ages.

"The political principle of the equilibrium of the Balkan States, proclaimed by the Allies and by Roumania, may be interpreted as shutting out the Bulgarian occupation of Thrace. For it is impossible to conceive logically that the Allies, after their enormous sacrifices in money and blood and their victorious march into Bulgarian territory, or Roumania after her costly march up to the Bulgarian capital, undertaken solely with the purpose of securing the equilibrium of the oriental states, would accept the overthrow of this equilibrium to the profit of vanquished Bulgaria. For in that case the latter, possessing Thrace and shutting up Constantinople and the Straits within a narrow circle, would, in fact, be a preeminently powerful force in the Orient, and her conquerors of to-day would very soon willingly or unwillingly become her vassals. . . . . .

"No one can deny that the future lot of Thrace interests Turkey most of all, as the possessor of Constantinople and the Straits, and that consequently in the settlement of this question Turkey has a right to a voice."

It is ridiculous to charge Turkey with breaking a treaty. Treaties are made and broken by the rule of might, not right, pleads the *Ikdam* (Constantinople), in which we read:

"We are urged to observe treaty engagements. Let us see. How well did Bulgaria observe the Berlin Treaty when she annexed Eastern Roumelia? Her first act after our proclamation of constitutional government was, of her own motion, to sever the last bond of her relation to Turkey. How about Austria? Did she observe the Berlin treaty when she annexed Bosnia and Herzegovina? Then a little later Italy, with no *casus belli*, seized one of our largest provinces. Not a voice was raised against such tearing up of treaties anywhere in Europe."

The *Sabah* (Constantinople) enlarges on this topic in the following strain:

"Yes, a treaty was made at London, we acknowledge, and we own that Adrianople was in the possession of our enemies. But is it just not to see the new situation and the causes that have led up to it? Is not this new situation emphasized by the advance of Roumania beyond the line of Silistria, and by the march of Greece and Servia against Bulgaria, their ally of yesterday? It is this new situation that has allowed Turkey to push on to the natural frontier of the Maritza River, to make good, if only to a slight degree, the losses she sustained in the last war. Will Roumania, Servia, and Greece deny that they have profited by this chance? No, but the Ottoman Empire has not the same right. How can the Great Powers deny this right to Turkey, who has lost so much, while they recognize the right of Roumania, who has suffered no damage at all! What injustice!"

The same paper advocates an appeal to the people, who, it feels assured, will decide in favor of Turkey. Hence we read:

"The Ottoman Army has occupied Thrace and Adrianople. This is an accomplished fact, which constitutes a prime factor in our favor. But there is a second: the wish of the inhabitants of this region. Let a plebiscite be taken; we will agree to that. It is a method to which already Italy, France, and America have had recourse. We do not believe that Bulgaria would secure even 5 per cent. of the votes."

Russia has protested, and protested more energetically than any other Power, against Adrianople being ceded to the Turks.

But what has Russia got to do with this matter, asks the *Tanine* (Constantinople), and proceeds:

"The Adrianople province is Moslem and Turkish. It was left to the Bulgarian to enter there by force, plant his standard, trample on national feeling and aspiration. To permit this, to defend by force such action, means that Moslems may not conquer Christian territory, but that Christians may, when they can, invade and trample upon Moslem lands. In other words, in defiance of the Treaty of Paris of 1856, Turkey and, by inference, all Moslem peoples are to be deprived of those international rights recognized by Europe, and cast out of the pale of civilization!"

This paper concludes with a veiled threat against the Christian Powers of the world if the Moslem right to Adrianople is disregarded. "There is peril in the awakening of the Moslem world," if, roused by injustice to fury, "the Moslem subjects of England, Italy, and France, and Moslem friends of Germany become exasperated into revolution and armed resistance."—*Translation made for* THE LITERARY DIGEST.

MONGOLIA AS RUSSIA'S PREY

THE GERMANS' cry is—"Eastward, ho!"—but Germany's Bagdad railroad is so far calculated to take her only as far as Koweit on the Persian Gulf, without touching the outskirts of Russian or English protectorates in Persia, much less the frontiers of British India. Russia has the advantage of assailing the territory of Northern China from the north, and the Chinese are beginning to fear for Mongolia, within whose borders Russian garrisons are being gathered. The Czar's Government desires to have a buffer state, and for this purpose to secure the autonomy of Mongolia. And thus the Russian papers are now warmly discussing the negotiations going on between Peking and St. Petersburg. In this connection the *Novoye Vremya* (St. Petersburg) explains how by a treaty completed and signed October 21, 1912, Russia, in consideration of certain very important rights and concessions, undertook to "protect" Mongolian autonomy against the encroachment of China. Of course, the true aim of Russia was to isolate Mongolia, and then grab her territory. The Chinese Government, with which Russia carried on negotiations regarding the status of Mongolia, was in no great haste to give up such a large part

RUSSO-CHINESE CHESS TOURNAMENT.

RUSSIA (exultantly and with supreme satisfaction)—"Got him!"

—*National Review* (Shanghai).

of its country, and tried in various ways to delay the recognition of the Russian claims, and, if possible, to avoid them altogether. The dilatory tactics of the Chinese did not please the Czar's Government, and it broke off the negotiations, declaring in an official *communiqué* that it "restores to itself freedom of action in this question." *Novoye Vremya* (St. Petersburg) thus comments on the situation:

"Russian diplomacy has made more concessions to China than she could reasonably expect. But the further its benevolence extended the more the pretensions of the Chinese grew. The only way out of such a situation was to break off the negotiations, and Russian public opinion can not in this case approve the actions of Russian diplomacy.

"The Russian Foreign Department, however, does not close to the Peking Government the avenues to a renewal of the

RUSSIA—"Charles, my son, it is immoral to profit by the misfortunes of another."

—*Ulk* (Berlin).

negotiations, but on the condition that the Peking Government should give up the futile stratagems and recognize, without reservations, the basic principles which the Russian Government holds in the Mongolian question. Those principles are simple, and their justness and practical necessity are beyond dispute. The fundamental demands of Russia consist in the following: The Peking Government must recognize the autonomy of Mongolia (with the exception of the provinces of Inner Mongolia) and the rights consequent thereto; the Russian Government, in its turn, recognizes the suzerainty of China over Mongolia and the rights consequent thereto; the Peking Government must declare its readiness to accept the good services of Russia in establishing the relations between Peking and Mongolia on the basis outlined in the Russo-Mongolian treaty of 1912; and the reciprocal relations of Russia and China in Mongolia have to be settled on the same basis by special treaties."

The *Ryetch* (St. Petersburg) criticizes the Government's policy in these words:

"The idea to make Mongolia a buffer state between Russia and China put before the former a definite problem which has real political significance. But the application of this idea in actual life has caused disappointment in that very quarter whose sympathy was necessary for the success of the undertaking. The Mongols cooled off perceptibly toward us when they had been convinced, first, that Russia pursued her own selfish interests in Mongolia, and, secondly, that she does not ratify her words by her deeds. The Mongolian delegation which visited St. Petersburg left in a perplexed state of mind, not having found out what exactly Russia wanted of Mongolia and what she could give her. Russian diplomacy reached after the spoils—in a manner that would out-Herod England herself—but was not successful in getting them. And the result is that in the Mongolian spheres which at first grasped the help of Russia there arose a protest against autonomy under the egis of Russia, in favor of a similar autonomy even under the egis of China. . . . And if the Chinese Government stubbornly refuses to understand, perhaps, the just admonitions of Russian diplomacy, if this 'lack of understanding' is shared also by public opinion of China, in all that must be seen not only a logical aberration of Peking, . . . but the consequences of a political failure. . . . It is true the Chinese diplomats suffer from the fault, or virtue, of being evasive in questions of politics, and delay in their dealings with European powers is their favorite, tho excusable, method. For who is willing to submit to an amputation? Who does not try to stave off a calamity, even tho an inevitable one? That's why energetic language with mention of a 'free hand' is the way the European centers often respond to the Chinese delays and evasions."

SCIENCE AND INVENTION

FARMING ON THE GROUND FLOOR

SUPPOSE YOU WERE starving on the second floor of a house while there was a plentiful supply of food on the ground floor. Would you not welcome the kindly soul who should put a key into the locked door that led to the stairs? Such a favor are our most progressive farmers doing to their starving crops. They grow, perhaps, in too shallow soil, but far beneath, in one of the lower stories of the earth's crust, is plenty of rich mineral food for them. The key that unlocks the door to it is dynamite. An explosion breaks up the hard-pan, loosens the soil far below the possibility of any plow or cultivator to disturb it, and opens to the plant the store of food that it needs. Says Xeno W. Putnam, in an article on "Farming with Dynamite," contributed to *Cassier's Monthly* (New York, August):

"Between the available farming soil above and the underlying mineral wealth below there is as definite a boundary wall against the intrusion of root growth as there is against the farmer's cattle in the wire fence which shuts them from the lands of his neighbors.

"How to tap these rich mineral veins has been the problem. If the crust is not too hard certain plants solve it for themselves, tho only in part for their weaker neighbors. Some of the clovers, the cow-horn turnip, the mangel, and a few others, if a thrifty surface growth is given them, attack this crust with their tap roots with surprizing energy. In many places, however, even these are repulsed; while the feebler root growths of the smaller grains try to adapt themselves to the conditions which they can not overcome and send their hungry feeders in stunted coils through the surface soil that has already been drained of its plant food. Deeper plowing has been suggested—and tried. It takes more power ahead of the plow; in other words, it increases the cost of production, the cost of the world's food; then it introduces certain new evils which require extra plant energy or operating skill to overcome. Subsoiling is even more expensive and is only playfully effective; it scratches a few grooves into the outside varnish of the earth, but does not really open up the mineral mines below.

TRIPLING CROP PRODUCTION BY DYNAMITE.

A demonstration at Clarksville School, Clarksville, Tenn. The heavy growth of corn on the reader's left is the result of dynamiting the subsoil.

"The world jested while the first stick of dynamite was being lowered into the midst of this condition and the explosion came before she got through laughing; then she looked in astonishment into the resulting hole. The walls were shattered and seamed with little crevices running in every direction and the plant growth which was tried followed along these tiny openings until in contact with a supply of every mineral element required. The surface-water, too, instead of dashing off to the nearest creek or saturating the thin surface-soil to a mortar-bed, gradually trickled down these deep well passages and lay there ready for the emergency of drought, but beyond the danger-line of the hitherto drowning rootlets. The plant growth showed an astonishing appreciation of all this. It pushed the little rootlets into the crevices, where they expanded rapidly in their rich feeding, and penetrated a surprizing depth, seemingly from a sheer love of exploration. These new feeding-grounds, these intertwining channels into which the surface-water drained with its load of warm air, had virtually opened up a new farm empire. The world had builded a second story to its agricultural factory."

What does this gold-mine, this source of inexhaustible wealth which lies just below our worn-out farming lands, amount to when we sum it up? What are some of the dividends, and may we all expect our share? Mr. Putnam asks these questions, and answers them by quoting a few facts. He writes:

"Perhaps the most famous orchardist in the East, if not in the United States, used alternating dynamite and hand-dug holes a few years ago in setting out an orchard of young peach-trees. Three years from then the trees set by this new plan bore from three to six bushels of fruit each, while those that were hand-set, under the influence of a broiling sun, dried up and showed no signs of fruit. This was in Connecticut. In South Carolina, land that had been dynamited raised 33 per cent. more corn in a single season than the same ground produced before. A farm in Kansas that was underlaid by a zone of hard subsoil and would have been considered dear at $10 per acre if valued by the growth it would produce, after being broken up with dynamite at a depth of four or five feet now contains a 100-acre field of as fine alfalfa as grows in the State and annually produces from $30 to $35 per acre. Fifteen thousand dollars has been refused for this 160-acre farm. On another Kansas farm was a 40-acre swamp that could not be drained in the usual way. In some of it the water was three feet deep. It was tapped by means of a row of blast-holes, and the next day the owner walked across the tract. A year from then that field produced 1,600 bushels of oats and is now in fine alfalfa. A Georgia orchardist found by experimenting that by planting peach-trees in dynamited holes he gained two years in six. . . . These are some of the results; there are thousands similar. Thousands of acres, previously unproductive, that are now teeming with fertility; thousands of practical experimenters who can afford to laugh, who are actually laughing because somebody once said 'dynamite' to them and said it with a fervor that convinced."

A NEW SOURCE OF PAPER-PULP — Several promising sources of paper-pulp were recently noted in these columns. Another may now be added to the list—the wide-spread and hardy plant, broom corn. Successful experiments with this have been made in Italy. In *Prometheus* (Berlin) we read:

"The fibrous twigs are broken in a sort of flax-breaker, then treated for a considerable length of time with caustic soda lye, and afterward put through the breaking-machine a second time. The mass is freed of moisture by means of hydraulic presses, after which it is separated into fibers, washed, and bleached. The material thus obtained sells for about a cent a pound, and is of excellent quality, suitable for making the best grades of paper. The liquid prest out from the pulp is a valuable by-product, since its high content of alkali makes it useful in the soap industry." — *Translation made for* THE LITERARY DIGEST.

THE NEW BREED OF RAILROAD MANAGERS

THE OLD-FASHIONED railroad president thought he was doing pretty well if he managed his railroad successfully. He of the new era regards it as necessary to manage the public also—sometimes a more difficult matter, as Mr. Charles S. Mellen found it to be. The retirement of Mr. Mellen, perhaps the last of the "old breed" to hold such a conspicuous post, leads *The Railway Age Gazette* to philosophize a little on the passing of the old order—"an epoch," it says, "in the history of railways in this country." Under the old régime, while railways were theoretically public-service corporations, they were not so in practise, says this journal; and they were not so regarded by their managers, who believed that it was almost their sole concern to earn dividends. Says the writer:

"The law regarded railways as public servants. The managers recognized the theory, but to a large extent ignored it in practise. They submitted to the letter of legal provisions regarding rates and service, only in the measure that these were vigorously enforced by unusually energetic and aggressive public officials. But they often did not conform even to the letter of the statutes; and very commonly they violated the spirit of their function of public service.

"During the last ten years, under the pressure of public regulation and public opinion, the attitude and conduct of railway managers have been undergoing a remarkable change. This has been due in no small measure to changes in the personnel of the managers. Some of the older leaders of transportation have demonstrated their statesmanlike qualities by adapting themselves to the changed conditions. Many of them, either in the ordinary course of events or owing to the development of conditions to which they could not adapt themselves, have been retired. There has, consequently, sprung up a new generation of managers—some of them new only in the adaptation of their policies to the spirit of the time, many of them, as managers, new in fact. The members of this new generation are animated not only by the desire to earn profits for their employers—a desire without having which in large measure they would be commercial eunuchs—but also by the desire to perform fully and loyally their function as servants of the public. They recognize the difficulties in the way of performance of their dual duty, but they accept unreservedly its responsibilities.

"Mr. Mellen belonged to the last generation of the railway managers. Able and ambitious, he proved himself incapable of performing the functions of a public servant. Perhaps his deficiency was not so much lack of ability to do the work of a public servant well as lack of ability to do it satisfactorily. At any rate, he showed such lack of capacity for adapting himself to contemporary conditions that it became evident to everybody else long before it did to him that his days as a railway manager were numbered. His retirement will mark the abdication of the last of the railway czars. It will be of no less significance in the country as a whole than in New England, for it will eliminate the last of the managers whose ability as executives was equaled by their ability to arouse antagonisms almost, if not quite, as inimical to the interests of the railways as downright inefficiency in operation."

What is the public going to do in the face of this managerial revolution in the railways? Does it appreciate the change in their attitude toward it? Will it modify the policy it has been following with reference to railways during recent years? If the public attitude and policy are not to be greatly changed, the writer assures us that there is serious trouble ahead for the railways and the country. He says:

"To sum up the situation in a word: will the public call off the railway baiters for a while and give the new generation of railway managers a fair chance? There is no doubt that the sentiment of the public toward the railways has softened very much. Unfortunately, while the public is no longer urging forward attacks on railways it is not requiring them to be stopt. This is clearly shown by the statistics regarding the number of laws to regulate railway operation which have been passed by the State legislatures during the present year. Most of these laws are harmful to the railways and do the public no good. The public has compelled the railway managers largely to reform. When, if ever, is it going to compel the lawmakers and administrative public officials to reform? When is it going to recognize the fact that by permitting legislatures and railway commissions to impose numerous unnecessary restrictions and burdens on railway companies it is permitting them to make it impossible for the new generation of railway managers to live up to the modern conception of the function of the railway manager as a public servant?

"The public is often strangely forgetful of the fact that it, as well as the individuals composing it, has duties and responsibilities. However, the situation does not afford ground for pessimism. Public officials always lag somewhat behind public opinion. The change in public opinion with reference to railways seems to be unmistakable; and, perhaps, in due time the conduct of the servants of the public will catch up with the views of the public."

SANITARY ICE-CREAM

PERSONS WHO ARE cautious to an extreme about the milk that they admit into their houses frequently relax their vigilance as soon as the milk is frozen. They want to know precisely the source of the article so long as it is furnished in liquid form, but they cease to push these queries when it arrives frozen from the confectioner's. The underlying cause of this discrepancy seems to be an idea that everything is sanitary below 32° Fahrenheit. This idea, however, is unfortunately false. Some germs, it is true, flourish only in warm media, but others grow much better below the freezing-point; and among these are at least a few that it is well for us not to admit to our digestive passages. Says *The Medical Review of Reviews* (New York, August), in an editorial on the subject:

"Taking ice-cream to be a product of cream and sugar with a natural flavor, it becomes patent that the sanitary aspects of the ice-cream become of importance. Cream itself contains a large number of microorganisms which are not destroyed in the processes of converting the cream into ice-cream. General investigations of the bacteriological content of ice-creams in Philadelphia, Washington, Boston, and New York have demonstrated that the ice-creams commonly contain from two millions to five millions bacteria per cubic centimeter. In fact, twenty-five million microorganisms per cubic centimeter and above represent frequent indications of the lack of sanitary conditions in the manufacture of ice-cream.

"Municipalities have not been properly concerned in the unsanitary conditions surrounding the places of manufacture of ice-cream. Unclean cellars, with the absence of proper light, with wretched ventilation, or with inadequate toilet facilities, suggest the impossible conditions under which too much of our ice-cream is made. It is impossible to secure a clean product in unsanitary cellars, where personal cleanliness is impossible and where the manufacture of ice-cream in a cleanly way is impaired by the presence of old furniture, filthy matting, and unclean sinks and foul toilets.

"It is needless to state that the harmful pollution of ice-cream is not all due to the unsanitary conditions of the ice-cream manufacture. The first step in the production of wholesome ice-cream demands the protection of the cream or milk which enters into its manufacture. The presence of streptococci or bacilli coli communis indicates that the source of pollution comes from cattle as well as from man.

"Bacterial infection of this nature should be destroyed before any use is made of such contaminated foodstuffs in the preparation of frozen products. The destruction of bacteria becomes more imperative when it is recalled that ice-cream is used largely as a food by children and invalids whose susceptibility to infection is greater than the normal healthy adult. The various outbreaks of poisoning from ice-cream with the nausea, vomiting, diarrhea, abdominal cramps, and general malaise bear loud testimony to the necessity of protecting the consuming public from the disease-breeding qualities of impure ice-creams.

"It has generally been regarded as a fact that the low temperature maintained during the storage of ice-cream suffices to destroy the bacteria. The investigation by Stiles in Washington and Pennington in Philadelphia has shown that the bacterial content is not generally decreased by storage. The general tendency is to secure a decrease in the number of organisms

which thrive with an optimum temperature of body heat. The decrease, however, is soon followed by a pronounced rise which indicates the importance of having a clean, low bacterial cream to begin with.

"The toxicity of impure ice-cream has been demonstrated in various epidemics due to the general consumption of contaminated ice-cream. Ice-cream has served to spread typhoid fever in addition to causing numerous other gastro-intestinal diseases. . . . . .

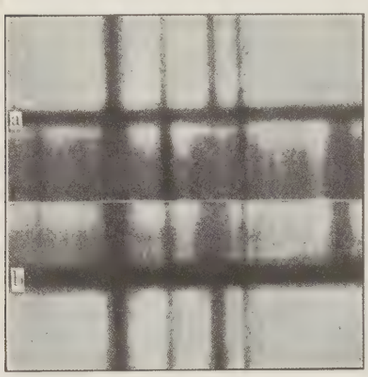
"The ptomaines which are grouped under the general popular head of tyrotoxicon are formed in impure creams, particularly where the cheap grades of material are used. Such ptomaines are most likely to occur in the cheaper grades of ice-creams where milk, eggs, and thickeners as gelatin and glue are used so as to lessen the necessity of using a high standard cream.

"It seems important at this time to call general attention to the necessity of labeling ice-cream truthfully so that the consumer will be protected from adulterated articles consisting of other constituents than fresh cream, sugar, and flavoring matters. The use of skimmed milk and condensed milk should not be permitted in the products which are advertised as frozen or iced creams.

"In the interests of the public health (1) it is necessary to safeguard the production, handling, and storage of the cream; (2) to demand clean, sanitary, well-ventilated kitchens or establishments in which ice-cream is made; (3) to provide for sanitary oversight of the ice-cream industry; (4) to establish chemical and bacteriological standards for ice-creams; (5) to secure the honest labeling of frozen products."

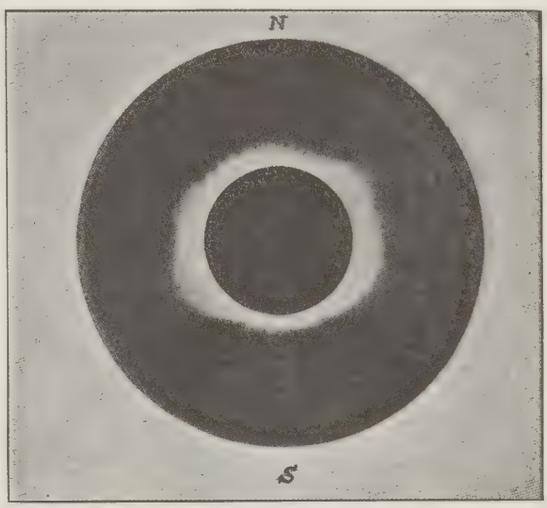
CELESTIAL MAGNETS

THAT THE EARTH is a great magnet has long been known. That the sun is one also now appears very probable. It can not, however, be a permanently magnetized body, for such bodies lose their magnetism at temperatures far below that of the solar mass. The interesting theory that every large rotating body is a magnet was advanced in 1891, and if this is so, it would make not only earth and sun, but also every celestial body, a magnetic globe. So far, however, this is only an unproved, tho very interesting, hypothesis. With regard to the sun, it has now been definitely shown that the vortices known as sun-spots are magnetic, owing to the fact that electrified particles are carried around in their whirls. They are electro-magnets, the electrified vortex acting in this respect precisely like the spiral electric current around the core of an ordinary telegraph- or bell-magnet. The discovery of these local solar magnetic phenomena is due to the previous discovery that a magnetic field splits the lines in the spectrum of light traversing the field. Prof. George E. Hale, of the Mount Wilson Solar Observatory in California, first observed this splitting in certain lines of the solar spectrum and attributed it to its true cause. In *The Popular Science Monthly* (New York, August) Professor Hale describes efforts to apply the same line of reasoning to the sun as a whole, which he thinks have established the magnetic character of that body. He writes:



a, *b*, SPECTRA OF TWO SUN-SPOTS.
The triple line indicates a magnetic field.

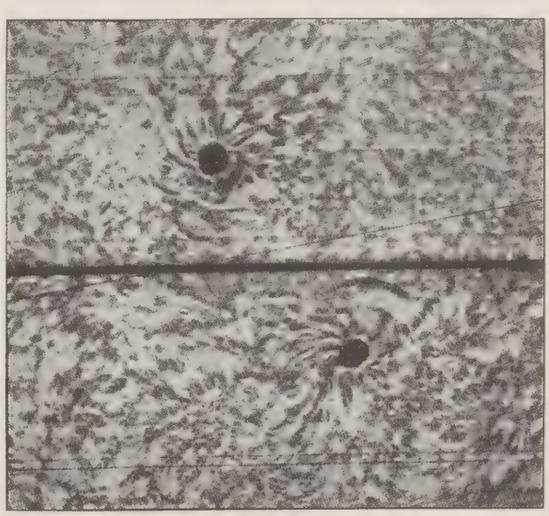
"Is the sun a magnet like the earth? The structure of the corona, as revealed at total eclipses, points strongly in this direction. . . . Bigelow, in 1889, investigated this coronal structure, and showed that it is very similar to the lines of force of a spherical magnet. Störmer, guided by his own researches on the aurora, has calculated the trajectories of electrons moving out from the sun under the influence of a general magnetic field, and compared these trajectories with the coronal streamers. The resemblance is apparently too close to be the result of chance. Finally, Deslandres has investigated the forms and motions of solar prominences, which he finds to behave as they would in a magnetic field of intensity about one millionth that of the earth. We may thus infer the existence of a general solar magnetic field. But since the sign of the charge of the outflowing electrons is not certainly known, we can not determine the polarity of the sun in this way. . . . To detect . . . the



Illustrations from "The Popular Science Monthly," New York.
SOLAR CORONA, SHOWING POLAR STREAMERS.

magnetic field of the sun as distinguished from that of the sun's atmosphere, we must resort to the method employed in the case of sun-spots. . . . If this is successful, it will not only show beyond doubt whether the sun is a magnet: it will also permit the polarity of the sun to be compared with that of the earth, give a measure of the strength of the field at different latitudes, and indicate the sign of the charge that a rotating sphere must possess if it is to produce a similar field. . . . . .

"I shall not trouble you with the details of the hundreds of photographs and the thousands of measures which have been made by my colleagues and myself during the past year. In view of the diffuse character of the solar lines under such high dispersion, and the exceedingly small displacements observed,



VORTICES SURROUNDING SUN-SPOTS.
Indicated by the distribution of hydrogen gas. Photographed with the spectroheliograph.

the results must be given with some reserve, tho they appear to leave no doubt as to the reality of the effect. . . . . .

"It must remain for the future to confirm or to overthrow the apparently strong evidence in favor of the existence of a true Zeeman effect, due to the general magnetic field of the sun. If

this evidence can be accepted, we may draw certain conclusions of present interest.

"Taking the measures at their face value, they indicate that the north magnetic pole of the sun lies at or near the north pole of rotation, while the south magnetic pole lies at or near the south pole of rotation. In other words, if a compass-needle could withstand the solar temperature, it would point approximately as it does on the earth, since the polarity of the two bodies appears to be the same. . . . . .

"In this survey of magnetic phenomena, we have kept constantly in mind the hypothesis that the magnetism of the earth is due to its rotation. Permanent magnets, formerly supposed to account for the earth's magnetic field, could not exist at the high temperature of the sun. Displays of the aurora, usually accompanied by magnetic storms, are plausibly attributed to electrons reaching the earth from the sun, and illuminating the rare gases of the upper atmosphere just as they affect those in a vacuum-tube. Definite proof of the existence of free electrons in the sun is afforded by the discovery of powerful local magnetic fields in sun-spots, where the magnetic intensity is sometimes as great as nine thousand times that of the earth's field. These local fields probably result from the rapid revolution in a vortex of negative electrons, flowing toward the cooler spot from the hotter region outside. The same method of observation now indicates that the whole sun is a magnet, of the same polarity as the earth. Because of the high solar temperature, this magnetism may be ascribed to the sun's axial rotation. It is not improbable that the earth's magnetism also results from its rotation, and that other rotating celestial bodies, such as stars and nebulæ, may ultimately be found to possess magnetic properties. Thus, while the presence of free electrons in the sun prevents our acceptance of the evidence as a proof that every large rotating body is a magnet, the results of the investigation are not opposed to this hypothesis, which may be tested further by the study of other stars of known diameter and velocity of rotation."

SANE CITY-PLANNING

CITY-PLANNING is understood by some sensible people to mean tearing down a space in the middle of a town and building it over to resemble a section of Dresden or Paris. Such schemes are almost always architectural in their inception. They are expensive, and the result is that they are not carried out. To plan a growing city so that it shall grow normally and usefully is quite a different thing from this, and it is refreshing to learn from an editorial in *The Municipal Journal* (New York, August 14) that this new idea of city-planning is gaining ground. Says this publication:

"The evolution of city-planning from the architect's dream of an elaborate civic center of imposing buildings to an attainable regulation of a city's growth to promote the convenience and health of its citizens is making encouraging progress. . . . Probably nothing has done more to retard real progress in city-planning than the idea entertained both by the people in general and by its most conspicuous advocates, that it meant chiefly, if not exclusively, the expenditure of enormous sums in the total transformation of certain central sections of the city and approaches thereto. We now realize that real city-planning is intelligent direction of the growth of a city, with only such changes in the older sections as are necessary for health and economy.

"The trouble has been in the past that most cities have, like Topsy, 'jess growed'; and the idea of city-planning is to apply modern science and knowledge to direct their growth. In most cases the various officials already employed by the city possess the knowledge necessary, and what is required is merely to combine the various possessors of this knowledge into one cooperative body and—perhaps most important—to impress upon them, the other officials, and the citizens generally the importance of taking forethought, of planning for the future with a view to the coordination of all of the various activities and departments of the municipality. A city-planning commission might well consist of merely a council of department heads, the frequent meetings of which would help to give each a more comprehensive view of the city's needs and possibilities, while each should direct and plan for the future growth of certain branches (the city engineer, for instance, preparing the street plan), subject to the approval of the others—practically the commission plan of government applied to this particular subject. But whatever the method, the aim should be intelligent and comprehensive direction of the growth of the city as a whole and in all its branches."

ARMIES AS SANITARIUMS

MARRIAGE AS A MEASURE of health has recently been advocated, as noted in these pages, by authorities who show statistically that bachelors and maids die earlier than wedded couples. As a further precaution against disease, we are now told, we should join the army. Soldiers are much healthier than civilians, as they are cared for by a Government whose interest it is, in dollars and cents, that they should keep in good condition. In an editorial on "Military Service and Public Health," in *The Army and Navy Journal* (New York, August 16), Dr. Piussan, chief of the French army medical service, is quoted as demonstrating "with great logic and clearness" that the Frenchman's army years are the happiest in his life. We read:

"In the first place, the food of the soldier has been most carefully considered and regulated with proper regard to obtaining the highest degree of efficiency from an individual fed on a scientific dietary. Since 1905, when the doctors recommended a better cooked and more varied diet, a system of cookery instruction has been a logical outcome of the recommendation. Arising out of a similar regard for efficiency, the clothing of the soldier is supervised and is designed with a view to best protecting him in all weathers; daily habits of cleanliness and personal hygiene are enforced; and, above all, suitable prophylactic measures are taken to protect him against infectious diseases.

"Dr. Piussan considers these in detail, and then invites attention to their results as exprest in figures. The death-rate for the whole of the population is a little over twenty per thousand, and these deaths are, of course, distributed in varying percentages over different ages; but an average death-rate for the civil population between the ages of twenty and twenty-two is eight per thousand. Now, for the home army of France the death-rate is less than four per thousand; 3¾ per thousand is the average over a ten-year period. . . . In short, there is less risk of dying in the army than out of it.

"This general conclusion, the London *Morning Post* points out, is confirmed by the facts, shown by precise statistics, that epidemics are rarer in the army, and that while the army sometimes 'catches' an epidemic from the civil population, it seldom passes an epidemic on. The epidemic is noted and stifled within the army's boundaries. From these and other considerations, Dr. Piussan's contention that the French Army, equipped with a system of applied hygiene and protected by careful preventive treatment, is a nucleus of good health and a school of sound hygiene for the whole nation, seems amply justified.

"Altho, perhaps, beyond the scope of Dr. Piussan's able paper, we can not but wish that he had spoken of the great benefit to the nation of having thousands of young men returning each year from the army to their home communities, taking with them the very latest ideas as to sanitation, food, and general hygiene. . . . . .

"One has but to study the result upon the health of the world of the work of the surgeons of the United States Army in Cuba and Panama to realize the far-reaching influence of medical sanitation upon mankind in general. By the experiments with mosquitoes in Cuba after the Spanish-American War and in Panama since the American work on the canal began, the peril of yellow fever has been banished from the former country and the terrors of the tropical climate have been chased from the Isthmus, so long considered the plague-spot of the world and so long sending broadcast over the world its shiploads of deadly diseases. Ship-quarantining against Cuba and the Isthmus has long since ceased, and foreign countries no longer look with fear upon vessels which arrive in their ports from the former homes of yellow fever. From the island of Cuba and from Panama object-lessons in the virtues of military sanitation must spread around the world for the ultimate betterment of the human race. . . .

"Back into the homes of the land in France, as in every country where there is a well-organized army, go many men each year at the expiration of their terms of service, and these take with them a knowledge of things as they ought to be."

SERVANTS OF INDUSTRY

A NEW INDUSTRIAL PROFESSION has seen the light in New England. The men who have adopted it call themselves "counselors on labor problems." Their aim, we are told by Robert G. Valentine, former Commissioner of Indian Affairs, who described it in a paper read before the seventh annual Sagamore Sociological Conference at Cape Cod in July, is to serve, not the employer, not the employed, but rather the industry itself. It may be best for the industry that both master and man should suffer; if this is the case, the new "servants of industry" do not hesitate to advise a course of action that will have this result. Their object, also, is prevention rather than cure; they are neither strike-makers nor strike-breakers, but rather strike-preventers. The following extracts from Mr. Valentine's paper are from a report in the Boston *Transcript* (July 3):

"It is time that the methods of science be applied to the human relations in industry; that an intelligent study and clear statement be made both on the part of employers and labor-unions of what the men and women at work think and know and feel, in order that such a grasp of the situation be obtained that we can do really effective work toward securing industrial peace.

"Welfare work, trade-union investigations, governmental and philanthropic activities do not cover the ground, either because they represent interested parties, or are necessarily limited in scope, or because, as in the case of arbitration, they have to wait till the trouble arises before they can act.

"The 'counselor on labor problems' furnishes the complement to these existing activities. He is not an interested party. He may be called in by employer, employees, or the public, but he takes an unbiased stand between them. He serves the industry.

"He acts first as consultant. He advises an employer, for instance, to improve the sanitary conditions of his factory in order that his position toward the union demands may be strengthened; or he advises a group of employees to strike for the machinery of betterment rather than for particular points of benefit.

"He installs a system of records, by means of which both employers and employees may keep in touch with the relations throughout the industry; he helps in reorganizations, acting as assistant to the regular management so that the work done becomes an integral part of things and does not crumble behind him. He makes industrial surveys, assists in educational campaigns, and supplies data for useful legislation.

"His best work is thus essentially preventive, and done in advance of any dispute. In a word, he aims to reach at the source of those troubles which endanger both profits and wages. In the spirit of science he seeks to discover the true laws of the industry that he may place them at the service of his client, whether that client be the man who must earn profits or stop, or the men and women who must have opportunity to earn at least living wages."

MOVING PICTURES OF NORTHERN LIGHTS—A recent Swedish expedition to study the aurora in northern latitudes has succeeded in obtaining three satisfactory moving-picture films of this elusive celestial phenomenon. The kinematograph was first tried in 1910 on the aurora, but no satisfactory results were obtained until this year. Says *Nature* (London, August 7), in a brief notice of the expedition:

"As in 1910, a kinematograph was employed to try to secure the changing phases of the aurora: for the most part the auroral images were too faint. On three occasions, however, when the auroræ were very bright, consecutive exposures were given, lasting from 0.5 second to 1 second for each image.

"Another series of about 100 photographs was taken on April 8 with the kinematograph, each exposure lasting about four seconds. These photographs demonstrate the great utility of this instrument not only in obtaining consecutive features of the displays, but in securing ordinary photographs at the two stations. The communication is accompanied by two most interesting plates. . . . One of these reproduces four portions of the kinematograph strip exposed on April 8 at Bossekop. These speak for themselves in indicating the valuable aid the kinematograph brings to auroral studies. The gradual change in form and density of the filaments is clearly indicated. M. Störmer states that the results of this expedition will be published in considerable detail in a subsequent memoir, and the above brief summary is sufficient to show that the memoir will be a most valuable contribution to our knowledge of the aurora."

WIRELESS TIME FOR ALL THE WORLD

ALL OF THE IMPORTANT countries of the world have now adopted the zone-system of time, based on Greenwich observatory as a center, the time in each zone differing by just one hour from that in the next. The earth's surface contains twenty-four of these zones and the well-known railway-time zones of the United States—"central time," "eastern time," etc.—are parts of the system. With a time-system that is now for the first time world-wide, it becomes increasingly important that the time should be widely and accurately distributed. This is generally done at present by telegraph, and the accuracy of the distribution leaves much to be desired, we are told by Commandant G. Ferrié of the French Navy, who writes on the subject in the *Revue Scientifique* (Paris, July 19). Says Commandant Ferrié:

"The principal disseminating agents of the time are the railways and the telegraphs, for which the knowledge of the precise time is particularly necessary. The principal centers of administration receive the time directly from the neighboring observatories, by telegraph or telephone, and retransmit it in like manner to the important stations or telegraph offices. These send it again to other secondary points where special agents or watchmakers receive it and transmit it to all sorts of places, by means of watches which serve to regulate public clocks, from which, finally, individuals take their time.

"The distribution is thus made 'in cascade,' and the number of retransmissions necessary before the time from an observatory reaches any particular clock is often very considerable. The precision thus obtained is very slight, because of the accumulation of errors of the intermediaries.

"For the needs of individuals, this defect in exactitude has generally no serious inconvenience; but it is not so with public services—the railroads, for instance, where a relatively small error in time at a station might cause an accident. Navigators require still greater precision. . . . For geodesists, seismologists, explorers, etc., the precision necessary is yet greater. . . . . .

"The use of wireless telegraphy . . . avoids all the difficulties and solves all the problems noted above, by suppressing totally, when necessary, all the intermediaries between an observatory and any particular clock. All that is necessary is to connect the observatory with a wireless station equipped to send time-signals. . . . These signals sent out in all directions with the speed of light may be perceived on land or sea at considerable distances by any number of operators having timepieces to regulate."

This universal system of signals also, the writer goes on to say, fits in particularly well with the new world-wide time-zones. In fact, the recent international time congress decided that, beginning on July 1 last, time-signals by wireless should be sent out in the same manner throughout the civilized world. Time-stations have been especially recommended to compare and mutually adjust their signals, so that, for instance, a vessel within call of two stations may not be confused by receiving these at slightly different intervals. Such comparison of times, also, makes possible very accurate redeterminations of longitude. Such a determination is now going on, the writer tells us, between the Eiffel Tower at Paris and our own great government station at Arlington, Va., near Washington. There has been some trouble in the exchange of communications over so great a distance; but there seems to be no doubt that owing to this unification of the world's time by wireless telegraphy, not only will arbitrary time-differences be reduced to a system, but the differences of longitude of stations over the globe will be determined anew with vastly greater precision.—*Translation made for* THE LITERARY DIGEST.

LETTERS AND ART

RHYTHMICS IN RUSSIAN ART

THAT THE OLD SUPREMACY in art which came first from Greece, then Italy, then France, should now be looked for in Russia, has become the accepted view of recent days. It is, then, instructive to read that the key-note of Russia's artistic expression is rhythm. "Rhythm is fascinating every one," says Mr. Huntley Carter in a recently published book called "The New Spirit in Drama and Art." This work is the record of a pilgrimage to all the large art centers of Europe for the purpose of discovering the trend of the newest ideas in each. Paris, Berlin, Dresden, Munich, Vienna, Budapest, etc., all contribute something; but the supremely original expression seems to be found in Moscow. There, we are told, rhythm as a fundamental idea is "exercising a spell alike on dramatists, painters, dancers, and musicians." That with Russians it is not the altogether new impulse that it strikes the outsider as being is seen in the fact that it is "the fundamental note of the compositions of the great school of national music that began with Glinka—who rediscovered the rhythm of the Russian folk-song—and has gone on developing in one direction through Dargomishky, Balakirev, Mussorgsky, Borodini, Rimsky-Karsakoff, Glazounov, and in another through Tschaikovsky." Art in Russia has much of the paradoxical in its development. Its artistic outpourings . . . betray a tendency toward repletion, but in other directions it is sterile. Mr. Carter writes:

COSTUME DESIGN.

One of Leon Bakst's suggestions for dressing a figure in the Russian ballet. The illustrations accompanying this article are from "The New Spirit in Drama and Art," by Huntley Carter.

"Moscow presents a picture of the stationary and ecstatic. It is a religious fanatic in an electrogilt temple, bowing to invisible gods. At first sight, neither the position nor the condition would appear to be favorable to art. But they are more favorable than they appear. Art is a jealous god. It tolerates no other gods. It demands to be crowned with ecstasy. And to put the crown of ecstasy upon its creations, it demands furthermore the assistance of love. . . . If we accept this implication, that ecstasy proceeding from love is the real foster-parent of art, we gain a key to the artistic attitude of Moscow.

"Saint Moscow is deliriously ecstatic. It is idolatrous. It is always at a high pitch of excitement, always under the influence of its primitive instincts. Look at its big decorators, and note how their work recalls the primitive man with his immense openness and his childlike vital vision, to whom the Milky Way is the footsteps of angels. The fact is, Moscow has never grown up. It is in that condition of ecstasy, bordering on frenzy, which marked the middle ages. At that time men's thoughts were directed mainly to religion and art as a means of exhausting their energy and preserving their balance. They turned to the dramatized church ritual and mystery plays for enlightenment and relief just as readily as men to-day turn to the social drama. Thus it would seem as tho Moscow, being prevented from developing in one direction, the social, has been forced, in order to retain its sanity, to develop in another, the artistic."

Russian art has touched the western world more particularly in its ballet and its theater. Its examples of reform have taken many captives. Reform in the theater began before the rest of Europe had waked up to such a necessity. The society formed to exploit the Art Theater of Moscow started with an ideal of extreme realism. They made a clean sweep of out-of-date plays, scenery, actors, and laws; but reaction against these supervened, and the ideal now is for "synthetisation, simplification, and suggestion." We read:

"Scorning realism, these newcomers engaged in the search for the fundamental rhythm to be developed and exprest in everything—voice, gesture, setting, costumes, and so forth. The scene was to be represented by a few essentials expressing the inner synthesis of period and phenomenon. Thus words, gestures, movements, decorations, costumes, all were to be set vibrating in unison. . . . . .

"The time had also come for the drama to find a new individual expression, and Tchekoff added a fresh impulse to the modern school. Tchekoff practically recreated the Moscow Art Theater and inspired it anew with his genius. It may be that his lyricism came at the right moment to balance its overnaturalism, and thus enabled it to avoid being sloughed in the rut of the brutal realism of Gorki, and to pass easily from this to the symbolism of Ibsen and, later, Maeterlinck. In any case, his peculiar genius for the stage and the extraordinary technic of his plays, so admirably adapted to the natural methods of the players, brought the first great success to the Moscow Theater, upon which it has never looked back. In gratitude it has adopted the sea-gull for a crest. Tchekoff practically created an immobile form of drama, and with his arrival at the Moscow Theater came a new era of stage-production. All the newly created traditions and principles of staging were readjusted, in order to produce the requisite atmosphere of immobility. So, from the appearance of Tchekoff, the work of the theater has gone on, every one concerned apparently concentrating on the task of creating a perfectly organized theatrical center, answering to a university of dramatic art, as well as to a national theater.

"The first time I was shown over the theater the question naturally arose: How is the theater physically equipped? The answer was brief. Beyond a complete and up-to-date electric-

room, and three principal features of the Deutsches Theater, Berlin, the revolving stage, the round or concave horizon, and the new horizon lighting, it has but little of special interest. It is spacious throughout, and restful. Its foyer and corridors are spacious, and its general architectural features compare favorably with the best type of modern theater. It has a very large stage—larger, indeed, than that of His Majesty's Theater, London—provided with a revolving center. In the evident desire, shown in the number and variety of electric appliances, to solve the problems of lighting by the application of the latest advances in electrotechnic, it passes at once from the conventional theater to the laboratory. Perhaps here the problems of stage-lighting, seen in the attempt to obtain the effect of direct sunlight or diffused light, a truthful distribution of light and shadow, are nearest solution. From the physical I turned to the mental equipment of the theater. How is the theater mentally organized and equipped? With a rare union of the artistic and the practical, was the reply. Both the directors, managers, and every member of the staff appear to be liberally endowed with taste, judgment, patience, and perseverance. The decorators and electricians understand the laws of the stage and the demands of the scenic materials. Even the wig-maker and costumier are artists, unlike the London samples, who are merely tradesmen. . . . . .

"It did not require a deep penetration to see that the company trained under this theater-university system has also the artistic and practical character. Indeed, the system has bred in it an extraorinary love of the theater and drama. To its members the theater is a center affording facilities for probing the most intimate secrets of the dramatic form of art. They live, work, and play in the theater. To them the theater is a sort of preparatory school, where they study during the day and play principal parts or walk on at night. They may be divided into head pupils, secondary pupils, and probationers—those waiting to be admitted. They are always in the theater, and attend every rehearsal, watching and learning. They are taught the essentials of acting and speaking, and are trained in the movements of the Jacques-Dalcroze system of dancing. They adopt the round-table method of studying a play and learning their parts, and thus come together in conference, as it were, for the purpose of analyzing and assimilating the part and the whole. How different this is from the London system, according to which to the English actor the theater only spells treasury! He is forbidden the theater except at special moments. As a rule, he is rigorously kept out of the auditorium, and sometimes off the stage while the rehearsals are on, and is given a detached fragment of the play to study, which he must learn either at home, when the missus is shopping and the 'kids are abed,' or during rehearsals, balanced on one leg supporting the scenery, or in the nearest pot-shop over a convivial beer in pewter. Ask a London actor for particulars of the play in which he is apppearing, and he will invariably tell you he knows nothing about it, except what is contained in his own 'bit.' . . . . In Moscow the actors are artists who passionately love their form of art, and together they form an efficiently organized company, each member of which is fully acquainted with the traditions of the theater, and fully prepared to form any part of a harmonious whole! They embody efficiency and uniformity in the highest degree."

STAGE SCENE IN THE NEW RUSSIAN MANNER

Designed by M. Roerick for the opera ballet, "Prince Igor."

PERIL OF THE BASEBALL LINGO

CHICAGO IS ATTEMPTING to improve baseball slang out of the language and, strangely enough, support comes from an unexpected quarter. Baseball managers and players are willing to have the newspapers report the game in good dictionary English. Our "numerous professors and other educators" vote for a continuation of the slang. Newspapers remote from the scene of the initial step in reform resent this effort. The Charleston *News and Courier* sees the national game suffering an injury, and declares that baseball is "probably worth more to us than the wheat crop or the immigration laws or most of the Congressmen that the nation maintains at Washington." We read this outcry:

"The injury which is now proposed is the abolition of the language of baseball. This, as all the world knows, is a distinctive and peculiar tongue. It is not English. It is not precisely slang. It is a strange patois, full of idiomatic eccentricities, rich in catch-phrases and technical terms, wonderfully expressive and in the highest degree flexible. Against this patois the voice of the purist has been raised. He would have us give up this 'lingo' in which for years events in the baseball world have been chronicled by the press. He would have the editor of every dignified sheet order his baseball reporters to use nothing but conventional English in the sporting columns and eschew forever the catch-phrases and the technical terminology which have made the language of baseball a tongue unto itself. The question has assumed the importance of a national issue. It has received editorial discussion in the columns of the most influential newspapers, and it has aroused interest from end to end of this baseball-loving land.

"It is to be hoped, and it may reasonably be expected, that the movement will not accomplish the results which its more radical advocates desire. Baseball stories told in conventional English are dull reading indeed; and it is a pertinent fact that the decadence of cricket in England is attributed by many British newspapers to the failure of the press to put brightness or 'ginger' into the descriptions of the games. It may be objected with some justice that the lucubrations of the average baseball reporter are not really bright; but it can not be denied that the tricks of speech which he uses and the fantastic yet expressive phrases in which he writes of victory or defeat give to the baseball page a distinctive quality which in its place is most agreeable. Such language on any page would be offensive in the extreme; on the sporting page it seems somehow appropriate and is displeasing only to the pedant.

"Long may the lingo live!"

The Washington *Post* seems to lay the blame of the reform move on Professor McClintock, of the English department of Chicago University, and in declaring that he is "quite off his base in knocking the use of slang," indulges in some further satirical vituperation:

"In what better way could a writer describe the failure of a

slabbist to put the pill over the plate than by saying 'Johnson gave the batter a free pass to first'? If the professor were doping out the game, he probably would say: 'Mr. Johnson pitched four balls that in immediate sequence made a détour of the plate, which, according to the rules of the game, entitled the batter to go to first base, despite the fact that he had not even aimed his bat at the baseball in any one instance.'

"Wouldn't that make the fans sit up and take notice? What an intellectual treat it would be for them to have the game described by Professor McClintock! The slang of to-day is the purest English to-morrow. Much of the English used by Professor McClintock himself was once regarded as slang.

"Some college professors may insist upon the merit of the theory that words were given us to conceal thought, but in the interest of brevity and clearness the slang of baseball will be permitted to stand, even in the face of threats of jail sentences from Chicago.

"There is just as much reason for a technical language for baseball as there is for a technical language for aeronautics, or even for the law. The baseball writer strives to put his thoughts across the plate. Usually he succeeds. He isn't writing solely for college professors, altho a great many of them, the kind who get to be President, like to read the 'sporting dope' hot from the bat. If Professor McClintock doesn't understand the 'dope' he can easily get one of his students to act as interpreter for him. He will find it a liberal education."

The Atlanta *Constitution* finds that "it is in the interest of baseball that this printed use of slang is being called into question":

"Such terms as 'fumbled,' 'singled,' 'swatted the sphere,' and 'jammed the cushions' may be figured out; but how is a man who speaks only English to understand what is meant by 'clattered across the pan,' 'dented the platter,' 'got pinked in the slats,' and 'a clean bingle'?"

SONGS OF THE JAPANESE "GEISHA"

ONE WONDERS what a Japanese, untouched by western life, would make of rag-time melodies. They would likely be no more "enthralling" than *geisha* melodies are to western ears, but they seem to hold about the same social status. To Dr. J. Ingram Bryan, who writes in *The Japan Magazine* (August), the *geisha* song strikes a deeper chord. It certainly strikes a more "delicate" one in the native heart, he thinks; "so much so that even the guests at an entertainment are not infrequently moved to venture a ditty in response." No one who has heard the *geisha* sing her plaintive songs, he declares, can fail to "long to know their import and meaning." "Soft syllables so gracefully chanted, falling deftly on the human ear with the appeal of universal sentiment, may deserve the interest of the outside world." The writer first sketches the picture of the little creature who is a "typical institution of all Japanese entertainments":

"There sits the *geisha* in her simple beauty, often a mere child, homeless, motherless, fatherless, sisterless, and brotherless too, with no protection save her own character, facing a cold male world, which she must needs amuse and entertain for a living. A monument of unloved loveliness, she faces the jealousy of all the wives of the neighborhood, whom she excels in the art of music, song, and repartee, wielding a charm the ordinary female knows not of. What tales of romance her history fills; what hearts she has stolen, and what homes she has broken, not in wilful cruelty, but in the old love-way of men and women through immemorial time, even she herself does not know. In this practical and materialistic age the *geisha* proves a martyr to love-fire with conspicuous frequency. Should some devoted youth be ready to die for her and she reciprocate the passion, if there be no human way to consummate the bond, the *geisha* is willing to face the old sure way of death; for *shinju* with *geisha* is a phase of modern Japanese society."

The *geisha's* songs are not "far removed from the love-songs of other lands." Going by the name of *hauta*, meaning fragment of song or ditty, they have a wide vogue among the middle classes of Japan. The upper classes affect to despise them as vulgar, but a nobleman's heart quite as frequently comes under their spell. While the guest reclines at the feast, the *geisha* takes her *samisen* and "offers these *bon mots* of the soul":

"Like all Japanese songs, the *hauta* do not follow any set literary form, tho usually in phrases of five or seven syllables, or both, as is most of the native poetry. But the music *motif* prevails; and the Japanese conception of music is quite different from that of the west. To them music is an expression of the soul untrammeled by time-bars or any other device of artificial invention, the only law being the emotion and intensity of the heart. It is a music in which heart and will are supreme. Thus the sentiments of the heart are interpreted in response to the promptings of nature and art. Hence the nation never tires of these songs, which are sung over and over again to generation after generation with undying interest. Like such English songs as 'The Night Hath a Thousand Eyes,' and 'Drink to Me Only with Thine Eyes,' these *geisha* ditties sound that one touch of nature that makes the world akin: their voice is in speech that never grows old. Presumably it would be quite out of place for a married lady to indulge in such emotive interpretations of the human heart, which is rather to be regretted, since the *geisha* is left to be the only heart's interpreter in Japan. . . . . .

"The *hauta* are often delightfully idyllic in the Greek sense, suggesting exquisite pictures from nature, as well as being wonderfully true to human life and sentiment. In this respect few are excelled by the following love-song, a favorite throughout Japan, in which is depicted a lover awaking on a cold morning when the landscape is white with snow and going to the window to look out before he takes his departure. His lady-love first hides his *haori*, or overcoat, so as to delay his going; and failing in this she clings to his sleeve, loath to let him part from her; and then she pulls back the shutter, pointing to the cold, deep snow, to discourage his taking leave of her:

In vain thy cloak do I hide, love,
  And in vain to thy sleeve do I cling;
Wilt thou no longer abide, love,
  Nor give me for winter fond spring?
I push back the window so slightly
  And point to the snow-burdened land:
O love, wilt thou leave me thus lightly,
  And choose the cold snow for my hand?

Much of the "exquisite delicacy of suggestion and sentiment," we are told, "is lost in the translation of such fairylike songs as those the *geisha* sings":

"This is especially true of the next *hauta*, which depends for much of its beauty on what in Japanese is regarded as the female manner, but which has nothing of corresponding quality in English. Like most women under such circumstances, the subject of this lyric feels that much of what her lover says is mere flattery, but she would have him understand that to her flattery is cruel, since in her ears one word of his is worth more than ten words of other men. And thus she hangs upon his lips in an ecstasy of passion, and would have him utter nothing that he does not mean and mean intensely, for on every syllable from his lips she lives. The moral influence of such a song on the usual crowd which the *geisha* has to entertain must be considerable, since none more than she is so exposed to flattery and the wiles of men:

O love, to me one word of thine
  Is more than other's ten:
Canst thou forget, O heart of mine?
  Oh, no; no ne'er again!
Tho spoken in but slightest jest,
  To me thy word is truth;
My hopes within thy promise rest,
  And live in thee, forsooth.

"The subject of the next song is exercised in sad meditation on the adversities of love. Lying upon a lone bed, she hears the cold rain beating mercilessly on the roof, and gives way to lamentation on the vicissitudes of affection, when, lo! there breaks in upon her sleeplessness the night-cry of two happy swans passing over the house. Envying the glad pair, she falls into a peaceless dream.

On a wet and chilly night,
  Wrapt in silence deep,
I lay me down, despite
  A heart disposed to weep.
Ah, how fleeting is man's love,
  How unreal he that's yours!
Can one set one's heart above
  The world of sorrow one endures?
Pondering my adverse lot,
  Loveless the lone hours go;
Hark, a note my heart knows not,
  From happy swans with faith aglow.

"Some of these songs are charged with as much rich humor as

they are with delicate imagery, the verse leaping from thought to image, and vice versa, with a playfulness that is delightful and surprizing.

In the wide, wide world
Of woes and tears.
Let us find a narrow spot
To live together,
You and I,
Until the world
Is quite forgot,
O my sweet—
Moon that shines
In my little window.

"Thus the stately guest thinks the *geisha* is singing him a love ditty, when all at once in happy relief it turns out that she is but uttering a delicately worded apostrophe to the moon.

"Inevitably, however, the *geisha* returns to the sadness of her life and sings:

Be patient, thou poor nightingale!
Endure a while the dark and rain;
Anon the sky will clear; and pale
The moon will cheer thy window-pane!

"ARTISTIC" OFFENSE

THERE IS NO DOUBT that the comfort of many and the peace of mind of not a few would be enhanced if such a word as "artistic" should suddenly drop out of the language. It never did have a real right to existence, declares the London *Times*, with editorial authority, because it belongs to a class of words that express "not a thing or an idea, but a mere vagueness or confusion of thought." It is a powerful weapon in the hands of intellectual mountebanks to overawe the timid. The odd thing about the use of the word is that it is oftenest applied "not to things which are unexpectedly like works of art, but to works of art themselves." The sins to which the word is a strong temptress are exploited in this way by the paper we have cited:

"People say of a picture that it is artistic, or they even say of some one who likes a particular kind of picture that he is artistic. Indeed, we have heard a story of a man who, when it was remarked that a lady had taste, added, 'Yes, and not only taste, but *artistic* taste.' Here the word 'artistic' has no meaning at all, and he might just as well have said, 'Yes, not only taste, but taste.' A picture, since it is a work of art or nothing, must be artistic if it is good; and to call it artistic is only a very clumsy way of saying that it is good. But people who say that a picture is artistic do not mean simply that it is good. They are not expressing their own opinion about it at all, but rather what they take to be the opinion of a vague class who are supposed to know all about such things. Indeed, you may hear people say of a picture, 'No doubt it is very artistic, but personally I don't see anything in it.' In this case the word 'artistic' is employed as a defense against clear thinking, and the sentence may mean either 'Some people think this picture good, but I think it bad,' or else, 'This picture, I believe, is good, but I like bad pictures.' Many people are afraid to say either the one thing or the other, and they use the word 'artistic' to express a mere hesitation between the two meanings.

"But others use it as a means of overawing those who differ from them. 'You may not like it,' they say of a work of art, 'but at any rate it's very artistic.' Here again they appeal not to their own feelings, but to the judgment of that vague class who are supposed to know about such things. They imply that it is a mere impertinence on the part of the Philistine to judge any work of art by his own feelings about it. In fact, they are 'not arguing with him, but telling him,' and telling him what they themselves know only by hearsay. For this use of the word 'artistic' really implies that all art is a mystery which only a few initiates can understand. The rest of us must not expect to enjoy a work of art; the best we can do is to enjoy our own recognition of the fact that it is a work of art, and we express that recognition by calling it artistic. We must feel for it the same kind of reverence which the savage feels for a hideous idol. He believes that the idol is powerful because the priest tells him so, altho he has never seen it exercise any power; and we must believe that a picture is artistic because we are told so, altho it produces upon us no effect whatever. But there is this to be said for the savage: that he does believe what he is told by a particular person who is supposed to be an expert in such matters; whereas no one knows who are the people who decide whether a work of art is artistic or not, or on what grounds they decide it. Also the idol may keep its vogue for centuries; but what was artistic yesterday has become inartistic to-day—indeed, the symptoms of the artistic change as rapidly as fashions in dress."

The common supposition is that artists decide what is artistic, and that belief, asserts *The Times*, "is the source of all our cowardice and confusion of thought about art." How much the artist has encouraged the layman to yield him this position *The Times* does not attempt to estimate, but it has some further wholesome observations to make on the general theme:

JAPAN'S PATHETIC MINISTERS OF SONG.

Geisha girls whose ditties sound "that one touch of nature that makes the world akin."

"The business of the artist is to produce works of art, not to tell us what are works of art. That we can only find out for ourselves by means of our own feelings, and no one can do it for us. Art is a means of communication between the artist and his public, and his public alone can tell whether he has succeeded in communicating anything to them. But the public, of course, must know what kind of effect a work of art should have upon them before they can tell whether it has that effect. It is because we do not know what to expect of a work of art that we do not trust our own feelings about it. And this uncertainty of expectation we conceal from ourselves by our use of the word 'artistic.' For when we use it we mean that we are trying to recognize a work of art not by a certain effect which it produces upon us, but by certain signs or marks which we are told it ought to possess. . . . The artist himself falls into the same mistake as his public, and aims at producing those outward symptoms which they look for. He too tries to be artistic according to a recipe, and in a few years he finds that the fashion has changed and he has become inartistic. Then his only hope is to find a new recipe, unless, of course, he gives up trying to be artistic and is content to be merely an artist."

RELIGION AND SOCIAL SERVICE

A WOMAN'S FIGHT WITH UGLINESS

THE FAITH that industrial communities need not be ugly; that the homes of unskilled workers need not be slums in the germ, is imprest by the notable example of an Englishwoman who was elected mayor of the ugliest city in Great Britain. Oldham, in the center of the textile industry, seems to enjoy this distinction, but the tenure of its lady mayor inaugurated a new impulse toward civic improvement. "Beautiful Oldham" was the motto she gave to young and old alike in her efforts to change the outward aspect of physical conditions. As Mary E: McDowell pictures her in *The Continent* (Chicago), she seems to be endowed with religious zeal, a reformer's energy, and a saving sense of humor. She had three strikes on her hands at one time, yet did not call out the militia. She settled the strike of the municipal street-railways after, as she said, "we had talked thirteen hours, then laughed together." Her story as Miss McDowell gives it, runs in this way:

"Oldham is monotonously ugly, and more hopelessly ugly than is the Chicago stock-yards district, for our houses are temporary, while theirs are of stone, well built and permanent. Wreathed about this town of 47,500 people, mostly textile mill-hands, are the great mills with their tall chimneys that pour their smoke over the place, adding gloom to the monotony. When, twelve years before, Mrs. Lees's husband died, leaving her with a fortune made from cotton-weaving, she told her daughters that they were free to leave Oldham if they wished, and that she would go with them. But with that fine sense of social obligation that seems to have developed best in the older communities, they said: 'No, we must not go away. We owe it to Oldham to stay here and serve her.'

LADY MAYOR OPENING A PLAYGROUND,
Where once was the worst slum in Britain's ugliest city.

"This service has been deeply religious, philanthropic, and civic. Over our cup of tea Mrs. Lees told me how she had concluded that she could best serve Oldham by offering herself for election to the city council. 'And I was barely elected, for no woman had before done such a thing; it was a new thing.'

"After the election she gave her principal attention to the children of the big factory town—to their better education and to their play. She and her daughters, believing that even a small slum spot in a community was a center of physical and moral contagion, purchased the spot known in Oldham as 'The Slum,' destroyed it, and in its place built a playground with a field-house 'like those in Chicago,' they told me. So practical and sympathetic had Mrs. Lees been with the working people of the town that very soon the citizens began to write letters, as is their habit in England, to the press, urging that the city council choose Mrs. Lees for mayor, 'because she cares more for Oldham than does any one else.' This was done, and for two years she was the 'lady mayor,' receiving the honor of 'the freedom of the city,' as was shown by the presentation of a gold key in a gold casket. This honor had only once before been conferred, and then to an honored mayor—a man.

"The ambition of the lady mayor was, when she went out of office, to leave more free public schools, free playgrounds, and more beauty in this ugly place. She, with her daughters and that spirit of social service known all over England—Mary Higgs—had, some time before my visit, organized a 'Beautiful Oldham' Society. The children were enlisted and taught to grow flowers, plant trees, keep the streets and yards clean, and to believe that a working people's city need not be so ugly. Only that faith that is 'the substance of things not seen' could ever have started such an idealistic society, but they were practical, civic esthetes. They were builders, not just dreamers. They organized a building association—cooperative—for the working people to build homes all together—a new kind of homes in Oldham. The streets were not laid out like a checkerboard, but in graceful lines, with gardens in front and back. They purchased fifty-seven acres on the edge of the town and laid out what they called a 'garden suburb.' The contrast was so surprizing that the old citizens exclaimed, 'They are throwing these houses around just about anyway.' This suburb was so successful that other groups are being planned.

"The lady mayor's home is a beautiful old mansion with a large ballroom, no longer used for the family, but given over to the service of the community as a social center. Organizations meet here and have their social gatherings. The school pageants are given in the Lees's grounds every spring.

"As Mrs. Lees was elected by the municipal householder's vote of both men and women, and as she herself had the municipal franchise, I asked her if she wanted the whole vote—for parliamentary offices also. 'Oh, yes, of course I do! And after a while I will get it, because the men see how ridiculous it is for me, as mayor, to hold the election funds and to announce the parliamentary vote, and yet, if there should be a tie, I can not cast the deciding vote. Some man has to be chosen to do this very simple and practical thing.'"

FARMING FOR MINISTERS

THE bane of the ministry is "lack of leisure with relaxation." One who seems to feel the confinements of the prison-house points a way out for his brothers in bond. He would have them turn to farming as an avocation, or, lacking the opportunity for coming in first-hand contact with the soil, adopt some department of mechanics or manual labor, such, for instance, as carpentry, wood-carving, or polishing, upholstering, metal-engraving, etc. These resources are suggested by the Rev. Oscar Haywood, D.D., writing in *The Examiner* (New York), who at the same time reminds us that "the minister does not enjoy periodic or intermittent release from routine duty as do other men who live by thinking."

The minister, it is true, has his vacation; but it is frequently only his professional activities transferred to another field. "By the laws of habit and custom which he freely takes upon himself he becomes the most hapless victim of the artificial life system which he deplores and condemns." It is for the minister, asserts the writer, to discover for himself a course of conduct wherein he may escape his professional habitat and find relaxation without risk of blame and without giving to other men occasion for stumbling." Whatever the choice there must be this care—

"That nothing shall engage him at odd moments that does not possess two merits. First, that his work may be approved by

others, and that it be productive, not necessarily remunerative. Second, that it may above all be justified in the minister's own good conscience and of value to his health. Let it afford the whole man a complete change of employment, in line with his aptitude, and let it be one that shall make him doubly useful and more efficient in his appointed place.

"In making choice of such an avocation the minister will find inspiration in the example of Paul, who was by trade a weaver of camel's hair for tents, and he will gather enthusiasm as he learns to say with Emerson: 'The whole interest of history lies in the fortunes of the poor.' Knowledge, virtue, power are the victories of man over his necessities, his march to the dominion of the world.

ONE OF OLDHAM'S UGLY STREETS,
Such as the lady mayor tried to beautify.

"Every man ought to have this opportunity to conquer the world, or a part of it for himself. Only such persons interest us—Spartans, Romans, English, Americans — who have stood in the jaws of need, and have, by their own wit and might, extricated themselves and made man victorious. Above all men, the minister should know that poverty is the ornament of greatness. The first wish of Vergil was to be a good philosopher; the second, a good farmer. A great philosopher, he made farming his avocation, and exercising in those two spheres he became the best poet, and by poetry glorified both philosophy and husbandry.

"Moreover, the minister in choosing some line of manual labor upon which to bestow himself in vacation hours shall find that he is falling in with a passionate movement of the day. The doctrine that the manual labor of the world ought to be shared among all competent members of society is gaining emphasis and spreading rapidly. The minister makes a fatal mistake when he goes along with the notion that any kind of exercise is good if it serves to keep up his appetite and give him muscle, and not only good, but very good, if he may enjoy it with gentlemen of the leisure class."

MARY HIGGS—"THE SPIRIT OF SOCIAL SERVICE."
Planting a tree with her fellow members of the "Beautiful Oldham" Society.

Exercise, in order to be worth anything, must be good for something, and selfish exercise is as bad as anything else that is selfish. There is a further refinement of the situation which the writer proceeds to illustrate with examples upon which there will likely be more than one judgment:

"There is only one kind of manual labor—the productive kind. Everything else is play. The lady who has lost the use of her feet by constant riding in a coach, and the man who races over abandoned and desecrated acres at golf while thousands are denied standing-room on the earth belong to the same class. If the example a minister sets before the community is not a moral asset, then it is a positive calamity. Let him make something, produce something of value, plant beans and hoe them as did Thoreau, thrash wheat like Gideon, tend sheep as did Moses and David, make doors and tables and carts as did the Lord Jesus, and his callous hands as he lifts them up, clean of every man's blood, free from lust and greed, shall bring down blessings upon all beholders.

"'But,' says one, 'do you mean that ministers should go to work with their hands instead of their heads?'

"I do not mean that exactly, but I mean something which you might think a good deal like that: I mean that they should not play life, or study it merely, while the community supports them at this expensive game, but they should earnestly live it from beginning to end. How could they better teach life than by at once trying the experiment of living?

"'Manual labor,' says Emerson, 'is a study of the external world.' The educated man lost in the woods is an ignoramus and more to be pitied than the black or white savage running wild in the jungle. He can not pick his course by the stars at night, and from a thousand herbs can not choose one edible root or berry. He can't make a fire with one match; for tho the match burns ever so lustily, his agitation puts it out.

"The greatest reformer America has produced, the one whose influence shall wax with the ages, but whose name may be forgotten—sharing the fate of the inventor of the compass, the discoverer of the Canary Islands, the inventor who gave the organ's sonorous note to music—the greatest of our reformers was a college president, Dr. Seaman S. Knapp, who made farming his avocation.

"In the Arabian desert Moses laid with his master hand the foundation of the moral law, and in a Louisiana marsh Dr. Knapp issued the ten commandments of agriculture. He taught India, China, and Louisiana how to multiply by four every bushel of rice hitherto raised on a single acre. He increased by three millions of bales the South's cotton crop, and his methods, imperfectly followed, brought forth a corn crop in the

United States last year that staggered statisticians. The writer spent a day with Dr. Knapp a few weeks before his death. Blazing with enthusiasm, he said in that interview: 'The great profession and science of the future will be farming; indeed, there will be no other. All others will be its allied trades.'

"Like Moses, he saw the promised land and died."

RELIGION UNDER SOCIALISM

HOW WOULD RELIGION fare under a strictly Socialistic *régime* is the inquiry made by a writer in the August issue of *The Nineteenth Century and After*, who argues for the timeliness of his question that just now Socialism is advocated from many religious and Christian quarters "as being the embodiment and working out, on the social side of life, of the Christian spirit and idea." These advocates maintain, he tells us, that the Christian spirit "left to work itself out unhindered" would infallibly produce Socialism and that in fact "Socialism is but the earthly name for a heavenly thing, for that 'kingdom of God' for whose advent all Christians pray." If this be true, says the writer, then it is fair to expect under Socialism that "religion, in the sense of real moral and spiritual culture would have its prospects greatly enlarged" and that it could scarcely fail to increase its hold "under a system which religion itself called for and produced." But it is not true, in the view of the writer, who is addressing especially those that care for religion and desire to maintain it, yet are "driven by the passion of altruism toward Socialistic ideas," and he warns them that:

"They must not serve, in the name of religion, a cause whose success would mean the disappearance of religion in the highest sense of the word. They must understand that religion can only persist in a social system wherefrom the *possibility* of failure is not shut away, since only when men are familiarized with the idea of struggle on the lower plane will they accept the idea of struggle on the higher: they must understand that religion, while thus barring out a mechanical constitution of society, has power to deal with all contingencies which under a non-mechanical constitution of society would arise; and they must understand, consequently, that religion neither demands nor permits recourse to such a mechanical constitution of society as Socialism would provide. Religion is able to save both itself and others with it. A revolution is needed, indeed—but a religious revolution first and foremost. For religion holds the key of the social situation, and is in itself a positive social force. It can do all that Socialism professes to do, and more; and this without exacting Socialism's too tremendous price. Religion, fully understood, saves the *whole* of manhood—saves manhood both on its material and on its spiritual side. It is to a realization of these things that the present religious advocates of Socialism need to come."

An inconsistent procedure of those who work for "the establishment of a Socialistic order in religion's name" is found by the writer in the necessary abolishment under Socialism, of altruism, which, if not "the whole of religion" as some assert, is at least "an *essential part* of religion." And the conclusion is, that "to establish Socialism is to disestablish religion, so far as the altruistic element of religion is concerned, not to perpetuate its reign." Yet he does not mean to suggest that:

"A religious man must, simply through a desire to maintain religion and its altruistic activities, desire also to maintain the injustices and hardships of the existing social order, or that these injustices and hardships are divinely ordained in order to provide a sphere in which religion may do its work. Something like this, it must be confest, has at times been said; and when it is said it is quite to the point to reply that if religion can not persist unless multitudes of human beings remain in the mire, then religion had better die. But what is meant is simply this—that those who believe in the permanent mission of religion in the world (if the term 'religion' is to keep anything like its present significance) can not consistently labor for the organization of a merely mechanically ordered social system from which religion would have to withdraw. A faith in the permanence of religion and its beneficent activities by no means requires the permanence of social wrongs; but one may venture to say that it does require the permanence of the *possibility* of social wrongs—precisely in order that religion may show its power to prevent the possibility from becoming a realized fact. In other words, it forbids society, whatever else society is or is not, to be an automatically working machine."

Such a social fabric would be an established Socialistic system, under which life were "a simple bargain with circumstances" with no struggle against more or less unwilling powers, thrust as a necessity upon men. The "desired prizes" would not, speaking strictly, have to be won, but would be received by an infallible method of exchange, and it is almost inevitable that with the *compulsory* struggle of life thus eliminated, the *voluntary* struggle implied in religion would have less chance of drawing men.

Meanwhile, in the face of Socialism's claim to give certainty on "life's lower and material plane" we are asked to remember that religion can do this and "must do precisely this, if it be rightly understood and practised." Yet, it is obvious that if religion consist merely of "an intellectual assent to a system of doctrine" or "a mere avoidance of positive sin," then religion "brings little or no power to bear upon the social ordering of things" but, "rightly understood and practised," it contains the remedy for every social ill. With religion as "the recognized regulative power"—

"Obvious and flagrant injustices would, of course, be immediately redressed. And while the majority might still have their own life to make, find their burden of responsibility undiminished, be compelled still to win their material good through more or less of conflict against hostility and through more or less surmounting of disadvantage, yet ceaselessly there would be at hand, in the religiously dominated lives of many, the reserve power which would move at once to any point in the body politic where some conquered one went down."

EARLY SERVICE FOR PROTESTANTS—Why should traditional methods of church service be so rigidly adhered to "as if they were too hallowed to be modified?" asks *The Christian Advocate* (New York). The purpose of the inquiry is to suggest the possibility to the city church of arranging its schedule of Sunday service "with the view to stimulating the interest and supplying the need of all kinds of worshipers." Further:

"Why could there not be an early morning service for persons who are compelled to work on the first day of the week and for those who later in the day must start on a journey, and for all other people who either find it inconvenient or impracticable to attend church at the customary hours? Would it be wicked to suggest that among the persons who might be properly served by such arrangement are those who propose to go into the parks or the rural resorts adjacent to the city for recreation on Sunday? We submit that it would be more sane, not to say more spiritual, for the churches to make account of such people and adjust hours of public service to their practises—much as these are to be deplored—than to whine out denunciations to those Sabbath-breakers who abandon the church for the fields, and make no provision to take away their excuse for such action. The city church ordinarily holds at an appropriate hour in the forenoon an orderly service of dignified tone for those well-circumstanced people who, after a late breakfast on Sunday morning, are disposed to follow the habit of years and betake themselves to the Lord's house. As things are at present there seems to be little difficulty in obtaining a good congregation for such a service. It is equally clear that the majority of these comfortable souls confine themselves to this service, partly because they can not assimilate more than one such supply of religious nutriment in a day, and partly because they feel they have discharged their duty by taking that. Why should not the city church gather another constituency from the crowd that puts on its every-day or outing clothes Sunday morning, and might before going elsewhere be induced to go to church, if not required to dress for the occasion?"

REVIEWS OF NEW BOOKS

GENERAL MEADE OF GETTYSBURG: HIS LIFE AND LETTERS*

Reviewed for THE LITERARY DIGEST by
GEORGE HAVEN PUTNAM

THE history of the Civil War must in large part be based upon the personal reminiscences of the chief actors, the leaders on either side of the struggle, and the series of these memoirs would, of course, be seriously incomplete if it had failed to include a record of the services of the victor at Gettysburg. This biography of General Meade has been produced with conscientious labor, editorial judgment, and good literary skill, by the General's son, himself an accomplished soldier, and the son's work has been supplemented by editorial service from a grandson. Colonel Meade has wisely presented the record very largely in the letters of the General, thus giving to the work the character and the personal interest of an autobiography. In Meade's letters to his wife, we find frank utterance of his hopes, ambitions, and occasional disappointments; we also find expressions of likes and dislikes, opinions and criticisms of the men with whom he had to do, which have both personal interest and historic value.

The book can not take rank in literary quality with that wonderful production, the autobiography of Grant, nor has it the dramatic interest that we find in the memoirs of Sherman and of Sheridan; but it is a faithful record of the life and service of a soldier of assured tho not brilliant capacity, a conscientious, patriotic citizen, and a Christian gentleman. Meade had the legitimate ambitions of his profession, but he appears to have been eminently free from the self-seeking, self-asserting, bumptious, political methods of certain of our generals. He kept himself in camp quietly absorbed in his duties, while not a few of his competitors were buzzing around congressional committee rooms or holding levees at Willard's Hotel.

Meade had been graduated high in his class and, like McClellan and W. F. ("Baldy") Smith, he belonged to the group of engineer officers. He had had a cordial admiration for McClellan, with whom his relations had been close and friendly, but he finds occasion in the later period of McClellan's career (only, however, in his confidential correspondence) to express keen disappointment with McClellan's management of his responsibilities and a strong doubt as to his capacity for command. Men trained as engineers naturally carry into active service as commanders of armies the methods and the temperament of their profession. No one of the Northern leaders was better equipped than was General McClellan for placing an army in a position so well selected and so well protected by works that it would be fairly safe against the attacks of the enemy. He also showed exceptional skill in extricating an army after his advance had failed, and in the management of a retreat. His own narrative, however, gives the impression that when he had brought an army into touch with the enemy and had got away with it safely, he felt that he had secured a satisfactory success. There is hardly an instance in which McClellan gave evidence of initiative or showed the capacity to conduct an aggressive attack. His associate Meade was made up of stronger stuff, but Meade never had an opportunity, or never took advantage of an opportunity, of leading an army to the attack, and his own most successful work was in so placing his army that the attacking had to come from the other side and could be carried on only at a disadvantage.

It would be difficult to find in the history of the country an instance of a more serious responsibility being suddenly placed upon a patriotic citizen than that which came to General Meade, when at three o'clock in the morning of the 28th of June, 1863, he was awakened with the announcement that he was to take command of the Army of the Potomac. During the week that followed, there was little sleep or rest of any kind for the commander. General Hooker, whom he relieved, appears to have been unable to give Meade any information in regard to plans that had been put into shape for the conduct of the campaign. It was more than twenty-four hours before Meade was able even to ascertain the positions of the several corps making up the army, but with the information before him he acted with decision and good judgment. The commanders of both armies were evidently at a serious disadvantage during this Gettysburg campaign for want of trustworthy information. It is difficult to understand why it should not have been practicable to organize a more effective scouting service with the cavalry; while in this instance, as had, of course, not before been the case with the campaigns of the Army of the Potomac, the people on the country-side could, with hardly an exception, have been trusted to do all that was in their power to secure for the commander trustworthy information.

The histories of the campaign are in accord to the effect that the two armies blundered into each other at Gettysburg without prevision on the part of their commanders; but the immediate result of this accidental attack was in favor of Lee two-thirds of whose army was in immediate reach of Gettysburg, while the Army of the Potomac was represented only by a small cavalry squadron with portions of two of the weaker infantry corps.

The space allotted for this review gives opportunity for reference but to the decisive features of the great struggle. It is in order to recall, however, that through the perverse disobedience of General Sickles in placing the Third Corps far in advance of the line assigned to him, the army was brought into serious risk of having its left crumpled up and of losing its main line of communication. The disasters of the fight carried on under serious disadvantage by the badly placed troops of the Third Corps, with the aid of forces that had been hurried to their support from the Second in the center and from the Twelfth on the extreme right, were in part offset by the magnificent defense made on Culp's Hill on the right by Gen. George S. Greene, who extended two small brigades so as to cover the line previously held by the Twelfth Corps. General Johnson, of Ewell's Corps, succeeded, however, in getting past our right, and at three o'clock in the morning of the second day was in the rear of Culp's Hill and was within striking distance, one thousand feet or so, of the reserve ammunition train of the army. If Johnson, in place of exhausting his men in attacks on Greene's inner line, had pushed his troops to the rear of our center, he would have had the magnificent opportunity of destroying the ammunition train and possibly also of capturing the headquarters. Such a blow, even if Johnson's division had itself been destroyed, might easily have decided the battle. In the early morning hours of the second day, Slocum's men, returning to their position on the right, drove the enemy out of their lines and Johnson's opportunity was gone.

The repulse of Pickett's men on the afternoon of the third day constituted the decisive event in the decisive battle of the war; and on this ground, and also because of the spectacular character of an advance carried on within sight of the encircling lines of the two armies, there has been a tendency to overestimate the difficulty and the daring of the undertaking. It is only just to the Army of the Potomac to recall that the ground traversed by Pickett's divisions was not so difficult as that over which the Union troops had made their way in two assaults on St. Marye's Heights at Fredericksburg, or that marched over by Grant's advance at Cold Harbor; while both at Fredericksburg and at Cold Harbor the assaulting troops, after succeeding, under a heavy and concentrated fire, in getting over the ground, were confronted with carefully constructed earthworks.

Certain of the military historians have found Meade wanting in enterprise for his failure to utilize for a countercharge, after the repulse of Pickett, the Sixth Corps, which, stationed to the left and rear of the center of our line, was in convenient position for such service, and which during the previous days of fighting, had been called upon less than any of the other corps. Longstreet's chief of artillery, Gen. E. P. Alexander, states in his memoirs that at the hour in question he had remaining in his caissons but two rounds of ammunition, while Longstreet's command had certainly been seriously shattered, not only by the repulse of Pickett's divisions, but by the severe fighting of the previous day with the Third Corps. There certainly seemed to be a fair chance, through such an advance, for a crumpling up of Lee's whole right wing.

---

*Meade, Gen. George Gordon, Life and Letters of. Edited by George Gordon Meade. 2 vols. Illustrated. $7.50. Charles Scribner's Sons.

On the afternoon, however, of this third day Meade was an exhausted man. The responsibilities and the anxieties of the week's campaign and the loss of sleep might well have impaired his vital energy. Whatever the cause, Lee was permitted to make his way in safety across the Potomac, and by the close of July the two armies were again facing each other on the old lines along the Rappahannock and the Rapidan. The Army of the Potomac remained under the direct leadership of Meade for nine months, at the close of which period Grant took personal charge of the campaign in Virginia; but during those months no aggressive operations were undertaken. During the last year of the war, Meade acted practically as an executive officer to carry out plans for which the commander-in-chief was responsible.

Meade will not be ranked by the historians with the great commanders, but his career is that of a well-trained, capable, and patriotic soldier, and he must always be remembered in the history of the war and of the country as the General who, for the longest period in its history, held the command of the Army of the Potomac, and to whom came the well-deserved good fortune of winning with this army the decisive battle of the war. Meade's distinctive reputation will rest upon the fact that he was the only one of our generals who in a pitched battle, fought on substantially equal terms, succeeded in defeating the greatest soldier of the Civil War, Gen. Robert E. Lee.

NOTABLE FICTION

Bennett, Arnold. The Old Adam. Pp. 374. New York: George H. Doran Company. 1913.

"Denry the Audacious" was so delightfully unconscious of his humor that we have often wondered how he and the world "hit it off," and here is the answer to the query. We find him a man of family, the successful alderman "Machin," a power in the Five Towns, and elevated to the dignity of "Edward Henry." Neither mother, wife, nor children are imprest by his greatness, but accept him lovingly, loyally, and quietly; so at the age of 43 he wonders what good is all the money, and, when an unusual opportunity presents itself, the "Old Adam" rises and he starts for London to show that he is still a personality of force. In his blissful egotism, he rides blindly over waves of possible difficulties and, in the end, his shrewd common sense seconds his assertive individuality and forces success out of possible failure. Apparently gullible, Edward Henry's mind works quickly and his rapid "come-back" startled many a Londoner before he finished his famous coup in theatrical building and managing. Epigrammatic bits of philosophy alternate with serious reflection, and the reader's interest never wanes. Arnold Bennett's charms are most varied, but, above all, he possesses a wonderful discernment of character and a power to portray it with very few words. After a nervous strain which bowls over even the "Old Adam," Denry returns to an appreciative wife and family, and his eldest, Robert, sums him up most comprehensively—"Isn't father a funny man?"

Brady, Cyrus Townsend. The Fetters of Freedom. Pp. 400. New York: Dodd, Mead & Co. $1.35 net.

It is not strange that a story in which Paul of Tarsus plays a prominent part should have appealed strongly to Dr. Brady as a clergyman. Rome, in the time of Nero, offers a sufficiently lurid background to make an exciting and dramatic tale. Dr. Brady's power in description has had full play. The author has attempted a tale of the eternal city, well within the possible and plausible. We have a brilliant and passionate love-story of the patrician pretorian Attilius and the "British Gwenna," who has become his slave through the misfortune of war, but is a princess in her own country. The book abounds in brilliant scenes of Roman life and vivid descriptions of the court of Nero and its degeneracy, and has a pathetic and tragic account of the vicissitudes of the early Christians, particularly Paul, with his enduring patience and convincing power. There is the usual court intrigue, with the jealous woman, and a victorious life for the lovers finally converted and happy. Where Dr. Brady has scored success is in his development of the character of Attilius, showing the psychological stages of progress in the man's regeneration and the forces that work out his salvation and final happiness. The author says: "I have no desire to instruct anybody. I have no ambition to show what I know. This is not a sermon, but a story."

Churchill, Winston. The Inside of the Cup. Pp. 513. New York: The Macmillan Co. $1.50.

Mr. Churchill has probably done the most serious work of his career in this novel, but, in order to bring out strongly all the points and arguments in favor of its hero's development, there are of necessity many long and serious discussions, which might discourage casual readers, but which will more than repay one who follows the story to its inevitable and satisfactory conclusion. The danger is, therefore, not that it will be too severely criticized, but that too few will read it.

We are all conscious of the general agitation and unrest of modern days in every department of life, the seeking of higher standards in business, politics, and religion; the general wave of reform, the protest against hypocrisy and a condition of *laissez faire* in the churches, a condition which Mr. Churchill has used most forcibly in a well-worked out arraignment of so-called Christianity, conventional righteousness and insincerity. "Wo unto you, Scribes and Pharisees, hypocrites! For ye make clean the outside of the cup and of the platter, but within they are full of extortion and excess."

St. John's is a typical church in a modern Western city, large, prosperous, and with a fairly representative congregation. To this church is called John Hodder, a young, earnest, and enthusiastic clergyman, It is his experience and his manner of dealing with the vital questions of life that form the basis of the story. Over against this character we have Eldon Parr, the city's most influential citizen, the chief vestryman and financial support of the church, with his coterie of prominent men, and one clever lawyer, through whose skill Mr. Parr has been able to escape the rightful punishment for his many underhanded methods by which he has made himself and his friends wealthy, at the same time grinding down and cheating "the under dog." Eldon Parr has not hesitated to sacrifice even his son Preston and daughter Alison to his inflexible will, antagonizing both of them so that he dwells alone, pacifying his conscience, if he can be said to have any, by large and frequent contributions to religious and philanthropic causes.

At first John Hodder was satisfied with smooth routine and evident social and churchly success, but chance finally acquaints him with the methods employed by Parr; at the same time he becomes cognizant of conditions in the adjacent streets where houses of questionable reputation add materially to the revenue of his wealthy parishioners. Suddenly his serene satisfaction is dispelled by some searching questions put to him by Alison Parr, who has long since failed to indorse the religion of St. John's and its moneyed "smugness." Then comes the real struggle,—perusal of works on modern criticism, working among the poor and unfortunate, and, finally, coming under the influence of Mr. Bentley, an old man who, having lost money and home through Eldon Parr's treachery, makes his home among the poor and becomes the friend of every unhappy man, woman, and child about him. The depiction of this old man's character is one of the sweetest, tenderest things in the story.

The romance of the book, unusually strong, never obtrudes, but is its strong undercurrent. At no point is there the jar of the incredible or impossible. Situations develop in the most natural, logical way, and the conclusions are forced on the reader by the convincing arguments of the writer. Beautiful character-drawing lies well within Mr. Churchill's power. He has used his skill in character analysis with force. There are vivid and graphic descriptions. It is a serious, intensely fascinating novel on a very vital theme.

Cooke, Grace MacGowan. The Joy Bringer. Pp. 338. New York: Doubleday, Page & Co. $1.25.

When a girl has decided to elope with one man and finds herself married to another, there is need for considerable adjustment, even if the two men are brothers. Heath Crittenden, ranchman and store-owner, came from the West with primitive passions and a well-established habit of taking what he wanted, and, interpreting Clifford's flirtatious manner for real affection, did not hesitate to substitute himself for his brother. The plain "I hate you," that met him when all was over caused an unpleasant awakening. Poverty and pride forced Clif to go west with her husband, but only on condition that they should live as Platonic friends. The Arizona experiences are the best part of the book. Mrs. Cooke has written some interesting and exciting descriptions of Indian life in the West. In the grip of the real things and unavoidable situations of the primitive life of the West, the unwilling bride learns her inevitable lesson. After some dramatic and dangerous experiences she finds that she hasn't married the wrong man after all.

Curtis, Isabel Gordon. The Lapse of Enoch Wentworth. Chicago: E. G. Browne & Co. $1.25.

Enoch Wentworth and Andrew Merry had always been good friends, the one a journalist, the other an actor of intermittent attainments, but after an all-night session at poker, both "swear off" after a final game played for a most unusual stake, giving a sort of combination of Mephisto and Shylock memories. It is this bond, however, which causes the dramatic complications of the story, in which Wentworth plays a despicable part and one thoroughly misunderstood by the

The Sensation in Adders Sales, 150 Per Day

The Individual Adder

This machine is built by one of the largest metal working concerns in America.

We have large offices, and we saw the need of an individual Adder. We came in contact with many concerns where the same need was apparent.

Our big machines wasted time. They required experts to operate. Workers, at times, waited long to get at them.

We wanted a desk machine—a machine for each worker—a portable adder. A machine to place close to one's books and papers. A machine which anyone could operate.

So we set our inventors at work to produce it, and this spring they announced its perfection.

The Up-To-Date Adder

These inventors of ours aimed at utter simplicity. They made seven keys do the work of the dozens heretofore employed.

They invented a keyboard which a child can manipulate.

They aimed at infallibility. They created a mechanism which never goes wrong. They devised a way by which copied numbers can be read on the machine, and checked with the copy before the addition.

The result is an up-to-date adder. It excels all in simplicity. It is the only machine on which the unskilled can do accurate work with rapidity.

Then, by automatic machinery and enormous production, they made possible this $35 price.

The result is a demand now unmatched in this industry. A nation-wide demand, and for every conceivable service.

Dealers Wanted

Over 500 successful Dealerships already established in the larger cities. We now desire an agent in every town under 15,000 who will purchase a few machines and operate under our "Quick Action" Selling Rules.

Agency can be handled by Merchants, Bank Employes Railroad Agents, City or County Officials, Newspapers, or any wide-awake man with some spare time and small capital.

Extensive territory cannot be assigned and proposition best suited to men having other business.

This American Adding Machine Costs Only $35

Three months ago, when we announced this machine, there were thousands of you who said, "That is impossible." A competent Adder—swift and infallible—for $35 was almost unthinkable.

But other thousands took these machines on trial. Big and small offices, stores and factories, scattered all over America. They put them to work on countless desks, in experienced hands. They proved the machines—saw them add, subtract and multiply. Saw them compute a hundred figures a minute, rapidly, easily and with never an error.

They saw them do with inexpert operators, the work of $150 machines. Then they ordered more. The fame of the machine spread from office to office.

Now the demand for this Adder is overwhelming. It is nation-wide. Now we are making 150 per day. Yet we are at this writing ten days behind orders.

We come now to urge that you test this machine.

If you ever add figures you need it. Even for small usage you can afford it. If you are now using big, central machines, see what it means to have individual adders—portable adders—an adder for every desk.

The American Adder is an astounding success. It fills a wide-spread want. Please do not wait longer to try it.

A Million Men Need It

There are a million men who need this American Adder, and who will have it when they find it out.

Some are in large offices, some in banks, where costly adders are now employed. They want a desk machine—a portable adder. A machine always ready, always close to the work, and which each man can use for himself.

Many of these are in stores, factories, mills and offices where adding machines are not employed. This simplicity, this price, places this competent adder within reach of every man who computes.

A million men, by saving time and mistakes, can make this adder pay for itself over and over. And we want those men to try it.

Ten Days' Trial

We let the machines sell themselves. We offer a trial wherever you are, and we urge you to ask us for it.

Where we have a local dealer he will bring the machine and show you how to use it. Where we have no dealer we send the machine, express prepaid, with full instructions for using.

You are welcome to ten days' trial. It involves no obligation. In fairness to yourself please send us this coupon and try the machine. Then return it or keep it as you desire. The test doesn't cost a penny.

Or, if you prefer, simply ask for our book. Mark the coupon to show what you wish.

How to Choose Upholstered Furniture

The purchaser cannot see the cheap construction, the cheap cushion filling and the weak springs so frequently used in upholstered furniture because the upholstering covers them up.

That is why you and every intending purchaser should send for the Karpen Book of Information which we send free of charge. After reading it you cannot be deceived, as you will be fully informed as to values, designs, materials, cabinet work and every other essential detail.

The Karpen Book also shows hundreds of the most beautiful upholstered furniture designs suitable for any need in any room in any home, be it simple or elaborate. You take no chances in making purchases of even the lowest priced pieces of

Karpen Guaranteed Upholstered Furniture

Your money will be refunded by the dealer without quibbling if time reveals faults in construction or defects in material.

Our trade-mark on each piece is our pledge of good faith. Look for it; refuse substitutes when shopping.

The better stores sell Karpen Furniture.

Write for our Book "11" and ask for the name of the Karpen dealer in your vicinity.

public and by his sister Dorcas, whose heart is torn by conflicting emotions, love for Andrew and loyalty to her brother. The theory of "moral lesion" is brought in at last to excuse the sinner and bring order out of chaos. The troubled waters are smoothed to the satisfaction of all concerned, especially the happy lovers.

Glasgow, Ellen. Virginia. New York: Doubleday, Page & Co. $1.35.

When we recall this author's, "The Voice of the People" and its big message and appeal, we can not realize that the same writer produced this involved and depressing tale. In all the scenes depicted and among all the characters, lovable and otherwise, Virginia Pendleton moves on to an inevitable fate. With her usual power, Miss Glasgow makes us feel the force of inheritance and tradition over this beautiful daughter of the Dinwiddie pastor, but it seems as tho both atmosphere and plot could have been developed in less than five hundred pages. Modern standards have little in common with the old idea that a mother should give her children all her time and attention. It seems strange to find that made an issue in the present volume, but there it is. You find it hard to decide how much to pity and how much to censure Virginia for the deplorable conditions that finally existed, when a lifelong devotion to home and family was rewarded by desertion and a breaking heart. Miss Glasgow's style is thorough and sincere, her diction good, and her character-drawing very complete, but she leaves too little to the imagination by analyzing all emotions and thoughts down to the finest point, even dissecting and explaining every little detail that might influence an action. As a development of type the book is notable, but it is monotonous and lacking in interesting and stimulating thought. The characters are consistent if monotonous and fate seems inexorable, but tho it may be impossible, this book seems to prove that one can be too good.

Greene, Frances Nimmo. The Right of the Strongest. New York: Charles Scribner's Sons. $1.35 net.

John Fox, Jr., will have to look to his laurels if we are to have many such good stories as this tale of Alabama—a book that satisfies the craving for real meat in a novel and gives thoughtful readers something worth while. A strong and powerful love-story runs through the book, but back of that is a struggle which interests all humanity—the struggle between the individual and the general good, the ruthless riding of large progressive interests over the rights or fancied rights of a few. To these Alabama hills, where ignorance and primitive passions have held sway, comes a young engineer with a great scheme for building model towns and turning the valley into a large reservoir. As the natives hold their property only by "squatter" rights, John Marshall had no difficulty in getting possession of most of the land, but naturally he meets with opposition and enmity on the part of the natives, among others the school-teacher, Mary Elizabeth, who had been educated by a philanthropist and hopes to elevate them through

Paris New York San Francisco

The way in which the world is receiving the 1914 Cadillac, the wonderful manner in which it is performing, presages an unprecedented Cadillac year

There never have been enough Cadillacs—there surely will not be enough of this new 1914 model.

In the year closing June 22nd, the Cadillac Company manufactured and distributed 15,007 cars.

Several thousand buyers, anxious to own Cadillacs, were compelled to be content with other cars.

It was the story of the previous year all over again, in spite of increased production.

And the story of the year before—and the year before that.

Each season the same thing has happened—several thousand more Cadillacs could have been distributed had we been able to produce them.

Intending buyers, disappointed in securing Cadillacs, have been numerous enough to constitute almost the entire clientele of some other cars.

For 1914 we plan to manufacture 18,000 cars.

It is perfectly obvious that Cadillac history is not only repeating but surpassing itself.

Reports from all parts of the country make one thing perfectly plain, to-wit:

That the accustomed Cadillac demand has been intensified into downright eagerness.

This is due to evolutionary developments in the new car.

Most potent among them is the marvelous influence of the Two Speed Direct Drive Axle.

Every one who rides in the new Cadillac recognizes immediately that its well known smoothness has been supplemented by an entirely new riding quality.

This is demonstrated at once, even to the inexperienced motorist.

Going even at high speed, the passengers discover that motoring in this new Cadillac *has lost its sense of strain.*

Unless the eye is on the speedometer, one is apt to guess that the car is going at about half its actual rate of travel.

Mentally and physically, driver and passengers unconsciously relax, revelling in the delight of a new and luxurious sensation, oblivious to the almost watch-like mechanism.

And on the heels of this delightful discovery, come others equally pleasant.

The owner finds that this Two Speed Direct Drive principle influences almost every Cadillac function which contributes to ease, efficiency and economy.

It not only brings into being a new degree of luxury, but accomplishes an abatement of operating cost.

The slower engine speed results in greater power generated from a given amount of fuel.

The slower moving parts mean less friction.

Both of these mean lower fuel consumption.

But above all else is the contrast between the Cadillac and the average car with the ordinary gear ratio.

The trembling oscillation of the latter is transformed in the Cadillac into a straight-ahead, steady motion which reduces vibration almost to the vanishing point.

A simple electric switch changes the gear from low to high, and like magic, there is added to any given speed of the engine an increase of 42 per cent in the speed of the car.

Now—recall to your mind the high repute in which the Cadillac is held.

Remember its record for workmanship almost miraculously fine; for strict standardization of its parts; for alignment of its units.

Remember its reputation for staunchness, for dependability, for long life, and for the supreme satisfaction and service which it renders to its users.

Remember its reputation for economy of operation and maintenance.

Remember the stability and the ideals of the organization behind it.

Consider all these things stimulating the rivalry for early deliveries.

And then try to conceive the effect of this new revelation of Cadillac progress added to all the others.

You will realize, then, that we are acting in your interest when we advise you to book your order now, even if you do not wish your new Cadillac delivered for several months.

REVIEWS OF NEW BOOKS

(*Continued from page* 388)

the children. The inevitable happens. John falls in love with Mary, and there comes a clash between her ideals and his life-work. The feuds of past years and the misunderstandings of the present fill the pages with dramatically exciting incidents, relieved when too intense by the cleverness of Uncle Beck, a charming character. The right of the strongest finally prevails, but love hopes to compensate the vanquished for all fancied wrongs and to reconcile the native to the ultimate justice of progress.

Hornbrook, Isabel. A Scout of To-day. Pp. 290. Boston and New York: Houghton Mifflin Company. $1.

This is a story for and about boys, illustrating their exuberance of spirit, their love of sport, and incidentally shows how easy it is to govern their lawlessness by teaching them to govern themselves. To a neighborhood of real boys, with the usual mixture of good, bad, and mischievous, comes a visiting lad, Nixon Warren, who has already enrolled himself among the Boy Scouts of America and is full of their precepts and ideals. At first his apparent superiority antagonizes his companions, but gradually they are won over to his way of thinking and organize patrols of their own. The author works into her narrative many interesting items of nature-lore, descriptions of boyish tramps and sports, hunting and camping episodes, and all outdoor fun so dear to a boy's heart. Perhaps the author uses language too exquisite to appeal to young boys, but that is a small fault among many good points. The Boy Scout movement is enthusiastically described and its good points made very clear, illustrating how easy it is to turn a boy from a thoughtless tease into a sympathetic helper, and to guard rather than torment animals. The reader will be really interested in the transformation of Leon the tease into Leon the life-saver of Harold Greer, from the timid "Hare" to the brave young scout. Even Marm Baldwin's dissolute son Dave is finally regenerated.

London, Jack. The Abysmal Brute. Pp. 169. New York: The Century Company. $1.

Jack London's greatest power is in the portrayal of man—Man spelled with a capital "M," virile, rugged, and direct. With women characters he is not as much at ease. The one feminine touch in this little tale is just a side-light, used to finish and explain a lovable and convincing picture. Young Pat Glendon had been brought up in the West, clean, strong, and nature-loving, but his father, a one-time king of the prize-ring, had trained him in the art of fisticuffs until he is all-powerful and invincible. When the young giant gets into the "game" at his father's request he is absolutely ignorant of the rottenness of ring tactics, and is kept so by a keen-witted manager, who becomes crooked as usual, and takes advantage of "Young Pat's" innocence to reap great profit. How Pat becomes disillusionized through his friendship and love for a young lady journalist, and how he rounds on his deceivers and gives them the fight of their lives, make a thrilling and dramatic story.

CURRENT POETRY

DEIRDRE and Cuchullain are no longer the favorites of Irish verse-makers. The Neo-Celtic movement has ended, at least so far as the poets are concerned. They are singing not of the ancient gods and heroes of the Gael, but of modern Ireland and the modern Irish. This is not wholly to be regretted. The enthusiasm for Celtic legend gave the world many lovely poems, but there was a real danger of overdoing it, of making Aengus as trite as Cupid. Miss Harriet Monroe's excellent *Poetry, A Magazine of Verse*, contains in its August number a poem by Mr. Alfred Perceval Graves which illustrates excellently the present-day tendency away from mythology toward the simple beauties of common life. Before the "Celtic Renaissance" was heard of, poems like this were not unusual—"Drimin Dhu Deelish" is a famous figure in the Irish verse of many years ago—and now, it seems, there is a return to such expressions of the romanticism of the commonplace.

O Drimin Dhu Deelish

BY ALFRED PERCEVAL GRAVES

O Drimin Dhu Deelish, my kind Kerry cow,
As black as the night with one star on her brow,
For Drimin Dhu Deelish, the silk of the kine,
For Drimin Dhu Deelish I mourn and I pine.
As O ru Drimin Dhu, och oru agraw,
As O ru Drimin Dhu, go dhu tu slaun!

For when to the milking I'd call Drimin Dhu,
'Twas then like a deer down the mountain she flew;
And ah, when beneath her the stool I would place,
How oft on my shoulder she rubbed her soft face!
As O ru Drimin Dhu, och oru agraw,
As O ru Drimin Dhu, go dhu tu slaun!

And tho sixteen gallon from Drimin would hail,
And under my fingers froth up in the pail,
She ne'er kicked one keeler away o'er the green,
For no cow genteeler than Drimin was seen.
As O ru Drimin Dhu, och oru agraw,
As O ru Drimin Dhu, go dhu tu slaun!

The mountain bog slid and surprized Drimin Dhu,
Tho bravely she battled to break her way through;
Till down, down she went, with a drizzen and drone,
Poor Drimin Dhu Deelish, and left us alone.
As O ru Drimin Dhu, och oru agraw,
As O ru Drimin Dhu, go dhu tu slaun!

When other cows ailed in the wet and the cold
Our Drimin was evermore hearty and bold;
Straight back and firm body and honey-sweet breath,
Mild eyes and grave manners, how could you know death!
As O ru Drimin Dhu, och oru agraw,
As O ru Drimin Dhu, go dhu tu slaun!

O silk of the kine, when among us you stood,
No milk was as fine and no butter as good,
But oh, 'tis chill water, and oh, 'tis dry scone,
Since Drimin, since Drimin Dhu Deelish is gone!
As O ru Drimin Dhu, och oru agraw,
As O ru Drimin Dhu, go dhu tu slaun!

Here is another poem by an Irishman, but this Irishman is, by residence, an American. Mr. MacManus is known chiefly as a writer of stories dealing with the people of his native Donegal. That he can write sincere and charming poetry is proved by the following verses. The figure is not new, but it has seldom been used more effectively. The poem is taken

The New Style

Bread and Milk

Made of wheat, and the whole wheat.
Four times as porous as bread.
Crisper than crackers—bubble-like, thin.
And a taste much like toasted nuts.

Puffed Wheat and Puffed Rice in the mornings, of course, are served with cream and sugar. Or mixed with fruit.

But for luncheons or suppers—between meals or bedtimes—they are served in bowls of milk.

Served as you serve bread or crackers. But you don't need to break them—they are just the right size.

They form toasted brown wafers—thin, floating wafers—fragile and brittle, easily crushing. They are ideal wafers to serve in milk.

Night Foods That Never Tax Digestion

Remember, too, that these Puffed Grains are scientific foods. They are steam-exploded. Every food granule is literally blasted to pieces.

They are made by Prof. Anderson's process. And no other method so fits cereals for digestion.

Serve them at any hour. Let children have them between meals. Make this their bedtime dish. For these foods supply them, without taxing the stomach, every element found in whole grain.

Puffed Wheat, 10c
Puffed Rice, 15c *Except in Extreme West*

Their Almond Taste

These grains in the process, for one whole hour, are rolled in 550 degrees of heat. That heat gives the nut-like taste.

Then the explosion puffs the grains to 8 times normal size. It fills them with a myriad cells.

The result is a food confection. Yet every element and flavor comes from the grain itself.

Use them in candy making—to garnish ice cream—in frosting cake—wherever you use nut meats. That will give you some idea of how delicious these foods are.

And yet a whole package—enough for ten big servings—costs but ten or fifteen cents.

The Quaker Oats Company

Sole Makers (445)

This Roofing Never Costs a Cent for Maintenance

It's false economy to put your money in a "cheap" roofing that has to be painted, regraveled or repaired every year or two. The *real* cost of a roofing is the *purchase price* plus the *cost of maintenance.*

J-M Asbestos Roofing is the only ready roofing that never requires a single cent's worth of coating, regraveling or other protection. Therefore it *costs less per year of service* than any other roofing.

This roofing never needs any protection because it is made of layers of stone (Asbestos) felt securely cemented together with Trinidad Lake Asphalt. It is *mineral through and through*—literally a sheet of *pliable stone.* There isn't a particle of perishable material in

New Vanderbilt Hotel, New York, Roofed with 17,280 Sq. Ft. of J-M Asbestos Roofing

J-M ASBESTOS ROOFING

Is it any wonder that this stone roofing is not affected by rain, heat, cold, salt air, chemical fumes, etc., and that it affords absolute protection against fire? And is it any wonder that this roofing is still in good condition on hundreds of roofs after more than 25 years of service?

J-M Asbestos Roofing comes in rolls ready to lay; also furnished in built-up form. Suitable for any type of building. Easy to lay. J M Roof Cleats, packed in each roll, make absolutely watertight laps and give the entire roof a handsome white appearance.

Your dealer sells J-M Asbestos Roofing—if not, order from our nearest branch.

Write for sample of the curious Asbestos Rock from which this Roofing is made and our Book No. 2786.

The House with the Green Door

BY SEUMAS MACMANUS

Lone is the house of my Love,
The house with the green door
That opened to let my Love in,
And opened never before.

It shut behind her that day;
In my face blew the bitter rain;
I cried aloud at the door,
Calling her name—in vain.

Oft I went back through the storm,
Strong the impulse that bore me,
Stinging the sleet in my face,
And chill the welcome before me.

It opened but once before,
Once it will open again,
The house with the green door,
And noiseless bolt and chain.

Many my fruitless journeys;
Yet, sometime the light will burn,
And friends watch late in my house,
And I shall not return.

I shall have found my welcome,
And a wide-thrown green door;
And I will tarry, in my Love's house
Shut close for evermore.

It may be that much of the interest of the poem which we quote below (from the *Westminster Gazette*) comes from the use of the name Shakespeare. Is "Will's brother" an historical personage? It is fortunate that Miss Stuart has discovered him, anyway. His memory is fitly honored in her stately lines.

Edmund Shakespeare

BY DOROTHY MARGARET STUART

["Edmund Shakespeare, a Player, buried in the Churche."—Register of St. Saviour's, Southwark.]

Red flies the gaudy pennant o'er the "Rose,"
Loud from the "Globe" the tuneless trumpet cries,
And strutting on the planks the mummer goes,
With feigned valor in his heavy eyes.

Voices and eager hands and restless feet
Drown the church bell in a long, furious wave:
The boy is dead—Will's brother—and they beat
The stone into the gap above his grave.

The boy is dead—he who in tattered gold
Sat as a king upon the creaking stage,
Or, mouthing feebly like some braggart old,
Played the sad comedy of loveless age.

What then?—the kings must rant, the dotards whine,
And the red flag fly gaily in the sun,
Altho one mummer less drinks Spanish wine
With Kemp and Burbage when the play is done!

They must not turn aside to grieve for him,
Nor leave the blade of folly in its sheath,
While in this last arena old and dim
He plays the last grim comedy of Death.

The mummer king has laid aside his crown,
The mummer fool his motley wears no more,
And on the red pane the slow sun creeps down,
Like a flag lowered to tell the play is o'er.

Shakespeare, of course, would never write so distressingly sibilant a line as "mystics' vision, poets' lore"—indeed we are far from considering Mr. Fisher's lyric Shakespearian. Yet in spirit and in

manner it is Elizabethan, and it is probable that Mr. Fisher has taken Shakespeare for the model. Surely it was a legitimate—and courageous—thing to do. The poem appeared in the London *Academy*.

"Make Me Music"

By Phil J. Fisher

Make me music for a night,
Soft as slumber, faery-light;
Let the notes' seductive play
Charm the rhythmic hours away,
Picture me in cunning stave,
Seas no galley ever clave;
Hills for roaming, happy streams
Rippled with the breath of dreams;
Isles that shipman never vaunted,
Woodlands faun- and dryad-haunted.
Make me music! Bear me hence
From the prison-house of sense.

Make me music for a night,
Secret, wise with all delight;
Tune it to a magic key,
Opening wistful things to me:
Joys far-holden, words austere
Uttered for a prophet's ear;
Mystics' vision, poets' lore,
Legends that are told no more;
Bliss of sacraments unspoken
On the lips of lovers broken.
Give me this and then, come, sorrow,
I'll engage thee on the morrow.

One of our American expatriates contributes to the New York *Bookman* an eight-line tragedy of remarkable force. Mr. Herman Scheffauer was first known as a balladist, and this poem is a ballad, a ballad stript to the skeleton.

The Sea Widower

By Herman Scheffauer

Dreaming the fisherman sat in the firelight,—
The low fire, the red fire, the fire upon the stone.
The sudden snap o' casement glass fell on his ear by night,
The wind's cry, his wife's cry—the wife that left him lone.

Men say the fisherman is one that walks in fey:
His boat calls, the nets call, adown the flood goes he;
The fishing-fleet at evening came homing o'er the bay;
An empty boat, a broken oar, two halcyons on the sea.

In a recent issue, we quoted Miss Ada Cambridge's "The Birds and the Lighthouse." A reader (to whom we are grateful) has sent in the following poem of F. W. Bourdillon, in which the same idea is differently developed. It was written some years ago, probably in an English weekly.

The Bird and the Beacon.

By F. W. Bourdillon

Poor bird that battlest with the storm
To gain the beacon-light,
Then fall'st a wounded woful form
Into the gulfs of night!
A thousand lips that light may bless:
To thee 'tis the last bitterness.

A light was given to the earth,
Wearing a woman's name;
A thousand tongues have told her worth,
And deathless is her fame.
But I was the spent bird, that there
Salvation sought, and found despair.

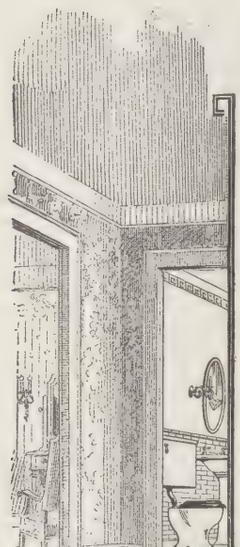
The Noiselessness of the Siwelclo is an Advantage Found in No Other Similar Fixture

This appeals particularly to those whose sense of refinement is shocked by the noisy flushing of the old-style closet. The Siwelclo was designed to prevent such embarrassment and has been welcomed whenever its noiseless feature has become known. When properly installed it cannot be heard outside of its immediate environment.



SIWELCLO

Noiseless Siphon Jet Closet

Every sanitary feature has been perfected in the Siwelclo—deep water seal, preventing the passage of sewer gas, thorough flushing, etc.

The Siwelclo is made of Trenton Potteries Co. Vitreous China, with a surface that actually repels dirt like a china plate. It is glazed at a temperature 1000 degrees higher than is possible with any other material.

The most sanitary and satisfactory materials for all bathroom, kitchen and laundry fixtures are Trenton Potteries Co. Vitreous China and Solid Porcelain. Your architect and plumber will recommend them. If you are planning a new house, or remodeling, you ought to see the great variety and beauty of design such as are shown in our new free booklet

"Bathrooms of Character" S 13

PERSONAL GLIMPSES

TACKLING NATURE IN THE RAW.

IN order to prove his contention that it is by no means impossible for a person to go into a forest and live as our primeval ancestors lived, Joseph Knowles, an American artist, recently went into the wilds to spend two months. Determined to lead an isolated and self-dependent existence, he left behind all clothing, implements, and methods of modern man. His intention was to kill wild creatures enough for his meat supply and depend upon berries, nuts, and other uncultivated vegetable matter for the rest of his food. He expected to use the skins of animals as clothing when cool weather came. His experiences during the first four days were written with charcoal on birch bark and left at a place where the crude manuscript could be found by his friends, who bade him goodby on the shore of Spencer Lake in the Northern Woods on August 4. Mr. Knowles's story is printed in the Kansas City *Star:*

Everything was wet, so I did not attempt to make a fire. After tramping through another area of dead cedars and underbrush, I finally reached the edge of the swamp. It was a great relief to get out of this jungle into the more open timber-land. It was here that I decided to pass the night without fire and shelter.

I had not eaten since morning and did not even think of food. Outside of the smarting of the thistles and brush scratches on my legs, I felt no disagreeable effects of my day in the forest without clothing.

I found a clear spot under a clump of spruce-trees, which sheltered me to some extent from the rain. A bed for the night was out of the question, for the air was too chill for slumber, and anything I might have secured for protection was wet. I did not feel the need of sleep, and still retained that feeling of freedom and exhilaration that I experienced when I stept into my domain.

During my physical examination by Professor Sargent, of Harvard, he said that the strength of my arms was lacking compared with that of my body and legs. I thought of this deficiency and of my opportunity now to begin to build up my arm muscles. So on a strong spruce limb I drew myself up and down, trying to see how many times I could touch my chin to the limb. When I got tired of this I would run around under the trees for a while. Altho the night was pitch dark I grew accustomed to my shelter.

Once during the night I lay down and fell asleep. When I awoke it had stopt raining and I was so cold that my teeth chattered. I jumped up and ran around under the trees till daylight.

At daybreak I started out again exploring, and returned to Lost Pond. There is something attractive about a sheet of water that draws a man from the timberland. The eye craves for distance after being shut in by the trees. The hoot of a loon was the only sign of life at the pond,

altho there were plenty of fresh deer tracks in the runways to show I had neighbors that morning.

I followed down along the outlet of the pond to Little Spencer stream, looking for shallow pools where I might find trout that I could catch with the crude materials about me, and at the same time heading for the burnt land, where I hoped to find berries. I was beginning to feel hungry, and so I set about securing my breakfast. I crossed the Little Spencer into the burnt lands and there was rejoiced to find an abundance of raspberries and some blueberries. They tasted good to me and I ate my fill.

With birch bark I fashioned baskets in which I packed some of the berries to last me during my explorations. I saw plenty of frogs, but I was not hungry enough to feel the need of them.

In a shallow pool near the outlet I rounded up a couple of small trout that had come up-stream seeking the cooler waters of the spring hole. They were easy to catch, for they were shut in from the stream by the lowering of the water, and I used a stick to dispatch them. The fish I also took along.

The bright sun in the burnt land was beginning to burn my back and shoulders, which were not accustomed to exposure, so I returned to the timber-land, where the sun was screened. I decided it would be better for me to get accustomed gradually to the sun and thus prevent the painful effects of sunburn.

Reaching a cool spot sheltered from the sun, I lay down and fell asleep. It was a restful, refreshing sleep. When I awoke it was late in the afternoon. My first thoughts were of fire and shelter for the night, so I started out with my fish and berries to find a spring in some convenient place near which I might build a temporary lean-to.

Near a cool spring, close to his sleeping place, Mr. Knowles made his first attempt to build a fire. His fuel was damp and he failed to start a blaze. For the benefit of those who do not understand the trick of kindling a fire by friction, he gives this detailed description of the process:

First, a tough cedar limb about three feet long is selected, and a thong of rawhide or the twisted lining bark of the ironwood or basswood, or a tough elm root will do. The elm root is what I used for my first fire.

Attach this thong or bark or root to each end of the cedar limb, forming a bow similar to an Indian's bow. Next a dry pine limb about eighteen inches long and about two inches in diameter is placed in a single loop of the bowstring and held in an upright position with the bottom end resting on a dry cedar log. The upper end is held in position with a block of wood in the left hand. The bow is held in a horizontal position and is drawn backward and forward, causing the upright stick to whirl at terrific speed. The pressure of the left hand on the revolving upright stick brings the friction at its point, and the sparks ignite the dry punk, which is carefully placed around the lower end of the upright stick. After the punk has caught the spark it must be gently fanned into a flame and then the fire is kindled.

Men Admire *Real* Beauty

PALMOLIVE

Promotes Naturally Beautiful Complexions

IT is more than mere soap—it gives to the skin just what it needs to keep it soft, smooth and beautiful.

It contains a perfect blend of palm and olive oils—Nature's own beautifiers.

It is free from all traces of raw alkali—is soothing to the *tenderest* skins.

Physicians and nurses in well known hospitals recommend it for bathing new-born infants.

For 2,000 years palm and olive oils have been used for the complexion.

Our process of blending in Palmolive Soap has increased their efficiency twofold.

More than a million women know that Palmolive proves it.

Send two 2c stamps for sample and booklet, "The Easy Way to Beauty," and you'll know it, too. 15c the cake. At all dealers. Natural color. Delightful perfume.

B. J. Johnson Soap Company, Inc., Milwaukee, Wis.

Canadian Factory: 155-157 George St., Toronto, Ont.

PALMOLIVE SHAMPOO makes the hair lustrous and healthy and is excellent for the scalp. It rinses out easily and leaves the hair soft and tractable. Price, 50 cents.

PALMOLIVE CREAM cleanses the pores of the skin and adds a delightful touch after the use of Palmolive Soap. Price, 50 cents.

N. B.—If you cannot get Palmolive Cream or Shampoo of your local dealer, a full-size package of either will be mailed prepaid on receipt of price.

Big Values in Slightly Used New Typewriters

THE Fox Typewriter is a beautifully finished, high grade, Visible writer, with a light touch and easy action and extreme durability. It has a tabulator back spacer, two-color ribbon, stencil cutter, card holder, interchangeable platens and carriages, is fully automatic, and is sent out complete with fine metal cover and hardwood base.

If our Typewriter does not suit you after a ten days' free trial of it send it back at our expense. If you wish to buy it after trial you can pay us a little down and the balance monthly or in all cash, just as you prefer. There is no "red tape" tied to this offer, and it is open to any responsible person in the United States.

Local Agents Wanted—Samples at Wholesale

We are making a special offer on a lot of Fox Visible Typewriters that have been very slightly used for demonstration purposes. These are not second-hand nor rebuilt, and could scarcely be told from new by anyone. Low price—easy payment terms—ten days' trial. Write for full particulars. Mention Literary Digest.

No sash to raise—operate from within the room by a turn of the handle. These shutters stay locked in any position —ask your hardware man or write us for book of details.

Mallory Mfg. Co., *522 Broad Street FLEMINGTON, N. J.*

When I found that my materials for fire were too wet I set about building my shack and spent the remainder of the daylight at this task. I used dead sticks covered with fir boughs and banked up the walls with moss, which kept out the wind. I ate most of my berries that night and put the fish in the spring to keep them cool till morning.

My crude shelter served me well that second night in the forest, and I was fairly comfortable without clothes. Outside the shrinkage around my waist-line and a few scratches on my legs and body, I was in just as good condition as when I left the shore of Spencer Lake on Monday.

My first move in the morning was to try the fire stunt. This difficulty was beginning to get on my nerves, so I made extra preparations for the new attempt, and I scouted around in the woods until I found some punk that was very dry. After a few trials with my crude apparatus the sparks began to ignite the dry punk and I soon fanned into flame my first fire in the forest. I hastened to the spring for my trout. You can imagine my surprize and disappointment when I discovered that they had disappeared during the night. The mink tracks around the spring told the story. He had got there first.

The berries were all I had left now, so I made quick work of them. After banking my fire I struck out for the burnt land. On the bank of the stream I found some wild onions. I ate a few of these, but did not take any with me, for, altho they are nourishing, I preferred the taste of the berries. I crossed the stream and finished my morning meal among the raspberry bushes.

Up to this time I had set no traps or snares for game, nor made any move toward securing skin or other material for covering. During the daytime I found it more comfortable without clothing as my skin became more accustomed to the outdoor air, and I felt little need of covering, except at night.

With another basket of berries I again struck back across the Spencer to the fish pool. Luck was against me this time! Not a fish was in the pool. I tried farther up the stream, but without success.

A splash in the water up-stream drew my attention. At first I thought I had started a deer, but as I watched the big pool where the sound came from I was just in time to see an otter making for shore with a big trout in his mouth. I threw a stone into the pool and yelled at the same time. I ran out into the stream below the pool and saw the trout floating belly-up, but the otter had disappeared. I gathered in the fish and had the satisfaction of robbing the otter to get square with the mink.

On reaching camp I was not long in roasting and eating my trout. I can not truthfully say that I enjoyed this meal without salt. However, it was a change from the berry diet, and in an hour after I felt like a new man.

I had decided to abandon my camp and strike out for a better section, so I put out my fire and started south in the direction of the Big Spencer stream, taking my apparatus for fire along with me. Arriving at the Big Spencer just before dark, I threw up my hasty shelter and built a fire.

Thursday morning I was up at day-

The Pen that Can't Misbehave

No. 20 $2.50 No. 42½ $4.50

Parker Pens are always clean as a whistle because all the ink is automatically drained out of the ink feed by the Lucky Curve when your pen is not in use. A perfect writing pen and a cleanly pen is a fine combination. *Geo. S. Parker.*

PARKER LUCKY CURVE

Fountain Pens

You can bank that your fountain pen will be fit and ready when you want it if it's a Parker. The Parker does not leak or smear the fingers — because of the Lucky Curve. And as a satisfactory writer, it has an enviable record.

The Lucky Curve

The big idea that has made fountain pens cleanly.

The pens illustrated are only two of hundreds of different styles in Standard, Self-Filling and Jack-Knife Safety pens at $2.50, $3, $4, $5 and up.

break and down to the stream. I found a spring hole in a large pool full of trout. I could see them lying close to the bottom with their noses all headed up-stream. Below the big pool I dammed up a smaller pool and left a channel between the two. Then jumping into the big pool I waded around and drove the trout down-stream. Many of them got by me and darted back to the spring hole, while some of them went through the channel into my trap. I repeated this two or three times, and then plugged the channel with rocks so that my captives could not return to their favorite spring hole. I had no trouble in landing several trout from my trap pool, which was small and shallow.

I ate my breakfast of trout and then dug a smoke-hole, walled it in with stones, built a fire in it, and hung the remainder of my fish in it to smoke.

The rest of the day I am giving over to reporting to the outside world the progress of my lonesome experiment. Taking a supply of charcoal from my fire, I headed toward Big Spencer Lake, seeking and on the way gathering large sheets of birch bark. At Lost Pond I sketched the section of the pond where I saw a deer feeding on the day I entered the forest.

At the close of my fourth day in the woods, I feel no ill effects from lack of food, clothing, or shelter. While I have maintained myself so far, I have accomplished little. I shall not be satisfied by merely holding my own, but look forward to achievements I hope to reach in the interest of science. I am fully determined to carry my experiment through to the end, following my original plans as closely as circumstances will permit.

I have no time for thoughts of the comforts of the outside life which I have cast off. At night my mind is occupied with my plans for the coming day; and during the day there are endless things to interest the man who loves nature.

Timely Aid.—An old colored woman came into a Washington real-estate office the other day and was recognized as a tenant of a small house that had become much enhanced in value by reason of a new union station in that neighborhood.

"Look here, auntie, we are going to raise your rent this month," the agent remarked briskly.

"'Deed, an' Ah's glad to hear dat, sah," the old woman replied, ducking her head politely. "Mighty glad, fo' sho', case Ah des come in hyah terday ter tell yo' all dat Ah couldn't raise hit dis month."—*Harper's Magazine.*

Enterprising.—The honest farmer who took in summer boarders greeted the new arrivals with truly rural enthusiasm.

"I swan, I'm right deown glad to meet ye," he cried as he extended his horny hand. "Heow's th' folks to hum?"

The man of the party looked at the enthusiast with some suspicion.

"Farmer," he said, "your dialect strongly reminds me of the stage variety."

The agriculturist grinned.

"It's all right, ain't it?" he asked. "I gave an actor feller a month's board free to teach it to me."—*Cleveland Plain Dealer.*

"Standard" GUARANTEED PLUMBING FIXTURES

TO build a bathroom that shall be beautiful and sanitary is the first duty of every householder—to equip this all important room with "Standard" guaranteed plumbing fixtures is to assure health to the home and the family. A "Standard" bathroom is an incentive to cleanly living.

Everyone who is planning to build should send for a copy of "**Modern Bathrooms**"—100 pages in color. It shows practical, modern bathrooms at costs ranging from $78.00 to $600.00 with prices of each fixture in detail. Floor plans, ideas for decoration, tiling, accessories, together with model equipment for kitchens and laundries, are also shown. Sent free on receipt of 6 cents postage.

Genuine "Standard" fixtures for the Home and for Schools, Office Buildings, Public Institutions, etc., are identified by the Green and Gold Label, with the exception of one brand of baths bearing the Red and Black Label, which, while of the first quality of manufacture, have a slightly thinner enameling, and thus meet the requirements of those who demand "Standard" quality at less expense. All "Standard" fixtures, with care, will last a lifetime. And no fixture is genuine *unless it bears the guarantee label.* In order to avoid substitution of inferior fixtures, specify "Standard" goods in writing (not verbally) and make sure that you get them.

THE SPICE OF LIFE

Wanted.—"Did the doctor tell you what you had?"

"No. He took what I had without telling me."—*Life.*

Reckless Spender.—SAPHEDDE—"It costs me $25,000 a year to live."

MISS CAUSTIQUE—"How foolishly some people spend their money!"—*Philadelphia Record.*

Weather Note.—A heavy bunch of clouds passed over Hogwallow yesterday bound for a Sunday-school picnic in progress near Rye Straw.—*Paducah Hogwallow Kentuckian.*

Impossibility.—"No man can serve two masters," observed the good parson who was visiting the penitentiary.

"I know it," replied Convict 1313. "I'm in here for bigamy."—*Cincinnati Enquirer.*

The Safe Way.—"Why don't you run for office?"

"I've thought about it," replied Mr. Dustin Stax; "but I'm satisfied to subscribe to campaign funds. The fact that a man is willing to give prizes for airship flights doesn't put him under obligations to aviate."—*Washington Star.*

Subtle Revenge.—Two young bootblacks who have stands close together on Tremont Street quarreled the other day. "I'll get even with that guy yet," vowed the smaller boy of the two.

"Goin' to fight him, are yer, Jimmy?" he was asked.

"Naw! When he gets troo polishin' a gent I'm goin' to say ter that gent soon's he steps off the chair: 'Shine, sir, shine!'"—*Boston Transcript.*

Most Any Time.—The scene is set.

A country road, trees, sky, summer homes, a lake in the distance. A steam-railway line crosses the road at right angles.

Enter, up the road, an automobile, well loaded and running at high speed.

Enter at the far right an express train.

Both automobile and train are rushing toward the crossing.

Owner of automobile to chauffeur: "Can you make it?"

The chauffeur, speeding up: "Sure I can make it!"

He doesn't.—*Cleveland Plain Dealer.*

Tip to the Ambitious.—Louis J. Horowitz, the sky-scraper builder, who in twenty years has risen from a position of $3 a week to one of $100,000 a year, was talking about success.

"I go to bed at 9 o'clock," he said, "and I get up at 5 o'clock. I play a little, but my play is exercise to keep me in good trim for my office. I play to work—as other men work to play."

Mr. Horowitz mused a moment; then in his terse, epigrammatic way he said, shaking his head:

"Success demands sacrifice! Two men set out to achieve fame. One succeeded. The other lived."—*Washington Star.*

A Happy Marriage

Depends largely on a knowledge of the whole truth about self and sex and their relation to life and health. This knowledge does not come intelligently of itself, nor correctly from ordinary everyday sources.

Sexology

(Illustrated)

By William H. Walling, A.M., M.D., imparts in a clear, wholesome way, in one volume:

Knowledge a Young Man Should Have.
Knowledge a Young Husband Should Have.
Knowledge a Father Should Have.
Knowledge a Father Should Impart to His Son.
Medical Knowledge a Husband Should Have.
Knowledge a Young Woman Should Have.
Knowledge a Young Wife Should Have.
Knowledge a Mother Should Have.
Knowledge a Mother Should Impart to Her Daughter.
Medical Knowledge a Wife Should Have.

All in one volume. Illustrated. $2.00, postpaid.

Write for "Other People's Opinions" and Table of Contents.

Puritan Pub. Co., 777 Perry Bldg., Phila., Pa.

CURRENT EVENTS

Foreign

August 21.—King Charles and Queen Elizabeth (Carman Sylva) of Roumania are shot at by brigands while motoring in the neighborhood of Sinaia, in the Carpathian Mountains.

Lord Strathcona announces his intention of resigning early next year as Canadian High Commissioner.

The Venezuelan Government officially declares the Castro revolution at an end.

August 23.—According to a Washington dispatch, Great Britain, France, and Japan urge Provisional President Huerta to accept President Wilson's plan of mediation between the contending forces in Mexico.

August 24.—The ninth Esperanto Congress is opened at Berne, Switzerland, twenty-three nations being represented.

August 27.—Dr. Douglas Mawson, the Australian Antarctic explorer, and five companions have been rescued and brought back to New Zealand, says a Christchurch dispatch.

Domestic

WASHINGTON

August 21.—The first deposits of the Government's $50,000,000 crop-moving deposits are made in several Southern cities.

Senator Penrose presents a resolution asking $25,000,000 for the protection of Americans in Mexico.

Financiers representing $15,000,000 assemble in Chicago to protest against the Owen-Glass Currency Bill.

August 23.—The wool schedule of the Tariff Bill is passed by the Senate.

August 24.—The War Department receives a communication from Governor-General Forbes, of the Philippines, enclosing a report from Dean C. Worcester, of the Philippine Commission, saying that slavery exists among the natives of the islands.

August 26.—Secretary McAdoo, of the Treasury Department, announces the apportionment of $46,500,000 of the fund of Government deposits offered to the South and West to facilitate the movement of crops.

August 27.—President Wilson reads his message to Congress on the Mexican situation.

The House orders an inquiry into charges against Federal Judge Emory Speer, of Georgia.

President Wilson accepts the resignation of W. Cameron Forbes as Governor-General of the Philippines.

GENERAL

August 21.—The Board of Public Welfare of Kansas City, Mo., announces that 25 per cent. of the 25,000 women workers in that city receive less than $6 a week.

August 22.—The heat wave in the West is broken, with lower temperatures and showers reported in Kansas and other States.

August 23.—The New York City Democratic Committee chooses Edward E. McCall as mayoralty candidate.

August 26.—The Governors' Conference is opened in Colorado Springs, Colo., for its fifth annual session, with delegates present from twenty-five States.

The world's largest power dam is dedicated at Keokuk, Ia.

San Francisco votes to extend [its municipally owned street-railways.

The Ohio Supreme Court upholds the nomination and election provisions of Cleveland's new radical charter.

August 27.—The independent candidacy of Mayor William J. Gaynor, of New York, for reelection is announced.

Staked Out.—To make sure the youngster was not disobeying the bass-fishing law, the game warden took his string of fish out of the water and found only catfish, perch, and suckers on the line. A few feet further down the stream he found a large black bass wiggling on a string weighed down with a stone and asked the boy what he was doing with the fish.

"Well, you see," answered the boy, "he's been taking my bait all morning and so I just tied him up there until I got through fishing."—*National Food Magazine.*

V-ALL-NO
AFTER DINNER MINT

A delicious, creamy candy with a flavor all its own.

Sold in tin boxes only—never in bulk.

Cedar Moth Bags

Manufactured by special process for a *Sweet-Smelling Moth Preventive of Lasting Qualities*. The odor is strong, wholesome and pleasant, and as specially prepared by us, is lasting and most effectively repellent to moths and their like. INVESTMENTS AND FINANCE

TO BUY OR NOT TO BUY

WITH still lower prices prevailing in August, investors were everywhere eager to know if a time to buy had not come. Financial journals, commission houses, bankers, and students of financial movements were everywhere beset with inquiries on the subject. As usual in such matters, a variety of opinions was obtained, ranging all the way from positive assurances that the opportune time had arrived to equally positive statements that prices were going still lower.

Franklin Escher, in *Investments*, takes the ground that now is "the accepted time." He can find "nothing in the business or financial situation to prevent investors from taking advantage of the many attractive opportunities offered." While there has been a halt in the improvement that got under way early in the summer, eventually the improvement "is bound to run a good deal further." At the same time, there is no boom in sight—no bull market in stocks, with big day-to-day totals and sensational advances—"just a slow, gradual recovery." The securities he "greatly favors" are "the standard dividend-paying railroad stocks." In past years the railroads "have been paying for their past sins," but the score "has been pretty well settled." They have not had an easy time in settling it, however, "and are not having an easy time of it now," but, in the prices to which their shares have been beaten down, "all that has been discounted." Shares "have got down to hard-pan quotations, quotations which represent value and earning power that are there." Further, it is to be remembered that "there is about due that reaction in the feeling of the general public against the railroads which always takes place when public sentiment swings too strongly in one direction or the other." Many observers believe that this reaction "has already set in—that is to say, that the people and the press generally are not nearly as down on the railroads as they were a few years ago."

The New York *Times Annalist* recently devoted a page and a third of its space to what it called, in a head-line, "What Everybody Wants to Know." Bankers, economists, and other experts on the subject had been asked if, in their judgment, the present were not the right time to buy, and, if so, whether stocks or bonds should be favored. Most bankers gave non-committal replies; a few were bearish, but these desired not to be quoted. James B. Forgan, President the First National of Chicago, however, wrote favorably. The present, he said, "is an opportune time for those having money on hand to permanently invest it." As for stocks or bonds, bonds were for "those who, in looking for an investment, do so from the standpoint of securing a sure and steady income free from the ordinary risks involved in being directly engaged in business." Stocks, on the other hand, are for those "whose experience and training make them capable of judging for themselves as to whether a business enterprise is good, bad, or doubtful"; these should "know enough about the stocks they buy to enable them to judge for themselves of the risk involved."

J. M. Elliott, President of the First National Bank of Los Angeles, replied, "I say unhesitatingly yes." Graham G. Lacy, vice-president of a national bank in St. Joseph, Mo., also replied affirmatively and with equal emphasis. "Good securities," he said, "have reached a very low point, and it has always been my practise to buy upon a cheap market and sell upon a dear one. I believe that in the near future we may see an upward tendency." He said further:

"We may expect the bond market to reach a stage of stability much sooner than the stock market, but many stocks that are intrinsically good are selling to-day at a very low price, and with change of condition, which undoubtedly will come sooner or later, we may look for a substantial rise.

"I have a firm faith in the good sense of the American people, and I do not doubt that we will ultimately work up to a satisfactory solution a great many vexed questions that at the present time seem almost insoluble. It is true that we are passing through a social and economic revolution, but it is well to remember that 'it is always darkest just before the dawn.'"

Byrne W. Holt, the writer on economics, long active and prominent in the Reform Club, did not think the present a good time to buy, "except possibly some of the best of the short-term notes and bonds with early maturities." He believes the financial and business world "is again nearing the end of another prosperous period." He looks for "prolonged business depression"; the crisis "may be several years off, but is probably near at hand." Irving Fisher, of Yale, writes that "any investments are at present uncertain." Jeremiah W. Jenks, of the New York University, finds securities at the present time so low in prices that the present is "a good time to purchase." But conditions are such that the investor should put his money "only in thoroughly sound securities."

HIGHER COMMODITY PRICES

During a period of seven months, ending June 30 last, commodity prices had slowly declined, but, with the passing of another month, an advance was made. On August 1, the index number of *Bradstreet's* stood at $9.0115, which indicated a rise of six-tenths of 1 per cent. English prices, compiled in a similar manner, indicated an advance of seven-tenths of 1 per cent. for the same period. Abroad and at home, therefore, the movement of commodity prices in July was about the same. *Bradstreet's* remarks that "most of the higher trend in this country is due to dearer corn on reports of crop damage, and advanced prices for beef, mutton, milk, eggs, pork, hams, lard, hides, hemp, jute, and flax, copper, coal, and coke, linseed-oil, hops, tobacco, and hay." The index number for August 1 "reflects a rise of 4 per cent. over August 1, 1911, and with the exception of last year, it is the highest index number ever recorded for any corresponding date."

STOCKS AND BONDS RATED FOR INVESTORS*

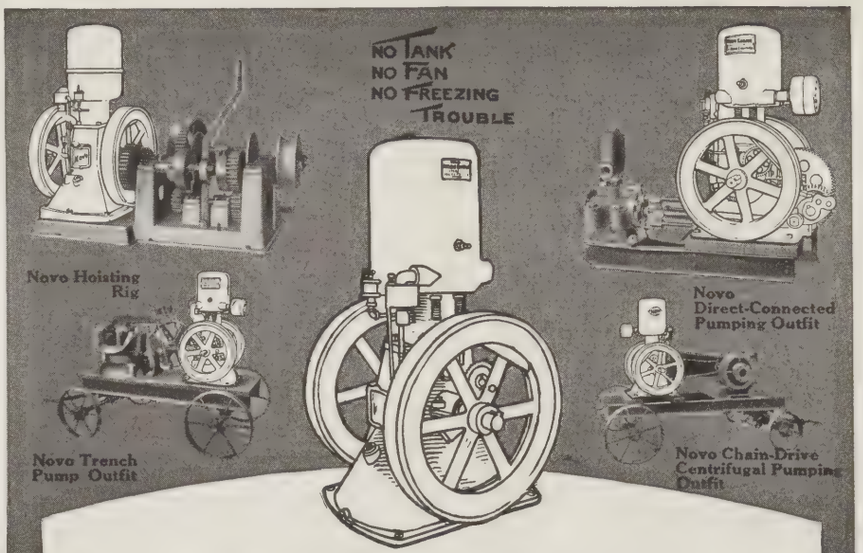
Mr. Moody's wide reputation as a writer on current themes and as the original compiler of "Moody's Manual," has made welcome to large investors, as well as to many small ones, his later publication, entitled "Analyses of Investments," of which the fourth annual number is now being issued in two parts. The part now ready deals with steam railroads. Part II, dealing with public utilities and industrials, may be looked for in the early autumn. Heretofore, Mr. Moody's work has been issued as a single volume and has dealt with steam railroads only.

The work differs radically from the familiar investment manuals such as "Moody's" and "Poore's." It is really an invasion of a new field. Its work is similar to that performed for many years by commercial agencies, in that it undertakes to give something like ratings for the stocks and bonds of the railways of this country. In addition to these ratings, there is presented, under the name of each railroad, a large mass of detailed and classified information as to earnings per mile, capitalization, dividends paid, margins of safety, freight density, train load, etc.

It is significant of the intrinsic values that lie in American railway stocks and bonds that so many of them are rated so high and that the number of such increases each year. Mr. Moody was able to describe last year more than 1,500 bonds, of which about 80 per cent. were rated as either "Aaa," "Aa," or "A." Stocks also bear examination well. Over 60 per cent. of all the railroad stocks were rated as of the "A" class, or as better. These ratings indicate forcibly the progress made by railroads during the past ten or twenty years. Mr. Moody presents ten-year comparisons, which to investors are extremely valuable as indicating what the roads have done. They bring forth facts as to character and stability.

For each road there is given a "comment," in which Mr. Moody offers a judgment as to the investment value of stocks and bonds. The Atchison system, we are told, has a management that is "both efficient and progressive." Its margin of safety "was maintained at the high figure of 50 per cent." The surplus is "amply sufficient in justifying the company in maintaining its full 6 per cent. rate on the common stock." If it can continue to lay aside each year large sums for improvements, "in times of dulness and depression little difficulty will be incurred in showing a sufficient surplus to pay the full dividend rate." The Chicago and Northwestern, altho it suffered "quite a sharp decline in 1912," spent "liberal amounts in maintenance;" and "we may expect the old surplus above the common stock dividend to be fully restored." The Union Pacific promises to have this year a much heavier passenger and freight density and the surplus available for dividends "will be considerably higher." While the readjustments going

*Moody, John. **Analyses of Investments. Part I. Steam Railroads.** Containing in detailed form comparative analyses of each of the railroad systems of the United States, with careful deductions enabling the banker and investor to ascertain the true value of securities. Fourth annual number. 8vo, pp. 744. New York: Analyses Publishing Co., 35 Nassau Street. $15.00.



In Severe Tests for Sustained Power, Novo Engine Proves its Superiority

It is an engine that does not fail, that does not need favorable conditions to develop the power you expect from it. *That* is why the Novo Engine has gained its reputation for economy, for efficiency and for reliability. It is cheaper and handier and safer than steam or electricity.

NOVO ENGINE

The Novo is Guaranteed against damage from freezing; is the lightest engine for power developed; is exceptionally compact, very simple and entirely self-contained. Ten sizes: 1 to 15 h.p. We'll prove every statement if you will write for our catalog and tell us your requirements.

Novo Hoists—Two styles, ten sizes from 600 to 4500 lbs. capacity. Adaptable to all elevating work within the range of their capacities.

Novo Trench Pump Outfits—On skids or all-steel trucks. Seven sizes; capacities 3500 to 12,000 gallons per hour.

Novo Direct-Connected Pumping Outfits—Three styles, twenty-one sizes, from 400 to 10,000 gallons capacity per hour. For home water-supply systems, pipe line, factory or city service.

Novo Centrifugal Pumping Outfits—Two styles, eleven sizes. Direct-connected or chain-driven. For irrigation, elevation and drainage systems under varied conditions.

on with this property "will tend to change the basis of the gross earning power to a considerable extent," in normal times the road "will be able to make fully as good a showing as in the past, and probably will have no difficulty in maintaining the 10 per cent. dividend."

In ratings the arbitrary sign "Aaa" is the highest accorded to any property. It is mainly reserved for underlying bonds and a few guaranteed stocks. One railway, however, receives this rating for its common stock—the Lackawanna; but that is an exceptional railroad, inasmuch as it has practically no bonded debt or preferred stock. Several high-grade common stocks receive the rating "Aa," among them the Atlantic Coast Line, Louisville and Nashville, and Pennsylvania. The rating "A" is given to common stocks which are "good dividend-paying issues, either with excellent dividend records back of them or rapidly growing equities which have assured their future position." Next comes the rating "Baa," which is accorded to stocks that have no long dividend records, but which "are in a somewhat questionable position regarding future payments at the full rate currently disbursed." These are "somewhat speculative issues, with fairly strong future investment possibilities." Other ratings for the more speculative or the highly speculative stocks are "Ba," "B," "Caa," etc. The lowest are "E" and "F," which are for "issues which, through reorganization, liquidation, or otherwise, are in a hopeless position, with little or no value, or which are already subject to some assessment which practically eliminates whatever value they may have previously enjoyed."

ODD LOTS AND BABY BONDS

Since the panic of 1907, frequent comments have been made on the significance to railroads and other corporations of the increase in the number of their stockholders. Reports as to the increase in the Pennsylvania and United States Steel lists have shown phenomenal changes. The companies themselves are understood to have been greatly pleased with them. Wider distribution of stocks means wider interest in the welfare of the properties and a decline in hostile feelings against them as soulless corporations owned by a few rich men.

Coincident with these increases has been the increase in sales of stocks in odd lots—that is, lots of fewer than 100 shares. Indeed, the odd-lot sales have been a powerful factor in this wider distribution of stocks. Observers of the growth of the odd-lot business believe the work of wider distribution will continue; some even say it has only just begun. L. F. Loree, President of the Delaware & Hudson Company, the number of whose stockholders has more than doubled since 1907, declared recently in *The Odd Lot Review* that "every new stockholder a standard railroad secures means another thinker among the population." In the not very distant past, the stock of railroads was mainly in the hands of institutions and large investors. Even ten years ago the number of holders was comparatively small. This condition, to Mr. Loree's mind, became the source of "the greatest weakness of the railroads."

A WORD ABOUT INVESTMENTS

WESTERN CANADA is attracting world-wide attention as a field for profitable investment. The rapid but substantial development of the country creates constantly increasing values for Farm Lands and City Properties.

REGINA
SASKATCHEWAN

offers particularly remunerative and at the same time safe investment in its Real Estate. Of the importance of the new movement he said further:

"The railroads need more stockholders in order that they shall have a fair representation among the masses of the people. The country needs a continuation in the improvement of railway service. Transportation is the foundation of all business, and as the country grows and develops, so the service must grow and develop, if general prosperity is to result.

"It seems to me that the present increase in shareholders is destined to have a far-reaching effect in the protection of the roads from hasty and ill-considered legislation. Big movements and great convictions force themselves on people quietly. The work accomplished in this way is much more effectual than that which is carried on with a blare of trumpets. To my mind, the present movement to have the roads not owned by the Government, but by the masses of the people, through their ownership of small lots of stock, is making a degree of progress which is all the more important because it is proceeding quietly."

Following in the footsteps of the odd-lot business has been a growth in bond issues in small denominations. Col. W. P. Clough, chairman of the board of the Northern Pacific Company, is quoted in he same paper as believing it is "only a question of time when all railroads will issue $100 bonds." He thinks the next issue by his road will include small denominations. An issue may not be made for some time to come, but when it is made bonds of the "baby" class will be put out. He has been much imprest by the increase in the number of the stockholders of his road. Before 1907 the number was only 2,500; now it is over 18,000. The greatest increase occurred in the past year. Popular interest in railways as investments has, in his judgment, "only just begun to manifest itself." Within the next four years the ratio of increase "will be much more rapid than it has been in the past." As to "baby" bonds he said:

"It is because the demand on the part of the average saver for an opportunity to put his funds to work in a way which will bring him a larger return than is possible in a savings-bank has increased so remarkably in the past few years that I believe the $100 bond is certain to come into general use in the future.

"Ten years ago, the average person was not educated to the opportunity of putting funds to work in this way. The change in the past decade has been remarkable. It will be more remarkable in the future, and as the demand for $100 bonds grows, there is little doubt that a way will be found to satisfy it. It is not likely that the book-keeping difficulties of handling the smaller denomination issue will be allowed to obstruct a genuine demand for this form of investment.

"I thoroughly believe that ultimately the standard railroads will take up much of the place which is now occupied by the banks in the savings service to the people. It does not seem probable that the roads will ever sell their securities direct from the executive offices. A railroad man is a railroad man, and a banker is a banker. Each can do his own work better than the other. But it has been shown that there is now a genuine and spreading demand for bonds of small denomination, and the railroads will find a way to satisfy it at a minimum charge to the purchaser.

"There is no reason why the saver should not have all the return on his surplus funds, instead of dividing with the savings-bank, as was the case ten years ago."

NAT WILLS—
Starring in "The Follies of 1913"

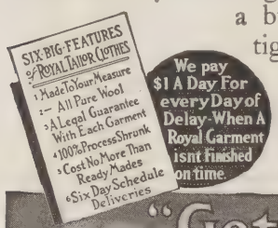
NAT WILLS—
Starring in "That Royal Tailored Look"

COPYRIGHT, 1913, BY THE ROYAL TAILORS

"It's funny what a difference a few Clothes Make!"

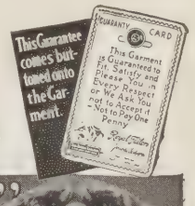
When Jim Wallingford, attired in gymnasium trunks, tried to put over a "get-rich-quick" deal—

he failed miserably. He couldn't even secure a hearing. Gone was that opulent Wallingford "front"; gone the "first National Bank Look" of the Wallingford clothes. ¶There is nothing for any of us to admire in the Wallingford code of ethics; but every man can profitably take a leaf from the Wallingford book of shrewdness by realizing that good clothes today are a business asset, an aid to prestige and power. This announcement is important to you, no matter how much or how little you have been spending for clothes—because it tells you how to get the best made-to-order clothes at a decided money-saving. A millionaire's service at a wage-earner's price; that's Royal Tailor Service—and it's serving both millionaires and wage-earners everywhere.



SIX BIG FEATURES
of ROYAL TAILOR CLOTHES
1 Made To Your Measure
2 All Pure Wool
3 A Legal Guarantee With Each Garment
4 100% Process Shrunk
5 Cost No More Than Ready Mades
6 Six Day Schedule Deliveries
We pay $1 A Day For every Day of Delay-When A Royal Garment isnt finished on time

At $16, $17, $20, $25, $30 and $35 your local Royal dealer will give you a Royal tailored-to-measure suit or overcoat—on a guarantee of absolute merchant tailor fit and service and satisfaction or no sale.



This Guarantee comes buttoned onto the Garment.

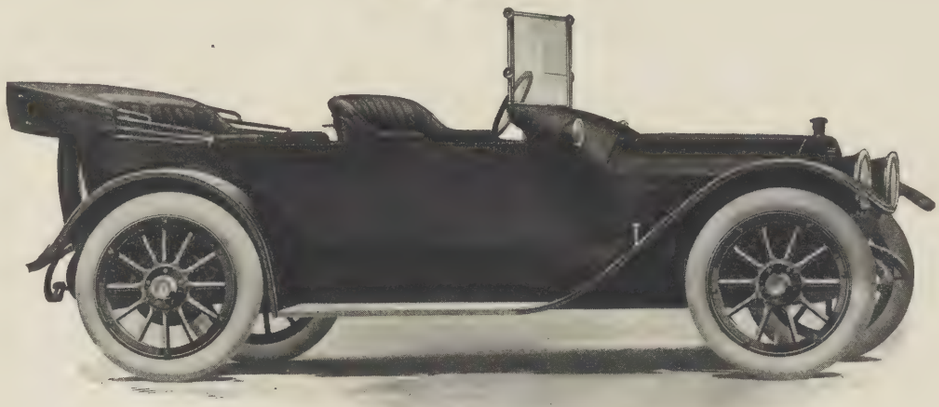
Velie



Two Velie Fours and the New Velie Six (1,000 Pounds Lighter)

In every detail of specifications and equipment these three cars represent the utmost in real, usable value that can be built into an automobile!

How much of the money you put into your motor car do you take out in actual service and satisfaction?

There is a limit to the real, usable value that can be built into an automobile.

Our tremendous manufacturing resources and big financial backing have enabled us to develop a motor car that includes every feature of real, usable value, at a price within the limits of everyone who wants a motor car.

The man who buys a Velie finds in it all that he can possibly require. No one feature is slighted to make room for one of more spectacular nature. The car is built to suit every requirement.

Compared point by point with any other car built, the Velie is the biggest automobile sold today.

The new Velie "4-45" is a continuation of the famous Velie "4-40," with more power, more room and greater comfort. The mechanical construction of this car has established a new standard for endurance, economy and ability.

The new Velie "4-35," a car of medium size and low price, embodies the many features of construction that place the Velie "4-45" so distinctly in advance of its class.

The big feature car of the Velie line for 1914 is the 1,000 Pounds Lighter Velie "Six."

For years automobile manufacturers have been trying to develop a "Six" that would operate at low cost. Until the appearance of the new Velie (1,000 Pounds Lighter) Six, not one manufacturer touched the real, vital spot.

Weight is the big factor that governs expense. Cut down weight and the properly built "Six" costs no more to run than the average four-cylinder car.

The Velie Six, carrying full quota of passengers (averaging 180 pounds each), weighs less than the average "six" does empty.

This big saving in weight cuts expense for operation down to half that of the usual car of its size.

The power of the motor is real, usable power; it is not used in carrying around a heavy, dead load. It is at the command of the driver when he wants to make high speed or show big hill-climbing ability.

Tire saving is another big factor in economy of the Velie (1,000 Pounds Lighter) Six. Tires last from two to three times longer than on any other "Six."

Light weight is a big factor in comfort. The Velie Six, mounted on long, wide springs, affords a degree of comfort found in no other car. You can make time faster in this car than in any other car of this size because you can make it with greater comfort.

Velie "4-45," $2000
Five-Passenger Touring

"I know a College Graduate who is a Dunce"

Elbert Hubbard

"I know a man who is fifty-five years old. He is a student. He is a graduate of three colleges and he carries more letters after his name than I care to mention, but this man is neither bright, witty, clever, interesting, learned nor profound. HE'S A DUNCE! And the reason is that **he cannot remember.** Without his notes and reference literature he is helpless," writes Elbert Hubbard.

A Perfect Memory Is The Key To Success

Thousands of intelligent men and women remain obscure because they cannot remember important things. The demands of commercial and professional life are becoming so exacting in their details of facts and figures to be remembered, that to succeed or even hold your own you simply **must** possess a good memory.

For over 20 years I have been training people to STOP FORGETTING—aiding them to greater business and social success—and I have **seen** enough and **learned** enough to **know** positively that the person with a strong, tenacious memory, though he be far behind at the beginning of the race for success, advances and soon out-distances his forgetful rival.

I prove every day that the great secret of business and social success is the ability to instantly remember experiences and facts.

Stop Forgetting!

I Can Show You How

Easily, quickly, in your spare time, at home by mail.

Spend **10 minutes daily** and I will make your mind an infallible classified index system from which you can instantly select thoughts, experiences, facts, figures and arguments. I will enable you to concentrate your mind on any one subject to the exclusion of others—I will enable you to absorb, weigh, reject and classify ideas, names and faces for instant reference—I will enable you to **think rapidly on your feet,** to address an audience without hesitating, with that confident, forceful conviction that wins success.

My System Is Easy, Infallible

A good memory is not a gift—it must be **acquired** like muscle, by training. The capacity of the brain is unlimited. The weakest mind instantly becomes interested in and susceptible to my clear, comprehensive method—there are **no difficult exercises** to memorize.

For 20 Years I Have Trained People To Stop Forgetting

These Notables Endorse My System: Many of the most intellectual men of the day are troubled with mind wandering and have availed themselves of memory training. **My method is heartily endorsed by such notables as Elbert Hubbard, Prof. David Swing, Dr. Latson** and thousands of others.

Every Woman as Well as Every Man should have my course—I give her command of a well-stocked and well-selected vocabulary—I will enable her to adapt herself quickly to the moods of an audience or meet any emergency.

How To Get Free Copy of "How to Speak In Public"

If you wish to be able to **think on your feet**—to meet emergencies—to express yourself clearly, logically and convincingly whether talking to one person or to a thousand, my book **"How to Speak in Public"** will explain how. This is my 1913 De Luxe edition handsomely illustrated, richly bound. Price is $2.00, but I will present a copy absolutely FREE to every student.

Let Me Send You a Free Copy "How to Remember"

Send the coupon at once for your free copy of "HOW TO REMEMBER." Don't hesitate—education, vocation, age or residence makes no difference.

The Key to Success—Mail It Today

Homes of Distinction

From coast to coast you will find many homes that owe their charm and distinction to the fact that they are faced with

Hy-tex Brick

They are homes of men and women who buy the facing for their homes with the same economy they exercise in other purchases.

Careful investigation has convinced them that only in Hy-tex Brick can be found the utmost in fire-safety, permanence, comfort, beauty and economy in facing material.

Houses faced with Hy-tex are slightly higher in first cost than frame and other cheap construction, but saving in fuel, insurance premiums and up keep charges wipe out this difference in a very short time.

Isn't Hy-tex worthy of *your* consideration before you select the facing for your next home?

Send for these booklets today:

"Suggestions for Small Hy-tex Homes." Pictures and floor plans of 26 houses of really moderate cost. Sent for four cents to cover mailing charges.

"Genuine Economy in Home Building." Deals with the problems of building from the home-builder's point of view. Sent for ten cents to cover mailing charges.

PERSONAL POWER

By Keith J. Thomas

A cool and logical analysis of the question of personal success. The author explains processes of mental development and gives ideas for the discovery and enlargement of natural talents. Throughout the book he suggests the pleasures of life, of hope, of friendship, and all the enjoyments to be derived from culture and wisdom.

"Mr. Thomas's suggestive book avoids the error common to books of its kind, most of which acknowledge no limit to the possibilities of any man who is convinced of his own powers. He shows how to develop the natural talents, explains the uses of failure, and suggests the best ways in which to make sure of the pleasures of life."—*The New York Times.*

A work needed by every lawyer, minister, teacher or student and every reader of The Literary Digest.

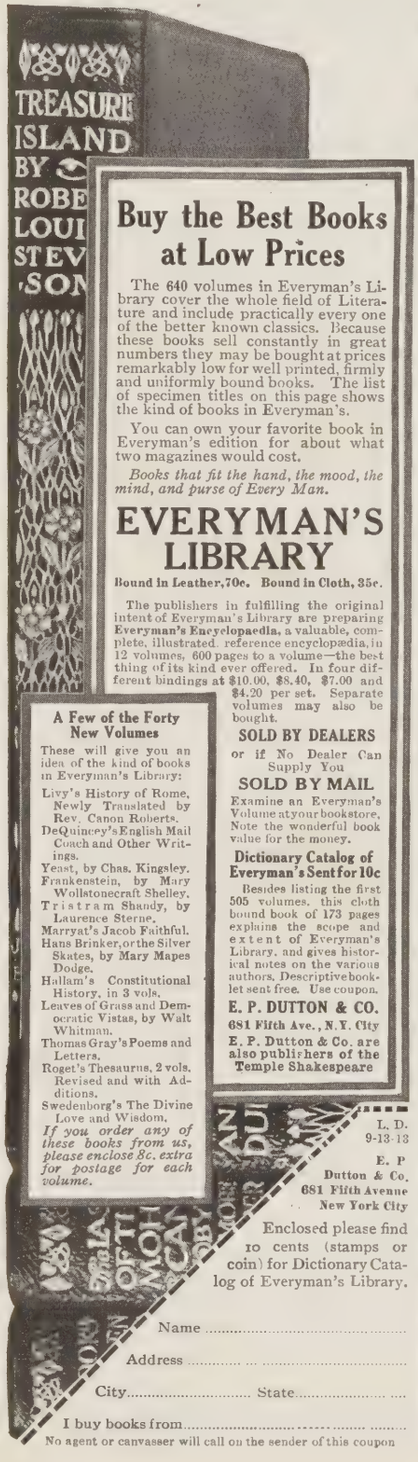
Printed from the same plates as the

$7.50 Subscription Edition for $1.50

Full descriptive circular sent by

JOHN R. ANDERSON, 35 West 15th St., New York

Some men feel that fine literature is something beyond them—something requiring a certain "higher education"—when, as a matter of fact, all they need to fully understand and appreciate the beauties of good books is a copy of the Standard Dictionary.



Buy the Best Books at Low Prices

The 640 volumes in Everyman's Library cover the whole field of Literature and include practically every one of the better known classics. Because these books sell constantly in great numbers they may be bought at prices remarkably low for well printed, firmly and uniformly bound books. The list of specimen titles on this page shows the kind of books in Everyman's.

You can own your favorite book in Everyman's edition for about what two magazines would cost.

Books that fit the hand, the mood, the mind, and purse of Every Man.

EVERYMAN'S LIBRARY

Bound in Leather, 70c. Bound in Cloth, 35c.

The publishers in fulfilling the original intent of Everyman's Library are preparing **Everyman's Encyclopaedia**, a valuable, complete, illustrated reference encyclopædia, in 12 volumes, 600 pages to a volume—the best thing of its kind ever offered. In four different bindings at $10.00, $8.40, $7.00 and $4.20 per set. Separate volumes may also be bought.

A Few of the Forty New Volumes

These will give you an idea of the kind of books in Everyman's Library:

Livy's History of Rome. Newly Translated by Rev. Canon Roberts.
DeQuincey's English Mail Coach and Other Writings.
Yeast, by Chas. Kingsley.
Frankenstein, by Mary Wollstonecraft Shelley.
Tristram Shandy, by Laurence Sterne.
Marryat's Jacob Faithful.
Hans Brinker, or the Silver Skates, by Mary Mapes Dodge.
Hallam's Constitutional History, in 3 vols.
Leaves of Grass and Democratic Vistas, by Walt Whitman.
Thomas Gray's Poems and Letters.
Roget's Thesaurus, 2 vols. Revised and with Additions.
Swedenborg's The Divine Love and Wisdom.

If you order any of these books from us, please enclose 8c. extra for postage for each volume.

You Enthusiastic Motorist!

How many of the following questions can you answer?

What is the correct definition of a "cycle car"?

If your motor overheats how can you stop it?

What car ran 83½ miles on one gallon of gasoline?

What is an "automatic gear-shift"?

What is the proposed "Lincoln Highway"?

What is "motor spirits"?

MOTOR AGE

has answered each of the above questions in past issues; others of equal interest are being answered in understandable English—every week.

The answers to many of these questions have a dollars and cents meaning when it comes to choosing a new car—repairing an old one—hammering upkeep *down*.

They appeal to the man who believes that keeping in touch with a ten-year-old industry which has revolutionized commerce and traffic, constitutes part of a liberal education.

Most motorists of the country are acquainted with MOTOR AGE. Some are subscribers, others buy it occasionally at the news-stands. If you belong to the latter class, here is your opportunity. A four-months' subscription—18 issues—to MOTOR AGE costs at the news-stand $1.80. Pin a dollar bill to the attached coupon, and we will send you MOTOR AGE four months for your dollar. *You save 80 cents.*

Editors, Lawyers, Scholars, Writers, Clergymen, Teachers, Travelers, Students—All who have any interest whatever in Foreign Languages need these authoritative

French-English German-English Latin-English DICTIONARIES

They will show you how to find the equivalent in English of French, German and Latin words.

And vice versa, how to find the French, German or Latin equivalent of English words.

How to spell, pronounce, syllabicate, etc.

How to conjugate the various foreign verbs.

How to translate American coins, weights and measures into their German equivalents, etc., and vice versa.

They contain lists of proper names, geographical names, and various other valuable data.

Cassell's New German Dictionary

German-English and English-German

Compiled from the best authorities in both languages. Revised and considerably enlarged by Karl Breul, M.A., Litt.D., Ph.D., Cambridge University Reader in Germanic.

By the issue of this new edition, this dictionary becomes the cheapest as well as the best popular German-English and English-German dictionary in the world. Among the new words and phrases included will be found many thousands of idioms, well-known proverbs and familiar quotations, besides colloquialisms and German slang terms which often prove puzzling to English students.

"I think that Dr. Breul, who has been so long engaged in the preparation of this work, has succeeded in giving the public an excellent book. It deserves to be recommended so much more, as the print is perfect and the price moderate."—*Prof. Münch, Berlin University.*

Octavo, Cloth, 1,360 pages. $1.50 net; by mail, $1.74.

Cassell's New Latin Dictionary

Latin-English and English-Latin

202nd Thousand. Thoroughly Revised and Corrected by J. R. V. Marchant, M.A., formerly scholar of Wadham College, Oxford; and Joseph F. Charles, B.A., late assistant master at the City of London School.

It is above all intended to be a dictionary of classical Latin, and thus, in this new edition, a large number of archaic, or post-Augustan, words have been omitted, while nearly all of the important articles have been entirely rewritten, chiefly with a view of introducing a greater number of quotations to illustrate construction and usage. The historical and geographical notices have been largely increased in number. In addition to the regular vocabulary features the book contains a table of the Roman Calendar, and a Geographical Glossary of the English names of important places with classical or later Latin equivalents.

Octavo, Cloth, 928 pages. $1.50 net; by mail, $1.68

Cassell's New French Dictionary

French-English and English-French

Edited by James Boïelle, B.A. Newly revised by de V. Payen-Payne, Assistant Examiner in French in the University of London. Containing, in addition to the regular French-English and English-French vocabulary, a special article on French Pronunciation; a list of French Nouns of Double Gender; a table of Irregular and Defective Verbs, and their Conjugations; a special Vocabulary of Proper Names; separate Vocabulary of Geographical Names, etc.

"The best French and English Dictionary of an ordinary size in existence."—*Critical Review*, Paris.

Octavo, Cloth, 1,230 pages; $1.50 net; by mail, $1.77.

WHAT THESE MEN HAVE GAINED—YOU CAN GAIN

"Your course in public speaking has done for me that which I am convinced beyond a doubt, nothing else of an educational nature could have done. It has changed me from a backward, timid, self-conscious man, to a confident, self-reliant, assertive one. I began your course for the specific purpose of being able to speak to the agents under my management. I have accomplished more than I ever dreamed, and my meetings are NOW productive of the results desired. I want to add here that you could not buy these lessons back at hardly any price if no more were available."—*Jno. B. Carter, District Manager Peninsular Casualty Company, Jacksonville, Fla.*

No Man Could Help Being Benefited

"No man, if he did nothing but simply read the good advice you give, could help being benefited. Your teachings are inspiring and elevating. They inspire confidence, thus removing all fear, the important factor in the failure of many would-be public speakers."—*C. E. Embree, General Manager, Farmer's Union of Maine, Bangor, Me., February 3, 1913.*

This Man Has Reached An Independent and Influential Position Through Its Help

"Since taking up your lessons I have been able to increase my earning capacity as a salesman, and have been enabled to work myself into a more independent and influential position."—*W. S. Webber, 106 Brunswick Rd., Melbourne, Australia, March 25, 1913.*

Makes a Successful Speech After the First Few Lessons

"Some time ago when I was yet at the outset of your course, I made a successful address at the people's church, the unique theatre here, I was able to speak with confidence and poise that I had never possessed before."—*James T. Murayama, Minneapolis, Minn., March 21, 1913.*

"It Develops Not Only the Speaker But the MAN"

"The course under Prof. Kleiser in Public Speaking has proven so valuable to me that I recommend it everywhere. The particular charm and value of the course, is that it develops not only the speaker but the MAN."—*Allen G. Loehr, Prof. French and German, University School for Boys, Stone Mountain, Ga., January 9, 1913.*

Always Used to Become Hopelessly Disconcerted—Now It Is Otherwise

"The course is everything its author says for it—so practical, lucid, and easy of comprehension. Before I studied this series of lessons I was unable to face an audience, and when I began to talk I became hopelessly disconcerted and confused: now it is otherwise, and the larger the audience, the more readily I talk."—*John B. Carroll, Quincy, Ill., April 5, 1913.*

Grenville Kleiser (former Yale Instructor) through his course of instruction by mail has taught more than 10,000 men and women in all occupations to become confident, forceful speakers on all occasions.

He wants you to

SPEND 15 MINUTES A DAY AND LEARN HOW TO

Make After-Dinner Speeches—
Propose and Respond to Toasts—
Tell Stories—
Make Political Speeches—
Sell More Goods—
Address Board Meetings—
Develop Power and Personality—
Improve Your Memory—
Increase Your Vocabulary—
Acquire Poise and Self-Confidence—
Speak and Write English Correctly—
Earn More—Achieve More.

Peculiar qualifications, or "being born to it," are wholly unnecessary to win success as a public speaker. "Poets may be *born* but Kleiser *manufactures* public speakers," says one successful business man.

PRICE ADVANCES SOON

It costs nothing to learn full and interesting details of this splendid course. If you decide to make your spare time profitable by enrolling for the course, it will cost you now less than it will in a few weeks—when the price positively advances.

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Published by Funk & Wagnalls Company (Adam W. Wagnalls, Pres.; Benj. F. Funk, Vice-Pres.; Robert J. Cuddihy, Treas.; W. J. Funk, Sec'y), 354–360 Fourth Ave., New York

VOL. XLVII., No. 11 NEW YORK, SEPTEMBER 13, 1913 WHOLE NUMBER 1221

TOPICS OF THE DAY

THE AMERICAN EXODUS FROM MEXICO

ALTHO HUNDREDS of Americans are acting upon President Wilson's urgent advice to "leave Mexico at once," protests are heard from both American and Mexican sources. Reports of the arrival of refugees at New Orleans and San Diego divide space in the news columns with such statements as that of James A. Scrymser, American president of the Mexican Telegraph Company, who characterizes this phase of the President's policy as "cruel," and says that it "has ruined the credit of Americans in Mexico." From Mexico City Dr. John W. Butler, superintendent of the Methodist Episcopal Mission, informs the home board that "American missionaries of all denominations are reluctant to leave Mexico," and Sebastian Camacho, President of the Mexican Senate, telegraphs to a friend that "in my opinion, the American colony in Mexico will suffer enormous damage to its interests and its well-being should Americans be forced to abandon a country in which, I repeat, they are considered and esteemed on all sides." Many Americans in Mexico seem to share the feeling of the Washington *Post* (Ind.) that if that country is less safe for them than for other foreigners this Government should find some way to protect them without demanding the surrender of their occupations and property interests by flight. By the Mexicans, dispatches inform us, the move is in some quarters regarded with resentment and suspicion as foreshadowing, if not armed intervention, at least the blockading of Mexican ports against the importation of arms. It is also deplored for the further paralysis it will cause in Mexican industries.

A delicate bit of Mexican sarcasm at our expense is afforded by President Huerta's order placing special trains and other facilities at the disposal of Americans desirous of leaving his country. In a Mexico City dispatch to the New York *Times* we read:

"He stated that hearing that the funds of the United States had been exhausted, and that only steerage and third-class passages were being offered, he had ordered that funds be given to refugees to enable them to travel in the comfort to which they had been accustomed, and to which they were entitled."

And the same correspondent quotes another "high Government official" as saying:

"We desire that the Americans who leave Mexico carry with them the remembrance of the comfort and safety which have characterized their stay in this country, rather than the possible penury and poverty of the place whither they are going."

The number of Americans residing in Mexico in 1910, according to several authorities, was between 40,000 and 30,000, and American investments in that country amounted to more than a billion dollars. But during the past three years of civil warfare, we are told, there has been a steady exodus, until now the number remaining is variously estimated at from 20,000 to 10,000. Now that this process has been accelerated by President Wilson's message, says a Washington dispatch, a fortnight hence there will be "scarcely a thousand Americans left in that troubled country." The State Department is providing free transportation for Americans who wish to leave Mexico, but lack the fare, and Congress is expected to rush through a special appropriation of $100,000 for the same purpose.

"This policy of scuttling out of Mexico goes against the American grain," complains the Newark *Star* (Dem.), and the Philadelphia *Public Ledger* (Ind.) predicts that the exodus "will have the effect of making still more acute the relations of the two countries." In fact, the Albany *Journal* (Rep.) thinks it "lends color to the belief in some sections of that country that war with the United States is near." In this connection many papers point out that the first official reference to intervention by the Government occurs in the instructions sent to the American consuls in Mexico just after President Wilson's message was read in Congress. In these instructions our consuls were told to make it known that "any maltreatment of Americans would be likely to raise the question of intervention." At the same time, says the Washington *Star* (Ind.), the advice transmitted through these same consuls to all Americans living in Mexico "was sufficiently peremptory to warrant an immediate exodus." This Washington paper goes on to say:

"In many cases these people undoubtedly sacrificed all they had of a fixt nature in their Mexican homes, and some reached the coasts and the borders in a state of destitution. Was there such haste about the departure that it was necessary to prompt it by official warning before provision could be made for the speedy and comfortable transport of these refugees to the American shores? Evidently no hostilities were imminent, else the President's message to Congress would have conveyed the suggestion in explicit terms. It is reported that practically no arrangements were made in advance for the carriage of these hundreds of Americans from the seaports, save their shipment on board of merchant vessels, already well filled and affording very poor accommodations for the additional passengers, thus hastily summoned. By delaying the official notification for a fortnight the vessels of the United States, cruisers, transports,

TERMS: $3 a year, in advance; four months, $1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage $1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE,** or **CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect. *Both old and new addresses* must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnalls Company, 354–360 Fourth Avenue, New York, and Salisbury Square, London, E. C.

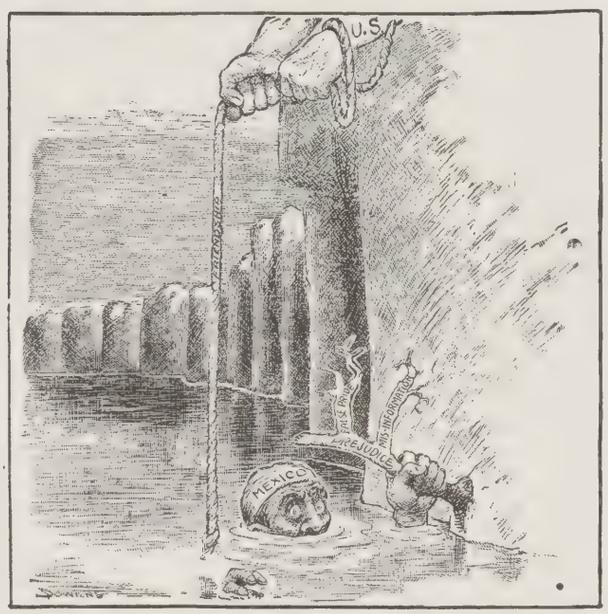
Entered at the New York Post-office as Second-class Matter.

and colliers, might have been utilized. Later must inevitably come a reaction of bad feeling on the part of the people who have been so peremptorily called out of Mexico, unless events prove that there was in truth an actual condition of peril, of which the public had no information or intimation. At this stage it looks as if somebody had blundered into a too hasty action."

"To say the best of it," remarks the Hartford *Courant* (Rep.), "President Wilson's order for all Americans who could to get out of Mexico was ill-considered." But perhaps the most vigorous protest comes from New Orleans, where, as a contemporary remarks, the President's ideas about Mexico seem to be just about as popular as his ideas about free sugar. Says the New Orleans *Picayune* (Dem.):

"Every American citizen with red blood in his veins will hear with shame and indignation that the President of the United States has personally appeared before the two houses of Congress, in joint session assembled and coolly announced that all Americans now in Mexico would be urged to get out of that country as quickly as possible, even if they have to abandon property and all possessions in order to escape outrage at the hands of the warring factions in the neighboring Republic. No more cowardly, inhuman, and cold-blooded proposition could have been advanced by the chief executive of a great nation. . . . . .

"Since force is no longer to be used in protecting American



AT HAND IF WANTED.

—Bowers in the Newark *News*.

citizens residing abroad, we might as well throw our splendid Navy onto the junk-heap and employ our soldiers in digging irrigation ditches in the Far West or in attending universal-peace gatherings. Having announced that we will not fight under any circumstances, what further use have we for military establishments? Any foreign government that chooses to insult us may now do so with impunity, and the Monroe Doctrine in which we have taken so much pride may as well be thrown to the winds, as European countries, realizing that we will not protect their nationals from insult and injury in Latin-American countries, will, no doubt, act on their own initiative for the future, and they will be amply justified in doing so."

And in *The Times Democrat* (Dem.) of the same city we read:

"Americans in Mexico, the highly gratified State Department declares, are heeding President Wilson's warning to scoot for home. . . . Of those who remain, it might be additionally suggested, the greater part will probably seek safety by proclaiming themselves subjects of Great Britain, whose Government finds a way to enforce respect throughout the world for the rights of its nationals. Of the Americans who obey the President's advice to abandon everything and run, how many will come home with a tithe of the old pride in their American citizenship?

"It is this particular feature of the Washington Government's thumb-twiddling policy that, to our mind, threatens greatest and most lasting harm to the national prestige. Millions of American money have been invested in legitimate enterprises south of the Rio Grande; thousands of American citizens have gone there to engage in legitimate pursuits, with full confidence that their Government would faithfully discharge its obligation to them. Now they are notified, in effect, that the Government is loath to take adequate measures for their safety, and are warned to abandon their enterprises, at whatever sacrifice, and flee the country. . . . . .

"President Wilson has made a prodigious sacrifice to his view of expediency and humanity. Americans in other countries than Mexico may suffer indignities invited by this new and humiliating announcement that American citizens must return home to secure the protection of their flag. Years may pass before that mischievous impression is corrected abroad by the consistent and determined stand of succeeding administrations for the protection of our nationals in their legitimate rights, wherever they are placed. From the Democratic viewpoint, the virtual command that Americans shall flee out of Mexico is the more humiliating and unfortunate because its author was elected upon a platform specifically declaring that 'every American citizen residing or having property in any foreign country is entitled to and must be given the full protection of the United States Government, both for himself and his property.'"

Of the effect on Mexican industries of American withdrawal the Philadelphia *Public Ledger* says:

"With the majority of the population not yet emerging from the status of absolute illiteracy, skilled engineers and managers of native extraction are difficult to find. Among the resident Americans are men in positions of the highest responsibility whose retirement would mean the virtual collapse of the establishments with which they are connected. . . . . .

"The worst punishment that Mexico could bring upon herself would be the subtraction of imported initiative and enterprise at the present juncture from her industrial activities."

Other papers, however, see in the recommendation to Americans to leave Mexico merely a recognition of the fact that the bandits are temporarily beyond control in many sections, and that the impossible can not be demanded of either Huerta or Carranza. Says the New York *Evening Sun* (Ind.):

"In the presence of a great number of our citizens in a country where protection to their business and property continues unreliable lies the chief drawback to the proposed passive policy. It is therefore perfectly possible to realize the purpose of President Wilson's call to Americans to leave Mexico in all cases where they find it feasible. The sole and evident intention of this move is to lessen the points of friction between us and Mexico, and foreign suppositions that Americans' withdrawal may mean intervention amount to descrying a mare's nest in what has much more of the clear outline of a pikestaff."

And in the Boston *Advertiser* (Rep.) we find this favorable view:

"If Americans, as President Wilson suggests, are forced to leave Mexico because of the failure of Huerta to protect properly their lives, they have in many cases excellent grounds for claims against Mexico. These claims will be adjudicated in the course of time, and all the just claims will undoubtedly be paid. But any man who settles in a foreign country, to do business, assumes whatever risk there may be on his own shoulders. The United States is certainly under no obligation to invade a country where civil war is raging, even if the conditions of that civil war make it dangerous for Americans to live in the area where the fiercest fighting is going on.

"If any other rule held good, the United States would be obliged to intervene in every war started in the civilized world, for Americans are everywhere, to-day, and are certain to be, so long as opportunities for business arise, no matter how great a war may be raging around them."

"The truth is," remarks the Springfield *Republican* (Ind.), "that many of the Americans in Mexico not only want to stay where their interests lie, but they also want the United States Army to come there to protect them, if need be, at an ultimate cost of hundreds of millions of dollars charged upon the people of the United States in war taxes."

THE RICH MAN'S SHARE OF THE INCOME TAX

DEMANDS for a higher tax rate on "swollen incomes," which are being urged by radical Democrats and Progressives upon the Senate Finance Committee, suit the ideas of those who think our great fortunes have been accumulated at the expense of the people in general and should be mulcted accordingly. But we find in numerous quarters sharp editorial disapproval of such a plan as being discriminatory and unjust. In the meantime, there are those who, feeling the immediate need of an income tax that will shift the burden of government from the shoulders of the man at the bottom to the shoulders of the man at the top, insist that we have some such legislation now; and if it needs correction, let another Congress correct it. But, says the San Francisco *Chronicle* (Ind.), if we are to have an income tax, it should be "a uniform tax," for deliberately to compel the rich man to pay more than his share is "most outrageously unjust." Instead of raising the rates on a few large incomes, suggests the New York *Tribune*, the Senate ought to reduce the minimum taxable income from $3,000 to $2,000 and "thus distribute more widely and fairly the burdens of the tax," because:

"The more people paying a direct tax of this sort, the more diffused will the sense of responsibility for government become and the stronger will be the check put upon extravagance in Federal expenditures."

This question is illuminated by the criticism of Senator Root, who attacks the income-tax proposal on the ground that it would thrust the burden of that form of taxation on a few States, especially New York, making the bill in effect "legislation by the South and other agricultural communities against the industrial communities of the country." He refers to the income-tax law passed in the stress of the Civil War, under which the limit of exemption was $2,000, and there was no gradation of the tax beyond $2,000. The larger incomes paid the same percentage as the smaller incomes subject to the tax, yet, he tells us, "under that act the States of Massachusetts, New York, New Jersey, and Pennsylvania paid more than two-thirds of the entire tax." And, reminding the Senate that in proceeding to grade a tax they must have in mind "not only the relations between this Congress and the individuals, but you are to have in mind also the relations between this Congress and the States," Senator Root proceeds:

"If you impose too great a burden upon the same people who paid two-thirds of the old income tax—that is, the people of the few States with the great industrial communities in them—you are diminishing the taxable resources of the States. The taxation with which we are now concerning ourselves is but a very small part of the burdens that are imposed upon the people of the United States. The State of New York—and I speak of that merely because I am more familiar with it than I am with other States—while it has great wealth has great demands.

"Why, the expenditures of the city of New York for the year 1911 were over $412,000,000. Where did we get that? Part of it was borrowed, and we shall have to pay it in the future. But in the same year the direct taxes imposed and collected in the State of New York upon real and personal property amounted to over $234,000,000.

"The result is that the people of the State of New York, and mainly the people whom you strike with this income tax, are the source of supply upon which the State of New York has to draw to pay these enormous expenses. So you ought to remember that in imposing an income tax you should not be unfair as between the taxable resources of the State of New York and the taxable resources of all other States."

Taking sharp issue with Senator Root, the New York *Globe* (Ind.) says he did no good to New York or the cause he spoke for by attacking the Income Tax Bill as a sectional measure, and it describes as "singularly foolish and non-pertinent" his solemn warning to the other States that they must not be unjust to New York and "that the Union will not long endure if there is injustice." And *The Globe* continues:

"Nor does Senator Root achieve anything by ignoring the reason why the exemption is placed as high as it is. He is intelligent enough to understand the argument and to state it fairly when attempting to overthrow it. The argument, in brief, is that persons of small incomes spend on an average a larger percentage of their net incomes than do persons of large incomes; that as other taxes, in one way or another, are taxes on consumption, the rich do not now pay in taxes as large a percentage of their incomes as the non-rich; that consequently a discriminating income tax is equalizing. Moreover, there is basis for the claim that a larger percentage of those having incomes of $4,000 and over dodge taxes more successfully than those with incomes of less than $4,000. Again, a discriminating income tax is an equalizer and a corrector of injustice."

THE CASE OF JUDGE SPEER

THE UNANIMOUS AGREEMENT of the House Judiciary Committee to investigate the official conduct of Judge Emory Speer, of the United States Court of Claims of the Southern District of Georgia, reminds the Springfield *Republican* that it was Judge Speer "who recently denounced 'arbitrary espionage' of Federal judges by Government spies." The statement was made in June last, at Sioux City, at the annual meeting of the Iowa Bar Association, according to the press, when Judge Speer said also that he was the object of such espionage, which he characterized as maltreatment of "American judges with cruel and apparently callous indifference to their reputation and good name." He asserted, further, that it was wrong and intolerable for the United States Attorney-General to have inquisitorial power over Federal judges, and argued that it put the judges "at the mercy, not only of the chief, but of the subordinate of an executive department." Judge Speer has unquestionably been the object of investigation, remarks *The Republican*, which adds that it was "begun under the Taft Administration evidently." Proceeding, it asks, now that the case is finally submitted to the House Judiciary Committee, and it is the House that institutes impeachment proceedings, "Are we to lose another Federal judge by this process?" As in the case of Robert W. Archbald, impeached as Judge of the Commerce Court, we read, Judge Speer will be permitted to appear before the Judiciary Committee with counsel to answer the charges laid against him by a special examiner of the Department of Justice. Of these, according to press reports, the most serious allegations are:

JUDGE EMORY SPEER.

Who has complained of "arbitrary espionage" by Government spies and now faces a Congressional investigation of his own "arbitrary conduct" on the bench.

"That Judge Speer unlawfully permitted the wasting or dissipation of bankruptcy estates that came within his jurisdiction as a Federal judge.

"That he presided in cases in which his son-in-law was an attorney on a contingent fee, with full knowledge that his decision would affect the fee of his son-in-law.

"That he was guilty of imposing unlawful punishments for contempt in cases coming before his court.

"That he ignored the mandates of the Circuit Courts of Appeal and of the Supreme Court of the United States in certain cases.

"That he was absent from his district when he should have been attending to his duties in court.

"That, contrary to law, he tried cases outside of his district."

Another charge relates to what his accusers call the judge's "arbitrary conduct," and there is also one about his personal habits. In part, the accusations are a reiteration, we read, of "attacks made on Judge Speer from time to time, during his many years of service" since his appointment to the Federal bench by President Arthur. In answer to an inquiry of the New York *Times*, Judge Speer telegraphed as follows:

"I am convinced that the original animating motive was a strong desire in a certain quarter to get control of the judgeship, the duties of which I have performed for nearly twenty-nine years.

"I also think that the charges are largely in reprisal for my address before the Iowa Bar Association, in which I declared that the spy system of the Department of Justice, directed at American judges, is subversive of the independence of the judiciary, once regarded as the chief felicity of the Constitution.

"The evils of the system are clearly illustrated by my inability to give you a more definite reply. The examination was secret. It was bitterly partizan, and was intended to be injurious and with the avowed purpose to make the accumulations the basis of my impeachment.

"My court was in actual session. No judge was ever subjected to greater interference with the orderly and effective performance of his duties.

"I can not and do not know the charges. So far, however, as they have been outlined by newspaper reports, they are capable of the easiest and completest refutation.

"Since you kindly give me the opportunity, may I not express the hope that the public, and particularly my brethren of the bench and bar, will form no opinion of these charges until I know what they are, and have had the opportunity, if need be, to prove how little I merit them."

If impeachment proceedings are pushed against Judge Speer, in the view of the Providence *Journal*, "the case is likely to be a celebrated one," for, it observes, "important cases over which he has presided have given him a national reputation." While professing "no sort of personal satisfaction" in the movement to impeach the judge, the Augusta (Ga.) *Chronicle* pretends "no sort of patience with his high-handed record as a judge or his insufferable bearing as a man," yet it calls strict attention to the fact that—

"If Judge Speer is to be impeached at all, it must be solely upon his record as a judge; the indelible record, as written down by himself during the twenty-eight years he has been on the Federal bench. No one may change or alter that record. If it shows against him official acts that call for his impeachment, he will be impeached; and if it does not, he can not be impeached. . . . . .

"And, finally, in whatever may be said for or against this Georgia judge—whatever may be his judicial virtues or faults—we may not lose sight of the fact that, mentally at least, he has been the peer of any Federal judge in this country; indeed, to deny that he is easily one of Georgia's most brilliant sons—would that she had as much cause to feel proud of him in other respects!—would be to display an unreasonable and unreasoning prejudice. A contemporary and classmate of the gifted Henry Grady, their superb talents were, in almost every way, equal—except in the use they made of them.

"But, with it all, we might hope that, thus late in life—with only a few years longer to serve on the bench—he be spared the pain and disgrace of impeachment. Perhaps his arraignment alone would serve as good a purpose—as a warning to other Federal judges, that the ermine is not necessarily, after all, a royal cloak, and that even a Federal judge is accountable to somebody here on earth."

What the Knoxville *Sentinel* terms the "highly personal note" of this editorial "prevails also in other Georgia newspapers," and it trusts it will be eliminated from the inquiry, for—

"Sentiment has nothing to do with the matter. If Judge Speer has played the judicial tyrant twenty or twenty-eight years, there is no reason why he should be allowed to continue in that rôle until his life or his judicial career ends naturally. Impeachment was designed to preserve the purity and integrity of public office. A judge is appointed for service during good behavior, and there is no way to terminate service for conduct unbecoming a judge except by impeachment. The more frequent use of impeachment proceedings is welcome. If judges resent it, let them avoid a course that invites inquiry."

Judge Speer ought to welcome investigation at the hands of a Congressional committee, thinks the Indianapolis *News*, because he will have "a fair hearing without the interference of local prejudice or political intrigue," and it remarks incidentally:

"We may congratulate ourselves on the absence of a general recall law by which Judge Speer, Judge Archbald, or any other

man on the bench, might be dragged from his high office by popular clamor or passion. The impeachment of Judge Archbald demonstrated the uselessness of new machinery for removal of faithless jurists. Archbald's guilt was proved. The Speer case ought to be investigated thoroughly. However the case develops, it should be apparent to accusers and accused that the safest and fairest procedure is that which we already possess; not the fallacy known as the recall."

SLAVERY IN THE PHILIPPINES

THE ASSERTION by Dean Worcester, of the Philippine Commission, that slavery is prevalent in the Islands will provide the new Governor-General with a problem to test his mettle at the very beginning of his term of office, observes many an editor. And if the editor happens to be one who objects to the plan for giving the Filipinos their independence in a few years, he finds the report a potent argument on his side. Newspaper opinion in this country, and also in the Philippines, in so far as we can judge, accepts Mr. Worcester's statement as facts, tho one daily, the Chicago *Post* (Prog.), notes satirically that the disclosure is made "on the eve of Congressional consideration of the Jones Bill," and thinks "the Democrats will be able to pooh-pooh the story as an eleventh-hour attempt to discredit the potential capacity of the Filipinos for self-government eight years hence." The Filipino Resident Commissioner at Washington, Manuel L. Quezon, flatly denies the existence of slavery as an institution in the Philippines. But most of our editors are willing to take Commissioner Worcester's word, and the Manila *Weekly Times* finds the Commissioner's evidence so convincing as to lay Mr. Quezon and other Filipinos, "voluble in detail," "under the suspicion of deliberate falsehood." The Manila paper speaks editorially of the report, in which Mr. Worcester draws his "inevitable and humiliating conclusion," as "one of the most important, as it is one of the most masterly, of the many notable pieces of work which he has performed during the many years of his service with the Philippine Government." To quote it still further:

"It establishes beyond the shadow of a doubt that the practise of holding human beings in slavery is common in those provinces

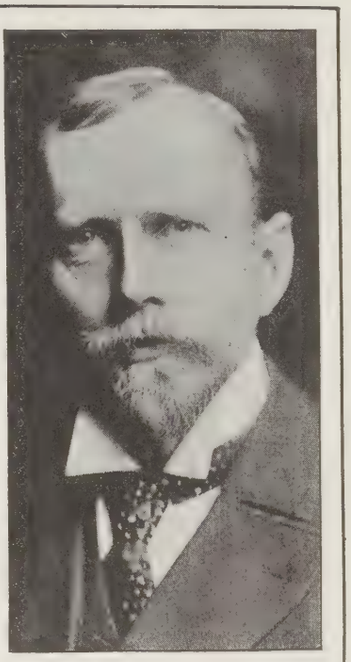
UNDER THE FLAG!

—Carter in the New York *Sun*.

which are subject to the legislative control of the Philippine Assembly, and it carries the charge of peonage up to the very doors of the Assembly itself. . . . . .

"There is no loophole of escape from the obligation of honor which this report forces on the Assembly—the obligation to pass at its next session an act which shall extend to those provinces under its legislative control the pains and penalties which today await the slave-dealer, the slave-owner, and those who would thrive on peon labor in the non-Christian provinces."

Commissioner Worcester's report to the Insular Government, after a request for information made by the United States Senate to the War Department, tells of the capture of children and their sale in the Islands or in China, of their being enticed from home on various pretexts, and of their purchase from parents. One thirteen-year-old girl, for example, "had been bought from her mother for some pigs, chickens, rice, and a cloak." Slavery exists throughout the Islands, according to this authority, even in the so-called "Christian provinces," under the direct control of the Philippine Assembly, not openly, yet on such a scale as to make it one of the most serious problems confronting the Government. To quote from press selections one or two characteristic paragraphs in the Worcester report:



DEAN C. WORCESTER.

Secretary of the Interior of the Philippine Government, who reports the existence of human slavery in the Islands.

"It has been and still is a common thing for Filipinos living in a territory adjacent to that inhabited by Negritos, Tagbanaus, Bongots, or Ifugaos, to obtain children by capture or purchase and to hold them as slaves, selling them to others whenever it proves financially advantageous to do so. Such unfortunates are clearly chattel slaves and often are repeatedly sold and resold.

"A typical case is that of Lasso, a Tagbanau of Palawan. Lasso was brought from one Patrico Tabastabas by Pastor Medino for 40 pesos. Medino sold him to Vincente Baculli for the same price, and in 1912 Tabastabas bought him back for 45 pesos. This year he sold him to Benito Marcelo for 55 pesos. The case actually came before the Secretary-Treasurer of Palawan, who is also justice of the peace, on account of some trouble over the last payment for slaves, and it was in that way that the Government got wind of the matter. The official sent the unfortunate man back to his tribe and furnished me with a statement of the facts. . . . . .

"Ambos Camarines is a regularly organized province under control of the Philippine Assembly; yet since the American occupation children have been sold into slavery there for deportation into China. The essential facts were reported by the Filipino Governor and the Filipino Fiscal of the province. I have been informed that it was the custom of the Chinese of this province, who bought children to send to China, to give them a Chinese hair-cut and dress them in Chinese clothes. And it is especially interesting to note that these Chinese claimed they were purchasing children for adoption, this being the same defense offered by the Filipinos who purchase Negrito children as slaves."

Mr. Worcester then asks, "What has been done to stop this traffic in human flesh?" And he tells of successive efforts on his part and that of other Commissioners to get the passage of drastic prohibitive legislation by the Philippine Assembly. Under the present laws, as judicially interpreted, most slavery prosecutions have been blocked because it could not be proved

that the victims were detained by actual physical force. Why, he asks, should the Assembly block laws which would stop the traffic? Mr. Worcester's own explanation is that some Assemblymen have actually been caught in slave ownership and further that a law penalizing slavery would likewise penalize peonage, which "prevails in every municipality in the Philippine Islands."

HARRYING THE "COAL TRUST" AGAIN

NO PREDICTIONS have come to our notice that indicate the ultimate consumer will enjoy more than an exhibition of expert and thorough litigation out of the Government's renewed attack on the so-called "Hard-coal Trust." The present Attorney-General is carrying on the crusade of the Taft Administration that came to a full stop last December with a decision of the Supreme Court by which the Government gained a partial victory, but did not prove its point that there was a general illegal combination among all the coal-carrying railroads. Attorney-General McReynolds is said to be going after one of the "minor combinations" of coal monopolists in his suit for the dissolution of the Reading Company. As a "minor combination" the Reading Company is described by counsel for the Government to be the largest of six railroad companies and their affiliated mining companies, who own or control about 90 per cent. of the entire unmined area of anthracite. The others are the Lehigh Valley, the Delaware, Lackawanna & Western, the Central Railroad of New Jersey, the Erie, and the New York, Susquehanna & Western. Anthracite, we are told furthermore, by reason of its concentration in the limited region of about 483 square miles in Eastern Pennsylvania, "lends itself peculiarly to efforts to monopolize its ownership," and the Department of Justice, in filing its suit, charges the biggest company of a "minor combination" with violating "both the Sherman Antitrust Law and the Commodities Clause of the Interstate Commerce Act in an attempt to monopolize the production and transportation of anthracite." As evidence of its monopolistic character, it is stated that at present the Reading Company controls "63 per cent. of the entire unmined deposits of anthracite" and that it markets "about 30 per cent. of the annual supply."

HOWARD ELLIOTT.

The disastrous wreck on his first day as President of the New Haven is an unpleasant reminder of the problems he is expected to solve.

According to the Attorney-General, moreover, unless the Reading Company is dissolved, it will own or control eventually "every ton of commercially available anthracite known to exist." The importance of the suit is emphasized by the Attorney-General, say press reports, with the declaration that in this case "only the law can afford relief." And in support of this contention he shows that while in almost every other industry it is possible for a monopoly to be broken by the influx of fresh capital attracted by high profits, against a monopoly of hard coal, the supply of which is limited, there can be no such protection.

Mr. McReynolds's suit against the Reading Company, says a Washington dispatch of the New York *Commercial*, possesses one feature that distinguishes it from those brought under the Taft Administration and which is "a new departure in suits under the Sherman Antitrust Law." In his prayer to the Court to break the Reading's control over the Central Railroad of New Jersey and allied corporations, which he contends are engaged in a conspiracy against the Sherman Antitrust Law, the Attorney-General asks that the Reading Company be required to dispose of the capital stock of these corporations "to persons not its stockholders or agents, nor otherwise under its control or influence." And *The Commercial* goes on to explain that:

"This prayer means that Attorney-General McReynolds intends to have settled in advance in this case the question that caused so much controversy in the Union Pacific-Southern Pacific dissolution case. The Attorney-General always has had a very strong feeling against the character of the dissolution permitted by the Department of Justice in the case of the Standard Oil Company, where a pro-rata distribution of the stocks of the subsidiary companies was permitted among the stockholders of the parent concern. The Attorney-General also was bitterly opposed to the course followed by Mr. Wickersham in the dissolution of the 'Tobacco Trust,' involving a similar principle and he was at loggerheads with the Union Pacific directors for a long time over his insistence that the Union Pacific stockholders should not participate in the enforced distribution of the Southern Pacific holdings."

Of direct bearing on the case against the Reading Company, says the New York *Journal of Commerce*, is the action of the Courts in the suit brought by the Government during President McKinley's Administration in May, 1899, against the Chesapeake & Ohio Fuel Company and fourteen other defendants, and it tells the story of the case as follows:

"The bill against the fuel company alleged that it had made a contract with the other defendants, who together constituted the Chesapeake & Ohio Coal Association, and all of whom were miners and shippers of coal on the line of the Chesapeake & Ohio Railway and West Virginia. This contract gave exclusive control of the output of the mines of the members of the Coal Association to the Fuel Association and also prohibited competition between the members of the association. It moreover prohibited the fuel company from handling any other coal than that of the association and fixt a minimum price below which the fuel company was prohibited from selling coal in the Western market. The fourteen coal-mining defendants were not so numerous as other coal-mining companies in the same part of West Virginia, and did not produce more than about half the coal mined in that region. It was therefore argued on their behalf that while their contract restrained competition among themselves, it operated to enlarge competition as between themselves and other coal companies in the Western market. This plea was unceremoniously brushed aside by the United States District Judge for the Southern District of Ohio, who held that the policy of the law will not suffer competition to be destroyed under the pretense that the public will be better served by combination. This opinion was unanimously sustained by the Circuit Court of Appeals, consisting of Judges Lurton, Day, and Severens, and from that no appeal was ever taken."

Whatever the outcome of the Reading suit, the object of it is "to strike at the heart of the anthracite situation," according to the published statement of Frederic R. Coudert, special assistant to Attorney-General McReynolds, and he adds that, if the great Reading combination "shall go unchallenged, the policy of Congress will have been completely set at naught, and one company will dominate the production and transportation of anthracite coal." And Mr. Coudert is quoted further as saying:

"The transactions complained of have taken place since the enactment of the Sherman Antitrust Law in 1890. This suit should test the ability of the Government to cope with the

ENGINE OF THE WHITE MOUNTAINS EXPRESS.

AT THE SCENE OF THE WRECK.

most important and powerful of the great combinations in the necessities of life, and, if the contentions of the Government are upheld by the Courts, should go far toward restoring conditions of actual and potential competition in the coal-fields and among the railroads."

THE NEW HAVEN DISASTER

THE DISASTROUS rear-end collision on the New York, New Haven & Hartford Railroad last week, with its toll of twenty-one killed and nearly half a hundred injured, calls attention once more not only to the general need of greater safety on American railroads, but to the peculiarly ill-fated record of that particular line. This record, according to the New York *Sun*, reveals fourteen serious wrecks in the past twenty-seven months, with casualty lists totaling seventy killed and four hundred injured—an average of a wreck every other month. "The explanation of a malignant ill-fortune pursuing the New Haven is no longer acceptable, even to those who have been most sturdy in supporting the road," remarks the Hartford *Times*, which thinks that "with so many wrecks following one another with such terrible results, the conclusion is almost unescapable that something in the fundamentals of management must be wrong"; and the Portland *Eastern Argus*, another New England paper, echoes this view. The cause will be traced to "some sort of inefficiency that can be remedied," predicts the Boston *Post*. Comparing the New Haven's record with those of other roads, the New York *American* notes that on the Erie "not a single passenger has been killed in any train wreck in ten years"; that on the Pennsylvania "in three years there have been only fifteen people killed"; and that on the Delaware, Lackawanna & Western during the past three years only one passenger-train has been wrecked, altho in that case the loss of life was great.

Whatever the official investigations now under way may reveal concerning the responsibility for this latest disaster, remarks the New Haven *Register*, two points already stand out in bold relief —the need of a more adequate signal system, and the necessity of eliminating wooden cars from the make-up of passenger trains. The Bar Harbor express, which was telescoped by the White Mountains express while halted in the fog, between North Haven and Wallingford, on the morning of September 2, was made up largely of wooden Pullman cars, two of which were reduced to kindling by the collision. According to Engineer Miller, of the White Mountains express, there was not time to bring his train to a stop after he saw the signal set against him. Concerning the signal system on the New Haven, President Elliott in a published statement says:

"The road has automatic block-signals of what is called the 'banjo' type, which when installed were considered very satisfactory. Since then improved methods of signaling have been devised and authority was issued some time ago to install the most improved and modern signals between New Haven and Springfield. Fifteen per cent. of the new work is already done, and men and materials are ready for the balance, which should be finished by January 1."

Asked by a New York *World* reporter if the accident would have occurred had the new signal system already been installed, Vice-President Whaley, of the New Haven road, replied:

"Well, of course, I can't say positively, but yes, if the new system had been working this morning it is probable that the wreck would not have occurred. The engineer would then have had two signals to work against instead of one, and I can't say I think that he would have run by both of them.

"None of that system is now in operation. We expect to have it working by about next January. Our system is all right, only it isn't suited to the dense traffic we now have to handle.

"Under the new system, which is called the lock-and-block tower or permissive system, similar to that in use in the New York subway, the operator in the tower could not have thrown the signal at the beginning of the block to permit the second train to pass unless the first train was entirely out of the block. It would have been physically impossible."

The terrible casualty list in this particular accident, according to a passenger on the White Mountains express, was directly due to the obsolete wooden Pullman cars of the rammed train. In a letter to the New York *Evening Post* this passenger says:

"Had steel sleeping-car equipment been used on the Bar Harbor train, I question whether there would have been a single loss of life, for the momentum of the White Mountains train would not have been sufficient to perhaps more than telescope the vestibules. I having been a passenger, and awake at the time of the collision, I believe my evidence is worthy of consideration."

In a Washington dispatch to the New York *Tribune* we read that "members of Congress and Commissioner McChord [of the Interstate Commerce Commission] to-day exprest themselves as favoring immediate legislation to require all railroads to provide steel passenger-cars and to enforce other drastic restrictions on the operation of passenger-trains." And the Philadelphia *Public Ledger* remarks editorially:

"The New Haven wreck carries one compelling lesson to every railroad in the United States. There must be a speedy replacement of wooden cars with all-steel cars.

"In a recent Pennsylvania wreck exactly similar to that on the New Haven more than 150 persons were only slightly injured, and not a single passenger suffered a broken bone, but the cars were solid steel, whereas the Pullmans on the New Haven were antique wooden cars."

How far this process of replacing wooden with steel cars has already progressed on the New Haven Railroad is shown in the following statement by President Elliott:

"There are fifty-six steel cars in operation on the New Haven road, of which twenty-six are in service on the electric zone between Stamford and New York. In addition to this there are sixty-nine steel underframe Pullman cars in service.

"One hundred and fifty steel cars have been ordered, of which thirty-four have been delivered, and in the last year no wooden cars have been ordered for passenger-trains."

"One can not but feel," remarks the Springfield *Union*, "that if only a small fraction of the vast sums spent by the New Haven to perfect a monopoly had been devoted to the purchase of steel coaches and to the installation of improved signal-devices, many lives would have been spared." And the Philadelphia *Inquirer* agrees that "there could be no better argument against the sort of railway consolidation that looks to monopoly nor a better one for that healthy rivalry which is certain to produce good service and the highest degree of safety."

On the other hand, many papers point out that the New Haven has recently shown a disposition to heed the criticisms and meet the demands of the public, but that it has not yet had time to bring to completion the reforms which it is instituting. "The conditions of the present catastrophe are largely an inheritance," remarks the Boston *Transcript*, "but it is a demonstration that reforms can be effected none too rapidly or too thoroughly." The fatal wreck, by a curious coincidence, occurred on the very day that the road's new president, Mr. Howard Elliott, assumed office. "That the new management, which has thus begun under circumstances so tragic, will have the confidence of the public in the fulness of its endeavor to find the weak spots in the system and correct them should be beyond question," says the Springfield *Republican*. "In spite of another frightful disaster, it will not do to say that the New Haven Railroad has not been mending its ways," remarks the New York *Press*, which adds that the problem confronting President Elliott is "one of the most serious a transportation manager ever faced." This problem, *The Wall Street Journal* points out, is complicated by "the dominance of the labor-unions," which makes it "impossible to employ the best men in the most responsible places," and by the increasing congestion of traffic on that line.

We quote in conclusion the following summing up of the situation by the New York *Tribune:*

"The road is replacing the old-fashioned 'banjo' signals with devices of an approved type, and it is buying steel cars to take the place of its present dangerous vehicles, just as it is doing away with its deadly short crossovers, now that repeated fatal accidents and the condemnation of the authorities have revealed its shortcomings. But if under the old management it had been run as a railroad and not as a stock-jobbing concern; if its chief attention had been devoted to safety and not to monopoly, it would have done long ago the things which it is now doing as a result of official exposure, and many lives would have been saved.

"Sympathy will be felt with the new president, Mr. Elliott, whose management has opened with this great catastrophe. Obviously, he has had no opportunity to cure the defects of the Mellen régime. If he required any reminder of how serious is the need of a thorough overhauling of the New Haven, a sharp one is before him. The road's equipment is not consistent with safe operation, and the discipline of its employees has been weak. . . . . .

"The public looks to President Elliott to make the New Haven safe, to equip it with everything that will reduce the likelihood of accidents and their destructiveness when they do occur, and to establish discipline among the road's employees, for other lines have discipline which puts the New Haven to shame. And the public looks to him to be the first to install an automatic device to prevent two trains from entering the same block, if any such device is practicable. Everything must be done to reassure the users of the New Haven Railroad."

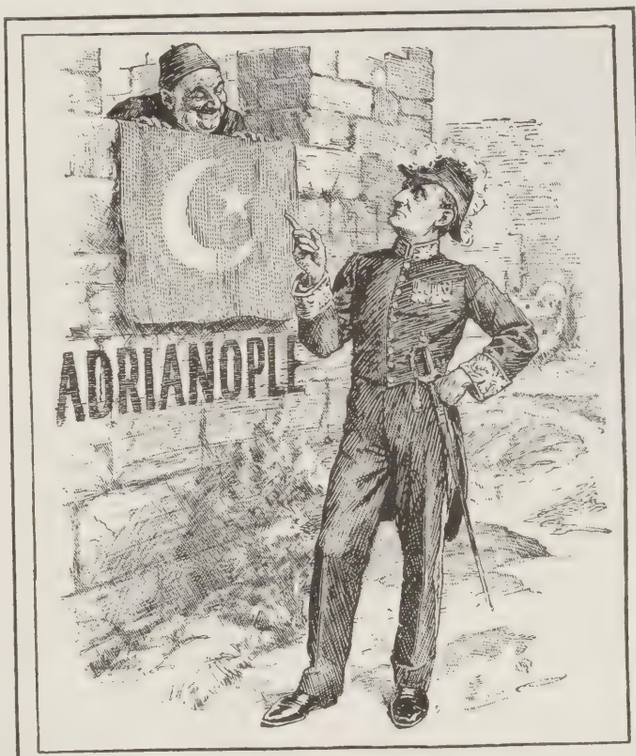
FOREIGN COMMENT

THE ADRIANOPLE QUANDARY

THE CALM WAY in which Turkey ignores the orders of the Powers to quit Adrianople makes some believe that the Crescent will stay there for many years to come. "The Powers have warned Constantinople," says Sir Edward Grey, "that the line of frontier between Enos and Midia must be strictly observed, and they demand that the Porte observe it." But the Porte seems unable to perceive any such line, and has massed some 250,000 troops in Thrace, led by Enver Bey, who is pictured by the correspondents as eager to become a Turkish Napoleon. It was when Napoleon encountered Russia that his star began to wane, however, and the Russian press are now urging military operations against his Turkish imitator. Thus we read in the influential *Novoye Vremya*, of St. Petersburg:

"Adrianople will not remain in the hands of the Turks. A Christian population once liberated from Turkish rule is never subjected to it again. This principle, it is to be presumed, will be applied also in this case. And Russia, who has shed so much of her sons' blood for the liberation of the Balkan Christians, we are convinced, will firmly insist upon Turkey's return within the limits established at the London Conference.

"Measures by which Turkey can be compelled to retire from Adrianople and to evacuate all the territory west of the Enos-Midia boundary can easily be found. In the hands of Russia, at any rate, there is one means: Russian troops can occupy a corresponding part of Turkish territory adjoining ours, and continue the occupation until the districts of the Adrianople vilayet west of the Enos-Midia line have been cleared of Turkish troops. They must take this into consideration at Constantinople, and not give themselves to immoderate jubilation over their 'victories.'"



A QUESTION OF DETAIL.

SIR EDWARD GREY—"You'll have to go, you know. The Concert feels very strongly about that."

TURKEY—"And who's going to turn me out?"

SIR EDWARD GREY—"Curious you should ask me that; it's the one point we haven't decided yet. Have you any preference in the matter?"

—*Punch* (London).

Some suspect that Turkey is receiving secret encouragement, and Germany is of course accused by its enemies. The *Kreuz Zeitung* (Berlin), indeed, makes no bones about siding with the Turk. This journal is edited by Professor Schiemann, who occupies the chair of modern history in the University of Berlin. He is said to be on intimate terms with Kaiser Wilhelm, whose opinions he often reflects in his writings. He tells us that European opinion is in favor of the Moslems, who will be permitted to retain possession of Adrianople and even spread beyond the Maritza into further Thrace, unless they disgust Europe by committing some terrible blunder. He puts into the mouth of Islam the following arguments:

"We have three hundred thousand men and more under arms. The convention which we have made with Greece will restore to our colors a vast number of soldiers now prisoners of war. Our financial resources, which are threatened with diminution, do not permit of our holding on a war footing an army of this importance. Besides this our Army is anxious to make a forward movement to which it is being urged by rage at the wrongs to which their coreligionists are being subjected by the Bulgarians."

The Turks, according to what the *Kreuz Zeitung* makes them say, are puzzled by the attitude of Bulgaria. The Porte is prepared, however, for a peaceful convention giving what Islam requires, or war to the knife. To quote further:

"If there were in Bulgaria a force capable of meeting our Army, we believe we could handle it. Or if, on the other hand, we felt certain that Bulgaria would not dispute with us the possession of Adrianople and the Maritza frontier, we would disband a large part of our Army. But we find ourselves confronted neither by the resistance that puts the soldier on the *qui vive*, nor the surrender which would reassure our War Office. Things can not remain in this state.

"It behooves Bulgaria to recognize, and that with no delay, the frontier which our Army has restored to the Ottoman Empire. If she does not consent to do this we shall take measures to compel her."

But another important German paper, the *Berliner Neueste Nachrichten*, takes a different view of the case, and declares:

"The arrogance of the Turks is becoming insufferable, and their conduct springs from the fact that the Powers have led them to believe that no one dares to intervene or interfere with them. They now believe that they are able to do anything. They speculate, perhaps mistakenly, on the danger of a great European war. They think that Europe cannot fail to be torn asunder for the benefit and glory of some Turkish Napoleon. Some one ought to point out to these fellows that Europe is just in the mood to give them a very severe lesson."

It may be that the difficulty will be solved by direct negotiations between Turkey and Bulgaria, as is suggested in the London *Spectator*, which gives this illuminating view of the situation:

"In the absence of any active or very definite plan on the part of the Concert, a belief is growing up that Bulgaria and Turkey may come to some arrangement between themselves. Such united policy as has emerged from the deliberations of the Concert is in the direction of approving the Russian scheme of applying a financial boycott to Turkey. The action of Russia in withdrawing two warships from the Bosporus and her contemplated disembarkation of troops at Burgas have undoubtedly caused the Ottoman Government anxiety, and give a point to what Sir Edward Grey said about the intervention of one of the

Powers. But Turkish difficulties are due not so much to any threats from Europe as to her harassing lack of money. It is the want of money which may put a stop even to the circuitous and temporizing methods of the Porte. Enver Bey's army can not be maintained very much longer without funds. The

A SON OF THE PROPHET.

Aga Sultan Mahomet Shah, G.C.I.E., K.C.I.E., LL.D., a lineal descendant of Mahomet, who is literally worshiped by millions of Mohammedans in India, Africa, and other parts of the Islamic world.

Turks must therefore come to a decision pretty soon, whether they mean to stake all on an expensive policy of military defiance or whether they will follow the cheaper and safer course of listening to the advice of the Powers. . . . . .

"Adrianople is the 'second city of the Empire.' Turks of all grades of opinion are proud of it and want to retain it, and as for Enver Bey himself, he is, in the words of *The Times* correspondent, 'burning to retrieve his reputation by some Napoleonic deed.' If the Turks want a reasonable rectification of their strategic frontier along the Enos-Midia line they can have it. Sir Edward Grey has already said so. So long as they hold Constantinople all Europe wishes them to be able to live there, and to be able to protect the Straits, without undue military anxiety. The most delicate question now seems to be whether the Porte can restrain Enver Bey if it really wishes to do so. It is pretty clear that the continued occupation of Adrianople will not in itself lead to armed coercion by Russia, but if the Turks tried to hold territory beyond the Maritza, Russian opinion would be incensed beyond measure. The rupture of diplomatic relations with Turkey would then be almost inevitable."

It is asked why the Powers do not intervene at Adrianople. We find Mr. Take Jonescu, Roumanian Minister of the Interior, answers this question in the Paris *Temps* by saying that Bulgaria stood in the way of any such intervention being provided for in the Bucharest Treaty. Such a provision would have secured the observance of the London Treaty by which Turkey's Enos Midia frontier was fixt. In order to obtain the maintenance of that expression of desire in the Bucharest Treaty Bulgaria would have had to accept a clause assuring reciprocal religious and educational liberty for the Greeks in Thrace, but she refused.

ISLAM'S GAIN BY TURKISH DEFEAT

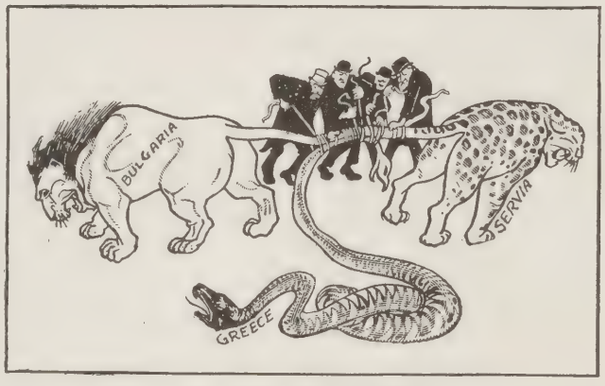
IT WILL SURPRIZE those who feel that the defeat of Turkey in the Balkans has dealt a crushing blow likely to unnerve the whole Mohammedan world to learn that the Islamites are in no mood to put on sackcloth, sprinkle ashes over their heads, and bewail their fate. On the contrary, the Moslems regard the calamity which has befallen the Ottomans as an evil not unmixed with good. Tho many are likely to regard such statements as whistling in the cemetery, yet there is considerable ground for believing that the disciples of the Prophet are quite sincere in looking upon the spectacle of Turkey losing ground in Europe as a blessing in disguise. Some idea of the Moslem earnestness in this matter can be gained from the following excerpts from an article contributed by "An Indian Moslem" to the current issue of *The Hindustan Review* (Allahabad), in which this novel view is elaborated:

"The war wakened Islam to a strong sense of religious brotherhood and demonstrated to the world the reality of the bond of religion. It was a spectacle to see the whole of the Islamic world moved from one end to the other like one body with the deepest sympathy and the truest emotion toward their fellow religionists in affliction.

"And what sacrifices it called forth, what noble deeds of devotion to the brotherhood ideal! Schoolboys denying themselves the necessaries of life, orphan children foregoing one of their daily meals, women parting with all their jewelry, some of the poorest giving away all their possessions! Islam has won undying fame for such deeds, and India (as the home of the largest body of Moslems, numbering over 60,000,000) is richer for such noble acts of sacrifice and devotion."

But a still greater blessing that this war has conferred upon the Islamites is its salutary effect in curbing the pride of the Mussulman, and making him fraternize with other Asiatics, rather than holding himself aloof from them in a spirit of hauteur. The writer goes on to show how the breach between the Hindus and Mohammedans of India (treated recently in these pages) is disappearing because the Moslem has been humbled:

"The other good that has resulted from the war is the perceptible difference in the attitude of Indian Mussulmans toward their Hindu fellow countrymen. . . . In times past the Mussulmans, thinking a little too much of themselves because of the



THE TREATY OF BUCHAREST.

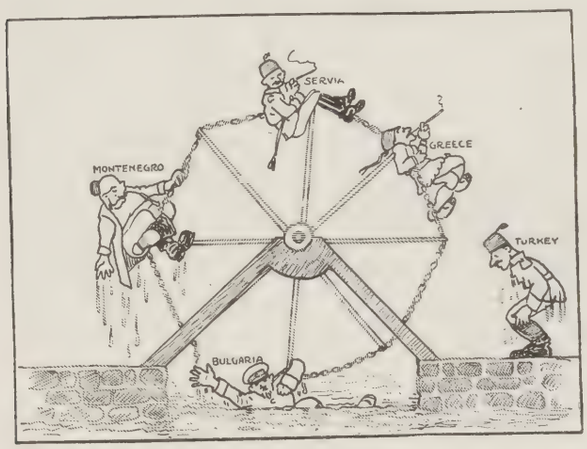
A hard job! —*Mucha* (Warsaw).

political power of their fellow religionists outside India, looked down with contempt upon their fellow countrymen, or at least did not consider them worthy of their attention. . . . . .

"Happily all this is changing now. For while, on the one hand, Indian Mussulmans are being increasingly led to look to themselves alone for help and guidance in the future, there is distinct evidence that the more thoughtful among them feel the need of closer relations with their Hindu fellow countrymen than has hitherto been the case. If this feeling continues to grow, as we trust it will, it will prove one of the greatest blessings to the country, for parties and divisions are the curse of India, and already the Hindu-Mohammedan problem has reached threatening proportions."

TO CURB TURKEY'S FRIEND

TOO MUCH POWER is being concentrated in the grip of Germany, and is being used against interests of Christian Europe in favor of the Turk, believes a Polish noble, Count Adam Orlowski, and he proposes a European coalition to clip the German eagle's wings. He is not the first to entertain such an idea, but the wings still seem to be in good condition. The peace of Europe will never be secure, the Count holds, till the overwhelming influence of Germany, in aid and



THE WHEEL OF FORTUNE.

THE TURK (to the Bulgar)—"Now it's your turn, my friend."
—*La Turc* (Constantinople).

comfort of the Turk, is suppressed. He has written to the French Chambers and the Italian Cabinet, and, says *The Illustrated London News*, begged the Ministers of Victor Emmanuel "to leave the barren road of Berlin and walk in the way of European freedom." The Count's scheme for a marshaling of the Powers of Europe in a fixt and firm phalanx against the united influence of Germany and the Porte is then indicated. There is, he says, to be a coalition of the "modern-minded" nations against Germany, whose extravagant militarism, industrial greed, and class system weigh so heavily on the backs of the common people. The coalition he proposes "would include France, England, Austria, Spain, Italy, Denmark, the Netherlands, Belgium, Russia, and Polish Germany." These Powers would all "act in concert to rid Europe of Prusso-Turkish influence."

This patriotic Pole sees in the political world a distinct tendency toward the great accord which he describes, and he thus outlines how Germany is to be punished and reduced to submission. The Powers would benefit in the following way through the new combination:

"The advantages for France would be the restitution of national rights in Alsace-Lorraine, while Russian constitutional immensity would perfect itself in an Empire of Russia-Poland formed on the model of Austria-Hungary. Spain would have easier access in the African Kongo. Denmark, Belgium, and Holland could secure themselves against Prussia. The advantages for Austria would be to get back the countries unjustly annexed to Prussia. Italian patriotism would see on the Trentine borders the realization of its wishes, which could be accomplished amicably as a compensation for Austria's important acquisitions in North Germany. This agreement would be founded on a local plebiscitum, so as to safeguard the sympathies of the peoples concerned."

The dismemberment of Austria, which, we are assured, is being contemplated by Germany, would be prevented by Russia, whose weight in the councils of Europe is strongly emphasized by Count Orlowski:

"Russia is the counterweight that holds in the balance the fate of Austria, and it is opposed to its dismemberment, for which the Pan-German policy is impatiently waiting. Russia and Austria are both interested in avoiding war between themselves, so as to oppose the diplomacy of Berlin, the claims of its Imperialism, its overbearing dealings with Alsace and Lorraine, and the expropriations in Posen. Things can not remain in this state; the defeat which German diplomacy, together with the Crescent, has suffered in the East, and the triumph of the Slavs, widen the field of their activity, preparing the pacification of Europe by the restoration of Poland."

THE DUMA'S FAILURE

THE BRILLIANT RECORD of the parliaments of civilized nations does not seem to have gained any great added luster as yet from the parliament of Russia. China has had a representative assembly too brief a time, perhaps, for final judgment, but in Russia even the papers that wish the Duma well fail to discover very much to praise in its doings. The first session of the Fourth Russian Duma has come to an end, and parliament has adjourned until next November. No important legislation has been enacted, and most of the time has been consumed in long and fiery speeches against the policy of the Government in general and the various departments in particular. During the debate on the budget, when the appropriation for the Ministry of Finance was under consideration, a "Right" deputy offended the Prime Minister, Kokovtzoff, and the incident caused what the Russian newspapers called "a strike of the Ministers." The latter, by common consent, ceased their attendance at the sessions and the Duma met for a whole month without the Ministers participating in the deliberations. The Russian press, radical and conservative alike, are not very enthusiastic over the results of the Duma's seven months' labors. The *Ryetch* (St. Petersburg) says:

"The session was absolutely unproductive, as far as actual results are concerned. Besides the budget, the Duma has passed only one bill which rises somewhat above the usual routine legislation—the project of the Ministry of Justice simplifying civil procedure by the substitution of one order instead of the former two. . . . . .

"The session, barren as it was from the point of view of legislation, was, on the contrary, extremely interesting and significant from the point of view of party formation and political

THE CAT AND THE MOUSE.

THE CAT—"I really shall be obliged to eat you if you don't move off that cheese." —*Daily News* (London).

feeling in the country. As is known, the reactionary forces had entertained great hopes with reference to the Fourth Duma. The elections had been held under unheard-of pressure on the part of the Administration; a general mobilization of the clergy had been conducted under the supreme direction of V. K. Sabler [Procurator of the Holy Synod], and until the very opening

of the Duma there had prevailed a feeling of certainty that a majority of her members would be 'Right'—Nationalistic. Reality has utterly disappointed the expectations of reaction. Despite the most fantastic reasons for depriving electors of the right to vote, and not less fantastic acts of lawlessness, the Opposition had returned into the Duma strengthened. Only the Octobrists had lost, and, according to them, they had come into the Duma dissatisfied and in a frame of mind hostile to the Government. The absence of a 'Right' majority and the growth of discontent in the country were evidenced on the very first day of the opening of the Fourth Duma."

The *Novoye Vremya* (St. Petersburg) speaks in the same terms of the work of the Duma. Touching upon the relations between the latter and the Government, it says:

"It would be erroneous to think that the Fourth Duma is hostile toward the Cabinet, as, for example, the First Duma was toward the Government in general. On the contrary, in the Fourth Duma there can be observed something like regret over her differences with the Government, which differences, however, can not be reconciled because of the fact that they . . . are

RUSSIA PULLS THE STRINGS.

—*Simplicissimus* (Munich).

based on conflicting views of the needs and demands of Russia. . . . This was evidenced . . . at the consideration of the budget, when so much bitter reproach was heaped upon the departments from the floor of the Duma.

"The Fourth Duma is, in its composition, not in the least like the First, in which the radical elements, parodying the National Assembly, absolutely ignored Russian reality, and turned the floor of the Duma into a cathedra of abstract ideology in the style of the French Jacobins of the end of the seventeenth century. The Fourth Duma, on the contrary, is more like the Third, and even exceeds the latter in the number of conservative, moderate elements, elements sober, sensitive to questions affecting the honor and welfare of Russia, full of the desire to serve her faithfully."

The *Novoye Vremya* ridicules the plan, generated in some reactionary quarters, to dissolve the Duma and order a new election:

"The most thoughtless people understand perfectly well that there are no chances of electing a new Duma which would work in unity with the Government, the more so because we haven't any 'united' Government. . . . It appears that during the whole session of the Fourth Duma there was one lone occasion when the 'united' Government acted in concert, and that is the so-called strike of the Ministers, their repudiation of their rights and duties to participate in the legislative activities of the Imperial Duma."—*Translations made for* THE LITERARY DIGEST.

GERMAN RAPS AT FRANCE

GERMAN NEWSPAPERS have recently taken occasion to speak smoothly to and of France. Like the ancient orator, their sentences flow as the honey when they mention their western neighbor, and the burden of their song is peace. They sometimes even extol France, and when the reporter of the *Vossische Zeitung* (Berlin) returned from the last French maneuvers he spoke in terms of high admiration of the Gallic Army, the physique of all the men, the precision of their evolutions, and the perfection of their equipment. There are two Berlin papers, however, society and government organs, which are always conspicuously Gallophobe. One is the *Lokal Anzeiger*, sometimes known by the name of the *Scandal Anzeiger*, and the other is the *Tag*. These papers are read in every military mess, and almost every drawing-room of the Empire. Not only strictly military news, but social items and social rumors fill their columns. The last ball, with details of the fashionable frocks and equipages, the last martial or marital squabble, are chronicled and described with Germanic piquancy and by the usage of strange compound words. And the everlasting and untiring theme of French inferiority to the Germans is plainly and unblushingly broached once more. The character of such criticisms is well exemplified by a recent article in the *Tag*, written by Professor Fassbender, of the Agricultual College of Berlin. He entitled his paper "The Popular Mind of France," and speaks with bitter contempt of the French Army, which certainly did no credit to the country and the Government by the antimilitaristic demonstrations which recently occurred at Lunéville, Nancy, and Grenoble. He states his views as follows:

"The popular spirit of France at the present moment is precisely what it was at the opening of the Franco-Prussian War in 1870. That was the period when a noted German mental specialist wrote a book with the title 'The Mental Degeneration of the French People.'

"All the symptoms of decay and decadence which he described are in evidence now, and especially the symptoms of megalomania, which manifests itself by a vanity which derives satisfaction from a systematic exaggeration of French idiosyncrasies, by a blindness to all French faults and failures, and a tendency to depreciate those who are or are considered to be the adversaries of France. In all this we see a distortion of normal perceptive power accompanied by a complete inability to detect logical contradictions."

The professor asserts that the French Government aims in every way to foment popular hatred of Germany, and that this is backed up by the French press. He even accuses the French Minister of War, Mr. Étienne, of distributing in the various military posts printed diatribes against Germany. On another rather tender point he writes:

"The French have tried to prove that the defeat of Turkey in the Balkans is a débâcle for Germany. The Bulgarian officers energetically protested against this judgment and stated that the victorious Bulgarians obtained at least half of their guns from the Krupp firm."

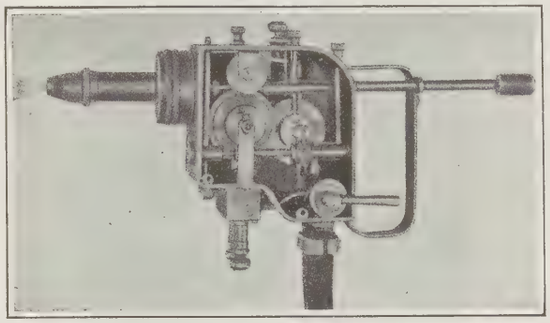
We must set against these violent statements the fact that France is actually trying to learn from Germany some of the arts which have made the Army of the Fatherland the most efficient in Europe. General Pau, as reported in the Paris *Temps*, acknowledged this efficiency in the debate on the Three Years' Service Bill, which he eloquently supported. He told France to imitate Germany, and what is imitation but the sincerest flattery? This accomplished soldier and Commander of the Legion of Honor spoke as follows in the debate referred to:

"The object of the French Government should be to imitate, to copy, to produce a counterpart of German military organization. Our means of national defense will continue to be inadequate until they resemble the military system of Germany."
—*Translations made for* THE LITERARY DIGEST.

SCIENCE AND INVENTION

PLATING WITH A PISTOL

SURFACES TO BE thinly coated with metal are usually treated by some process of electrodeposition. But objects to be electroplated, if they are not themselves conductors of electricity, must first be coated with a conductor, which greatly limits the application of the method, and there are also other objections which may possibly cause the process to be superseded by one lately developed by Schoops, of Zurich, Switzerland, in which finely divided metal is sprayed against the surface to be coated, which may be of almost any material—wood, metal, concrete, celluloid, textile fabric, or paper. The production of such a spray has been used for thirty years past to make fine metallic powders, but its application to plating is new. The inventor's first device used a spray of molten metal; his next dispensed with the melting-pot and used fine powder as a sand-blast; and in its present form a fine metal wire is led through the apparatus and atomized. This has made it possible to use a much smaller and more compact device, no larger than a pistol and somewhat resembling that weapon. Our quotations are from a descriptive article contributed by Dr. Lach to *The Scientific American Supplement* (New York, August 16). Says this writer:



Illustrations from "The Scientific American Supplement."

FIG. 1.—THE METALLIZING PISTOL.

"Fig. 2 shows one of the earlier forms of this device. At *a* is seen a spool from which a fine metal wire is unwound by means of a mechanism, *b*, which feeds it to the atomizing nozle, *c*. The apparatus is actuated through a transmission gear, *e*, from an air-turbine, *d* which is driven through a reinforced flexible pipe, *f*, by means of comprest air at six to eight atmospheres, making about 15,000 revolutions per minute. The nozle is provided with connections, *h* and *h'*, for oxygen and hydrogen, which issue at the nozle, are there ignited and fuse the metal wire as it is fed through the nozle. The comprest air, after passing through the turbine and there doing its work, passes by a tube, *i*, to the nozle from which it issues as a conical blast surrounding the oxy-hydrogen flame and carrying with it the metal melted by that flame.

"As the final result of evolution of the apparatus just described, there was finally produced a device, shown in Fig. 1, and no larger than an ordinary revolver, a device which moreover has been found most efficient in practise. It has done duty for eight hours at a stretch without giving any trouble.

"In Fig. 1 the front wall is shown broken away, exposing the internal part of the device. Air under pressure passes through a thick tube, which also contains the channels for the oxygen and hydrogen admission, and actuates a turbine (at the right in the center) which rotates at very high velocity (up to 35,000 revolutions per minute). The motion is transmitted to a large disk on the left, and then to a smaller disk above. Between these two the wire passes, being firmly gript by them and fed to the nozle. The melting and atomization are effected just as described above.

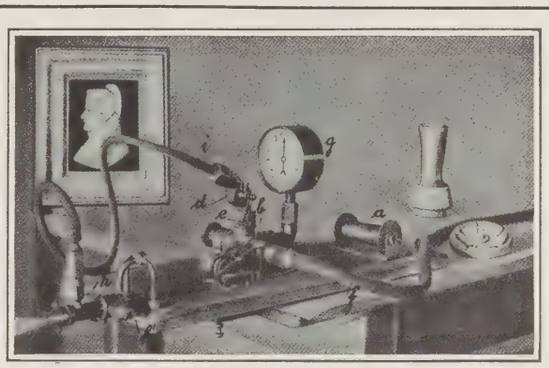


FIG. 2.—EARLIER FORM OF THE APPARATUS.

"Passing on now to a consideration of the field of application of the new process, we have to distinguish two classes of cases. On the one hand, it may be desired to produce a permanent coating to remain attached to the surface on which it is originally projected. Secondly, it may be desired to coat an object temporarily, and then to detach the coating thus formed and use it as a mold or cast. Applications of the first kind are so numerous that one hardly knows where to begin their enumeration.

"All containers employed in the industry, in mines, in chemical works, in breweries, etc., are either provided with a resistant coat of paint, or are lined with lead, copper, tin, or other metal. In all these cases the atomizing process commends itself highly in place of all the methods hitherto employed. And no small advantage lies in the fact that it is possible by means of the little spray-pistol to gain access to every nook and corner, even where a brush does not readily and thoroughly penetrate. . . .

"As a rule it will be desirable to apply thin coatings of metals. A particular case of this kind is the manufacture of electrical cooking and heating apparatus, in which it is desirable to produce very thin metallic deposits of a conductor, to act as a 'resistance' upon a suitable substratum, such as porcelain or earthenware. . . . It is obvious here that the use of Schoop's method will be a great gain. Again, in copperplating carbon electrodes and in making all sorts of electrical connections, the metal-spray process should prove invaluable. . . . . .

"Again, in coating iron surfaces to protect them against rust, especially in the case of structures presenting a complicated surface, the new process should prove invaluable, as it enables one to gain access to every nook and corner. A metal coating thus applied will give vastly better protection than the usual coat of paint, which has to be renewed at frequent intervals and corresponding expense."

As compared with electroplating, the Schoop process, we are told, possesses the great advantage that the delicate operation of "pickling" or chemically cleaning metal before coating becomes unnecessary. . . . Vastly greater speeds are also attainable than in electroplating. Some metals, such as aluminum which can not be coated at all by electroplating, may easily be coated by the Schoop process, which is applicable, of course, not only to metals, but to materials such as wood, paper, fabric, and even lace. To quote further:

"An important application of metal-coated fabrics prepared by the Schoop process is their use for balloon envelops, which can be rendered almost absolutely impermeable without losing their flexibility. The fact that such fabric becomes a good conductor of electricity is an additional advantage, and it has been suggested to make clothing for workmen in electrical installations from metallized fabric, as this would afford them considerable protection against shock by contact with live wires or leads. Metal-coated fabric has also been found to furnish

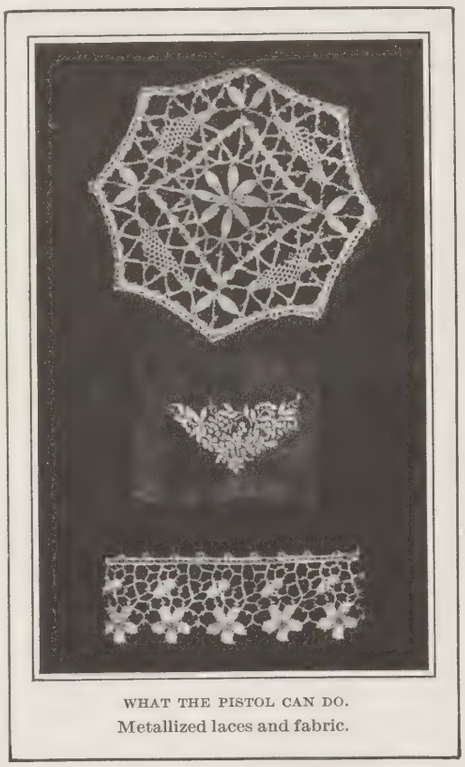
an excellent screen for optical lantern projection, a screen which possesses all the advantage of the aluminum screen, while being much cheaper, and at the same time handier, since it can be rolled up when not in use.

"As regards the possible application of the process to coating wood, the field appears practically unlimited. Aside from the production of purely decorative effects, we need only point to such examples as the coating of railway-ties, telegraph-posts, fence-posts, etc., for protection against the weather, against the moisture of the ground, or against insects. Again, the wooden hulls of ships can be copper-coated with greater ease and perfection by Schoop's process than by the usual method of applying the metal in sheets. In packing goods air-tight for transport by land and sea the new process should prove invaluable. Bottles may be sealed, and in some cases (*e.g.*, eggs) food materials themselves given a protective metal coating. . . . . .

"Finally there are those applications in which a detachable coating is produced upon a surface, in order to prepare a mold for casting a copy of the original. In this case the surface is first prepared by giving it a fine coat of graphite, talcum, or fat, from which the metal coat afterward detaches itself readily.

"Not only is this method of making casts applicable to all ordinary purposes, but dentists, for example, can by its aid prepare artificial palates by spraying a metal coating over the mold made in the usual manner from a plastic mass. A similar process can be employed for the preparation of artificial limbs. The variety of possible applications is, in fact, unlimited. Thus the well-known method of identifying criminals by their finger-prints can be improved upon by making metal casts of the imprints by Schoop's process. Gramophone plates can also be copied with complete success by this method. This is probably as severe a test as could well be applied as regards the accuracy of the copy. Another important application is in the reproduction of half-tone blocks, which has hitherto been effected electrolytically. Not only is it possible to use any desired metal, such as iron, for example, but as many as thirty copies have been prepared in the almost incredibly short space of one hour.

"And all the possibilities of the new process are far from being exhausted. The inventor is still working on its further development. Among these is its application to spraying glazings and enamels; the production of alloyed coatings by spraying on two or more metals from separate nozles or from one nozle (which may, for instance be fed with a wire of several strands twisted together)."

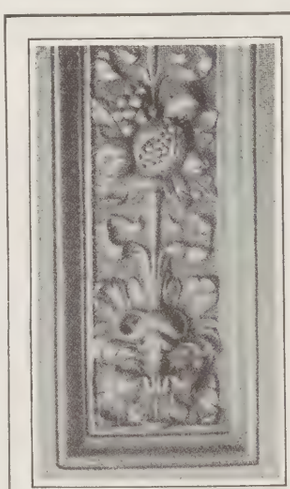


WHAT THE PISTOL CAN DO.
Metallized laces and fabric.

ELECTRIC TANNING—That the operation of tanning may be performed with greater speed with the aid of an alternating electric current has been shown by recent experiments. The continuous current can not be used, because of its unfavorable chemical action. Says a writer in *Cosmos* (Paris, July 31):

"The electric current greatly facilitates . . . the penetration of solutions of tannic acid into hides. In fact, Roever has shown that an electromotive force of 100 volts can cause 16 pounds of tannic liquor per hour to pass through a square yard of skin. Now, despite this fact, electric tanning has not hitherto made a place for itself in the industry. Possibly this is because the continuous current, besides this action of transportation by endosmose, may have an electrolytic action that destroys the tannin. Mr. O. J. Williams has endeavored to ascertain whether this is really the case. He has subjected tannic liquor to a continuous current . . . and has found that the tanning substance is rapidly destroyed; after the application of the current there remains not more than two-thirds or one-half.

"On the other hand, the alternating current, with a frequency of 93 periods a second, has almost no chemical effect."



METAL-COATED CONCRETE MOLDING.

OUR BIG VARIABLE STAR

THE MOST CONSPICUOUS variable star may be seen any day at high noon by using a piece of smoked glass and looking directly toward the sun. That the amount of light and heat emanating from the sun vary periodically has been known for many years, but our information is confirmed and made more precise by recent investigations carried on by the Smithsonian Institution simultaneously in two widely separated parts of the world—California and Algeria. One of the most curious facts about the sun's variability is that the light and heat do not vary together. The light is least at times when the sun's surface is most infested with spots; and at this very time the heat given out is greatest. Says a writer in *Cosmos* (Paris, July 17):

"We are accustomed to designate as the 'constant of solar radiation' the quantity of energy poured out by the sun on a surface fully exposed to its rays, situated at the upper limits of our atmosphere so that the radiation reaches it without partial absorption by the air and the atmospheric dust. . . . The determination is very difficult, for as physicists can not transport their instruments to the atmospheric limits, they are obliged to measure the solar radiation in the depths of the terrestrial atmosphere, increasing the values thus directly obtained by taking account of the heat and light absorbed on the way by the atmosphere. The problem will therefore not be solved until we know the value of the atmospheric absorption.

"This problem, at which numerous physicists have been working for a long time, has been attacked with new weapons since 1902, by the Smithsonian Institution of Washington, first on Mount Wilson, California, and more recently at Bassour, Algeria. . . . Up to the present time Messrs. Abbot, Fowle, and Aldrich have made 700 determinations of the solar constant, some at stations on the sea-level and others at varying altitudes up to 14,000 feet. While awaiting the detailed publication of results, which will appear in the *Annals* of the Smithsonian astrophysical observatory, the authors have communicated to *Astronomische Nachrichten* a summary of their results.

"1. The mean value of the solar radiation-constant for 1905–12 is 1.929 calories per square centimeter per second. . . . . .

"2. This so-called constant is not really constant. It increases . . . when the sun-spot surface increases. . . . Thus, when the sun is covered with spots, and so less luminous in parts, it nevertheless radiates more energy in the form of heat.

"3. The numerous and concordant observations made simultaneously in California and Algeria show that at an interval of ten days an irregular variation of .07 calory may appear.

"4. The variations in question depend on the sun itself; they have nothing to do with the interposition of meteors, of shooting stars, or of any other matter whatever exterior to the sun."—*Translation made for* THE LITERARY DIGEST.

A TESTING-DOCK FOR SUBMARINES

THE ART OF TESTING materials may be called "the anticipation of accidents." If a bar of steel is defective, it is obviously safer to have it give way in a testing-machine than to wait until it forms an important part of some device on whose strength depend the lives of a thousand human beings. Nowadays no good engineer uses untested materials. And furthermore, wherever such a thing is possible, the completed device or engine, with all its assembled parts, is given a test. This is evidently particularly valuable in the case of such a vessel as the submarine, and we learn from *Popular Electricity and the World's Advance* (Chicago, September) that the governments that own large navies are not oblivious of this fact. Says this magazine:

"Records of submarine disasters are replete with instances where lives could have been saved or, perhaps, never jeopardized if the boats had been strong enough to resist the crushing pressure of the enveloping sea. The constructors thought the under-water craft secure against just such casualties, but they did not learn that they erred in their calculations until some of their fellows had emphasized the fact by going to harrowing deaths. The Government is going to construct a special dock for the testing of submarines under conditions which will simulate all of the circumstances of a deep submergence without really putting the under-water boat entirely beneath the surface. This probably sounds paradoxical, but it is a fact.

"To-day, when the submarines built for the Navy are tested they are carried to some point off the coast where the water is deep enough, and then sunk to a depth of 200 feet without anybody being inside of them. Various pressure-gages are placed within them by which it is possible, after the boat is raised again, to tell how much the hull was deformed or squeezed by the grip of the burdening sea. This is really only part of the information that should be had to make certain that the little vessel is reasonably safe in case she should sink that deep with all hands aboard. The exhaust-pumps and other mechanisms should be worked during that test to show that they would function as required in case of need. But by the present method of examination, this is out of the question. The testing-dock that the Navy Department will build is after an Italian design and similar to others that have been built abroad.

"The structure is really a long steel cylinder, or, it might be said, a huge bottle, which can be effectually sealed by putting a stopper in one end. This sturdy metallic bottle is big enough to receive a submarine, and strong enough to withstand a bursting pressure far in excess of that of the sea at the maximum depth to which the submarines are designed to sink. The method of operating is quite simple. The submarine is floated into the testing-dock, moored right at the wharf of the building yard where most convenient, and then the open end of the structure is plugged by a globular gate, caisson, or stopper, as you may choose to call it. The boat is held in place by suitable means and the steel bottle then filled with water so that the craft to be tested is thus completely enveloped by the fluid. Everything being in readiness, the pressure-pumps are started, and gradually the compressive force of the confined water is increased to the required degree.

"Observers, not as in the usual sea test, are inside of the submarine, and they can watch for developing leaks and make progressive tests of all operative mechanisms essential to the craft's security or safety when otherwise submerged. The observers inside of the boat are in telephonic communication with the engineers at the pressure-pumps, and upon the appearance of serious yielding of the hull or dangerous leaks, the pumps are stopt and the external pressure about the craft in this manner immediately relieved."

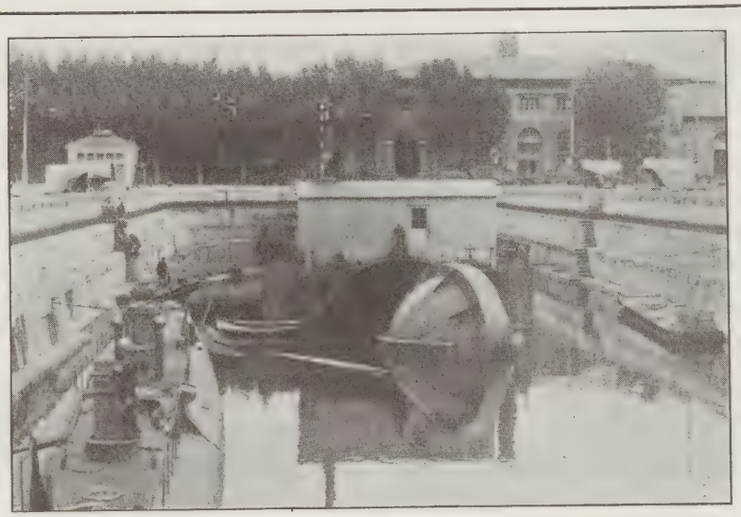
LAUNCHING THE NOVEL TESTING-DOCK FOR SUBMARINES—ITALIAN DESIGN.



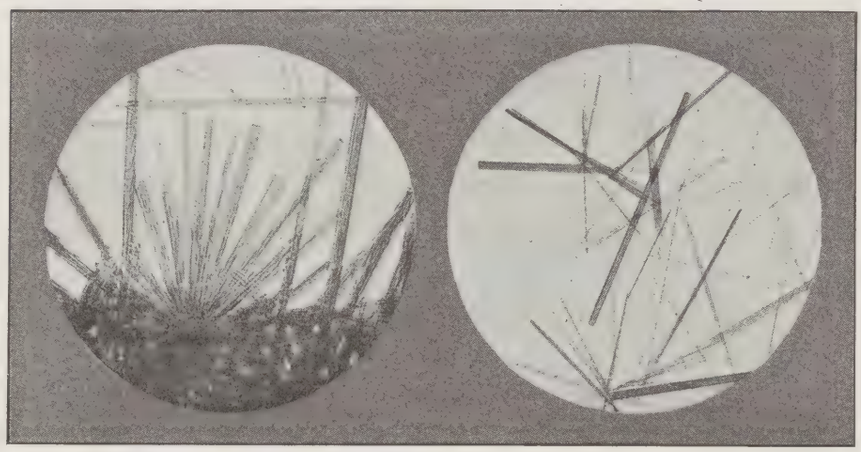
OPENING THE TESTING-DOCK TO ADMIT SUBMARINE ON THE LEFT.

WONDERS FROM PRESSURE—The simple application of pressure, provided it is powerful enough, is making chemists open their eyes. The behavior of chemical substances under high pressures is in some cases entirely different from that ordinarily observed. Under such pressures, salts decompose spontaneously into their component acids and metals, water yields its elementary gases, and peat consolidates into coal. Says *Energy* (Leipsic, Germany, July, English ed.):

"The application of very high pressures seems to be producing a positive revolution in the chemical industry. Only a short time ago, the report circulated that Haber had succeeded in causing elementary nitrogen and hydrogen to react at a pressure of 300 atmospheres and at temperatures varying between 500° C. and 600° C. A remarkable reaction belonging to this category was likewise discovered by Ipatiew, who succeeded in precipitating metals from their salt solutions by hydration under high pressure. Thus, starting with cupric sulfate, he obtained finely distributed copper and sulfuric acid. There is another interesting reaction in the decomposition of water under high pressure and at high temperatures in the presence of a metal, as, for instance, iron, which binds the oxygen separated. At the same time, hydrogen of very high purity is yielded. This new method of producing pure hydrogen is of especial interest at the present time, since this gas is used for many technical purposes in various departments. Among the various modes of production that have been announced of late, the new method is probably the cheapest. The production of artificial coal under high pressure is also one of the recent inventions. Cellulose or peat is heated up with water to 340° C. under a pressure of more than 100 atmospheres in apparatus especially constructed for the purpose, the resultant being a product identical with mineral coal, both from a physical and a chemical point of view. At 310° C. the process requires 80 hours, at 340° only 8 hours are necessary for the transformation."

IS LIGHT DIVERTED BY GRAVITY?

IN THE OLD DAYS when light was considered to be a tenuous form of matter, scientists would doubtless have answered this question promptly in the affirmative. If a ray of light is a stream of particles, these particles ought to be affected by gravity. In other words they ought to have weight, tho it might be so slight that it could not be detected. Later, when light was recognized as a wave disturbance, the answer would have been quite as decidedly in the negative. A wave, as distinguished from the medium in which it is propagated, is not material and can have no weight. Recently, however, the so-called "principle of relativity," which has caused so much scientific controversy, has been asserted by some to involve the deviation of an ether-wave passing near a gravitating body. We learn from the *Revue Scientifique* (Paris, August 2) that there is a probability of testing this theory by observation in the near future. We read in this paper:



BLOOD CRYSTALS OF THE DOG. BLOOD CRYSTALS OF THE JACKAL.

"Several years ago, Einstein, relying on the theory of relativity, advanced the hypothesis that a ray of light might undergo deviation simply from its passage through a sufficiently powerful field of gravity. Since that time, this scientist has insisted that astronomers possess the means of testing the truth of this hypothesis. Quite recently Mr. A. Curtis has published an interesting study whose principal points are as follows:

"The observations suggested by Mr. Einstein consist in determining the variations of the apparent distance of two stars in the neighborhood of the sun during a total eclipse. . . . According to Einstein's theory . . . a light ray grazing the disk of the sun would be diverted about nine-tenths of a second of arc, the effect being to increase the angular distance of the star from the sun. . . . These increases, altho very slight, are nevertheless quantities that it is possible to measure on photographs made with instruments of sufficiently long focus.

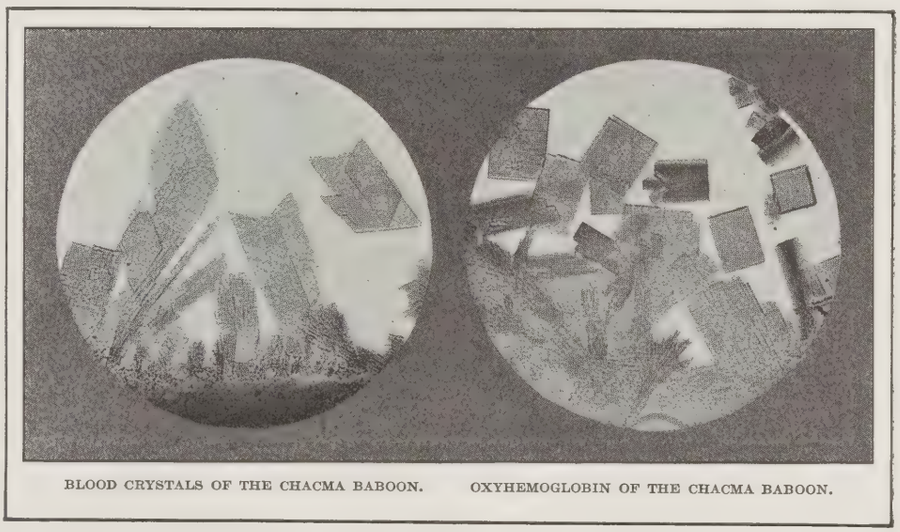
"Probably, up to the present time, the only material that would have served to test this hypothesis is the series of plates made during the search for an intra-Mercurial planet by the expeditions organized by Lick Observatory on the occasions of the eclipses of 1901, 1905, and 1908.

"Unfortunately, the attempts made so far have been unavailing; the plates were made for another purpose and do not admit of precise measurement, for the sun's image is on the edge of the plate, and the telescope was adjusted to follow the sun's motion, instead of that of the stars, so that the stellar images are not points."

It is proposed, the writer tells us, to take photographs during the eclipse of August, 1914, visible in Russia and Sweden, which shall be specially adapted to this kind of measurement. Mr. Curtis has studied the situation and has determined the stars that it will be best to use for this purpose. By the end of next year we shall probably know whether Einstein's somewhat startling theory that the transmission of light is affected by gravity is upheld by experimental evidence.—*Translation made for* THE LITERARY DIGEST.

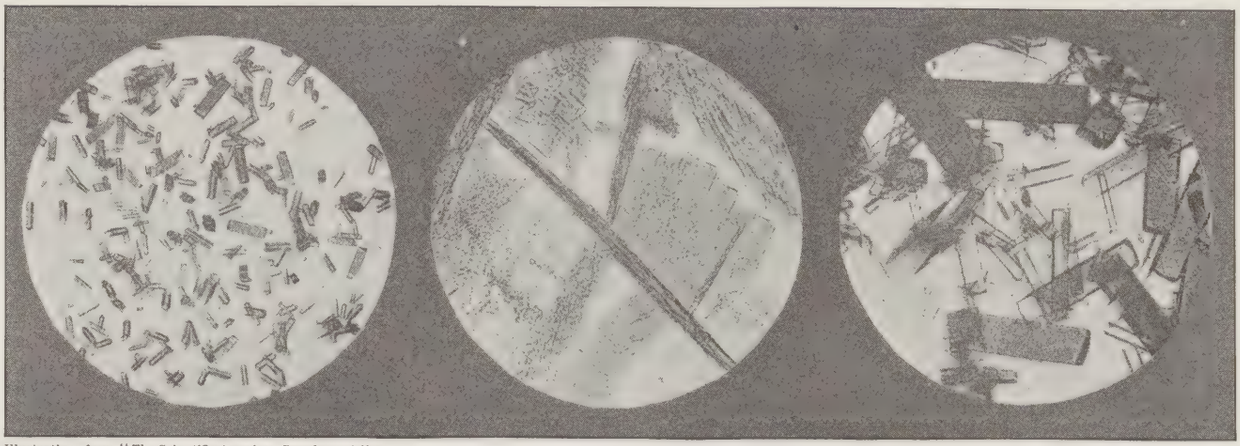
BLOOD CRYSTALS

BLOOD IS A MASS of tiny bodies, generally called corpuscles or globules, swimming in a colorless fluid known as serum. Most of the corpuscles are red, and these give the blood its characteristic color. The red corpuscles are the valuable parts of the blood, and their coloring matter—hemoglobin—is what makes them valuable, for it is the carrier of oxygen from the air to the tissues. It has recently been found that the crystals formed by hemoglobin under favorable circumstances—known for a half century, but not carefully studied until now—assume forms that are characteristic of the source, being different in different animals and in man, even in cases where the globules themselves can not be told apart under the microscope. This discovery was more briefly treated in our issue for September 28, 1912, with illustrations that might supplement those presented here. As then noted, this test, curiously enough, can not distinguish between the blood of man, ape, and monkey, but can distinguish between the different races of mankind. The significance of the series of experiments is noted in *The Scientific American Supplement* (New York, August 23), from which we quote as follows:



BLOOD CRYSTALS OF THE CHACMA BABOON. OXYHEMOGLOBIN OF THE CHACMA BABOON.

"It has been known since 1840 that under suitable circumstances, the red coloring matter of the blood can be caused to crystallize. Since then the observations originally made by Hünefeld have been repeated by a number of later investigators. But the most modern and most complete investigation of the subject is recorded in a volume published by the Carnegie



Illustrations from "The Scientific American Supplement."

THE BENGAL TIGER. THE CAT. THE LION.

BLOOD CRYSTALS OF THE FELINES.

Institution of Washington in 1909, containing the report of a classical series of investigations, carried on by Prof. Edward Tyson Reichert, Professor of Physiology in the University of Pennsylvania, in conjunction with Prof. Amos P. Brown, Professor of Mineralogy and Geology in the same university. That a mineralogist should have been collaborator in this series of biological researches is not surprizing when we remember that much of the work consisted in the examination and measurement of crystals. The method finally adopted by Reichert and Brown consisted in first of all adding oxalate to the blood to prevent its coagulation; then laking the product with ethyl ether, and centrifugalizing. The process had to be modified more or less according to circumstances. For instance, in many cases the blood employed was obtained from specimens forwarded from zoological gardens, and no longer quite fresh at the time of receipt. In such cases proper allowance had to be made for a certain putrefaction which had occurred in the blood.

"We have had occasion to mention the legal importance of blood test in criminal cases where blood-stains are brought in evidence of guilt. But as was pointed out then, a test which relies merely upon the identification of the particular kind of blood-corpuscles is very uncertain, owing to the fact that at the best, that is to say in their fresh condition, blood-corpuscles from different sources are often difficult to identify, and other tests also are apt to be unsatisfactory. Now the work of Reichert and Brown has furnished a very highly refined means, by which it is possible to differentiate with great precision between the blood from different animals. A crystal is a body with perfectly definite properties, which can be measured accurately.

"But while the application of blood crystallography to the prosecution of the criminal is of obvious practical importance, to the scientific man there can be no doubt that the supreme interest of the work of Reichert and Brown lies in the light which it sheds upon biological problems. Thus it is found that related species of animals display their family character by certain similarities in their blood crystals. This furnishes us with a test which we can apply in doubtful cases, and indeed, new as the method is, instances have occurred where a test thus applied has either brought to light an unexpected relationship, or else has settled a disputed point. Thus, for example, it has been found that the blood of the guinea-fowl differs very considerably from that of the domestic fowl, to which this bird was supposed to be related. It is found, on the contrary, that the guinea-fowl appears to be a close relative of the ostrich. Similarly, there has been considerable doubt as to the exact relationship of the bear as compared with certain animals, as the dog, the wolf, the fox, etc. The blood test has proved conclusively that the bear is closely related to the sea-lion and seal, rather than to the animals just mentioned, as indeed had been suspected by certain naturalists.

"While even now the work of Reichert and Brown has borne remarkable fruits both for the criminal lawyer and for the biologist, we have every reason to expect that only a small part of the story has been told and that much remains for future development."

A TELEPHONE FOR THE NOSE

THAT THE NOSE is an important vocal organ no one can doubt who has suffered from stoppage of its passages. When these are perfectly free and clear, so that the voice has a ringing sound, a considerable part of the air used in voice-production passes through them. A French inventor has devised a telephone that uses a nose-piece as well as a mouthpiece, with its separate microphonic transmitter; and the result, as he claims, is greatly to improve the clearness of the voice, as heard in the receiver. Ability to talk intelligibly over long distances is especially improved, he asserts, by the use of his "intensive" telephone, as he has named it. We translate below a description of the instrument contributed by Jacques Boyer to *Cosmos* (Paris, July 3). Says this writer:

"Hitherto, technicians have striven to increase the clearness of telephone transmission either by careful attention to the electromagnetic sensibility of the microphones, or by automatism, or by modifying the electric controls and conductors. But no investigator has dreamed of deducing useful improvements of the telephone from a study of the human voice. Starting from physiological considerations of this kind, Dr. Jules Glover has invented a device by which he obtains a considerable amplification of the sound, as well as perfect clearness of the words, so valuable in long-distance conversation.

"As, in the telephone, the current acts on the receiving magnet not by its own intensity, but especially by its vibrations, it is necessary, in order to bring about the precise sensitization of the inner ear, and the complete impression of the auditive centers, to endeavor to reproduce very exactly the modulations of the voice. Now, on issuing from the pharynx, the sound-waves reach the soft palate, which dissociates them into two unequal groups, one escaping from the nose, the other from the mouth. Therefore we ought to try to transmit both these groups of vibrations, but our ordinary telephones receive only those from the mouth, so that nearly half the voice remains unutilized. The fact may be experimentally verified by recording photographically the intensity of the variations of the microphonic current with an oscillograph, and also by examination of the vocal vibrations and their fixation on plates of bichromated gelatin. The prints and traces are different for the nose and the mouth, in the case of the same verbal formation.

"In Dr. Glover's 'intensive telephone,' the whole voice takes part in the elaboration of the electromagnetic phenomena. It is different from the ordinary devices in having two transmitters, or two groups of transmitters, of different sensitiveness, for the nose and the mouth. The whole is fixt at the two extremities of a tube. . . . . .

"Dr. Glover does not guarantee that the laws of diction will be perfectly respected by his invention, for with his new microphones the nasal transmitter works better than the vocal! But what difference does it make so long as the hearer understands better!"—*Translation made for* THE LITERARY DIGEST.

LETTERS AND ART

SHAKESPEARE NOT NEGLECTED

A TRAVELER in a Warwickshire railway-train once saw an octogenarian seated opposite, bending heavily over his thick stick, but obviously disposed to talk. A little encouragement brought him around to the point of unburdening himself. "Look at the weather we're having," he said. "Look at the weather we've had: look at the weather we're goin' to have—and all on account of Wullium Shakespeare." And after a pause: "We pay too much attention to that man, I'm thinking." The old Warwickshire native seems to belong to a large brotherhood of anti-Shakespearians; his state of mind and the peculiar logic thereof being akin to that "large section of the playgoing public," who, as set forth in the London *Times*, "tho they profess to appreciate the splendor of Shakespeare's genius, are openly and frankly bored by the performance of his plays, and some of them glory in their shame." "If they had their way, the stage would not be cumbered with Shakespeare's presence." Well, neither in America nor England do they seem likely to have in the coming season anything like the amount of their way that formerly they have grasped. Besides Sothern and Marlowe, Forbes-Robertson, and Mantell, the standby Shakespearians, John Drew, William Faversham, Margaret Anglin, and Annie Russell will interpret the Bard of Avon. Then, too, the very home of Shakespeare will send us the Stratford Players, under the lead of Mr. F. R. Benson. So they, along with *The Times*, must believe it is a mistake to think that there is no public for Shakespeare. We read on:

HE WILL BRING THE STRATFORD PLAYERS.

Frank R. Benson, an English Shakespearian star, who will come to America this season for a long tour.

"By the production of selected plays Irving and Miss Ellen Terry found it possible to fill the pit as well as the stalls of the old Lyceum with a critical and discerning audience, for whom Shakespeare spelled real enjoyment—dramatic, emotional, literary, poetical, and artistic. At His Majesty's Theater for the last few years Sir Herbert Tree has been able to do much the same thing with the lavish and splendid productions of his annual festival season. Mr. Granville Barker, Mr. Bourchier, Mr. Asche, and others whose attentions to the plays have taken the form of passing flirtations rather than of permanent attachments, have also not lacked a following, and have even sometimes enjoyed remunerative runs. But, as the devout lover, Mr. F. R. Benson stands above and apart from them all. For nearly thirty years, in the teeth of many difficulties and discouragements, he has been faithful to his ideal of presenting Shakespeare, for all who have eyes to see and ears to hear, and presenting him whole. His worth has been ignored by the politely indifferent and belittled by the cynically superior. Often, in spite of the loyal and generous support of the governors of the Memorial Theater and others, it has been hampered by financial anxieties. But, through evil repute and good repute, it has gone on and prospered, and during the last few years his efforts and those of the Stratford-upon-Avon Shakespeare Memorial Association have begun to be recognized at their proper worth."

It is now thirty-nine years, we are reminded, since the Association was founded, and thirty-four since it was publicly inaugurated on the 315th anniversary of the poet's birth:

"At first it had to contend not only with indifference, but with contempt. 'Much Ado About Nothing' (with Barry Sullivan, Miss Wallis, and Mrs. Theodore Martin in the principal parts) was the play chosen for the opening performance, and 'Much ado about nothing' was the general verdict of the critics of the day. In some quarters it was considered absurd and improper that Stratford should rush in where London and the rest of the country feared to tread. Public opinion on 'the ridiculous aspect of this lofty enterprise' was not unfairly reflected in the scathing comment on the whole scheme published at the time in an important London newspaper. It was characterized as presumption on the part of the founders—'an estimable local clique'—that they should ask the public to recognize 'this little friendly society as a national enterprise.' They were told that to do so was an abuse of the public patience and an insult to the memory of Shakespeare. 'A "monument," forsooth! A "memorial," quotha!' said the scribe, and proceeded, 'in the name of common sense and common propriety, in the name of the national dignity, in the name of the veneration which all Englishmen should feel for the memory of William Shakespeare,' to protest 'distinctly and indignantly against the whole paltry and impertinent business.'

"Since those words were written, obviously in the heat of the moment, a third of a century has passed. In that time the Stratford Shakespeare Association, founded on the rock of the proper appreciation of the value of Shakespeare to this country and the world, has weathered many storms. It has proved also that it is a living and growing organism. Under the auspices of the present governors, Mr. Benson and the Stratford-upon-Avon Players will start next month on a prolonged tour through Canada and the United States. Their repertory will consist of fourteen of Shakespeare's plays, including the entire text of 'Hamlet.' So many Canadians and Americans have visited Stratford and seen them play on their native stage that they would in any case be assured of a cordial welcome. But if they were going as complete strangers their success would be no less certain. For right through the company the general standard of acting is exceptionally high. The modern stage draws a large proportion of its best actors from the practical school of the Benson companies, whose former members have done and are doing excellent work in many of the

principal theaters of the English-speaking world in plays of every kind. But as long as they remain at Stratford their specialism is Shakespeare, and as a company of specialists they naturally know their business rather better than the rest of the acting world, who do not concentrate on one particular form of art. Between them the Stratford Shakespeare Memorial Association, Mr. Benson, and his company of Stratford-upon-Avon Players have in fact done a great work for the memory of Shakespeare, with very little help from the outside world. When the tercentenary comes it may be taken for granted that at Stratford the festival celebrations will be conducted in a way worthy alike of the nation's heritage in Shakespeare and of the past record of the town in which he was born. We wish that it were equally certain that the country at large will in the course of the next three years take steps to follow the example that has been set them by Stratford's 'estimable local clique' and the Benson company."

HAVE THE DEAD LITERARY RIGHTS?

WHEN THE FOUR LETTERS of Charlotte Brontë to Professor Heger were recently brought to light in the columns of the London *Times*, there were a few voices raised in protest, but they were not strong enough to prevail against the approval uttered by higher literary personages. There is now to be heard a more resonant note from Mr. George W. Smalley, who writes from London to the New York *Tribune* his opinion of "the disservice" which the great British daily, which he has served for long periods in past years, has done the memory of a great Englishwoman. By this act, he declares, is raised again, and raised very sharply, "the question whether the dead have any rights which the living are bound to respect." Two of the letters—treated in THE LITERARY DIGEST of August 30—"lay bare a woman's soul," and as you read them you ask: "Could Charlotte Brontë, could any woman, have written them if she imagined they would ever, for any reason or in any circumstances, be given to the public?" Mr. Smalley reviews the case as he sees it:

"Hers was a nature of singular self-concentration and reserve. When she gave her confidence she gave it completely. She gave it to Heger. She trusted him. It can never have occurred to her that he would betray her trust. She did indeed suspect that her letters might fall into wrong hands if sent by post, and she therefore sends them by a friend, to be delivered to him personally. She omitted no precaution of privacy. But it does not seem that she took account of what might happen after Heger's death; and of what has happened. So little value did he set upon the letters that he scribbled on one of them—the one which to most men would have been most sacred—the address of a Brussels shoemaker. Then he tore them up. The fragments were rescued—it does not appear by whom—and pieced together with paper and string. Whether they came to Madame Heger's knowledge is not clear. She was the woman against whose prying Charlotte tried to safeguard herself. She was the original of *Madame Beck* in 'Villette.'

"But upon Constantin Heger's death they passed into the care of his son Paul. For long years they were supposed to be lost. Garbled extracts from them appeared in Mrs. Gaskell's 'Life of Charlotte Brontë.' Finally Dr. Paul Heger, former President of the Royal Academy of Medicine of Belgium, Commander of the Order of Leopold, LL.D. of St. Andrews, and member of the British Association, took counsel with Mr. Marion H. Spielmann, a writer on art, and upon his advice offered the letters to the British Museum, which accepted them."

Mr. Smalley proceeds to state what grounds, if any, exist in justification of the publication:

"It was not with Dr. Paul Heger a question of money. No reproach can be addrest to him on that score. He declined all compensation, whether from the Museum for the letters themselves, or from the publication of them. But he authorized Mr. Spielmann to publish them, in *The Times* or elsewhere; 'knowing that you will act with the delicacy that the situation requires!' Whatever money was paid for them was to go, on Mr. Spielmann's suggestion, to the Royal Literary Fund of Great Britain. It is not quite clear whether Mr. Spielmann himself was to profit, or did profit, by his services as intermediary and by his editorship of the material, including Dr. Heger's letters to him on the subject. Nor does that much matter. Dr. Heger writes at some length. He thinks that the letters ought to be in the possession of the writer's countrymen. He considers further that they ought to be published in order 'to put an end,' as *The Times* remarks editorially, 'to all gossip and speculation about the relations between his father and Charlotte Brontë.' Dr. Heger himself says:

"'There is nothing in these letters which is not entirely honorable to their author or to him to whom they are addrest. It is better to lay bare the very innocent mystery than to let it be supposed that there is anything to hide. I hope that the publication of these letters will bring to an end a legend which has never had real existence in fact. I hope so, but legends are more tenacious of life than simple reality.'

JOHN DREW AT SIXTY,

Going back to Shakespeare, renounced since his severance from Mr. Daly's company in 1892. He is seen here as *Benedict*, in "Much Ado About Nothing," with Laura Hope Crews as *Beatrice*.

"I do not know what title Dr. Heger has to pronounce on such a matter of judgment which he evidently intends to be taken as final. There must be, in the great public to which Charlotte Brontë appeals, some who do not accept it. For me, I do not accept either Dr. Heger's opinion or Mr. Spielmann's as to the propriety of putting them into print. I can not accept even that of *The Times*, to which I should naturally defer. I write to you on the subject in order to challenge these judgments; to challenge them on both the grounds alleged as excuses for

Copyrighted by Elliott and Fry

MRS. ALICE MEYNELL,

Who had a large following of supporters urging her appointment to the Laureateship after Mr. Austin's death.

publication, and in the hope that Charlotte Brontë's American public will dissent from them. I think a deplorable mistake has been made. It is unhappily irreparable. The mischief has been done. But it is still possible to point out that it is a mistake and why it is a mistake."

Overlooking the minor voices that have been raised in protest, Mr. Smalley refers to "the papers or writers who have spoken," who "seem to agree with *The Times* that the act is defensible, first, in the interests of literature, and secondly, because it lays finally to rest a scandal injurious to Charlotte Brontë." But—

"Two men, and so far as I know two only, with a certain position in the world of letters, but neither of them such a great authority, have lent their sanction to this proceeding. They are Sir W. Robertson Nicoll, editor of *The British Weekly*, whose nature is perhaps rather robust than delicate, and Mr. Clement Shorter. Mr. Shorter has long specialized in the Brontés. Into matters concerning the Brontë family he has for years made a critical research. He bought from Charlotte's literary executor all legal rights in her unpublished correspondence. He has edited Mrs. Gaskell's 'Life of Charlotte Brontë,' and has written some half dozen volumes on her and her family. He may be deemed a sort of trustee for the posthumous fame of her and her sisters; self-appointed, but pursuing his duties with zeal and with a knowledge of all the minutiæ of the subject. He bestows his blessing on these letters. They are, he holds, 'a complete vindication' of her and of her relations with Heger. Does he think they needed vindicating? There have been slurs, but only abroad; never in England, or never any of which any serious writer would take notice. Is, then, the purity of an Englishwoman to be the sport of a prurient Continental imagination, and is modesty to be put aside solely to dispel a non-existent belief?

"The renown of a great writer is a possession forever. It is one of the chief glories of a nation and of a race. Charlotte Brontë has taken her place in English fiction: that permanent place which is conceded to genius only; and always reluctantly to a woman. But is this immortality to be a thing apart from the personality of the woman? Is the author of 'Jane Eyre' to be treated with a reverence denied to Charlotte Brontë? Would she have bought her fame at that price? Is one to be sacrificed to the other, and needlessly sacrificed? If she were living could the letters have been printed? She died at thirty-nine, in 1855. Does the lapse of less than sixty years reverse the rules of morality, of the morality which ordains first of all respect for the woman because she was a woman? The answer to those questions is the answer to the suggestion that the revelation of a woman's private letters is or can be in the interests of literature. You can not divorce literature from morals. . . . It is a wrong there are now no means of redressing. All one can do is to protest. You can not compel people to forget. You can not quite restore the state of mind or the blissfulness of ignorance which prevailed before. And if you could, is it worth the price? I appeal to women, who are the surest judges for their own sex; which would they rather endure, the suspicion or the distress of such a vindication as this? I do not dream of questioning the good faith of *The Times* or the sincerity of its motives, but I think the publication of the letters a grave and melancholy error of judgment."

WOMEN AS ARTISTS IN POETRY

ONE OF THE THINGS people find to praise in the new Poet Laureate is his mastery of the science of verse. It has been his lifelong study and he has lately published a book on it. But years ago, it appears, he had a rival and a master at that game in Christina Rossetti. This at least is the contention of Mrs. Margaret L. Woods in *The Fortnightly Review* (August), who holds a brief for women poets as "artists in form." "Women are playing, and will play, their part in the revival of poetry which we all rejoice to see going on around us," she declares safely enough when we reflect that a woman, Countess de Noailles, is generally accounted the foremost poet of France to-day, and another woman, Mrs. Meynell, barely missed the English laureateship. The "Futurists" boast of no woman poet, and, indeed, one of the most prominent of Futurist mottoes is "Méprisez la femme" [Despise the woman]. Mrs. Woods does not seem to mind her absence in this galley, since, having "turned to young Oxford—to young Balliol, to be particular," she was assured that "the Futurists have no future. They are nothing but the last foam on the wave of Nietzschism." When it is declared—by men, it is to be supposed—that "women are deficient in literary form," Mrs. Woods nails the dictum as "one of those commonplaces which people repeat without once fixing their eye on the facts." For behold:

"The lyric form which remains unapproached and unapproachable in its gorgeous harmonies, in its winged rush, is the lyric form of a woman: Sappho's. No one, not even Swinburne, has ever been able to reproduce her verse. All antiquity hailed her as the greatest of the Greek lyrists, and in modern times it has been said of her: 'Never before these songs were sung, and never since, did the human soul in the grip of a fiery passion utter a cry like hers; and from the executive point of view, in directness, in lucidity, in that high, imperious verbal economy which only nature can teach the artist, she has no equal and none worthy to take the place of second.'"

Sappho was not alone the poet of her day. All Lesbos was vocal with the songs of women poets. If they have since ceased to sing in such numbers, Mrs. Woods can imagine that "after all, conditions may have had a good deal to do with the subsequent dearth of women poets." She argues thus:

"On the other hand, when one observes the large proportion of men of creative genius who have had poor health, one may

reasonably assume that the brain-storm we call Inspiration is a very real strain on a man's nervous system; and therefore that, other things being equal, you would less frequently find a woman's nervous system (which has always its own special strain to support) able to support it.

"But other things never have been equal. Our divine poets have never been required to carry on an arduous practical profession, to be manufacturers or general practitioners, and poets only with the fag-ends of their brains and in their odd moments. I say this in no forgetfulness of the official side of Goethe or the theatrical side of Shakespeare. Chaucer used to be quoted as a hard-working, conscientious government official. But it has transpired that Chaucer was sacked for incompetence—if nothing worse. The more intimately we know the social life of the past, the more we realize the tremendous arduousness of the profession of being a woman, up to a quite recent date. The production of children, from one dozen to two, was but a corner of her activities. Look at the drawings of Hans Holbein; the most veracious work of the most veracious portrait-painter that ever existed. They show us the faces of the young wives of men of rank and wealth; charming, gay, or serious schoolgirl faces, not unlike those of our twentieth-century daughters. Then they show us the faces of the middle-aged wives; and they are like those of keen, perhaps of hard, even of coarse men of business. Why? Because in those days every woman had to be, according to her circumstances, a hand, a forewoman, or a manageress—or all three at once—in a going, an always going business concern. Every private house was a manufactory and a surgery as well. Those were good days enough for the vigorous, capable, practical women in whom our race abounds. But the best thing the women poets could do was to die young; and I suspect they did it. Yet probably a good many women before Lady Anne Lindsay, the writer of 'Auld Robin Gray,' and Miss Jane Elliot, who wrote 'The Flowers of the Forest,' had contributed to our store of folk-literature."

Tennyson, it is asserted, was proud of his "Tears, Idle Tears," as a "song in which no one noticed the absence of rime," but Mrs. Woods sets against this a poem from "The Bard of the Dimbowitza," a product of the school of women folk-poets of a remote district of Roumania, where "the women improvise as they spin together, passing the spindle and the song from one to another":

"There are songs in this book which from that point of view are more perfect achievements [than Tennyson's]. Such is the prelude—repeated at the end—of this little poem:

> "*Look not upon the sky at eventide,*
> *For that makes sorrowful the heart of man.*
> *Look rather here within my heart, and joyful*
> *Shall thine then always be.*"

> "To yonder grave there ofttimes came a woman,
> And said to it: 'Hast thou forgiven me?'
> 'Avaunt!' the grave made answer.
> Then weeping she would go her way, but going
> She ever plucked a flower from the sward.
> Yet still the grave would grant her no forgiveness.
> Then said the woman: 'Take at least my tears!'
> 'Avaunt!' the grave made answer.
> But as she weeping turned away and went,
> Behold, the gravestone would uplift itself,
> And the dead man gaze forth,
> Sending a long look after her, that woman,
> Who weeping went her way."

> "*Look not upon the sky at eventide,*" etc.

"I select this poem rather for its brevity than for any special beauty it possesses as compared to the rest of the Dimbowitza poems.

"When one speaks of 'The Bard of the Dimbowitza' as folk-literature, it must be remembered that it is impossible to know how much of it really is so, and how much belongs to the Countess Hélène Vacaresco, who is steeped in the life and songs of the people. As, however, it is of the English form in which these poems appeared that I would more especially speak, that secret is one I need not attempt to unveil. The volume appeared in 1892, and was signed by Hélène Vacaresco, Carmen Sylva, and Alma Strettell. The form is for the most part irregular blank verse, very original and beautiful in its cadences. The great public of the moment was not interested in poetry, and took little note of it, but it was much read and admired by literary people, especially those who made verses, and had a perceptible influence on the movement toward unrimed *vers libres* which has been going on for a quarter of a century or more. Altho it might be said that this is the form toward which the English language has always inclined, since magnificent examples of it are constantly before us in the Bible and Prayer-book. . . . . .

"The theoretic writings of Robert Bridges, to say nothing of his beautiful poems, have done very much to set people thinking on the real laws and liberties of English verse. But

COUNTESS DE NOAILLES,

Who is accounted by many judges the foremost living poet of France.

Christina Rossetti knew all that either by independent study or by intuition. While every literary critic in England was counting syllables or scanning feet, she was discovering for herself exquisite forms and cadences outside the critic's laws but within the poet's liberties. And Ruskin said that Christina's poetry was a disgrace to her distinguished brothers, and she ought to be prevented from writing. But how to prevent Christina from writing? If every other place were denied her, she would write on the corner of the washing-stand. The thing was impossible. So Christina continued to write; and, after all, the family was not disgraced. It gave us the only great religious poet we had had since the seventeenth century. For Keble I have never been able to regard as anything but a fluent clerical verse-writer who 'attuned his lyre' to the smooth melodies of his day and supplied a felt want—no longer, it would seem, felt. Christina Rossetti came to fill a curious gap in the women poets' ranks; and she filled it with a rush. For Elizabeth Barrett Browning could not be called a specifically religious poet, altho she wrote some religious poems. Of her as a versifier it is worthy of remark that she was a daring innovator and experimenter in several respects, but particularly in rime-forms. I have heard that Swinburne as a boy admired and studied her poems, especially on that account. But Mrs. Meynell stands much nearer to Christina Rossetti than Mrs. Browning, both in her spirit and her form. And here we have again a poet who admirably illustrates my contention, that far from being weak in form, women poets have excelled in it both by their originality and by the accomplished beauty of their workmanship."

RELIGION AND SOCIAL SERVICE

NEW SPIRIT IN CHURCH ARCHITECTURE

THE ONE most quotable and most quoted legacy of Milton—that line about "dim religious light," does not appear to suit the modern idea of churchliness. The modern church "should appear to welcome passersby, not repel them by its cloistral and secluded quality," declares Mr. Bertram Grosvenor Goodhue, who is one of the foremost of our younger ecclesiastical architects. The new St. Thomas's Church in New York, now nearing completion, is one of his designs. So also is the better known chapel at West Point, the Trinity Pro-Cathedral in Havana, and the chapel of the Intercession. In each of these Mr. Goodhue has exprest his conviction that "the church of to-day must extend its arms invitingly to the public," not, however, with the complete sense of modifying its sanctuary as a place apart. In *The Churchman* (New York) he gives this expression to his views:

"Sometimes, of course, the cloistral effect is needed—in a monastery, for instance. And the church must always have solemnity, but not coldness. I have tried in my work to express this quality of invitation, together with sanctity and a degree of magnificence quite undreamed of in my craftsman days."

He turns a backward eye over the comparatively short period of his own work to note the change that has come over the spirit of church-designing in this country:

"It is not so very many years since I started work, but the period has witnessed a great renascence, not only in ecclesiastical architecture, but in all the arts connected with the Church. And that means in all the arts, for Mother Church takes all the arts under her fostering care.

"This development is quite apart from the question of doctrine. The time when organ music was regarded as an instrument of evil is gone by. Only in rare cases do we find a still lingering prejudice against gold and color as 'un-Protestant.'

"In Pittsburg recently I completed a Baptist place of worship that proved to be one of my most interesting commissions. I was met with no demand to produce a meeting-house. Quite the contrary! A very cultured member of the committee said, 'Anything good enough for the Episcopalians is none too good for us!'

"And, as a result, the building has a 'chancel' with a quality almost sacerdotal. The organ, to be sure, a blaze of gold and color, is the principal feature that strikes the eye. But below it the arrangement of pulpit, reading-desk, communion-table, and baptistry, with its 'dossal' of green and gold, produces, I like to think, something of the reverential spirit one gets in so much greater volume in the medieval shrines abroad."

AN EXAMPLE OF THE WELCOMING CHURCH.

The new St. Thomas's, one of Bertram G. Goodhue's recent works, standing on Fifth Avenue, in place of the one destroyed by fire.

A FEMININE RELIGIOUS REVOLT

ARE THE CHURCHES losing their hold on women? This question is put by *The Christian Commonwealth* (London) after a study of modern feminine types in Winston Churchill's latest novel, "The Inside of the Cup." On August 16 we gave an outline of this story mainly from the point of view of the hero, the *Rev. Mr. Hodder*. Few novels of recent date receive such extended notices in the religious press, the implication in this particular case being that Mr. Churchill's is epoch-marking. Hence the question put by the Rev. R. J. Campbell's paper at the head of a study of "The Woman in Revolt." It is still a "deeply rooted masculine belief," points out the writer, "that religion is more a woman's affair than a man's, an ornament and dignity to the sex, an occupation to diversify her domestic life, a vocation when the kitchen and the nursery are closed to her." But against this one-time prevalent, uncritical estimate of woman's position is Mr. Churchill's heroine, a woman who "challenges the current religious teaching from the pulpit of St. John's and who stimulates *Hodder*, the rector of the church, to reconsider his conclusions in the light of their modern view of the world." Continuing the study:

"Quite early in his new charge *Hodder* is brought into contact with a woman member of his church, a sane, healthy, and vigorous personality, who confesses quite frankly that his presentation of Christianity does not convince her, tho she is puzzled by the authority and force with which he presents it. She can not believe in the doctrine of the Virgin Birth, the physical miracle involved therein seeming to her so useless. Then later another and much older woman disturbs and challenges him on the question of the Church's attitude toward divorce. *Hodder* held that the marriage bond is indissoluble, and is obliged to refuse her request that he would allow her divorced daughter's re-marriage to take place in St. John's.

"Not until *Alison Parr*, daughter of the millionaire banker, comes into *Hodder's* orbit, however, does he realize the deliquescence of the old traditions and sanctions of religion among modern women. Before he meets her he hears of her—from her father, who speaks bitterly of the 'nonsensical ideas about her sex' which she has imbibed, and from a friend who tells *Hodder* that '*Alison* is a person. . . . The most extraordinary thing about her is her contempt for what her father has gained, and for conventionalities.' With a touch of contempt this friend described the attempt *Alison's* father had made to get her to marry a smug, Pharisaical member of the Church: 'She would have led him a dance for a year or two, and then calmly and inexorably left him. And there was her father, with all

his ability and genius, couldn't see it either, but fondly imagined that *Alison*, as *Gordon Atterbury's* wife, would magically become an *Atterbury* and a bourgeoise, see that the corners were dusted in the big house, sew underwear for the poor, and fast in Lent.' To *Hodder's* question whether *Alison* is happy as she is, he gets the reply: 'She is self-sufficient, and that is just what most women are not in these days.'

"One Sunday morning *Alison Parr*, who has come home for a holiday, goes with her father to church and hears *Hodder* preach a sermon against materialism and individualism, into which he threw all the passion of which he is capable. *Hodder* lunches with father and daughter that day, and at the table is an almost silent witness of an outspoken and incisively worded debate between the other two. *Parr* claims that philanthropy and organized charity were never on such a scale as in the present age. And *Alison* tells him that charity and philanthropy, as they exist to-day, have very little to do with the brotherhood of man. 'So long as you can make yourselves believe that this kind of charity is a logical carrying out of the Christian principles, so long are your consciences satisfied with the social system which your class, very naturally, finds so comfortable and edifying. The weak and idiotic ought to be absurdly grateful for what is flung to them, and heaven is gained in the throwing. In this way the rich inevitably become the elect both here and hereafter, and the needle's eye is widened into a gap.' In the pagan garden she has designed *Alison* and *Hodder* discuss the same question which she and her father had handled at lunch. She tells the rector that his sermon interested her as she had not been interested since she was twenty, 'when I made a desperate attempt to become a Christian—and failed. . . . But why (she cried) do you insist on what you call authority? As a modern woman who has learned to use her own mind I simply can't believe, if the God of the universe is the moral God you assert him to be, that he has established on earth an agency of the kind you infer and delegated to it the power of life and death over human souls. . . . Can't you see that an authoritative statement is just what an ethical person *doesn't* want. Belief—faith—doesn't consist in the mere acceptance of a statement, but in something much higher—if we can achieve it. Acceptance of authority is not faith, it is mere credulity, it is to shirk the real issue. We must believe, if we believe at all, without authority.' She tells him that 'he and his religion are as far apart as the poles; in order to preach his doctrine logically, he should be a white ascetic, with a well-oiled manner, a downcast look lest he stumble in his pride or do something original that sprang out of his own soul instead of being an imitation of the saints.' Her provocative frankness and clear-eyed honesty goad him into introspective study of himself."

HE DESIGNS "INVITING" CHURCHES.

Bertram Grosvenor Goodhue, who declares that the modern church "should appear to welcome the passersby, not repel them by its cloistral and secluded quality."

The girl, *Alison Parr*, had "striven all her life to be free." She is very far from the acquiescent type, as we see in her further analysis:

"She hated humility, penance, asceticism, self-abnegation, repression, falling on her knees and seeking forgiveness out of all proportion to the trespass—these things threatened her possession of herself, 'the only valuable thing I've got.' In a senseless self-denial, she felt, she would have withered into a meaningless old maid, with no opinions of her own, and with no more definite purpose in life than to write checks for charities. 'Your Christianity commands that women shall stay at home, and declares that they are not entitled to seek their own salvation, to have any place in affairs, or to meddle with the realm of the intellect. Those forbidden gardens are reserved for the lordly sex. St. Paul, you say, put us in our proper place some twenty centuries ago, and we are to remain there for all time.' Obviously, a girl with this instinct of self-preservation could not feel safe in her father's house; his dominating personality and inflexible will clashed with hers, and she went away to study landscape-gardening and to save herself from extinction as an individuality. Her struggles for self-assertion had bred in her a sense of disillusionment and futility; what she had gained hardly seemed worth while. Her work satisfied only the esthetic impulse. It left her emotionally and intellectually unsatisfied.

"With *Hodder's* awakening comes revelation for *Alison Parr*. Naturally and inevitably she becomes a partizan when the conflict between *Hodder* and her father is precipitated, but her interest deepens and assumes a personal quality, and soon they both knew that love had come to complicate and yet to illumine their relations. Together they make their choice and refuse the millions of *Eldon Parr*, in order to follow the light which has broken in upon their minds and hearts. *Hodder* in successive talks makes clear the religious conclusions at which he has arrived, and is fortified and confirmed in them by the response her personality makes to his. 'Oh, I am proud of you,' she cries. 'And if they put you out and persecute you I shall always be proud. I shall never know why it was given me to have this and to live. Do you remember saying to me once that faith comes to us in some human form we love? You are my faith. And faith in you is my faith in humanity, and faith in God.' And that passionate declaration proves that *Alison Parr* was still a woman, tho she was in revolt against an interpretation of religion and life too small for her capacity of soul and intellect."

THE VICE-PRESIDENT AS PREACHER—Nearly all our recent Presidents and some of our Vice-Presidents have figured as preachers or religious teachers during their occupancy of the Presidential chairs, so it is not departing from custom to find Vice-President Marshall, tho a Presbyterian, exhorting at a camp-meeting of Virginia Methodists. More startling than his motor-car costume, says the Brooklyn *Eagle*, was his reversal of Scripture to read "the sins of the children shall be visited on their parents," in the development of which text he applied a corrective for some things that are puzzling to a large contingent:

"Children are sent to Sunday-school for a part of Sunday; to regular schools for a part of five days a week, and the rest of the time they are forgotten, and they do as they please. It is high time for American fathers and mothers to have opinions on religion. You wonder why the turkey-trot, the tango, and the slit skirt exist. I say it is because the mothers of the country are not interested in training their children."

The Eagle indicates some other points touched upon:

"After tracing a connection between the teachings of the Master and the teachings of Thomas Jefferson, Thomas Riley Marshall finds that 'there is no freedom anywhere where there is

not a clear conscience, free from fear of God and man.' He adds: 'This country of ours is living a beautiful practical Christian life in many ways—in many ways, I say—but there is too much tendency for men to counsel with sharp lawyers as to what they can do and still keep out of jail.'

"Many church members will agree with much of what the Vice-President says, if not with all of it. On the whole, he is resisting temptation, subjecting himself to restraint, when he keeps so close to the beaten paths of theology on such an occasion."

THE JEW'S FABLED WEALTH

"RICH AS A JEW" is a byword from time immemorial, and the belief that the race are the possessors of enormous wealth appears in "antisemitic creeds and, sometimes, in our own unguarded boasts," says Max Heller in *The American Israelite* (Philadelphia). Publicists and writers in the past and present have fostered the idea, explains this writer; while at the present moment the claim is reiterated in the English translation of Werner Sombert's work "Die Juden und das Wirtschaftsleben" (The Jew and Agricultural Life), published in 1911, that "the Jews have been the world's capitalists from immemorial times and that their wealth has been handed down continuously, from generation to generation, down to our day." The present writer dissents entirely from the view, citing in support Dr. Ignaz Zollschan, author of "The Race Problem," to the effect that "the descendants of the Spanish-Portuguese Crœsuses have either long ago disappeared in Christianity or else are leading a wretched existence in Oriental mellah or Polish ghetto." Mr. Heller, in addition to pointing out the impossibility of the claim, asserts that Jewish ambitions have taken other directions:

"Zollschan might have added that few things are more sharply characteristic and, therefore, more easily proved or disproved than the continuity of wealth. If such an absurd possibility were, indeed, conceivable as the continuity of wealth, unsupported by landed estates, among a people of haunted existence and unprotected rights, if one family could be imagined that had retained a large fortune from Solomonic times or for even so much as, let us say, two or three centuries, there would have to be evidence, in the possession of family jewels, family portraits, family plate, family library, of that settled and mature prosperity which never fails to leave these visible heirlooms of ancestral comfort and culture. How is it that just one family of Jewish millionaires, the Rothschilds, has attained to its centennial, that not one other wealthy family in all Jewdom can point to as many as four or five generations of real wealth? How does it come that while hundreds of our Polish and German families trace their descent centuries back, to famous scholars, like Mahram, Schiff, Moses Isserles, and others, while among the Spanish Jews there are those whose genealogies go back unbrokenly for centuries to the Abrabamels, the Mendes, the Teixeiras, and so forth, there is not, outside of the Rothschilds, one wealthy Jewish family that can boast wealthy ancestors for so much as one century?

"Nor can this fact be explained from the constant shifting and wandering of the Jew. There are ghetti, like those of Amsterdam, Frankfort-on-the-Main, Prague, Venice, especially Rome, in which Jews have lived continuously for many centuries. In these ghetti there are numerous families which trace their descent to scholars and within which traditions of scholarship and piety have continued through many generations. How is it that the powers of accumulation, the talent for acquiring and retaining wealth, have not, in a single instance (except the one unbroken century of the Rothschilds), shown a similar persistence? There is only one possible answer: Because the disposition toward spiritual culture is rooted far more deeply in the Jewish soul than is the love of possession or of material comfort.

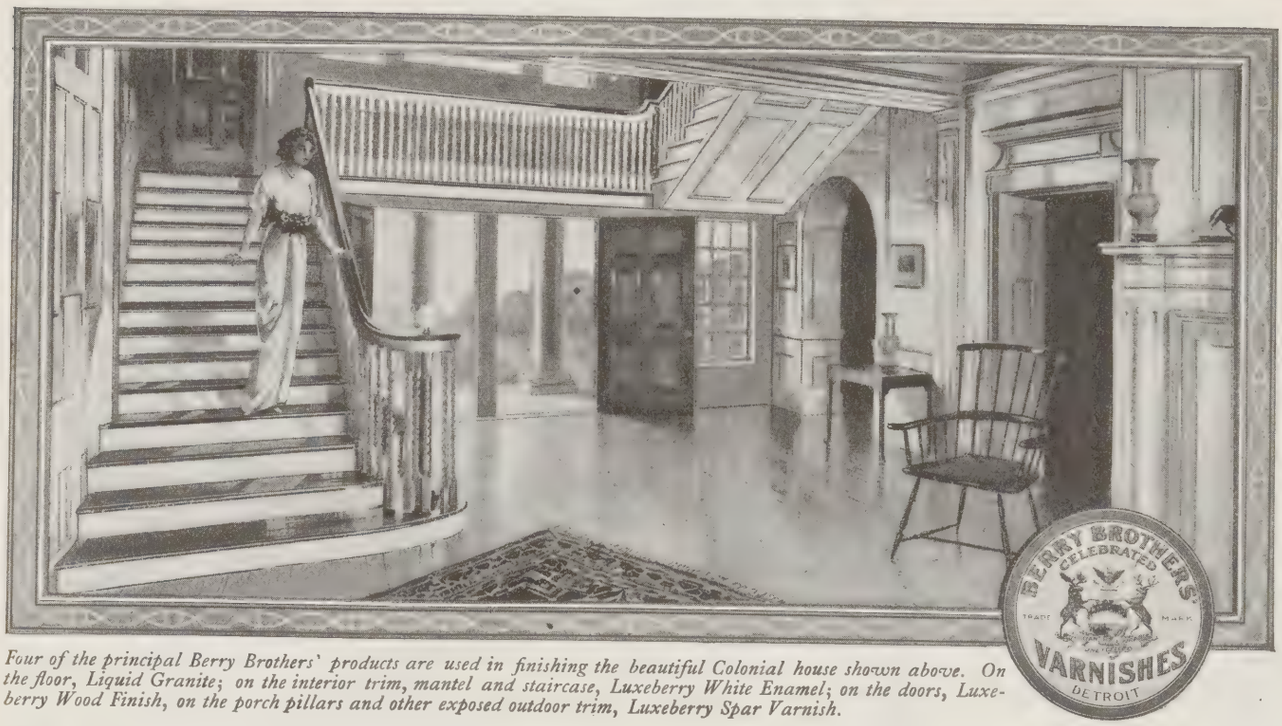
"Zollschan, however, animadverting upon the real significance of Jewish wealth, calls attention to other important facts. As to the indescribable poverty of the Jewish Orient, that has, by this time, become a thrice-told tale. Two facts, however, are not so frequently adduced: the one that, as Zollschan put it: 'The Jewish people, like every other people, is comparable, in its social stratification, to a pyramid; but, contrary to conditions elsewhere (excepting, we might reserve, similar evils in our own country), the diminishing top with us is continually breaking off through baptism and intermarriage, such apostasy and union of our upper classes being tantamount to a revindication of Jewish capital so extensive that recently a statistician (Rachfahl) has put forth the, after all, exaggerated estimate that as much as 70 per cent. of the capital acquired by the Jews becomes dejudaized again.'"

In the Middle Ages there were means other than these natural ones for transferring to other hands the Jew's wealth. The Church and State, says this writer, did not keep him waiting long, "before they had spied him as a ready-made victim for taxation, oppressive legislation, and exploitation of every sort." Coming down to modern days, those who "clamor, in books and magazines, about Jewish conquests and invasions," continues Mr. Heller, overlook another economic fact:

"It happens very frequently, in Russia, Galicia, Bohemia, Germany, that, when the Jews have succeeded in thoroughly systematizing some line of manufacture or trade, they are crowded out, in the end, by the non-Jew who has learned their methods and who displaces them with ease. In Bohemia that seems to have been the story in many instances, so that, to-day, the Czech is, by many, regarded to be the Jew's superior in commercial acumen; in Germany, according to Zollschan, who designates this symptom as 'the law of dispossession,' the Jews have been totally crowded out from the chemical industries. That the house of Rothschild does not to-day occupy the paramount position it once held in the world of finance is matter of common knowledge.

"Nor must it finally be forgotten that of all the baseless slanders that have ever been hatched out against the Jew, the most pitifully false is that which represents Jewish capital as a solid national asset, lined up in serried array for the progressive domination of the modern world. The beer-hall anti-Semite, drawing upon a riotous imagination, may picture mankind as the shackled slave of Jewish gold; a Prof. David Starr Jordan, vociferous champion of disarmament, arbitration, peace, may rehash, in convention and from lecture platform, all the stupid lies about a set of thirteen Jewish banker-families dictating war and peace, stimulating armament, piling up national debts; a pseudo-scientific economist, like Sombart, may paint the Jew as the inventor and the master-spirit of capitalism, which threatens to dry up the very soul of mankind; the patent and obvious fact, as evidenced beyond all dispute, in innumerable instances, is: that the Jewish banking-houses, both the baptized and the unbaptized, not only do not operate as a solid whole,but have not the shadow of a mutual understanding, even when a Russian or Roumanian loan is to be obstructed; that the Jewish banker in Germany, France, England is forced, from patriotic consideration, to act, even to the detriment of his brothers, in the interest of the country to which he owes allegiance; that, therefore, the vast capital in the hands of individual Jews is only to an insignificant extent available for the righting of the wrongs, for the mitigation of the miseries which are being inflicted upon us. The possession of money is, in some senses, a source of weakness, as the ownership of land is a mark of solidity and distinction; capital is constitutionally timid; the landowner is the genuine possessor the permanence of whose wealth partakes of the inalienable character of its substance.

"We may look forward to much deep-rooted mischief from the brilliant volumes of Houston Stewart Chamberlain which, in their English dress, have had at the hands of the British and American public an even friendlier reception than what they met with in the cradle-land of the anti-Semitism they preach. The subtle and sustained appeal they make to Teutonic pride and Anglo-Saxon conceit will contribute powerfully toward commending their skilful misrepresentations and specious arguments. The Sombart book is not likely to make many converts to anti-Semitic views; that the Jew is the arch-capitalist, the world's organizer, the money-power of all history, of all this it will not be easy to persuade the country of Rockefeller and Weyerhaeuser, of Carnegie, the Vanderbilts and the Goulds. Still there is a sinister meaning to the fact that, decades ago, the invectives of Duehring, Treitschke, and Stoecker could never find admiring translators or an eager public in the English tongue and aroused but feeble echoes, even when they had a mouthpiece as eminent and able as Goldwin Smith. Perhaps the Chestertons and Bellocs, the vaudeville stage and the magazine sensation may have been preparing the soil for a friendlier reception of the fanciful tale."



Four of the principal Berry Brothers' products are used in finishing the beautiful Colonial house shown above. On the floor, Liquid Granite; on the interior trim, mantel and staircase, Luxeberry White Enamel; on the doors, Luxeberry Wood Finish, on the porch pillars and other exposed outdoor trim, Luxeberry Spar Varnish.

LIQUID GRANITE
A floor varnish whose name suggests its wonderful durability. Gives a beautiful finish, unaffected by wear or water. The best known and most widely used of all varnishes.

LUXEBERRY WOOD FINISHES
For the finest rubbed (dull) or polished finish on interior woodwork. Woodwork 30 years old finished with this splendid varnish is still fresh and bright.

LUXEBERRY WHITE ENAMEL
Unequalled for white interior finishing—stairs, hallways, bathrooms, as well as white furniture. Gives a rich lustrous surface of exceptional beauty. A white enamel that stays white.

LUXEBERRY SPAR
(It's Waterproof)
So called because originally used for marine work—for masts, spars, decks and hulls of boats. Now widely employed for all kinds of outdoor finishing exposed to the weather. Will not turn white, and it never checks nor cracks.

For Every Varnish Need—Berry Brothers' Varnishes

NO matter what your varnish requirements are—interior or exterior, for whatever purpose—Berry Brothers can furnish you the varnish that is best adapted for that use.

Don't buy "just varnish." Let us help you choose the right varnish for your requirements. Don't think that any varnish will do for any purpose. Floors require a different finish from bookcases, and outdoor work, exposed to the weather, needs a different varnish from stair rails.

Fifty-five years' experience has taught us how to make the right varnish for every purpose. We make all kinds; we make them right—and varnish buyers have come to know and trust us. That is why we have grown to be the largest makers of varnish in the world.

That is why the Berry Brothers' label on your varnish can guarantees not only satisfactory appearance, but durability and ultimate economy.

Solve your varnish problem by buying or specifying Berry Brothers. Any dealer can supply you.

Send for our "Homebuilders' Booklet." Interesting, instructive and free for the asking.

Berry Brothers, Inc.

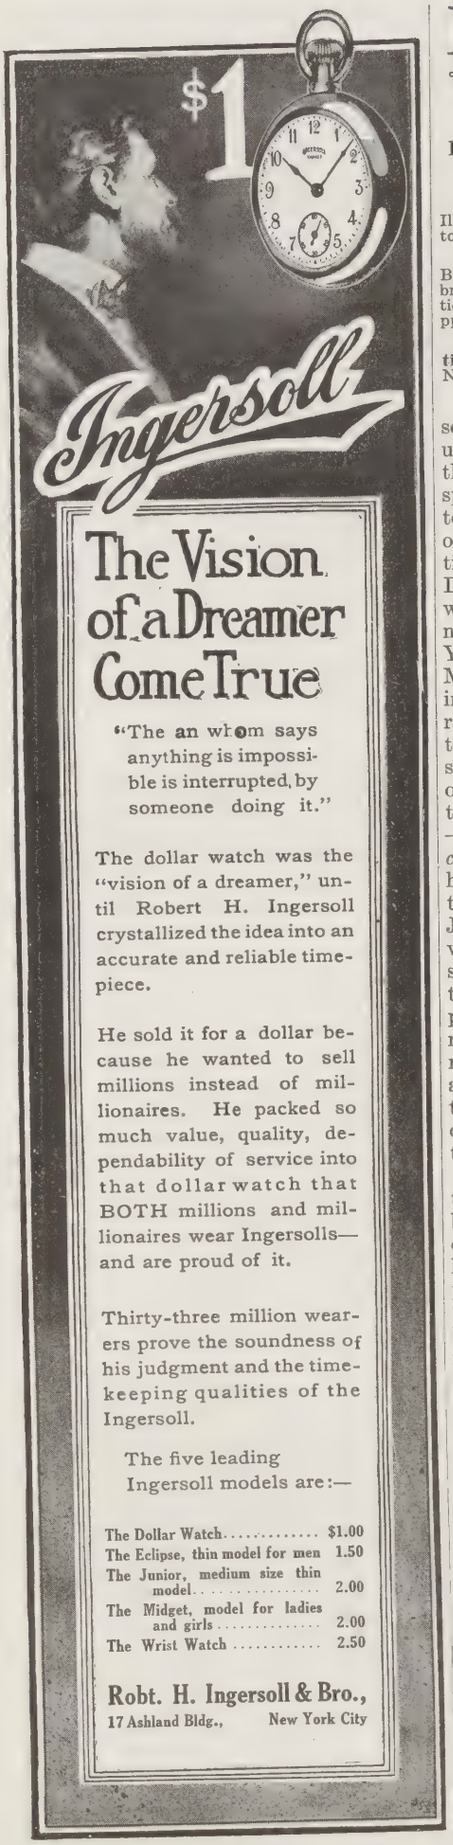
Largest Varnish Makers in the World *Established 1858*

Factories:—Detroit; Walkerville, Ont. *Branches:*—New York, Boston, Philadelphia Baltimore, Chicago, St. Louis, Cincinnati, San Francisco

"Berry Week"—the Time to See Your Dealer About Varnish

From September 13 to September 20 will be ***"Berry Week"*** in the leading stores throughout the country handling varnish, paint and similar goods. Dealers will devote special attention to the sale of Berry Brothers' Varnishes. They will have varnish displays on exhibition. They will be unusually ready and able to discuss varnish problems with you.

Take advantage of ***"Berry Week."*** Learn more about varnish. Plan for your fall repairs and decorating. And order Berry Brothers' Varnishes if you want satisfaction.



$1
Ingersoll
The Vision of a Dreamer Come True
"The an whom says anything is impossible is interrupted by someone doing it."
The dollar watch was the "vision of a dreamer," until Robert H. Ingersoll crystallized the idea into an accurate and reliable timepiece.
He sold it for a dollar because he wanted to sell millions instead of millionaires. He packed so much value, quality, dependability of service into that dollar watch that BOTH millions and millionaires wear Ingersolls—and are proud of it.
Thirty-three million wearers prove the soundness of his judgment and the timekeeping qualities of the Ingersoll.
The five leading Ingersoll models are:—
The Dollar Watch $1.00
The Eclipse, thin model for men 1.50
The Junior, medium size thin model 2.00
The Midget, model for ladies and girls 2.00
The Wrist Watch 2.50

REVIEWS OF NEW BOOKS

REVOLUTIONS: CHINESE, MEXICAN, AND MENTAL

McCormick, Frederick. The Flowery Republic. Illustrated. Cloth, pp. 448. New York: D. Appleton & Co. $2.50 net.

Baerlein, Henry. Mexico, the Land of Unrest. Being Chiefly an Account of What Produced the Outbreak in 1910, Together with the Story of the Revolutions Down to This Day. Illustrated. Map. Cloth, pp. xxiv–461. Philadelphia: J. B. Lippincott Co.

Le Bon, Gustave. The Psychology of Revolution. Translated by Bernard Miall. Cloth, pp. 337. New York: G. P. Putnam's Sons. $3.50 net.

The destiny of the Chinese Government seems at the present moment to hinge upon the character of one man. To find the true interpretation of the motive and spirit of its President is to obtain the key to the cipher in which the future history of China is written. The persistent question which has long caused China's patriot, Dr. Sun Yat Sen, his chief anxiety, and which Dr. Sun has recently answered in the negative, is of paramount concern—"Will Yuan Shih-kai be true to the Republic? Mr. McCormick, not only in the most interesting chapters which form the biography of President Yuan, but throughout the volume, furnishes new material for the study of the man upon whom the welfare of one-fourth of the human race seems now to depend. For the settling of the problem—Was Yuan a patriot or a traitor in the *coup d'état* of 1898?—one may read here his own explanation of the events of those tense days and the part which he and Jung Lu played in them—events about which he had for thirteen years kept silence, since, as he said, "I am quite able to confront my heart with heaven above; posterity will decide upon the justness of my cause." In this "one man in a wilderness of men" the Republic and the Empire are welded. "There was one Manchu, the Empress Grand Dowager; there was one Chinese, Yuan Shih-kai. For him the times called and he came."

Mr. McCormick prefaces his account of the Flowery Republic, whose path is now beset with thorns, by a very valuable chronology of the dramatic events which led to the Revolution of 1912, and rightly places first the significant sentence—"1838. Protestant schools of Christian knowledge opened." Equally important for reference is the Diary of the Revolutionary Rebellion, which concludes the book. Mr. McCormick's twelve years in China, his personal relation with the chief men and events of the period, enable him to relate vividly one of the most remarkable chapters in the world's history. To follow a story so intimately told sometimes requires a familiarity with the situation which the general reader may not possess, but he will only occasionally find himself in difficulty, and always in sympathy with the author's spirit and appreciative of the vast amount of illuminating material which he provides. Recent events in China—the apparent eclipse of Dr. Sun and the futile beating of the waves of rebellion against the iron will of Yuan Shih-kai give added zest to the reading of "The Flowery Republic."

In the tension of the present Mexican crisis the observations of Mr. Baerlein, an English traveler and correspondent who has made very extended study of Mexico and the Mexicans, are extremely opportune—especially as he writes chiefly of affairs of political importance in Mexico's domestic and foreign relations. One deplores sometimes the sarcastic tenure of the author's thought, yet with the facts which he presents in mind sarcasm is perhaps a pardonable act of self-defense. The major part of the book is given to depicting the conditions prior to the revolt of 1910, and the later developments up to the spring of 1913. While the narrative of events is succinctly given, there is an abundance of illustrative material, much of it of a sort to make one shudder and wonder how such things can be. A passage most interesting at present relates to the Madero-Huerta incident. Mr. Baerlein writes:

"As to whether the Ambassador, Mr. Henry Lane Wilson, in whitewashing the murderers was obeying orders from Washington, and whether such orders were inspired by Wall Street, will possibly be ascertained; a large number of his countrymen are now demanding that the truth be known. His appeal for a more kindly consideration of the murderers and his very quick acceptance of the official version of Madero's death are indeed to be regarded as an insult to American intelligence. At the same time one can not say, as yet, whether his Government, being reluctant to interfere (and voicing in this the large majority of the people), told him to make the best of the *fait accompli*, or whether they have been the slaves of those, the American and Mexican financers, who will not, if they can help it, let the Mexicans shake off their slavery. It is a fact that the Ambassador's relation with Madero had for a long time been very strained, that altho he was the doyen of the diplomatic corps it was not he but other diplomats who, toward the end, communicated with Madero, whereas on the Sunday and Monday before Madero's fall, General Huerta came several times to the American Embassy."

However the immediate present may result, to Mr. Baerlein the final outcome is inevitable:

". . . The Mexicans will strive against their fate, and do their utmost to keep away from Americans; they will invoke the hatred of the days of Diaz, when his interview with Mr. Taft, suggesting secret treaty or agreement, brought such criticism on his head; they will invoke the hatred of Madero's day, for he was said to be too well disposed toward the neighbors. These on their side will resist with all their strength the irresistible. Officially they will declare, like the Ambassador in Mexico, that the assassination of Madero was an accident. They will repeat to Europeans that the Monroe Doctrine does not call for them to supervise the social and political morals of the Mexicans; and they will hope that no Ambassador will fall a victim to Madero's accident of being shot by those who want to set you free. They will acknowledge, as *The Spectator* has very well put it, that they may have assumed the honorable position of trustee without any means of performing the work of the trust. Logically, they should either guarantee

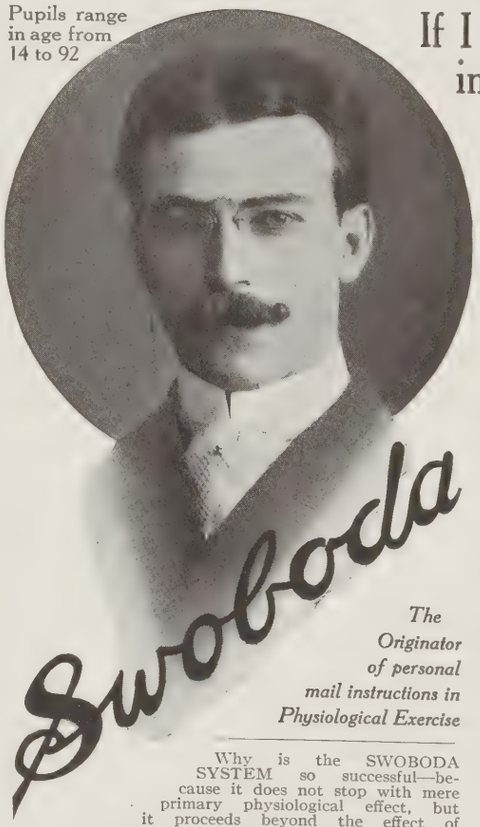
How to Acquire Perfect Health, Wonderful Energy and a Vigorous Heart



Pupils range in age from 14 to 92

The Originator of personal mail instructions in Physiological Exercise

If I could meet you face to face, and bring you in contact with my wonderfully developed

physical and mental energy, and show you what I have done and am doing daily for others, I know that I could easily and quickly prove to you that you are only half as alive as you must be to realize the joys of living in full, and that you are only half as well as you should be, half as vigorous as you can be, half as ambitious as you may be and half as well developed as you ought to be. The fact is, that no matter who you are, I can prove to you positively, by demonstration, that you are leading an inferior life, and I want to show you the only way in which you may, speedily and easily, without inconvenience or loss of time, come into possession of real health, vigor, energy, development and a higher realization of life and success.

Why lead an inferior life when the Swoboda System quickly and positively strengthens the heart, lungs and all internal organs and thus promotes ideal health?

The Swoboda System with the Least Expenditure of Time, Energy and Money and with no Inconvenience, **Builds** vigorous brains, superb, energetic bodies, develops great reserve force, strong muscles, creates a perfect circulation by revitalizing and developing the body, brain, and nerves to their highest power.

When I say that I give something different, something new, more scientific, more rational, effective and immeasurably superior to anything ever before devised for the uplifting of the human body to a higher plane of efficiency and action, I am only repeating what thousands of prominent men and women of every country on the face of the earth, who have profited by my system, are saying for me voluntarily.

The Swoboda System is no Experiment I am giving successfully to pupils all over the world. I have among my pupils hundreds of doctors, judges, senators, congressmen, members of cabinet, ambassadors, governors, thousands of business men, farmers, mechanics and laborers, and almost an equal number of women.

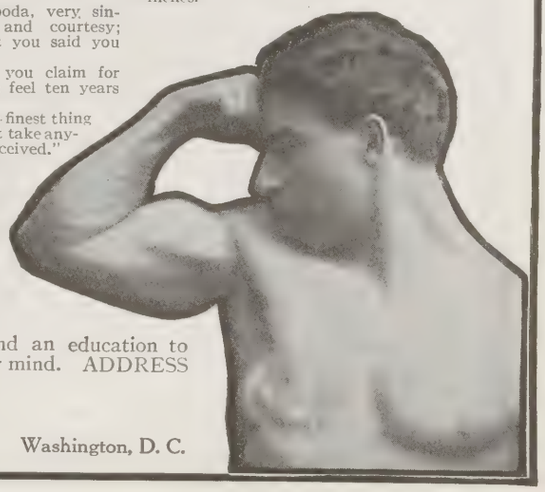
Why is the SWOBODA SYSTEM so successful—because it does not stop with mere primary physiological effect, but it proceeds beyond the effect of ordinary exercise, into the realm of organic evolution, through the secondary and tertiary effects. It energizes, develops, recreates and causes the body internally and externally to adapt itself, for greater success in promoting the realization of perfect health and physical organization.

Most physiologists know only of the primary effect of exercise. If my system were limited to the primary effect alone it would be no different from ordinary exercise, but the SWOBODA SYSTEM is based upon a fundamental evolutionary principle. It creates, by its secondary and tertiary reactions, results which are impossible for other exercise—results, too, which seem impossible to those who do not understand.

The Swoboda System is the result of a discovery I made in the human body which has absolutely revolutionized the possibilities and effect of exercise. **The results are startling in their extent, and are noticeable from the first day. You never will know what it is to be really well and vigorous, or to comprehend what the *SWOBODA-KIND of health and energy* of body and mind actually is until you give the SWOBODA SYSTEM a trial.**

WHAT OTHERS HAVE TO SAY

"Can't describe the satisfaction I feel."
"Worth more than a thousand dollars to me in increased mental and physical capacity."
"I have been enabled by your system to do work of mental character previously impossible for me."
"I was very skeptical, now am pleased with results; have gained 17 pounds."
"The very first lessons began to work magic. In my gratitude I am telling my croaking and complaining friends, 'Try Swoboda.'"
"Words cannot explain the new life it imparts both to body and brain."
"It reduced my weight 29 pounds, increased my chest expansion 5 inches, reduced my waist 6 inches."
"I cannot recommend your system too highly, and without flattery believe that its propagation has been of great benefit to the health of the country."
"My reserve force makes me feel that nothing is impossible, my capacity both physically and mentally is increasing daily."
"Your system develops the will as much as the muscle."
"I thank you, Mr. Swoboda, very sincerely for your kindness and courtesy; you have always done what you said you would."
"I believe it will do all you claim for it; it has certainly made me feel ten years younger."
"I consider your system the finest thing a man can take, and would not take anything for the benefit I have received."
"Your system developed me most wonderfully."
"Ten minutes of your exercise is equal in value to three hours of horse-back riding."
"Effect was almost beyond belief."
"Chest measurement increases 5½ in. in 60 days."
"All your promises have been fulfilled."
"Swoboda system an intense pleasure."
"Muscles developed to a remarkable degree.'"
"Gained 20 pounds in weight."
"Did not expect such wonderful results.'
"Thought it impossible to get such results."
"Best system I ever tried."
"Increased 16 pounds in 60 days."
"Gains 17 pounds, sleeps better, muscles larger."
"Your system is a recreation."
"Cannot speak too highly of your system."
"Considers it a great discovery."
"10 minutes of your system better than hours of any other."
"Very first lesson worked magically."
"Reduced excessive waist measure 3 inches."



Join the Army of the Vigorous, Strong and Happy

You can be physically just what you wish to be. You can have reserve vitality for every emergency. *I guarantee it.* I offer my system on the basis which makes it impossible for you to lose a single penny. *My guarantee is startling, specific and positive.*

My new book, "EXERCISE REVOLUTIONIZED," is free. It tells of the dangers of exercise and conscious deep breathing and explains how the "SWOBODA SYSTEM" is making vigorous and strong men and women, out of weak and poorly developed individuals. The evidence it offers is most convincing. My free book will be a revelation and an education to you. Write for it and my complete guarantee to-day, before it slips your mind. ADDRESS

"Y and E"

Mammoth Vertical File

for Blue Prints, Drawings, etc.

We make Filing Systems for all Purposes

This is the Safe and Sane Way to File Blue Prints

—the way to keep them clean, flat, smooth and findable instantly; the way to file your drawings, plans, sketches and all the big, unwieldy things you've got to keep handy somewhere.

Don't jam them into pigeon holes, don't shove them into big drawers, don't stand them behind your desk to get dirty and torn and—lost.

File them like letters. A "Y and E" Mammoth Vertical File will take care of 700 to 1000 prints properly and produce the one you want in a moment's time and in as good condition as when it was put away.

Note the *index in the cover.* Points out the location of the print you want.

Note the front of the file; pulls out and two legs spring into place, forming a smooth, rigid table on which to examine drawings or make notations. Folds out of the way when you are through. The whole file when closed takes up floor space of 4 ft. by 15 in.

Made in two sizes—for drawings 40 x 36 or 44 x 30 inches. Prices: Plain Oak $43.00; Quartered Oak $46.00; Mahogany $60.00.

Send for Our Booklet—

"The Proper Place for Blue Prints and Drawings"—free when requested on your business letterhead.

"Leaders of the World" in Filing Systems and Business Equipment

Don't confuse this with ordinary "make-shift" roofings—we guarantee it 15 years and inside each roll furnish modern ideas for laying it artistically.

Certain-teed Roofing

Rolls Shingles

When ready roofing was first put on the market, the public demanded that it must prove its value by actual wear on the roof. *Certain-teed* Roofing has stood the test for years—it has made good in all climates and under the most severe conditions. When artistically laid it makes a roof you can well be proud of. You can't tell how long roofing will wear by looking at it—so for your own protection, accept no substitutes—be sure the *Certain-teed* Quality Label is on each roll.

Sold by dealers everywhere at a reasonable price.

REVIEWS OF NEW BOOKS

(*Continued from page* 430)

life and property throughout the western world or should modify the Monroe Doctrine so as to admit the cooperation of other Powers who may be interested in the affairs of Central and South America.

"For a time the Mexicans will struggle with each other, then they will struggle desperately against the United States, and then their country will be known as Mex."

In addition to the arraignment of Porfirio Diaz and Mexico generally which occupies the first part of the book—with the history of the revolts as the peg on which to hang it—Mr. Baerlein includes several miscellaneous essays on Mexican topics. The most fanciful and novel of these is entitled "Diaz at the Door of Hell." One would feel that he ought often to remonstrate did not a cold fact turn up each time to validate the writer's criticism—yet will even this win converts to his conclusions? His summary of the character of the Mexicans well illustrates his style and his standpoint. "It is hardly possible to generalize, but if you want a comprehensive picture I should say that they are childish. Have you ever seen a boy tear up a living beetle and a moment later say that yonder ripples of the olive-tree are like his mother's hand when he is lying in his bed? So are the Mexicans."

We knew long ago that reason never had much to do with revolutions. It seems we were right. M. Le Bon says so, and adds that they are to be explained by a disturbed balance between the rational logic, the affective logic, the mystic logic, and the collective logic which guide our life under normal conditions—in a word by the psychological constitution of the human mind. What could be clearer! But what disturbs the balance? Hush! One regrets that the author did not give a fuller exposition of the constituent logics, for not all who turn the pages of "The Pyschology of Revolution" will have read "Opinions and Beliefs." However, assuming that men do some things because they think, others because they admire or hate, others because they dream, and still others because they live in groups, we may proceed to examine revolutions. Tho the most abundant field for the psychologist of revolution might seem to be South America, our author has confined himself mainly to the European Reformation, and *in extenso* to the French Revolution. After a discussion of the general aspects of revolutions and the forms of mentality which appear in them, he devotes many pages to a review of the French Revolution on the lines of the logics mentioned. If there be more history than psychology in it, who shall say nay? The concluding pages offer some further reflections on the progress of the revolutionary concepts of his *pièce de résistance* in the present day. M. Le Bon's book on "The Crowd" is known as a very acute and suggestive contribution to psychology. How much he has added to this in the present work is hard to say. He is the only authority on revolutionary psychology.

EDWARD M. TABER'S LITERARY REMAINS

Taber, Edward Martin, Stowe Notes, Letters, and Verses. 8vo, pp. 335. New York and Boston: Houghton Mifflin Co. $3.50.

The author of these "remains," as they would have been styled in the Victorian period, was an artist in three senses. He

(*Continued on page* 434)

H U Pmobile

The 1914 Hupmobile is in the hands of Hupmobile distributers.

We believe this new Hupmobile to be the *best* car of its class in the world.

By *best*, we mean best in internal essentials, especially. We mean best in those things which make for long life and continuous service at lowest cost.

But we believe you will also pronounce it the *most beautiful* car of its class in the world.

We believe we have put *more money into the chassis* than any car of its class in the world.

We base these beliefs on our conviction—

That the production of this new Hupmobile incorporates a greater tonnage of *high-grade steel* than any car of its class in the world;

That this new Hupmobile is the *largest user of aluminum*—without regard to class or price—in the world;

That the frame used in the new Hupmobile is the *costliest piece of pressed steel construction* used by any car of its class in the world;

That the Hupmobile long-stroke motor will *outpull any engine* of its class in the world;

That the Hupmobile *pressed steel body*—designed by us and built by the builders of Pullman cars—is the costliest body used by any car of its class in the world;

That Hupmobile *springs* utilize a greater tonnage of *costly* steel—more than 2,000 tons—than any other car of its class in the world;

That Hupmobile bearings—Timken and Hyatt—are the best in the world; one whole Hyatt building being devoted to Hupmobile bearings.

We repeat—for readiness; for ruggedness; for smartness of style; for fineness of finish; for daily work on the road; for extremest economy—we believe this new Hupmobile to be the best car of its class in the world.

-Build it in the Simple Hy-Rib way

Hy-Rib is a steel sheathing, combining within itself reinforcement, forms, lath and studs. With Hy-Rib, concrete construction is reduced to its simplest terms. No forms are required, no reinforcement, no lath, no stiffening channels—nothing but the easily handled sheets of Hy-Rib. Note the simplicity of the process, whether for walls, sidings, roofs, partitions or ceilings.

Fasten the sheets of Hy-Rib to the supports, and apply the plaster or concrete.

The result is a permanent, fireproof construction, built more rapidly and at lower cost than in any other way. No matter what, when or where you build, you need the **Hy-Rib Handbook—sent free on request.**

REVIEWS OF NEW BOOKS

(*Continued from page* 432)

was a painter by profession, he was a poet, and he was above all a consummate artist in the production of English prose. He was not a naturalist like Thoreau, whom he resembled in his love of outdoor life and power of minute observation and description. Nor had he any philosophy, or at least he does not express the transcendental passion of Thoreau or Coleridge. The latter at Chamouni, contemplating "sovran Blanc" with awe and wonder, confesses at last,

"I worship the invisible alone."

Taber was an impressionist. He lived upon the varied hues, the form and movement of external nature, and whether he dips his brush in color or his pen in ink, he reproduces in perfect description the tree, the landscape, the living creature, and the changing wonder of the sky with a distinctness and a beauty which destine his work to become a permanent element in American literature. Wordsworth, who was himself so deep a lover of nature that he has been styled a pantheist, says that the world knows least of its greatest men. Greatness merely means completeness, the attainment of the final in any department of human activity. But Taber's name is not to be found in any account of American literature, altho his spirit is essentially American. With a less sensitive, less keen eye many Europeans have built up a reputation as poets. But this impressionist is not so great a poet as a painter, word-painter and pencil-painter. He has not the lyric cry, for he feels no pain, no melancholy, and no longing. His mind is a *camera obscura* on which the face of nature is reflected, and in that face he rests. How true this is appears from the best and most characteristic poem he has written—"Winter's Answer to Misgiving," which exactly represents the placidity of the contented impressionist. We quote it as follows:

"Often the heart, that eager is
To build its hope on dazzling height,
Falls in the shadow of its bliss,
And comfortless sees endless night.
A sullen whisper stirs anon:
'Acknowledge life a worthless boon;
What gains to cloak and smother care—
To smile at grief? Accept your doom;
Why struggle still against despair?
How long resist the creeping gloom?'

"As long as crowns the hilltop bare
The pine against the azure sky,
And gives its music to the air,
And waves its tasseled boughs on high;
As long as shall the chickadee
Flit, lisping sweet, from tree to tree,
As long as on this slope's displayed
The sumach's dauntless red cockade."

The volume may be said to consist of three parts—prose pictures, reproductions of paintings and drawings, and verses. Of the fine photographs the frontispiece is the most striking. It represents Taber side by side with the oxen and the plowman. His attitude is alert and he seems to be looking back arrested by the note of a bird, or a shift in the scenery of the clouds—very different from the mooning wanderer described by Wordsworth as listlessly led on the wild-goose chase of his own vagrant fancies, from early dawn,

"Until the setting sun
Write fool upon his forehead."

Taber's works are likely to be read and

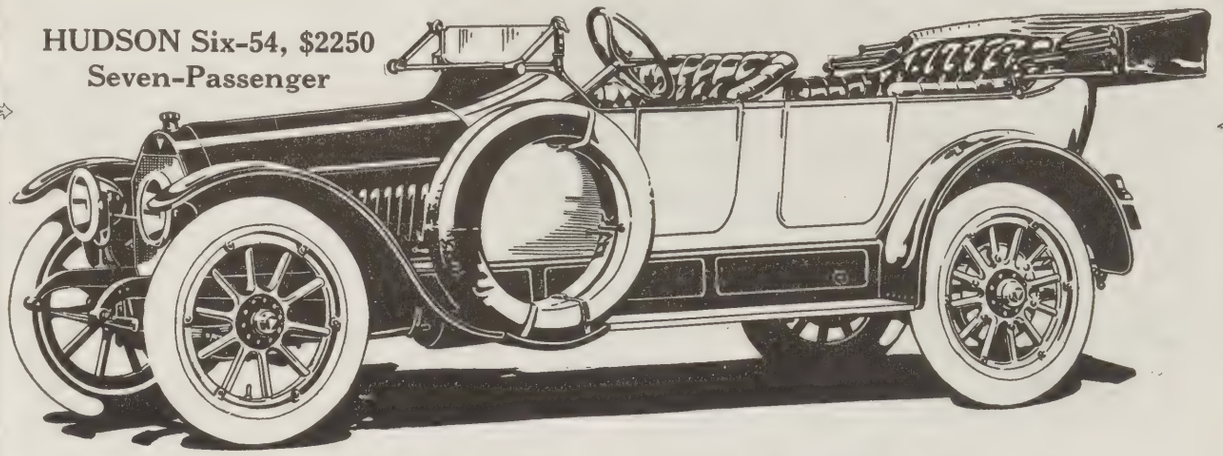
HUDSON Six-54, $2250
Seven-Passenger



Something Really New—
Six Cylinders—Distinguished Beauty

Never before have HUDSON designers brought out in one model so many advances.

But it happens that Europe, after reaching the limit in fine engineering, has suddenly corrected many faults in bodies.

And America must follow. Some makers will delay, some chafe and protest. But sooner or later we have always followed European vogue. Those who waited found their models obsolete ere long. You remember how it was with fore-doors.

Here is an ideal body type which marks the coming mode. The world's best designers agree on it. All the best foreign makers will this year exhibit nothing but streamline bodies.

We have not merely copied—we have Hudsonized the type. We have ourselves worked out countless improvements. We have, we believe, the handsomest car you'll see. But the general effect is such as must mark any up-to-date car this year.

Europe is Right

And Europe is right. Look at passing models. Note that abrupt and inartistic angle at the dash. Compare with this model, where the streamline runs unbroken from tip to tip.

Compare the high-hung, top-heavy bodies with this low-hung effect. Compare old-type fenders with these new.

Compare the old way of carrying extra tires, blocking one front door, or on the rear, when the balance of the car is disturbed. Now both front doors are clear and still the tires are where they should be—on the running board.

Note that every door hinge is concealed. Why did we ever have body sides marred by projecting hinges?

Note the left-side drive, the center control, the deep cushions with high backs. You sit in the car, not on it.

Now we have four forward speeds.

We have wide tonneau doors.

We have every operation and control within reach of the driver's hand.

You know that these things are desirable. Now that they have been thought of, and adopted abroad, what car can resist coming to them?

Other New Things

Here are other new features which we have adopted in this new HUDSON Six-54:

A seven-passenger body, where the extra seats fold out of the way.

135-inch wheel base—36 x 4½-inch tires. Gasoline tank in dash also a European innovation.

The Delco system of electric self-cranking—the rapid type built especially for this car. Powerful electric lights with dimming attachment.

Speedometer set in dash. Concealed noiseless gears set into the axle.

Yale lock on ignition control.

Rain-vision windshield. Genuine Pantasote top with curtains attached, ready for instant lowering. Electric horn—trunk rack—tire holders—license carriers. Every comfort and convenience known.

Built by Howard E. Coffin and His Engineers

Here too is the latest production of Howard E. Coffin and his great engineering corps. The men who built the former HUDSON Six, one of the greatest successes ever known in this industry.

This is their masterpiece. The largest, finest, strongest car these men have ever built. Their sturdiest car, their most comfortable car, most dependable.

And note the price. Note how this factory, with its mammoth output, has cut the cost of Sixes. Think of a Six of this power and size and room selling for $2250. Even one year ago such a price was unthinkable.

See This Innovation

Your local HUDSON dealer has this car on show. Go see it, if only to see the trend of design in motor cars. Compare it side by side with old-style cars and judge which you want to drive.

See it now—while it's new.

Our catalog on request.

REVIEWS OF NEW BOOKS

(*Continued from page* 434)

carried in the bosom by those who love work that is done neither for money nor renown, but rather for sheer love of the subject of pen and pencil. The author of these Notes was born on Staten Island, July 21, 1863. In 1887 he was ordered to leave New York for his health and removed to Stowe, Vermont, where he lived until September 9, 1896.

BELIEF IN A FUTURE LIFE

Frazer, J. G. (D.C.L., LL.D., Litt. D.). The Belief in Immortality and the Worship of the Dead. Vol. I. 8vo, pp. xxi–495. London and New York: Macmillan Co. $3.25 net.

In the year 1863, Mr. W. R. Alger put out his well-known volume on "The Destiny of the Soul," which aimed to be a review of the idea as found among different peoples, and ran through many editions. To this Dr. Ezra Abbot affixt his justly celebrated bibliography of the subject, which is yet indispensable to workers in that line. But since Mr. Alger wrote, the modern science of anthropology has grown up, and has laid under tribute a vast flood of literature, dealing not only with peoples who have organized cults, priesthoods, and the like, but with the races whose organization in these respects is as yet to come. Dr. Frazer is, since Andrew Lang's death, the most prominent living anthropologist, having attained this position by investigations in primitive society embodied in several great series of works—"The Golden Bough," "Totemism and Exogamy," etc. He has attained this position by utilizing with unexampled completeness the mass of material available in the rich field thus opened.

The present volume begins a new series, which is to be devoted to an exhibition of notions of immortality and ghost-worship by primitive peoples all over the earth. The arrangement is geographical, and in the volume before us the author deals with the peoples of Australia, New Guinea, and Melanesia. It is characteristic of Dr. Frazer's work that he "follows his leads" into a variety of details, and so comes upon subjects which seem at first sight only remotely related to his principal theme. Yet more deliberate consideration will usually show a connection which justifies the line of investigation. In the present volume, for instance, the ideas of primitive peoples concerning death, its causes and nature, are expounded; in like manner a possible connection of initiatory rites with ancestor-worship leads to an exposition of the subject so well covered by Prof. Hutton Webster in his "Primitive Secret Societies." Similarly his examination takes him into a discussion of the method of disposal of the dead. The result is a collection of facts, with the authorities therefor abundantly yet concisely given, which is a boon to the anthropologist who would draw upon such treasures. In other words, the method, now so well known, used in "The Golden Bough," is used here, and with increased particularity.

One can hardly, with good grace, quarrel with the painstaking detail exhibited in this book. Yet it is a fact that in a minutely geographical survey, when different parts of the same island (like New Guinea) come under consideration, identical beliefs are found among different tribes and restated with fulness. Condensation in this respect is not only suggested but demanded. Iteration is unnecessary and confusing. Apart from this

defect, the tabulation and discussion here begun are of the highest value. The nature of primitive belief in the continuance (often limited, seldom unconditioned), of life beyond the grave is clearly established, and will afford argument pro and con for the belief as held by advanced peoples. We shall await with anticipation the continuation of the series.

CARE OF THE HEART AND BLOOD-PRESSURE

The Heart and Blood-vessels; Their Care and Cure, and the General Management of the Body. By I. H. Hirschfeld, M.D. 8vo, pp. 336. New York and London: Funk & Wagnalls Company. $1.25 net.

Heart-Disease, Blood-Pressure, and the Nauheim Treatment. By Louis Faugères Bishop, A.M., M.D. Fourth revised edition. 8vo, pp. 303. New York and London: Funk & Wagnalls Company. $3 net.

Dr. Hirschfeld's volume is a medical work that may be recommended as a manual of personal hygiene to the average intelligent reader. It is bristling with up-to-date facts regarding the care and cure of the circulatory system.

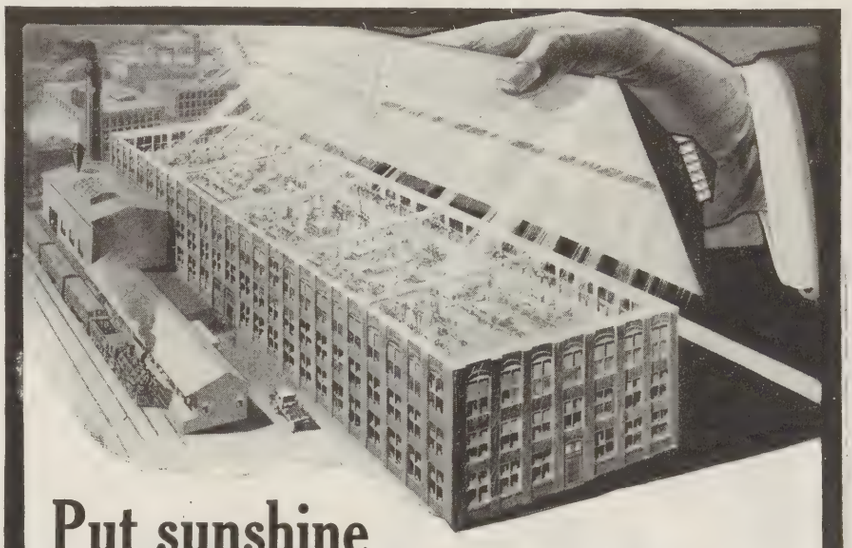
The book reveals in a striking manner three qualities that may be noted in most of the recent manuals of a medical nature. First, it places the specific topics treated in the larger setting of biological facts and laws; secondly, it stresses the prevention of disease as well as its cure; and thirdly, it makes a direct appeal to the average individual and social intelligence. It is really a new thing in human experience that tens of thousands of men and women know enough, and care enough, about a scientific knowledge of their own bodies to appreciate and welcome such a book as this. It is also a new thing in medical literature for a really well-equipped man to write a book for popular intelligence. These facts are alike significant and hopeful. They indicate that human needs and human knowledge are at last becoming organized for a mighty crusade against ignorance, with its resulting disease, distress, and inefficiency. If no other evidence existed, this were enough to prove that the world is growing wiser and better.

Dr. Bishop's book is the fourth revision of a popular medical handbook on heart-disease, with especial reference to blood-pressure and the Nauheim treatment.

It is hard to say which class of readers is best served. To general practitioner, as well as to lay reader, its clear and brief analysis and practical suggestions both for treatment of heart-disease and for its prevention must appeal in an unusual degree. Half-tone illustrations help to make clear the Nauheim-Schott treatment, which will appeal alike to specialists and to patients seeking that kind of treatment. Throughout the book there is evident that broader view of disease as related to the whole of life which may be described as biological, as also that practical, human outlook upon the medical profession as not merely corrective in its functions, but also educative. Perhaps, it is the latter quality which will especially appeal to most readers of THE DIGEST.

First Aid. — "Floorwalker, I have sprained my ankle on your confounded slippery floors."

"Yes, sir. Quite so, sir. Arnica, next counter, sir. Bandages, second aisle to the left."—*Louisville Courier-Journal.*



Put sunshine on your ceiling

Do the ceilings of your plant *reflect* or *absorb* light? It makes a difference which you can figure up in good dollars. A difference in your lighting bills, in the efficiency of your employees, in the quality of your product.

You want all the daylight you can get—every manufacturer does. *And you can get from 19 to 36 per cent more daylight,* the amount of the increase depending on the present condition of your ceilings and walls.

It is simply a matter of paint

Rice's Gloss Mill White Paint does not *absorb* a particle of light; it *reflects* every ray that comes in through your windows down on your machinery and into the dark corners of your plant. It will give you a smooth, glossy, tile-like surface, which will not scale off like a cold water paint; which will not crack or craze under the jar of heavy machinery; which sheds dust, doesn't soil easily and can be washed like enamel.

RICE'S MILL WHITE

is economical to apply. It flows easily and evenly under a 4-inch brush. Its covering power and body make two coats equal three of lead and oil. It contains no lead or other poisonous substance, and *stays white longer than any other gloss paint.*

Rice's Mill White is an *oil* paint with all the advantages and none of the disadvantages of enamel. *It provides the highest illuminating power and the greatest sanitary value at the lowest ultimate cost.*

We were the originators of "Mill White" Paint. None of the many imitations on the market is made by the special RICE process. Not one of them possesses the elastic, permanent qualities which made the reputation of "Mill White" Paint.

Rice's Mill White Paint is sold direct from our factory in barrels containing sufficient paint to cover 20,000 sq. ft. with one coat. If you have that area or more of ceiling and wall space to cover,

RICE'S GRANOLITH

A tough and elastic, permanent finish for concrete walls. Becomes a part of the cement to which it is applied. One coat sufficient, unless a gloss is desired. Makes the best possible primer on inside concrete and brick for a second coat of Rice's Mill White Paint, giving a tile-like, enamel finish at no more expense than lead and oil paint.

CURRENT POETRY

"JOHN MASEFIELD'S GREATEST Poem" is the confident characterization of "The Wanderer" printed on the cover of the September number of *Harper's Magazine*. Sometimes the contents of a magazine fail to live up to the cover. But in this case, the publishers' announcement is not too enthusiastic. It is dangerous to use the word "great" in writing of contemporary verse. But certainly "The Wanderer" approaches greatness more closely than any other poem that Mr. Masefield has written, with the possible exception of "Ships," which appeared in *The New York Times Review of Books* during Mr. Wetmore's editorship. In "The Wanderer" are no instances of the bathos which mars "The Widow in the Bye Street" nor of the deliberate sordidness which mars "The Everlasting Mercy." All is clear and direct and full of the sea's own strength. Few poets of this generation could equal the description of the ship returning after the storm with "her masts like trees in winter, frosty bright." We have not room to reprint more than half the poem.

The Wanderer

BY JOHN MASEFIELD

All day they loitered by the resting ships,
Telling their beauties over, taking stock;
At night the verdict left my messmate's lips,
"The *Wanderer* is the finest ship in dock."

I had not seen her, but a friend, since drowned,
Drew her, with painted ports, low, lovely, lean,
Saying, "The *Wanderer*, clipper, outward bound,
The loveliest ship mine eyes have ever seen—

"Perhaps to-morrow you will see her sail,
She sails at sunrise": but the morrow showed
No *Wanderer* setting forth for me to hail:
Far down the stream men pointed where she rode,

Rode the great trackway to the sea. dim. dim.
Already gone before the stars were gone.
I saw her at the sea-line's smoky rim
Grow swiftly vaguer as they towed her on.

Soon even her masts were hidden in the haze
Beyond the city; she was on her course
To trample billows for a hundred days:
That afternoon the norther gathered force;

Blowing a small snow from a point of east;
"Oh, fair for her," we said, "to take her south."
And in our spirits as the wind increased,
We saw her there, beyond the river-mouth,

Setting her side-lights in the wildering dark,
To glint upon mad water, while the gale
Roared like a battle, snapping like a shark,
And drunken seamen struggled with the sail.

While with sick hearts her mates put out of mind
Their little children left astern, ashore,
And the gale's gathering made the darkness blind,
Water and air one intermingled roar.

Then we forgot her, for the fiddlers played,
Dancing and singing held our merry crew,
The old ship moaned a little as she swayed,
It blew all night, oh, bitter hard it blew.

So that at midnight I was called on deck
To keep an anchor-watch: I heard the sea
Roar past in white procession filled with wreck:
Intense bright frosty stars burned over me,

And the Greek brig beside us dipt and dipt,
White to the muzzle like a half-tide rock,
Drowned to her mainmast with the seas she shipped
Her cable-swivels clanged at every shock.

And like a never-dying force, the wind
Roared till we shouted with it, roared until

Its vast vitality of wrath was thinned,
Had beat its fury breathless and was still.

By dawn the gale had dwindled into flaw,
A glorious morning followed: with my friend
I climbed the fo'c's'le-head to see; we saw
The waters hurrying shoreward without end.

Haze blotted out the river's lowest reach;
Out of the gloom the steamers, passing by,
Called with their sirens, hooting their sea-speech;
Out of the dimness others made reply.

A Runcorn schooner passed, a steamer came
Swift on the flood toward us, hooting loud,
Passing so near that we could read her name
And hear her mate's voice calling to the crowd.

I said, "It blew most bitter hard last night,
There must have been a wild sea on the bar,
The salt has caked that steamer's funnels white,
Look at her bows how red with rust they are."

And as we watched, there came a rush of feet
Charging the fo'c's'le till the hatchway shook.
Men all about us thrust their way, or beat,
Crying, "The *Wanderer!* Down the river!
Look!"

I looked with them toward the dimness: there
Gleamed like a spirit striding out of night,
A full-rigged ship unutterably fair,
Her masts like trees in winter, frosty-bright.

Foam trembled at her bows like wisps of wool,
She trembled as she towed. I had not dreamed
That work of man could be so beautiful,
In its own presence and in what it seemed.

"So, she is putting back again," I said.
"How white with frost her yards are on the fore."
One of the men about me answer made,
"That is not frost, but all her sails are tore,

"Torn into tatters, youngster, in the gale;
Her best foul-weather suit gone." It was true,
Her masts were white with rags of tattered sail
Many as gannets when the fish are due.

Beauty in desolation was her pride,
Her crowned array a glory that had been;
She faltered tow'rd us like a swan that died,
But altho ruined she was still a queen.

"Put back with all her sails gone," went the word;
Then, from her signals flying, rumor ran,
"The sea that stove her boats in, killed her third,
She has been gutted and has lost a man."

So, as tho stepping to a funeral march,
She passed defeated homeward whence she came,
Ragged with tattered canvas white as starch,
A wild bird that misfortune had made tame.

St. Nicholas, it seems, was patron of highwaymen. He was also, however, patron of merchants, so the thought of Miss Stuart's poem is rather confused. Nevertheless the verses are spirited and colorful. They appeared in *The Academy*.

A Song of St. Nicholas' Clerks

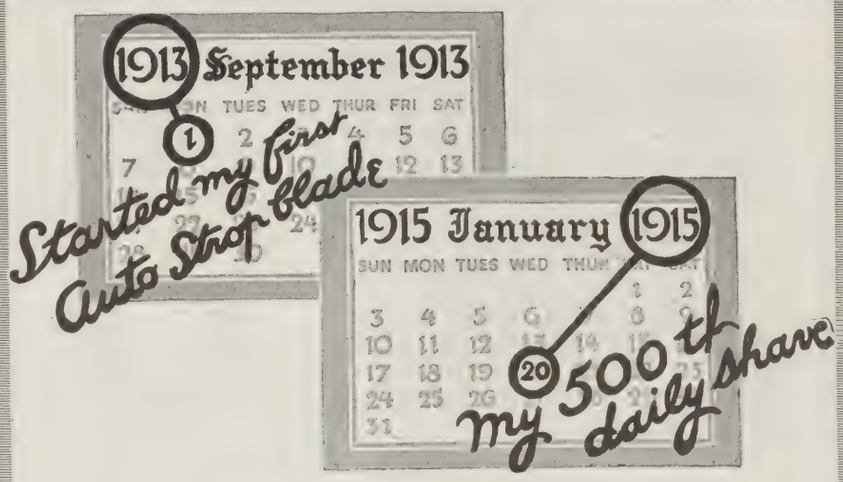
By Dorothy Margaret Stuart

Hide thee, white lady of the sky,
Behind thy darkest veil,
For Flemish merchants ride abroad
Drowsy with London ale.

And lonely is the road and long,
And thick the willows stand,
And English gold the Flemings bear
To their moist Flemish land.

Foul shame it were that English gold
From England should be borne!
Foul shame on us, if we should fail
To meet them ere the morn!

Then twenty crowns for every man,
A red gown for his dame,
And a candle for St. Nicholas
Who helps us with our game!



You Will Not Need Blades Until Jan. 20th, 1915

JUST think of the economy of 500 Shaves Guaranteed from 12 Blades. Provided you shave every day, you will not buy new blades until Jan. 20th, 1915, and maybe not then.

Besides, the easy stropping means easy, cool, velvety shaving with the same blade day after day, week after week.

AutoStrop shavers are delighted with the new model having the adjustable feature. All beards are alike to this razor, which can be regulated for any kind of a shave.

The AutoStrop Safety Razor is sold on 30 days' free trial, by all dealers. If it does not fulfill every advertised claim, return it and your money will be refunded.

Smiles at Miles

Not many years ago, a French poet wrote a poem—if it may be called a poem—consisting entirely of feminine names, arranged in accordance with rhythm and rime. The effect was musical and not unpleasing. But the Rev. James B. Dollard performs with greater skill a more difficult feat in the hauntingly lovely lines we quote below. They appear in his collected poems, published by The Catholic Church Extension Society of Canada. Simply a string of names—but what exquisite melody they make! Of course, many of the names are in themselves beautiful—Shanagolden, for instance, and Corrymeela—but it required poetic skill of a high order to combine them so harmoniously.

Song of the Little Villages

BY JAMES B. DOLLARD

The pleasant little villages that grace the Irish glynns,
Down among the wheat-fields—up amid the whins.
The little white-walled villages crowding close together,
Clinging to the Old Sod in spite of wind and weather:
Ballytarsney, Ballymore, Ballyboden, Boyle,
Ballingarry, Ballymagorry by the Banks of Foyle,
Ballylaneen, Ballyporeen, Bansha, Ballysadare,
Ballybrack, Ballinalack, Barna, Ballyclare.

The cozy little villages that shelter from the mist.
Where the great West Walls by ocean spray are kissed;
The happy little villages that cuddle in the sun.
Where blackberries ripen and the harvest work is done.
Corrymeela, Croaghnakeela, Clogher, Cahirciveen,
Cappaharoe, Carrigaloe, Cashel, and Coosheen,
Castlefinn and Carrigtohill, Crumlin, Clara, Clane,
Carrigaholt, Carrigaline, Cloghjordan, and Coolrain.

The dreamy little villages, where by the fires at night
Old Shanachies with ghostly tale the boldest hearts affright,
The crooning of the wind-blast is the wailing Banshee's cry,
And when the silver hazels stir they say the fairies sigh.
Kilfinora, Kilfinnane, Kinnity, Killylea,
Kilmoganny, Kiltamagh, Kilronan, and Kilrea,
Killashandra, Kilmacow, Killiney, Killashee,
Killenaule, Killingshall, Killorglin, and Killeagh.

Leave the little villages, o'er the black seas go,
Learn the stranger's welcome, learn the exile's wo,
Leave the little villages but think not to forget
Afar they'll rise before your eyes to rack your bosoms yet.
Moneymore, Moneygall, Monivea, and Moyne,
Mullinahone, Mullinavatt, Mullagh, and Mooncoin,
Shanagolden, Shanballymore, Stranorlar, and Slane,
Toberaheena, Toomyvara, Tempo, and Strabane.

On the Southern Llanos—north where strange light gleams,
Many a yearning exile sees them in his dreams;
Dying voices murmur (passed all pain and care),
"Lo, the little villages, God has heard our prayer."
Lisdoonvarna, Lissadil, Lisdargan, Lisnaskea,
Portglenone, Portarlington, Portumna, Portmagee,
Clondalkin and Clongowan, Cloondara, and Clonae,
God bless the little villages and keep them night and day!

PERSONAL GLIMPSES

THE VERBAL SHOTS OF SHERIFF HARBURGER

NOT even his severest critics will deny Mayor William J. Gaynor the honor of being the most original letter-writer in New York, if not in the nation. Not long ago somebody compiled his best epistolary fulminations and had them published in a handsome volume, which is an unusual thing to happen to a person during his lifetime. But Mayor Gaynor is far from having a monopoly of the fame that comes from knowing how to write letters that look well in print; the champion has to take off his hat every now and then to another well-known New Yorker, Sheriff Julius Harburger. Mr. Harburger lacks some of Mayor Gaynor's familiarity with Epictetus and the other ancient philosophers, but when it comes to handing out picturesque adjectives nobody in the English-speaking world has much, if anything, on the big town's popular Sheriff. Like many other public men, Sheriff Harburger does not shy at newspaper reporters when they come around asking to be allowed to print his letters. He frequently jokes with newspaper men about his letters and speeches, as when, a few days ago, he was asked for a copy of a letter written to a man who had complained about the existence of bad odors in his neighborhood. He was talking to a New York *World* reporter about it:

Now, of course, I couldn't afford to pay any attention to all the letters I receive as Sheriff of New York County that flatter me, tho I get more of that kind than any other. It wouldn't do for me to give the letters that compare me to Mayor Gaynor as a letter-writer to the papers, because the people might think I am egotistical. And everybody knows I am the most modest man in New York County.

But here is Harry Thaw breaking out of Matteawan, and here am I without anything to break out of except silence. So when I get a letter early this morning from Louis Bowsky, who says he owns an apartment house, called the Fairmont, at No. 438 West One Hundred and Sixteenth Street, I decided to answer it in my most brilliant style.

Mr. Bowsky said he was mad because people in a restaurant at Nos. 1121–1127 Amsterdam Avenue, just north of his apartment house, persist in rattling pots and pans, and cause odors of cooking to arise in the quiet morning atmosphere. I saw my literary opportunity and grasped it. Here is the result—

But before I tell you about the letter, I must confess that I went to the ball game this afternoon. And, since you insist, I must confess that more than three thousand people, who recognized me as I entered the grand stand, arose with one accord and shouted, "Three cheers for our Sheriff, Julius Harburger." That touched me, and I wouldn't have

The Car With the Clean-Cut, Thoroughbred Air

IN the Borland, great thought and effort have been given to the making of a car that is the embodiment of good taste—a roomy car having the snappy, speedy lines that are the last word in automobile design. And yet there is preserved that restraint of design and finish demanded by "those who know."

5-Passenger Coupe, $2900 — The Borland Electric — *Either forward or rear drive*

The Borland Electric is the car with the clean-cut, thoroughbred air—combining the essential *dash* with solid dependability of design and construction.

Spacious seats for five, all facing forward; horizontal control; either forward or rear drive; six forward and three reverse speeds. Automatic cut-out disconnects power when emergency brake is applied. "Exide" batteries standard equipment. Special electric pneumatic or standard makes of cushion tires optional.

mentioned it unless you had insisted. I don't want you to print it either—unless, of course, you think it would be for the benefit of the voters of New York County. Well here is the letter. See if you don't think for style and literary flavor it far surpasses anything of the sort you've ever read. With a dictionary, and my intellect, it took me only a few minutes; I just dashed it off.

Here is the Sheriff's letter:

"When I open my mail in the morning I have forty or fifty complaints daily from men and women who are undoubtedly thinking that instead of being Sheriff I am Mayor of New York City. Altho I am willing to be, I still wave the Shrievalty wand and can only confine myself to the obliterating of bomb-throwers, thugs, firebrands, gunmen, arsonites, thieves, anarchists, nihilists, dynamiters, seditionists, horse-poisoners, political lepers, redflaggers, blackmailers, blackhanders, illiterates, besotted white slavers of both sexes, grafters, looters, and parasites.

"However, with my multiplicity of work, I am only too glad to protect your tenants from the noxious gases which ascend to your roof and permeate the nostrils of your aristocratic tenants, which are welcome where I live as a fumigator against all diseases, which have kept me so well and healthy in the last sixty-two years.

"The chopping of wood and of trees was one of Gladstone's healthy pursuits which gave him life up to his eighty-sixth birthday. The toilers in this restaurant can not do these choppings in an unfrequented spot because necessity compels them to do it in their own space. We have had very hot weather of late and it affects the nerves of excitable people, so if your tenants and yourself could go to the mountains or to near-by summer resorts I am sure you would not be disturbed."

And it's a fact, explained the Sheriff to the reporter, in concluding, that it's the east-side aromas that have kept me at my present fighting weight for the past thirty years—127 pounds with my clothes on.

Now don't you think that epistle is good enough to get in, even if Harry Thaw did get out?

Miss Frances Aymmar Mathews, a magazine writer, wrote Sheriff Harburger, asking him to appoint her a deputy in order that she might put a stop to noises which interfered with her work. She said strong-lunged youngsters in their neighborhood kept up a din that was almost unbearable. We read in the New York *Herald:*

In her quest for the coveted badge, Miss Mathews made the fatal mistake of accusing Mayor Gaynor of being "the most unflinching vote-hunter I have heard of," and of adding in her letter that she was "merely a woman, and only a miss at that." When Sheriff Harburger read this, in her second communication addrest to him, he tugged at his roan gray mustache a few seconds and then snatched up his

GREAT BEAR SPRING WATER
50c per case of 6 glass stoppered bottles

trusty fountain pen. This is what he wrote:

"You can imagine my surprize in finding you of the feminine gender. You do not seem to be an admirer of Mayor Gaynor. I am. I am glad you mention that your great-grandfather was the founder of Tammany Hall. I am a sachem of the Columbian Order, where I get my inspiration for patriotic themes, and, as Sheriff of this county, carry them into effect.

"If you get married, which I hope will be soon, and in the course of years gather a happy family of boys and girls and grandchildren, as I have, with their noises, pandemonium, and hilarity, you will, like me, pay no attention to this supposed turbulent element, and let them have their way yodeling in this land of milk and honey."

On Sheriff Harburger's last birthday, which was also George Washington's birthday, his deputies gave him a dinner. Laudatory speeches were made by several deputies, and one deputy read a poem dedicated to his employer. The Sheriff's own speech is reported in the New York *Press*, from which we quote:

"Friends, I thank you. Now let me tell you something about Washington and myself.

"Washington was born in 1732, 181 years ago. I was born in 1851, sixty-two years ago. In Washington's day, everywhere was a wilderness. On my first birthday the sunlight of civilization had made its mark and progress. Washington was born in affluence. I had the backing of the public schools, poor parents, and an indomitable ambitious spirit, inculcated by Washington's example of heroism.

"At Lexington we lost the first skirmish. But if they had had my special deputies there they would have won and wiped the British from American soil."

The gesture accompanying the verb "wiped" was rewarded by a storm of applause.

"I have the best-trained army in the world," said the Sheriff. "Among them are boxers, wrestlers, actors, bankers, acrobats, eugenics, navyites, soldiers, circus performers, lawyers, doctors, journalists (with a bow to the press table), authors, musicians, jiu jitsus, contractors, manufacturers—(pause here for breath)—former police officials, theatrical managers, teachers, mechanics, stock-brokers, insurance-brokers, financiers, railroad officials, clergymen—(pause for another breath)—undertakers, physicians, scientists, restaurateurs, inventors, florists, artists, and Anthony Comstock."

Summoning together all his oratorical powers for a final effort, the Sheriff then said:

"Friends, the Sheriff's office was once a mark for many muck-rakers and odoriferous pulchritudes, who assailed it from many sides. Now, the public is praising this time-honored office, and I owe it to you, my staff, who, in its rectitude, has made the Sheriff's office of this county a part of the nation's welfare."

Education Neglected.—"What can you tell me about the rings of Saturn?"

"Nothin'. I ain't no bellhop."—*Houston Post.*

The Finest Watch in America
The Edward Howard—$350

ASK any representative Horologist his opinion of the EDWARD HOWARD Watch—based upon his knowledge of fine watch making and his observation of the rating and performance of the watch in practical service ever since its introduction two years ago.

Jeweled with matched Oriental Sapphires, hand finished and selected for quality and depth of color. Hand-made Compensating Balance with Graduated Timing Nuts. Howard Patent Gravity Regulator. Mainspring with highest reversible resiliency. Dial hand-ground Venetian enamel. Extra fine 18K solid gold case.

A HOWARD Watch is always worth what you pay for it.

The price of each watch is *fixed* at the factory and a printed ticket attached—from the 17-jewel *(double roller)* in a Crescent *Extra* or Boss *Extra* gold-filled case at $40, to the 23-jewel at $150—and the EDWARD HOWARD model at $350.

Not every jeweler can sell you a HOWARD Watch. Find the HOWARD jeweler in your town and talk to him. He is a good man to know.

The Bissell

Electric Suction Cleaner

It does its work just as well as $500 to $600 built-in suction cleaners, yet costs much less than any portable cleaner that even approaches its power, size and efficiency. It moves 80 cubic feet of air a minute at terrific speed, picking up everything from the finest dust atoms to ravelings, lint, big cuttings and heavy refuse that less efficient cleaners cannot lift.

It's The Speed and Volume of Rushing Air That Count

Those two things give the measure of a suction cleaner's quality. The Bissell Electric Suction Cleaner excels because it has the most powerful motor ever put in a portable suction cleaner of anything near its lightness. Its 1½ in. hose has four times the suction space of the usual ¾ in. hose. It has an 80 ft. circle of operation from any lamp socket. Weighs only 33 lbs. Is easily carried up and down stairs by any woman.

You Don't Have To DRAG The Bissell

It runs lightly beside the operator on large, rubber-shod wheels without conscious effort. It's not like pushing a heavy motor on a stick. Both tube and flexible rubber hose are extremely light, though large and strong. The tool slips easily over rug, hardwood floors, draperies or upholstery, requiring much less exertion than the handling of a broom.

You need not hesitate a moment in ordering by mail. The name "Bissell" has stood for extraordinary efficiency in high grade electrical machinery for over twenty years. We will pay the freight and let you test this wonderful cleaner for a month for a ridiculously small payment, without any obligation on your part. Decide leisurely—alone. Then you can own it, if you wish, for

Only $1.75 Per Week

Practically unbreakable, it gives complete satisfaction in the largest office buildings, churches, hotels, theatres, restaurants, etc., as well as in private homes.

With special appliances, which are furnished free, the Bissell Electric Suction Cleaner polishes silver, sharpens knives, etc., and at slight extra cost can be equipped to run washing machines, meat choppers, bread mixers and other light machinery.

Write today. Ask about our Easy Payment Plan.

SALT MACKEREL, CODFISH, FRESH LOBSTER

FOR THE CONSUMER NOT THE DEALER

FOR YOUR OWN TABLE

FAMILIES who are fond of **FISH** can be supplied **DIRECT** from **GLOUCESTER, MASS.,** by the **FRANK E. DAVIS FISH COMPANY,** with newly caught **KEEPABLE OCEAN FISH** choicer than any inland dealer could possibly furnish.

We sell **ONLY TO THE CONSUMER DIRECT** sending by **EXPRESS RIGHT TO YOUR HOME.** We **PREPAY** east of Kansas on orders above $3.00. Our fish are pure, appetizing and economical and we want **YOU** to try some, payment subject to your approval.

SALT MACKEREL, the fat, meaty, juicy fish are delicious for breakfast. They are freshly packed in brine and will not spoil on your hands.

CODFISH as we salt it, is white and boneless and ready for instant use. It makes a substantial meal, a fine change from meat at much lower cost.

FRESH LOBSTER is the best thing known for salads. Right fresh from the water, they are simply boiled and packed in **PARCHMENT LINED CANS.** They come to you as the purest and safest lobster you can buy and the meat is as crisp and natural as if you took it from the shell yourself.

FRIED CLAMS are a relishable, hearty dish that your whole family will enjoy. No other flavor is just like clams, whether fried or in a chowder.

FRESH MACKEREL, perfect for a fried fish, **SHRIMP** to cream on toast, **CRABMEAT** for Newburg and deviled, **SALMON** ready to serve, **SARDINES** of all kinds, **TUNNY** for salad, **SANDWICH FILLINGS** and every good thing packed here or abroad, you can get here and keep right on your pantry shelf for regular or emergency use.

With every order we send **BOOK OF RECIPES** for preparing all of our fish products.

Our list tells how each kind of fish is put up, with the delivered price, so you can choose just what you will enjoy most. Send the coupon for it now.

CURRENT EVENTS

Foreign

August 28.—The Carnegie Peace Palace at The Hague is dedicated.

August 30.—Five hundred persons are hurt and one killed in the rioting accompanying the street-car strike in Dublin.

September 1.—Lord Haldane addresses the American Bar Association at Montreal on "National Ethics."

At Juvisy, France, the aviator Pegoud in a Blériot monoplane succeeds in describing a vertical letter S in the air, flying upside down about a quarter of a mile.

September 2.—Ex-President Taft addresses the American Bar Association at Montreal.

Chinese Government forces capture the City of Nanking.

In a wreck on the Midland Railway, near Hawes Junction, England, 14 persons are killed and 30 injured.

The eleventh Zionist Congress opens at Vienna.

September 3.—Negotiations between representatives of the United States and of the Huerta Government are resumed in Mexico City.

Ex-President Taft is elected president of the American Bar Association.

Domestic

WASHINGTON

August 28.—The House Democratic caucus adopts the Glass Currency Bill by a vote of 160 to 9.

It is announced that nine battle-ships of the Atlantic fleet will set sail for a Mediterranean cruise on October 25.

August 29.—Senator Hitchcock (Dem., Neb.) bolts the Democratic caucus and introduces his corporation income-tax measure on the floor of the Senate with a speech attacking his party's caucus rule.

GENERAL

August 29.—Viscount Haldane, Lord High Chancellor of England, arrives in New York.

It is announced that ex-President Mellen, of the New York, New Haven & Hartford Railroad, will be retained by the road as adviser.

September 1.—Four racers are killed and three injured in a crash of racing automobiles at the Labor Day races in Nashville.

September 2.—In a rear-end collision on the New York, New Haven & Hartford Railroad, near North Haven, six miles north of New Haven, 21 persons are killed and more than 30 injured.

Attack upon the anthracite coal trust is begun by the Government in a suit brought by Attorney-General McReynolds to dissolve the Philadelphia & Reading Railway Company's control of coal-mining and transportation.

September 3.—Mayor W. J. Gaynor accepts a renomination offered by a non-partizan committee of citizens at a mass-meeting in City Hall Park, New York City.

"A Better Day's Profits" Free

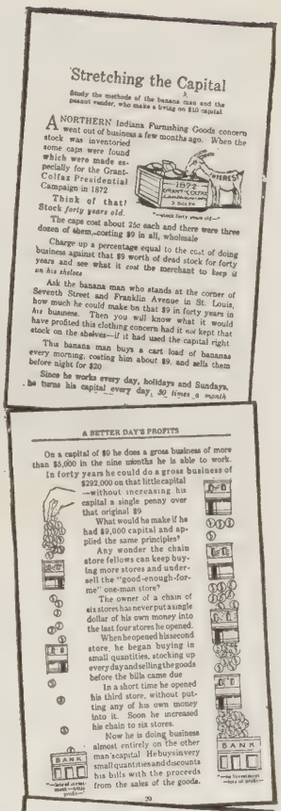
Here is one chapter from "A Better Day's Profits," the new Burroughs Book for Retailers.

If you like the "taste" of this chapter, we will send you a copy of the book itself, containing *seventeen* chapters as good as this one.

Sixteen chapters tell how other live retailers make a better day's profits and one chapter tells how our Department of System Service can help you adapt those methods to your business.

Read the chapter reproduced here; then send the coupon. No cost nor obligation.

This 100 page book tells how successful retailers have cut out leaks and losses and multiplied profits.



Stretching the Capital

A NORTHERN Indiana Furnishing Goods concern went out of business a few months ago. When the stock was inventoried some caps were found which were made especially for the Grant-Colfax Presidential Campaign in 1872

Think of that! Stock *forty years old.*

The caps cost about 25c each and there were three dozen of them—costing $9 in all, wholesale

Charge up a percentage equal to the cost of doing business against that $9 worth of dead stock for forty years and see what it cost the merchant to keep it on his shelves

Ask the banana man who stands at the corner of Seventh Street and Franklin Avenue in St. Louis, how much he could make on that $9 in forty years in his business. Then you will know what it would have profited this clothing concern had it not kept that stock on the shelves—if it had used the capital right

The banana man buys a cart load of bananas every morning, costing him about $9, and sells them before night for $20

Since he works every day, holidays and Sundays, he turns his capital every day, 30 times a month

A BETTER DAY'S PROFITS

On a capital of $9 he does a gross business of more than $5,000 in the nine months he is able to work.

In forty years he could do a gross business of $222,000 on that little capital—without increasing his capital a single penny over that original $9

What would he make if he had $9,000 capital and applied the same principles?

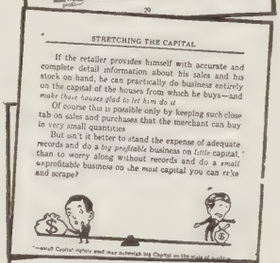
Any wonder the chain store fellows can keep buying more stores and undersell the "good-enough-for-me" one-man store?

The owner of a chain of six stores has never put a single dollar of his own money into the last four stores he opened.

When he opened his second store, he began buying in small quantities, stocking up every day and selling the goods before the bills came due

In a short time he opened his third store, without putting any of his own money into it. Soon he increased his chain to six stores.

Now he is doing business almost entirely on the other man's capital. He buys in very small quantities and discounts his bills with the proceeds from the sales of the goods.



STRETCHING THE CAPITAL

If the retailer provides himself with accurate and complete detail information about his sales and his stock on hand, he can practically do business entirely on the capital of the houses from which he buys—and *make those houses glad to let him do it*

Of course this is possible only by keeping such close tab on sales and purchases that the merchant can buy in very small quantities

But isn't it better to stand the expense of adequate records and do a *big profitable* business on *little* capital, than to worry along without records and do a *small unprofitable* business on the *most* capital you can rake and scrape?

Figuring Stock Turnovers

Cutting the Delivery Cost to One-third

Stopping Store Leaks

What it Costs to Do Business

Buying for Profit

Fixing Prices to Get a *Profit*

"Nine-tenths of all retailers are making less than they think they are. They are always surprised when they find it out."

INVESTMENTS AND FINANCE

GREAT SHIP-BUILDING ACTIVITY

"NEVER was the world so busy making ships," says the New York *Times Annalist*. Ocean freighting seems to be "on the threshold of a great expansion, in which one stimulating influence is the Panama Canal." The tons gross under construction in the United Kingdom at the end of March this year "was greater than all previous totals ever recorded by Lloyd's Register since that famous society was founded." It exceeded the tonnage for March, 1912, by 377,000 tons, and the tonnage for June, 1909, by 1,318,000.

Outside British yards, 392 vessels, of 1,348,000 gross tons, were under construction on March 31 of this year. Germany led the list with 96 vessels, of 534,412 gross tonnage. This country came next with 85 ships, of 228,159 gross tonnage. In the United Kingdom on June 30 this year there were 543 vessels under construction, with a gross tonnage of 2,003,241. Of this tonnage, 1,996,024 was for steam craft.

American ship-builders "never have been so busy, or their yards so crowded." The year's total output "probably will break all previous records." A Philadelphia firm are said to have $18,000,000 of orders in hand, and to be "working their big plant to its fullest capacity." Similar reports "indicating an unprecedented boom in American ship-building come from the other centers of this industry." From Chile have come orders for a fleet that will ply between United States ports and the west coast of South America; the number of ships in the American-Hawaiian Line "is being greatly augmented"; several ocean-steamers are being built in shipyards on the Great Lakes, and nearly all the coast-wise lines are adding to their equipment. So runs the record.

This activity "is directly traceable to the opening of the Panama Canal, a short time hence, and to the expectation that preferential rates will be given to American shipping using the Canal." Other reasons, however, exist for this expansion.

"One is that the overseas commerce of the United States has been increasing at a tremendous rate. It is greater this year than it ever has been. It is a rich prize for which the commercial fleets of England and Germany are constantly contending. Also there are great possibilities opening up in other parts of the globe.

"Sea traffic is on quite a different basis from land transportation. When a railroad extends its lines into a new and rich section of country and builds up a profitable tonnage it is likely to have the new territory to itself for a long time. It costs a great deal of money to go after business by land. On the ocean, however, it costs nothing for a right of way. The moment a new field for commerce is described by the watchers in the counting-houses of London, Hamburg, or New York, ships flock to it over all the long sea roads. Incidentally, because the tide of commerce rises and falls, the shipping business is subject to periods of great depression and of high prosperity. Generally it is a feast or a famine in maritime transportation. Now, unless all signs fail, it is going to be a long feast."

The latest "famine" began to end in 1910, when, within two or three months, there set in "the most prosperous period of shipping that ever has been known." The boom is now in full swing. The end of the boom seems far away, since maritime commerce "has developed enormously all over the world in the last three years." Other items as to present conditions in this business are given by the writer as follows:

"Another factor in recent permanent expansion of trade is that many new uses have been found for staple commercial products, and new articles of great importance commercially have been discovered and developed. This has brought about the opening up of many new producing regions for the world's great staples, and the consequent widening of their markets. There has been a great industrial and commercial development in Asia and Africa. Railroad systems have been extended and new lines built, and harbors have been improved. Immigration, especially to America, has been very large.

"With the opening of the Panama Canal probably many hundreds of thousands of immigrants will be distributed along our Pacific coast. The rearrangement of the trade routes that will follow will mean, of course, greater facilities for the interchange of commodities and a lessening in their cost of transportation, as well as a development of regions that hitherto have stood still because they were comparatively difficult of access. As England is the center of the world's ship-building, these varied influences have been felt sooner and in a greater degree than anywhere else.

"Naturally, the price of new ships has advanced. Practically everything that enters into the construction of a sea-going vessel costs much more now than it did three years ago. As a result foreign vessels to-day are selling at an advance of about 70 per cent. above the market values of the early part of 1910. Still another reason for this is that the ships that are being built now, as a rule, are better constructed and better equipped in a mechanical way than vessels built five years ago. The speed requirements are higher, even for cargo boats, and an increasing number of the large freighters are being equipped with oil-burning devices or with gas-engines. On an oil-burning vessel of 5,000 tons the engine-room force is cut from twenty-five men to eight, the cost of fuel is decreased about one-third, and the saving in engine-room space, which can be utilized for revenue-producing freight, is considerably increased."

PENNSYLVANIA STOCKHOLDERS

The Pennsylvania Railroad now has 85,310 stockholders, or partners, in its great business; those were the figures for August 30 of this year. During the past six months the increase in the number of these partners was 9,851, "the largest number of people who have ever received a Pennsylvania dividend." Corporations welcome wider distributions of their stocks. The more persons to become interested in the properties through purchases of stock, the nearer the companies get to the public.

Of the Pennsylvania's 85,310 stock-

holders, nearly 48 per cent. (40,824) are women. Women own more than 27 per cent. of all the stock. The quarterly dividends recently paid by this road called for the distribution of $7,408,082. Of that sum, the amount paid to women was $2,020,903.

The great increase in the number of the road's stockholders has been particularly notable for six years past. In that time there was an increase from 45,000 to upward of 85,000, or about 40,000. The number of women increased from 21,028 to 40,824—an addition of nearly 100 per cent. The capital stock of this company comprizes 9,877,443 shares. The average holding is about 116 shares. There was a decrease of four shares in the average holding during the past six months which shows the growing popularity of odd-lot purchases.

The par value of the present share capital amounts to $493,872,150, which includes the addition of $39,994,200 made since last May. Of the $45,387,795 new stock that has been authorized to be issued, all except $5,393,595 (about 11 per cent.) has already been fully paid for, altho subscribers have had the option of waiting until November 29 before paying in full. The remainder of the new stock authorized ($5,393,595) is being held for issue when fully paid for.

PREFERRED STOCKS FOR INVESTMENTS

An investor having $40,000 of idle money asked *The Wall Street Journal* to suggest a list of "high-grade railroad and industrial preferred stocks" suitable for his purpose, that purpose being to purchase stocks of the two classes that would "give a good return and eventually show a profit on the investment." In reply he was told that "there are many preferred stocks of both railroad and industrial companies which return attractive yields and hold out the opportunity of fair profits from appreciation in market prices as soon as investment conditions show that improvement which ultimately must come."

From preferred railroad stocks the writer said it was "impossible to secure as large a yield as from industrials"; 5 per cent., "or a little better," is about what they would have yielded at prices that recently prevailed. In case the inquirer would be satisfied with that amount of yield, he was advised to divide a part of his $40,000 among the preferred shares of Atchison, Baltimore & Ohio, St. Paul, Colorado & Southern (first and second), Southern Railway, and Union Pacific.

From industrials "at least 1 per cent. more income can be obtained than from rails," while the maximum degree of safety "is only a little less." Among such stocks, the writer named as worthy of consideration, "to round out such a purchase," the following: American Can, American Car and Foundry, American Smelting and Refining, American Sugar, Central Leather, Liggett & Myers, Lorillard, Mackay Companies, Underwood Typewriter, United Dry Goods, United States Alcohol, Westinghouse first, Woolworth, and S. S. Kresge.

In general, the writer said of the two classes of stocks that they "are traded in on the New York Stock Exchange, and enjoy an active market; practically none of them would have to be sacrificed at more than one-half a point under the market if occasion should arise where a quick sale was necessary; earnings applicable to

WINCHESTER

MODEL 1912

20 GAUGE

Light Weight

Hammerless Repeating Shotgun

This new Winchester is the lightest, strongest and handsomest repeating shotgun made. It weighs only about 5¾ pounds, yet it has surpassing strength, as all the metal parts are made of Nickel steel, having about 50,000 pounds more tensile strength to the square inch than ordinary steel. The receiver is free from screws and unsightly pins to collect rust and dirt and work loose, and its solid breech, closed at the rear, makes it extremely safe. It operates and works with an ease and smoothness not found in similar guns of other makes. It is simple to load and unload, easy to take down, being separated into two parts quickly without tools. For pattern and penetration, it is fully up to the established Winchester standard of shooting quality, which has no superior.

Ask your dealer to show you one, or send to Winchester Repeating Arms Co., New Haven, Conn., for illustrated circular.

A 20 GAUGE GUN FROM BUTT TO MUZZLE.

Put the Shine Back on Your Automobile

Ever Smoke a *Fresh* Havana?

The peculiarly delicious flavor of a really fine Havana is due to the presence of the oil of the leaf.

This oil evaporates quickly, and no humidor will restore it after it is gone.

I ship my hand-made Havana cigars the day after they are rolled, direct to private smokers throughout the United States.

Thus they reach the customer without losing a particle of the full, rich flavor found only in fresh Havanas.

So strongly do these fresh Havana Cigars appeal to smokers that today — after ten years — the "Roberts" enjoys a wider sale than any other cigar.

Naturally, my direct selling plan enables me to give a better cigar for less money.

All my cigars are shipped, postpaid, subject to approval, without deposit. Send for my Free Trial Offer and interesting booklet, "The Roberts Way." A postal will do — simply address

Roberts
OF TAMPA

Roberts Cigars are not sold by Retailers

dividends of the various companies are satisfactory, none of them, according to the last year's report, having failed to cover this requirement at least twice over, and in several cases the amount has been four and five times what was needed to take care of payments on the preferred stock." By making selections from these lists, the inquirer was assured that he "ought to be able to make a selection that would widely diversify your investment and give a return that would average slightly above 6 per cent."

Moody's Magazine believes there is now for investors "a real opportunity in preferred industrial stocks." Many of them are "yielding 6 per cent. or more, and are in a strong position as to earning power, assets, and prospects." At the same time, the writer remarks that "it has frequently been necessary to comment with almost brutal frankness upon the badly watered preferred issues sold to the public in the place of bonds." With the use of his own judgment, however, "plus personal investigation and ordinary business discretion," an investor may "select really desirable securities" of this class. The writer says further of "badly watered preferred issues" and of "futile safeguards" which have been held forth for the purpose of making such stocks marketable:

"The real questions are whether the company has sufficient earning power and assets to make the stock worth its issue price, and whether the management is sound and conservative. Without these elements no amount of guaranties and special provisions can make a good stock out of a poor one. We do not recall a single case, for example, where the cumulative provision proved of the slightest value to the holders of a preferred stock which was deficient in earning power. The cumulative feature was of value to the holders of American Can preferred, because of the company's prosperity; but the stocks of prosperous companies are not much in need of special guaranties. Another futile safeguard often included is that the funded debt shall not be increased or the amount of the preferred stock itself increased without the consent of a large majority of the holders of said stock. When a company becomes embarrassed, however, the holders have no option but to consent or else see their security rendered worthless or greatly depreciated by a receivership.

"Preferred stocks are not bonds, and there are no legal kinks by which they can be made so. All that these preferred stock special provisions amount to is a promise to be good; and some companies, like Rumeley, for example, are too poor to be good, while others are constitutionally bad, and don't keep their promises, anyway.

"A preferred industrial should never be bought in the place of a bond. Nearly all of them lack the assets which render genuine bonds especially secure, and the great majority of them also lack the margin of safety in earnings. If a company had free assets or any other assets not fully covered by obligations, it would not ordinarily raise new capital at a cost of 6 to 8 per cent. by a preferred stock issue, when the capital could be just as well raised at a cost of 4½ to 5½ per cent. by means of a bond issue. Moreover, these preferreds can not be locked up in a box and forgotten, as is done with a bond. They must be watched to see whether their value is being maintained by good earnings and by soundness of management; and they are quite unfit to be invested in by one who lacks either the time or the knowledge to distinguish

for himself between good securities and poor."

MR. EDISON'S FORTY YEARS OF LITIGATION

Thomas A. Edison has confided to a newspaper writer the surprizing statement that "forty years of litigation" has been one of his chief rewards for producing inventions that have revolutionized so many things in the world's everyday life. He declared that all his patents, except one, brought lawsuits either in this country or in Europe. Whenever he produced anything that proved to be of value, a host of inventors sprang up with claims to having preceded him, accompanied by false affidavits. Details from this interesting interview are given below as printed in *The Wall Street Journal:*

"'This class of men has arisen in every field where my work has produced anything of commercial importance. I remember one fellow who swore he invented one of my machines before I did. We found out where he had it built, and the records of the machine-shop showed it was made a long time after I had put my machine on the market. He simply copied my mechanism, rusted it all up to give it the appearance of age, and I was forced to assume the most costly litigation to defend my position.

"'I lost the German patent on the carbon telephone through the insertion of a comma which entirely changed the interpretation of the patent. Another foreign patent was lost because the patent office in that country discovered that something similar had been used in Egypt 2000 B.C.—not the exact device, but something which was nearly enough like it, they claimed, to defeat my patent.

"The longest suit ever brought in connection with any of my patents was that instituted against Jay Gould in 1873—forty years ago. My automatic telegraph system was brought out at that time and a company was formed by Gould which built a line from New York to Washington. He used this company as a club against the Western Union Telegraph Co., which he was desirous of controlling, and agreed to pay me $100,000 for my patents which I turned over to him to be used on the Washington line. As soon as Gould got the Western Union his payments to me stopt, and I sued him. This suit has been in the courts ever since.

"'The quadruplex, which I brought out in 1874, was no sooner developed to a working possibility when two so-called inventors placed interferences against me in the patent office and attacked the patent in the courts. The Western Union bought my patent and defended the suits which were in the courts for a number of years.'

"By means of the quadruplex four independent messages may be sent over one wire at the same time. This system is still in use by the telegraph companies, and has been improved but little since Edison invented it.

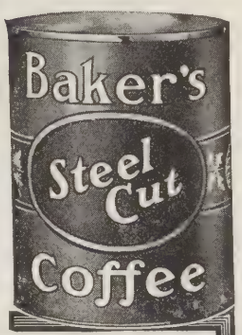
"'The carbon telephone followed in 1877, and the litigation over this invention lasted for many years. Bell invented the magneto telephone in 1876. This is known today as the receiver, which may be used as a transmitter, but not with any great efficiency. President Orton, of the Western Union, asked me to make a telephone which would have greater commercial possibilities, and I produced the carbon transmitter.

"'The Western Union began to establish exchanges and entered the telephone field. The Bell Company immediately brought suit, and then started what was perhaps the costliest patent litigation known up to that time. The Bell Company claimed

40¢ Eastern Basis

"Great! and it costs no more per cup than ordinary coffee."

Eastern Basis 35¢



Makes More Cups to the Pound

IF you are not already a user of our coffee, permit us to send you a trial package. Then you can see for yourself that it is not only better and purer, but that it costs less per cup than ordinary coffee, as it makes more cups to the pound.

A Trial Can Free

SEND us your grocer's name and we will send you a trial can of Barrington Hall, enough to make six cups of delicious coffee, and booklet "The Evolution of Barrington Hall." This explains the three stages of progress through which this famous coffee has passed.

At first Barrington Hall was sold whole or ground as ordinary coffee is today, then steel-cut with the bitter chaff removed, and finally Baker-ized. In it we have retained the good points of our older methods and adopted new features (explained in booklet) that make it economy without economizing. A luxury not at the expense of health, but one that is an aid to modern living.

Baker's Steel-Cut Coffee

Steel-Cut Coffee lacks a little in quality and in evenness of granulation when compared with Baker-ized Barrington Hall, but the chaff with its objectionable taste is removed from it also. It is superior to the so-called cut coffees that are offered in imitation of Baker-ized Coffee.

Our coffee is for sale by grocers in all cities and most towns. Write for grocer near you who can supply it.

The Simplex Water Works Baltimore, Md.

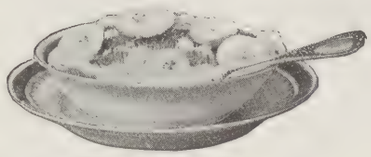
PANAMA
AND WHAT IT MEANS
By JOHN FOSTER FRASER

A delightfully readable book and the only one which treats the subject from an Englishman's viewpoint. Mr. Fraser has spent much time at Panama, and writes with great human interest of the enormity of the undertaking; of the men who are engaged in it, of how they live, work, and play; of the seemingly impossible feats of engineering which have been performed; of the question of treaty interpretation which has arisen to mar the project; of this, that, and the other—all of keen interest; and finally of what the whole project means to the world at large.

THE SCIENTIFIC AMERICAN, New York, says: "His way of putting things, and his instructive photographs, enable the reader to look on from a point of vantage. The men, the machinery, the accomplished work, will be sharply defined and real to him who reads the story."

Large 12mo, cloth, beautifully illustrated, with 48 full-page plates and a map. $1.75 net; by mail, $1.85
FUNK & WAGNALLS COMPANY, Publishers, New York

Take Your Home With You



Travel comfort comes from the ability to take home comforts with you. The only way to enjoy the comforts of your home in hotel, cafe, restaurant or summer resort is to have served simple, nutritious, wholesome foods that you are accustomed to have in your own home. You can take your home with you by eating

Shredded Wheat

served in the way you have it at home—heated in the oven to restore its crispness, with hot milk and a little cream poured over it. If you like it with sliced peaches or other fresh fruits and cream, be sure and have it served the way you like it. Two Biscuits, with fresh fruit and cream, make a perfect meal for the hot summer days and will supply all the strength-giving nutriment needed for work or play. Shredded Wheat is ready-cooked and ready-to-serve.

TRISCUIT is the Shredded Wheat Wafer, a crisp, wholesome, satisfying snack for luncheons, for picnics or outdoor excursions on land or sea. Delicious when toasted in the oven and eaten with butter, soft cheese or marmalade.

Made only by

The Shredded Wheat Company

that the Western Union was using its receiver, and the Western Union claimed that the Bell Company was using its carbon transmitter. The companies finally came to terms, after fortunes were spent by both in legal defense.'

"In 1878 Edison invented the phonograph, and, like all the others, this invention was immediately made the target of litigation. The incandescent lamp was brought out in 1879, and perhaps the costliest patent litigation in the history of electrical corporations followed. When Edison began his experiments, lighting by incandescence was said to be impossible. There was no such luminant in the world, yet after he brought out the incandescent lamp a host of inventors came forward with affidavits of all kinds stating that they made a practical filament lamp before he did—but all patterned after his.

"'The first money to develop the incandescent lamp,' Mr. Edison said, 'was furnished by a syndicate of Wall Street men, prominent among whom was J. P. Morgan. They put up $100,000, and I went to work on the new light. Nearly the entire sum was spent in producing the first practical lamp. For years we held all our meetings in the office of J. P. Morgan & Co. Then the Edison Electric Co. erected its own building at 44 Broad Street and established permanent quarters in New York. I was never interested in the business end of the company, altho I was a director, paying strict attention to the manufacture of the lamps.'

"Then came the electric railway and the magnetic ore-separator, in which fields, too, he was the pioneer, and these patents were in the courts for many years. Litigation in the motion-picture patents was also heavily prosecuted. Edison's work in this field was the production of a motion picture by means of one camera with a succession of photographs on a continuous film. Previously the picture was taken by a battery of cameras, each taking a successive photograph. The reproduction was not successful. Edison's method was the only one which produced the practical motion picture as seen to-day.

"'There is no justice in law,' Mr. Edison concluded. 'It has resolved itself into technicalities and formulas. A case will be thrown out of one court and carried to another, it will be sent back on writs and advanced on argument, and bandied back and forth more for the exercise of legal practise than for the attainment of justice. Where an important case might be settled in a short time by the use of common sense, it is prolonged for years through the technicality of jurisprudence, the whole course of which defeats the object sought.'"

TRANSCONTINENTAL CANADIAN RAILWAYS

Next year promises to see in operation, "from ocean to ocean," two new Canadian railways—the Canadian Northern and the Grand Trunk Pacific. This early completion has been made possible by the recent success of the two roads in securing subsidies and loans from the Government exceeding in amount for both roads $30,000,000. Meanwhile, the Canadian Pacific will proceed at once with a program of developments and extensions involving outlays of $100,000,000. A Montreal correspondent of *The Wall Street Journal* says in detail of these matters:

"The bulk of Canadian Pacific's expansion activities is in the West. It has been found that much construction work, including terminals, yards, trackage, docks, and so forth, which is now only a few years old, is incapable of filling the demands upon it and must be replaced with larger

An artistic interior is the chief charm of any home

You need no longer confront the problem of remodeling one, two or three rooms, or even your entire house with a dread of the ensuing muss and inconvenience. For Utility Wall Board affords a simple solution, yet one full of possibilities for making your home more beautiful.

UTILITY WALL BOARD

It is a tough, fibre board that comes in convenient lengths and widths. You can nail it directly to the studding yourself quite easily and speedily. It makes a wall smoother and more satisfactory for decorating than plaster and lath. When you desire to remodel only one or two rooms, the use of Utility eliminates the heaviest expense—that of mixing the plaster.

Write today for a sample. We will gladly send our Book of Artistic Interiors.

ISENBERG CIGAR CO., Wheeling, W. Va.

facilities. At Vancouver the road is called upon to construct larger piers to accommodate the new liners it has placed on the Pacific route.

"Canadian Northern, the Mackenzie & Mann road, should be a complete transcontinental line next year—early next year, its builders say. In the western provinces its mileage amounts to 4,600; in eastern Canada its groups of lines aggregate some 2,000 miles. Between Ottawa and Toronto there is less than ten miles to be completed; the bridging is finished and the grading practically so. The Sudbury-Port Arthur link, it is stated, should be completed before the end of the year. On the main line through British Columbia, work is being pushed at several points, with steel laid from Edmonton, Alberta, to Yellowhead Pass, a distance of 350 miles. The entire route from Edmonton to Vancouver is 770 miles long. The Canadian Northern has $70,000,000 capital stock, every share of which has been held by the Mackenzie & Mann combination. However, in June, the Canadian Government voted the road a subsidy of $15,640,000, in return for which it was to receive $7,000,000 stock as an investment. Apart from this, subsidies to the Canadian Northern and affiliated companies exceed $120,000,000. The road's eastern terminal at Montreal will be entered through a tunnel under Mount Royal. At Vancouver, its main line terminal in the West, a tunnel four miles long will give it entrance to that city.

"A mile of completed road a day has been the slogan of the Mackenzie & Mann partnership, and this has been lived up to for several years. The record of the road heretofore has been chiefly as a freight-carrier, and as an undeveloped line it has been made to pay its way. Its business is not entirely of Canadian origin, as it has connections on the American side at Duluth. When the Hudson Bay Railway, projected by the Canadian Government to run from Winnipeg to Port Nelson on the Hudson Bay, is completed, it is expected that its operation will be taken over by the Canadian Northern.

"The National Transcontinental is being constructed by the Canadian Government between Winnipeg and Moncton, N. B., a distance of 1,800 miles, as the eastern connection of the Grand Trunk Pacific running from Winnipeg to Prince Rupert on the Pacific coast. The mileage of the combined lines is approximately 3,600.

"The Grand Trunk Pacific is being built with grades not exceeding four-tenths of 1 per cent. against east-bound traffic, and six-tenths of 1 per cent. against west-bound traffic. The mountain section is, of course, an exception, with a twenty-one-mile stretch of pusher grade, the balance averaging about a 1 per cent. grade.

"On the government line the stretch from Winnipeg to Quebec was to have grades not in excess of those on the prairie portion of the Grand Trunk Pacific. The line from Quebec to Moncton was to have two pusher grades for short distances. Moncton is not on the seaboard, but from that point the traffic is to be handled to St. John's and Halifax by the existing government-owned road, the Intercolonial of Canada.

"According to the agreement for construction of the lines, the National Transcontinental is to be leased by the Grand Trunk Pacific for fifty years with interest at 3 per cent. on the cost of construction, beginning seven years after operation was started. With construction subject to approval by the Grand Trunk Pacific it was, on the one hand, to its interest to see, as prospective operator, that the line was built in such manner as to require the least expense of operation; on the other hand, the provision that it should pay 3 per cent. interest on the cost was a spur urging it to guard against unnecessary expenditure on construction."

Tire Prices Down

Now the Costliest Tires—No-Rim-Cut Tires Cost You No More Than Others

Goodyear No-Rim-Cut tires used to cost one-fifth more than other standard tires. The reasons are told below.

These tires, despite that extra cost, came to outsell any other. As our output grew the cost came down.

Now you pay no more for No-Rim-Cut tires than for any other standard tire. Yet notice what you get.

Rim-Cutting Ended

You save in these tires all the ruin of rim-cutting. And that's an enormous item.

We had public accountants lately gather statistics. They examined thousands of ruined clincher tires—the old-type hooked-base tires. And they found that 31.8 per cent had been discarded for rim-cutting only.

That's almost one in three.

No-Rim-Cut tires, made by a costly method which we control, end that loss completely. That we guarantee.

Save Blow-Outs

We give these tires the "On-Air Cure." That is, they are final-vulcanized on air bags shaped like inner tubes.

That's to save wrinkling the fabric.

All other tires are vulcanized on iron cores alone. The fabric often buckles. And that buckled fabric leads to countless blow-outs.

This "On-Air Cure," which we alone employ, adds to our tire cost $1,500 per day.

Save Loose Treads

We use another costly method to prevent tread separation. The rights to it cost us $50,000.

Millions of dollars have been lost to tire users through the loosening of the treads. No other tire in the world employs the effective method we use to combat it.

Yet No Extra Price

You get all these savings in No-Rim-Cut tires. All these features used by no one else. Yet no other standard tire today costs less than No-Rim-Cut tires.

The reasons are mammoth output, new factories, new equipment. In one item alone—in overhead cost—we have saved 24 per cent.

Another reason is that we keep our profits within 8½ per cent.

Judge for yourself if tires lacking these features are worth the Goodyear price.

Our dealers are everywhere.

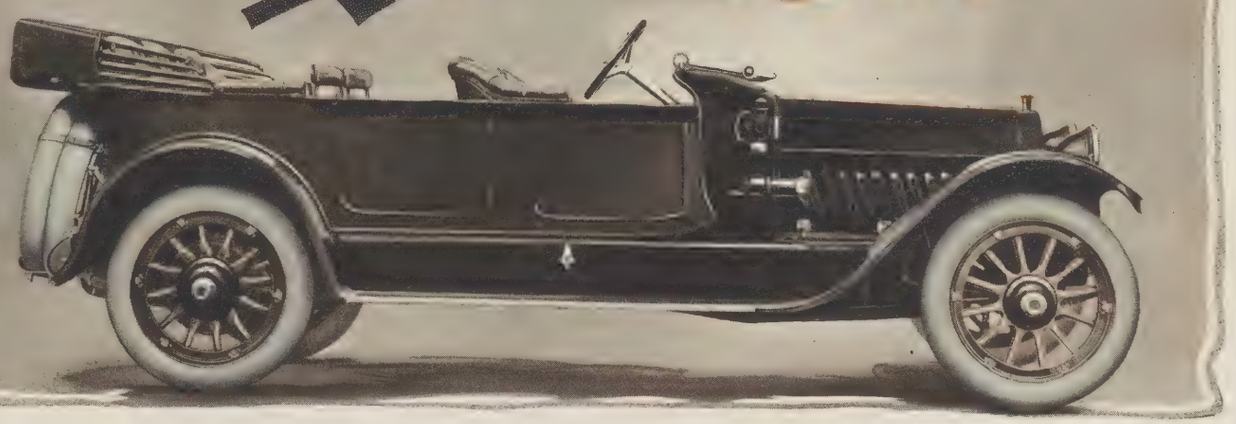
Oldsmobile 1914



Here is the Greatest Six-Cylinder Car Ever Produced

OUR entire sales organization, engineering department and factory managers not only endorse the statement that this is the greatest six-cylinder car ever produced, but insist upon advertising it as such—there is no other expression which so adequately and truthfully describes the new 1914 Oldsmobile Model 54.

We have never before in our sixteen years of automobile manufacturing made so strong a statement. Our policy has ever been, and will continue to be, a truthful adherence to facts, and when we commit ourselves we believe we can prove by demonstration or comparison that we have not underestimated the position occupied by Model 54 among sixes.

The motor of this new Oldsmobile is a marvel. To perfect it, the largest corps of engineers, engaged in the exclusive business of designing and building automobile motors, have labored for months. They feel (and we believe you will agree) that this product is the most efficient six-cylinder motor either in this country or abroad. Not too light—not too heavy—perfect in balance and control—it is all that knowing motorists mean by the term "light on its feet."

The 1914 Oldsmobile is not a triumph for ourselves exclusively, but one in which every American can share. Europe's most noted car builders have yet to produce a car that will surpass this Oldsmobile in appearance, completeness or performance.

The 1914 Oldsmobile can be seen at any of our factory branches, located in all the principal cities, and dealers from coast to coast. A complete catalogue will be sent on request.

Four or Five-Passenger Phaeton touring body type, $2975

We will **name our price** only in **direct letters** to those **sending the coupon** below. **Tear off the coupon,** write **name** and **address** plainly and **mail now before you forget it.** Dr. Ridpath's widow derives her income from his History, and **to print our price broadcast** for the sake of quickly selling these few sets would cause **great injury to future sales. Send Coupon today.**

Boston Post

says: "John Clark Ridpath is above all things an historian. His historical works are accepted as standards in schools, colleges and homes. His style is simple, his manner charming."

Leslie's Weekly

says: "Dr. John Clark Ridpath is one of the ablest of American historians. He combines a beautiful literary style with wonderful accuracy and completeness. His great History of the World is a library in itself. There is no better set of books to place in the hands of youth than this notable work."

Christian Herald

says: "No other work of its kind has ever supplied a history so well suited to the needs of all classes and conditions of men. We cheerfully commend this most popular and complete of all world histories to our readers."

FREE
WE will mail free a beautiful 46-page booklet on history to every reader interested in our offer who mails us the coupon below. It contains portraits of Socrates, Cæsar, Napoleon, Shakespeare and other great characters in history; also specimen pages showing beautiful style in which the work is written.

Nine Royal Octavo Volumes

4,000 double column pages, 2,000 superb illustrations.

THE REASON for Dr. Ridpath's enviable position as an historian is his wonderfully beautiful style, a style no other historian in any generation has ever equalled. He pictures the great historical events as though they were happening before your eyes; he carries you with him to see the battles of old; to meet kings and queens and warriors; to sit in the Roman senate; to march against **Saladin** and his dark-skinned followers; to sail the southern seas with **Drake,** to circumnavigate the globe with **Magellan,** to watch that thin line of Greek spearmen work havoc with the Persian hordes on the field of Marathon. He combines absorbing interest with supreme reliability and makes the heroes of history real, living men and women, and about them he weaves the rise and fall of empires in such a fascinating style that history becomes as absorbingly interesting as the greatest of novels. Hundreds who read this have decided to buy Ridpath **some day; now is the time.**

EVERY AMERICAN CITIZEN should know the history of his own country and of the world, to intelligently perform his full duty as a citizen. How else are we to judge of the great national questions except by some knowledge of the past? Our Tariff Policy, the question of the Trusts agitating the great business and commercial world, the respective rights of labor and capital—these and hundreds of other important questions press upon us as a nation for intelligent discussion and decision. How have such questions been met in the past? For the answer read the history of ancient civilizations which flourished, decayed and died. Read the history of mighty Babylon, or of imperial Rome, and familiarize yourself with her growth, development and decay. Read the history of the French Revolution, the establishment of the republic, out of which came the empire dominated by Napoleon. Then when you know history, when you know the cause of the rise and downfall of empires and nations, and not until then, will you be able to intelligently discuss and decide the great questions that are pressing now everywhere for attention.

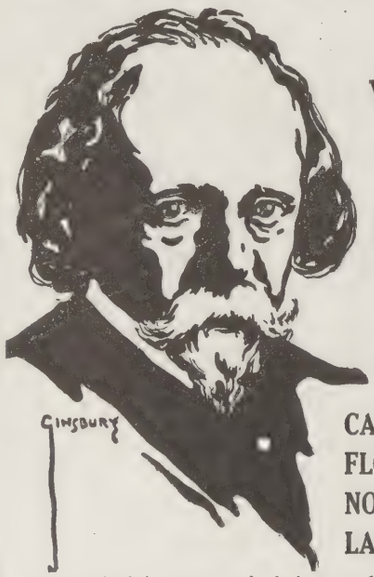
HALL CAINE'S GREATEST NOVEL



The Woman Thou Gavest Me

Being the story of Mary O'Neill

CAUGHT ON A FLOOD OF SUCCESS NOW IN ITS THIRD LARGE PRINTING

this wonderful romance is being read and discussed in every community of consequence. It is the Book of the Year,—one of those rare novels which appeals to people in every walk of life. The startling revelations of Mary O'Neill form a love story for all the world and for all time, in which Hall Caine has presented a remarkable analysis of the modern marriage. It reveals the relation of Man to Woman from the Cradle to the Grave.

Do You Believe That ?

"Our Whole System of Society is Rotten From Top to Bottom and the Social Environment is the Worst That the World Has Ever Seen"?

So says our greatest living scientist—co-discoverer with Charles Darwin of the theory of evolution—

in his new book

Social Environment and Moral Progress

By DR. ALFRED RUSSEL WALLACE

Author of "Darwinism," "Man's Place in the Universe," Etc.

"One of the most fruitful and suggestive of recent works. It is a study on the one hand of the moral character and intellectual capacity of man, and upon the other of modern society as affecting man's moral and intellectual progress....A remarkably stimulating examination of the life of mankind."—*The Springfield Republican* (Mass.).

"He recalls to our minds, with stinging, uncontrovertible logic, all the social, political, and economic wrongs and injustices from which we suffer today. After treating of morality in general, and of character as a permanent attribute of humanity, he devotes a chapter to environment during the nineteenth century, tracing the gradual urbanization of life in civilized countries, the drift from country to crowded city, and all the ills of 'hectic industrialism'."—*Review of Reviews.*

"His book is bound to be an epoch making one, a towering landmark in a vast expanse of literature upon this burning subject."—*Record of Christian Work.*

"The author's position as co-discoverer with Darwin of one of the most momentous theories in the history of thought, his venerable age, his wide scientific knowledge, and deep philosophic insight, lend to his utterances an authority such as could be claimed by *no other living writer*....It comes with an authority too high to be impugned; it conveys a message of too grave import to be ignored. Not to read and earnestly ponder such a message is little short of a sin against the future."—*The Dial.*

300 After-Dinner Speeches

by Joseph H. Choate, Wm. J. Bryan, Benjamin Disraeli, James G. Blaine, Wm. M. Evarts, John Hay, Oliver Wendell Holmes, Sir Henry Irving, Chauncey M. Depew, Henry Ward Beecher, Mark Twain, Henry W. Grady, Joseph Jefferson, Robert G. Ingersoll, Seth Low, Albert J. Beveridge, Woodrow Wilson, etc.

150 Great Addresses

by Lyman Abbott, Charles Dudley Warner, William Cullen Bryant, Rufus Choate, Theodore Roosevelt, Arthur J. Balfour, Jonathan P. Dolliver, Edward Eggleston, William E. Gladstone, Charles Francis Adams, John L. Spalding, Joseph Chamberlain, Grover Cleveland, Fisher Ames, Lawrence Barrett, Henry Drummond, James A. Garfield, Sir John Lubbock, Hamilton Wright Mabie, etc.

60 Classic and Popular Lectures

by Charles A. Dana, Robt. J. Burdette, Russell H. Conwell, Canon Farrar, John B. Gough, Andrew Lang, Wendell Phillips, Josh Billings, John Tyndall, Geo. William Curtis, Artemus Ward, Paul DuChaillu, John B. Gordon, Newell Dwight Hillis, John Morley, John Ruskin, Henry M. Stanley, Wu Ting Fang, etc.

2000 Short Stories and Anecdotes

by Mark Twain, Chauncey M. Depew, Horace Porter, Champ Clark, Joseph H. Choate, John M. Allen, etc.

LIKE HEARING the greatest speeches ever made

The brightest thoughts of the World's most famous orators—the wittiest sayings of the wittiest men of the Nineteenth Century—epoch-making speeches that moved not only audiences but Nations. They are all here just as they were delivered by their distinguished speakers and gathered in such form as to instruct and entertain you where and when you will.

Modern Eloquence

Each Speech, Lecture or Address is *Complete*

Everything in this wonderful Library is of proved value and interest, and is printed in its *entirety*. Speeches that have been flashed around the world, lectures that have been repeated again and again to never-tiring audiences, "occasional" addresses that have made men famous in a day, masterly orations that have molded public opinion and directed the march of progress—these are brought together for the first time in this remarkable library.

A Wonderful Bargain

Send us the attached coupon AT ONCE and we will tell you how to get the Library on EASY MONTHLY PAYMENTS, and with our terms we will also mail you **Henry W. Grady's Great Lecture, "The Race Problem"—FREE.** Reprinted from the work itself. Champ Clark says:—**"The most famous after-dinner speech within the memory of any living man."** Sending the coupon places you under no obligation to buy. If you are interested tear it off and send in *now*. Don't wait. The offer is limited.

Consists of ten beautiful, richly bound volumes, elaborately indexed, beautifully illustrated with over 80 photogravures on Japanese vellum; paper, presswork and bindings of very highest quality.

This Great Work is Sole Occupant of a New Field

It has neither predecessor nor competitor. The most brilliant men of the world today endorse it unqualifiedly. To read it is a liberal education—a treasure trove of information accessible in no other form. No intelligent man or woman can fail to be moved by the words gathered here—words which have brought men to tears or laughter, to pity or scorn, to indignation or repentance. Each address is a separate gem and from the standpoint of inspiration alone is priceless.

Are You Ever Asked to Respond to a Toast, To Write an Address, or to Make a Speech?

If so, you will find these volumes the greatest help imaginable, because they contain nearly every variety of *good pattern* for the various classes of oratory. And many an inexperienced banquet chairman, toast master or honored guest, casting helplessly about him for a good story or appropriate remarks, has found here just the inspiration needed.

From the Great Commoner

Hon. Wm. J. Bryan says: "In commending your work, MODERN ELOQUENCE, which I do most heartily, I feel that I am doing a favor, not so much to you as publishers, as to those who may be led to purchase and read the work. It is a valuable addition to any library.

A blind man who could see—

Here is Romance. In 1864 Joseph Pulitzer was turned away from French's Hotel in New York, for the lack of 50 cents to pay for his bed. Twenty years later he bought French's Hotel, ripped it down to its last stone and on the same site reared the famous Pulitzer Building, the home of his masterpiece and legacy, "The World," one of the world's great newspapers.

At the height of his later triumphs, Pulitzer was stricken blind. One of the Rothschilds has said that without this handicap he would have collected into his hands all the money in the world. But blindness and ill health did not dim the flame of ambition in this restless genius—and money was not his goal. From his steam yacht, cruising over the seas of two worlds, Pulitzer directed the destinies of his two great papers, making and unmaking politicians, fighting for the weak and oppressed with the fanatic zeal of the born crusader.

In the "Reminiscences of a Secretary" Alleyne Ireland tells, with intimate details, the Arabian Nights' story of this man's life. One of our editors describes it: "A human document, portraying with vivid distinctiveness the idiosyncrasies and frailties of a wonderful invalid, with occasional flashes that indicate real greatness of soul and earnestness of purpose." The first chapters of the "Reminiscences of a Secretary" will be published in the October number.

One of the most instructive truck books ever published—FREE

THIS is an *unusual* book. It has been carefully prepared and gives only the practical information you are really *interested* in, and in a way that will take least of your time.

You will not have to wade through statistical arguments on trucks vs. horses, or about extending delivery area, or about giving prompt delivery. You *know* all that.

It gives you definite, easily digested information about the Garford truck *itself*—"on the job."

It shows the sixty-two Garfords that were purchased to transport U. S. mail in New York City; the fleets of Garford trucks on the $200,000,000.00 Catskill Aqueduct job where practically every contractor is using Garfords; the eight Garfords that are doing the work of fifty horses for the Watson Contracting Company; Garfords in the contracting, lumber, grocery, oil, coal, dairy, meat, ice, brewery, and transfer business—in fact in practically every line of business. It pictures Garfords with trailers handling 13-ton loads; Garfords mastering grades up to twenty-six per cent.

The Garford was one of the first successful trucks built in America. We are pioneers in the commercial vehicle industry. Garford Trucks are designed along the most approved and practical European lines, but built for use on American roads. Our records are conclusive evidence and proof of the economy and efficiency of the Garford Truck in service. These records are open for your inspection, and are worth your most careful consideration.

Visit the factory if possible. We want you to become acquainted with the extreme care taken in their construction. In fact we know it will surprise you.

That is why we want you to read this book. It is a practical volume for practical merchants and manufacturers. Fill out the coupon and mail it today.

Copyright Hart Schaffner & Marx

You'll see in our young men's clothes the ultra fashion ideas; the things that are "a season or two ahead;" things that older men will take up later. That's what that department is for—to keep ahead; its work represents the advance line of fashion in men's clothes; and that's why young men are so keen for our goods. Our illustration brings out some of the points that characterize this season's models; you'll see more of them when you see the clothes themselves.

Young men's clothes, as we make them, are different; the back, the shoulders, the front, the sleeves are different. Notice in our illustration the three-button, two-to-button idea; the long slope of the lapel and the way the collar lies. Notice how the coat hugs the waistline; the patch-pockets; the Norfolk vest on the central figure. When you see the clothes examine the Eas-adjust waistband in the trousers, an exclusive feature in our goods.

YOU want smart style, latest style, correct style; but you've got to be careful, if you want to be sure of getting it. Not all "soft roll" coats are correct in style; not all "English models;" there's something more in correct style than just calling it that.

We know; we make a business of knowing; and when you find our mark in the clothes you may depend on getting the right thing. You'll get quality, also; without quality, style doesn't last very long.

The young men in our illustration are wearing suits such as can be had for $25 in any store selling our goods. We advise you to see the clothes for yourself. You'll find suits as low as $18 and $20; and as high as $40 and $50. If you see the $25 suits you'll see why ready clothes are best to buy.

Send for the Fall Style Book showing
many new models for men and women.

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Published by Funk & Wagnalls Company (Adam W. Wagnalls, Pres.; Benj. F. Funk, Vice-Pres.; Robert J. Cuddihy, Treas.; W. J. Funk, Sec'y), 354–360 Fourth Ave., New York

VOL. XLVII., NO. 12 NEW YORK, SEPTEMBER 20, 1913 WHOLE NUMBER 1222

TOPICS OF THE DAY

THE PRESIDENT'S TARIFF VICTORY

EVEN THOSE EDITORS who do not share President Wilson's belief that "a fight for the people and for free business . . . has at last been won" by the Senate's passage of the Tariff Bill, agree that the result is at least a tremendous victory for him. "Woodrow Wilson is coming out of the special session of Congress with a great personal victory to his credit, so far as the tariff is concerned," remarks the Washington correspondent of the New York *Sun* (Ind.), who notes that the two other big practical problems still remaining on his hands are currency reform and Mexico. The Wilson Administration has been six months at the helm, adds the same observer, and in that time the country has learned that "President Wilson is, at present, complete master of the Democratic party in Congress." The bill emerges from its four months' ordeal in the Senate without the sacrifice of any of the things the President demanded—free wool, free sugar, free meats, and greatly reduced duties on all the necessaries of life. Moreover, as the editors and correspondents point out, the differences between the House and Senate bills are not of a nature to offer any serious obstacle to a compromise in conference. "That there is 'no news' in the Tariff Bill as it comes from the Senate," remarks the Boston *Herald* (Ind.), "proves President Wilson's capacity for leadership"; and on this point it goes on to say:

"Usually a President interested in a tariff measure sees his wishes reasonably met in the House, only to have them disregarded utterly in the Senate. This was notably the case with the Wilson Tariff Bill of 1894, so rewritten in the Senate that the Democratic President refused to sign it. The Payne-Aldrich Bill, in Taft's day, got away from him in the upper chamber. But Mr. Wilson, with a small party majority in the Senate, has been able to hold it in line, getting the bill through in much the form in which it left the House. This will afford a real test of his policy. It will give the country what it ordered in establishing a Democratic Administration. It will let us see how the low-tariff idea works, as elaborated under the best party auspices. For the tariff fight is over. The new law will soon be in operation."

"The progress of this first great measure of legislation establishes the adequacy of President Wilson's leadership," remarks the Springfield *Republican* (Ind.), which goes on to say:

"It has brought the Democratic party to its first great milestone in the discharge of the responsibility which the people have committed to it. That will give hope and confidence to its members that the rest of the Wilson program is possible of attainment, and so to be expected.

"Without threat or bluster, steadily and surely, the President has been working with and leading his party in Congress. The critics have been active, but the march has not faltered or wavered. Qualities of mastership that were successful in New Jersey have not proved inadequate in the environment of Washington."

"There may be differences of opinion whether the economic theories exprest in the Tariff Bill passed by the Senate are sound," remarks the New York *Evening Sun* (Ind.), "but there can be no questioning of the fact that a Democratic Congress has at last fulfilled its pledges and placed a great piece of constructive legislation to its credit." One interesting feature of the Senate's contribution to the new Tariff Law, says the same paper, is that "with a slender working majority it decreased ad valorem rates nearly 4 per cent. more than the House, where the Democratic majority is large enough to be unwieldy."

"It is the first tariff in fifty years which was passed by the representatives of the people, and not by the representatives of privilege and plutocracy," declares the New York *World* (Dem.). And even the New York *Tribune* (Rep.), an organ of the Taft Administration, praises the Senate for "hewing pretty close to the line of Democratic promise and policy." This, says *The Tribune* significantly, "was a marked improvement on its work in other days, when its influence was too steadily cast on the side of 'stand-pattism' and obstruction." "This is the first revision we have had in many years which was not attended with great fear and considerable business stagnation," notes the New York *Herald* (Ind.), which sees an explanation in the fact that " the country's business in a very large measure has outgrown old conditions."

Yet this bill whose passage is received so calmly by the country's business interests, remarks the Pittsburg *Dispatch* (Ind.), represents "the most radical tariff reduction ever known in this country." And in the Baltimore *Sun* (Dem.) we read:

"This bill provides not only genuine revision downward, but carries out the Democratic principle of a tariff for revenue only. Whatever may be its faults, it is not tainted with protection. The Senate this time has not emasculated but strengthened the bill. It goes into conference with fewer serious differences to be adjusted between the two houses than any tariff yet presented.

"When it is on the statute-books the whole country will breathe a sigh of relief, for Republicans as well as Democrats

TERMS: $3 a year, in advance; four months, $1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage $1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE,** or **CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect. *Both old and new addresses* must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

have been prepared for its passage, and are only waiting to find out the final rates and provisions in order to adjust their business to the new conditions."

"The American people have secured real tariff revision for the first time in two decades," exclaims the Richmond *Times-Dispatch*

DISSOLVING THE PARTNERSHIP.

—Macauley in the New York *World.*

(Dem.); "the Democratic party has kept the faith." Similar expressions are encountered on every hand in the Democratic press, while Republican and Progressive editors add their tributes to the efficiency and good faith with which the Democratic party has redeemed its tariff pledges. After one month in the House and four in the Senate, notes the Washington *Herald* (Ind.), "the lowest successful tariff measure since the Civil War" goes to conference "with only friendly differences to consider." The same paper adds:

"President Wilson and the progressive leaders of his party have acted with marked courage in their tariff course, and this fact, recognized throughout the country, will insure to the new law a fairer trial than it otherwise might expect.

"Only time can tell whether or not the bill is a wise one, but the people themselves, largely regardless of partizan concern, will be the judges, and they will be grateful to the Democratic leaders for presenting, through an honest bill, a clean-cut issue between low-tariff and high-tariff economic policies."

By the passage of this bill, remarks the Newark *Evening News* (Ind.), the Democrats in Congress have accomplished "three things thoroughly worth while":

"They have redeemed a party pledge without equivocation. . . . . .

"They have exhibited a solidarity and sense of responsibility that bode well for the future. . . . . .

"They have acknowledged leadership in the White House, and thus brought into close and effective cooperation the executive and the legislative branches of the Government, friction between which has frequently rendered abortive all attempts to carry out clear-cut national policies."

Turning to the hostile criticisms of the bill, we find Mr. Hearst's New York *Evening Journal* (Ind. Dem.) joining with such Republican organs as the Philadelphia *Press* and the Boston *Transcript* in predicting evils to follow in its train. "If Mr. Underwood gains the advantage in the conference, the bill will be less bad than it is now, but it will not be good," says *The Transcript*, which continues its indictment as follows:

"From its inception to its conversion into the Wilson Bill the tariff legislation of the session has been inspired by a spirit of sectionalism. Neither revision nor protection has been uniformly spread over the industries of the land. The industries of New England have been flayed, whereas Louisiana is the only State in the South which has been subjected to similar treatment. Framed unscientifically, and inspired by partizanship, the new tariff will of necessity encounter both political and industrial opposition. President Wilson says that its passage will be a victory for the people. For what people? Assuredly not for the 7,600,000 voters who last year, by dividing their favor between Roosevelt and Taft, made Wilson's election possible, nor for the Northern toilers who will be thrown out of work, nor for the Louisiana plantation laborers. . . . . .

"The country is called upon to endure the new tariff with the best grace it can. If in operation that tariff sacrifices revenue as it has sacrificed protection, the experience of the country will not be unprecedented in view of the operation of the Democratic Tariff Bill which President Cleveland permitted to become law. Prosperity fell a victim to the first Wilson tariff. Let us hope it may survive the second of the same name at least until a Congress representative of the majority of the American people can come to the rescue a year hence."

This Tariff Bill was "devised in secret caucus and forced through both branches of Congress by relentless despotism exercised through the caucus machinery," declares *The Press*, which predicts a painful awakening on the part of the farmers when the new rates go into effect. And in *The Evening Journal* we find the following gloomy prognostications:

"The one certain result of a lower tariff is this: MORE AMERICAN MONEY WILL GO ABROAD AND MORE WORK FOR AMERICANS WILL BE DONE ABROAD. . . . . .

"Foss, of Massachusetts, elected as a Democrat, has gone back to the Republican party. That is nothing. He has moved his great factory from the United States to Canada. THAT IS SOMETHING.

"The work that American citizens did here in the United States for Foss will be done by Canadians in Canada. They will get the work and the wages—and we in the United States will pay the bills. . . . . .

"Hundreds of millions of American money that USED to stay

here will go out of the country under the new tariff. We may feel the need of that later.

"Merchants will be able to sell some things much cheaper. They will come from abroad and be the product of labor that costs less or of other cheaper foreign conditions. That will be very nice—cheap shopping is a delight—IF YOU HAVE THE MONEY WITH WHICH TO SHOP."

PRESENT ASPECT OF THE "HOUSE OF GOVERNORS."

Only twenty-five State Executives attended the sixth annual convention of the House of Governors, which held its sessions at Colorado Springs. One journal describes this institution as "proceeding aimlessly, but in the general direction of the setting sun."

A TOTTERING "HOUSE OF GOVERNORS"

THE FUTILITY of the Governors' conferences, of which the sixth has just been held at Colorado Springs, Colo., causes certain editors to wonder whether these gatherings might not better be ended. Epigrammatically recording the progressive decline of an institution founded by Theodore Roosevelt "to discuss questions of public importance," the Springfield *Republican* says: "First, it was the 'House of Governors,' then the 'Conference of Governors,' and now it is merely a few Governors hearing themselves talk." On the latter point we are informed by the press that out of forty-eight Governors of the States only twenty-five attended the Colorado Springs meeting, which, according to the New York *Evening Post*, "is not a sign of a special vitality in the institution from which much was hoped." The most obvious error of the conference, *The Post* points out, lies in its program of subjects for discussion. It is all very well, we read, to take up matters that involve, or may involve, Federal action, but the great purpose of the conferences was "uniform State legislation." Nevertheless, in examining the list of topics proposed as subject to such legislation, *The Post* is moved to ask whether all or even the most of them are in reality suitable to adjustment by uniform State laws. For instance, inquires *The Post*, "why should all the States make haste to have the same system of direct primaries?" and if Oregon wishes to try "the extreme of direct legislation," why should not her sister States stand by and profit by her experience? Looking at the matter from this point of view, *The Post* begins to doubt whether or not "the field apportioned to the House of Governors be much more limited in extent than was supposed"; and, in referring to the so-called "outside topics" introduced into the conference, it cites the proposal of Governor Hunt, of Arizona, to abolish legislatures and conduct State administrations through a Governor and his Cabinet, and the proposal of Governor Hodges, of Kansas, for commission government of States as tending "to make of the conference a body for the discussion of the theories of government."

Instead of attempting to cover "a wide range of big subjects," thinks the New York *Press*, more might be accomplished "if emphasis were thrown upon one topic considered thoroughly," but, adds *The Press*, unquestioning in its conviction of the value of the annual conference—

"Whatever is done by way of formal action or discussion, those congresses of Governors have become a notable institution in furtherance of intelligent treatment by the different States of the many problems which are common to them all."

Confident also is the tone of the Richmond *Times-Dispatch*, which says that altho "the ideal of the inventors of 'the third house' is far from realization, yet it is not unattainable," and the New York *Globe*, praising the Governors' Conference as "an opportunity to exchange ideas and suggest reforms based on practical experience," calls attention to the fact that "these conferences . . . have always been productive of good in the past." Recalling that in the beginning there was talk of an authoritative organization of the House of Governors which should make it an essential part of the Government and that the idea ended in talk, the New York *Tribune* notes with satisfaction that while the meetings have continued to be "purely voluntary and unauthoritative" they have not "declined in interest or lacked profit."

Quite the opposite is the opinion of the New Orleans *Times Democrat*, which, as a failure, ranks the "House of Governors" with the Commerce Court, and says of the present conference:

"Far less attention has been paid to it than was paid to the earlier conferences—probably for the reason that the high hopes of practical results, awakened when President Roosevelt broached the plan, have been disappointed. It had been expected that the assembled Governors would find ways and means for closer cooperation, for securing uniformity of laws, etc. After several years' trial of the plan its expected good results are rather conspicuously absent."

Another New Orleans paper, *The Picayune*, finds that "it is not easy to see that anything useful or important can come from these meetings," but it hopes the Governors "will have a good time," while the New York *Times* says that, instead of a House of Governors, we should have "a House of Delegates, made up yearly of experts" specially charged to consider interstate measures covering some special field. Then there is the Providence *Journal*, which, speaking of "an institution fading away for lack of an objective," describes the House of Governors as "proceeding aimlessly, but in the general direction of the setting sun."

A GREAT BANK ACCUSED

THE GRAVE CHARGE that the largest bank in the country is carrying on a campaign of "misrepresentation" about the Currency Bill that is "intended to discredit the Administration" and "has the effect of poisoning the public mind and misleading public opinion" puts in concrete form the feeling that seems to exist between the bankers and the Democratic leaders in Washington. These are the words of Senator Robert L. Owen, Chairman of the Senate Banking and Currency Committee, and the bank he names is the National City Bank of New York City. Many recall that this is the second time the Democratic leaders have assailed this and other large banks that are suspected of being in a "money trust." Not long ago the Secretary of the Treasury declared his belief that New York bankers were purposely depressing the price of Government bonds to arouse hostility among the country banks against the pending legislation. The reply of Frank A. Vanderlip, President of the National City Bank, to Senator Owen's charge denies that his bank is "leading a movement against the Currency Bill," altho he admits having criticized it and declares he intends to criticize it further in accordance with his best judgment. The statements of Senator Owen were exprest as follows in a letter to James Simpson, vice-president of Marshall, Field & Co., of Chicago:

"The propaganda now being carried on, led by the National City Bank of New York, which has circularized the country against the bill, is obviously intended to discredit the Administration and to make it appear that the bankers have not been consulted and that the committee is not well informed. This misrepresentation has the effect of poisoning the public mind and misleading public opinion. . . . . .

"The business men of the country need have no fear that their Representatives and Senators in Congress will act unadvisedly. The representatives of the big banks of the country have been given the most abundant opportunity to be heard. And after they had their Chicago meeting and presented anew their old contentions and requested further hearings, this opportunity was immediately afforded by telegraph and the hearings set for 2 o'clock Tuesday, September 2."

Taking up the cudgels for the bankers, the Chicago *Inter Ocean* (Rep.) reminds Senator Owen that the invitation to come to Washington was not extended to the bankers until they had "held a national convention in Chicago and unanimously approved amendments to the bill which they declared were indispensable," and the *Inter Ocean* adds:

"As a matter of fact, the most active circularizer that has been generally heard of is a Wisconsin 'country' banker who obtained a practically unanimous vote of the banks of that State against the bill as it now stands. The educational campaign for currency reform has been carried on from Chicago by the National Citizens' League, an organization of merchants and manufacturers chiefly, to which anybody can belong, and on whose governing committee there is one solitary banker, and he not a national banker. And the active leaders of the recent Chicago convention were not bankers from the neighborhood of 'Wall Street,' but from the West and South."

Mr. Vanderlip, who is described by the Brooklyn *Eagle* (Ind. Dem.) as "president of the largest national bank in the United States, an institution known to represent in the financial world the men and interests that are now most powerful in controlling credits and most concerned in having the new system workable," is reported as saying in defense:

"I and other officers of this bank have endeavored to make an intelligent criticism of the pending Currency Bill, and we intend to keep on criticizing it as long as we feel that it does not adequately meet the needs of the banks and the business interests of the country. I am not opposed to currency legislation. I have preached it for years.

"It is foolish to attribute criticism of the bill by the National City or any other bank to selfish motives. There is just as much patriotism in banking offices as in the halls of Congress. Of course, if you believe we are all actuated by selfish motives, that is too bad. But it isn't true.

"We are not leading in any movement to kill the Currency Bill, but I consider any move for the purpose of bettering legislation a wise and patriotic thing. It is all moonshine about a propaganda to defeat the bill. I want to see financial legislation effected. This bill has some correct principles, but it must be changed according to the lines suggested at Chicago."

Hereupon *The Eagle* is moved to say that while believing Senator Owen and Mr. Vanderlip both to be patriotic Americans, "anxious to have such legislation as is best for all America," yet it doubts whether "the temper displayed by each of them" is calculated to bring about that result, and it explains that:

"Senator Owen should have avoided charging 'misrepresentation.' He knows well enough that the degree and extent to which bankers have been taken into counsel is a matter of public knowledge on which misrepresentation would be silly; and that the general information on banking subjects of the Senate and House committees is not a concrete issue, but a matter of opinion on which any man is free to think as he pleases. On the other hand, Mr. Vanderlip is peculiarly unfortunate when he permits himself to be goaded into saying that the pending bill 'must be changed according to the lines suggested at Chicago.'"

While granting that Senator Owen's charge "draws a red herring across the trail," the New York *Evening Sun* (Ind.) ventures that "in all likelihood his action will not divert the attention of the thinking part of the banking and business community from the shortcomings in the bill," but the New York *World* (Dem.) affects no surprize at the Owen charge, which, it says, reveals the National City Bank "in no new attitude." It has been for so long "a directing partner of the Government in financial affairs," *The World* goes on to say, that it "can not well know how to act differently now," but times are changed and—

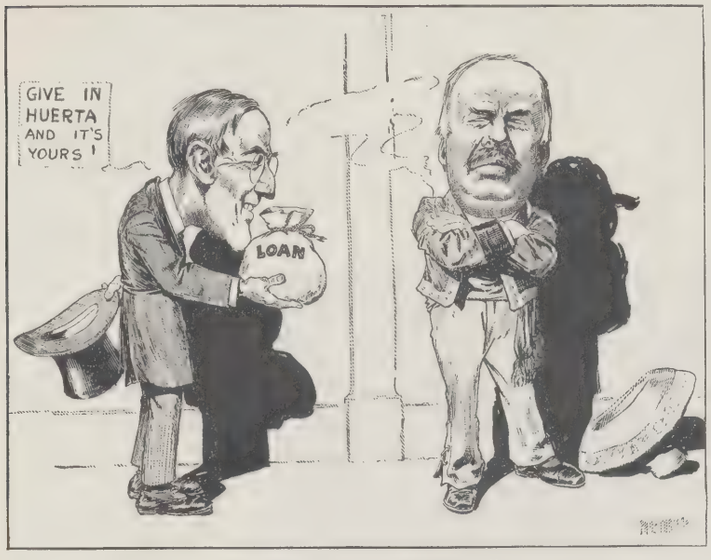
"It has been forced out of the State Department and dislodged from the Treasury Department. The old ways of getting back are hopelessly blocked. But if it can rewrite the Administration's Bank and Currency Bill into the Aldrich Bill, a new way of getting back will be opened which can not so easily be closed."

Another indication of the way the bankers are regarded by the men who have charge of the Currency Bill is shown by the remarks of Chairman Glass, of the House Banking Committee, on September 10, when he said in part:

"The whole fight of the great bankers is to drive us from our firm resolve to break down the artificial connection between the banking business of this country and the stock speculative operations at the money centers. The avowed purpose of this bill is to cure this evil. They do not want existing arrangements disturbed: they desire to perpetuate a fictitious, unscientific system, sanctioned by law, but condemned by experience and bitterly offensive to the American people—a system which everybody knows encourages and promotes the worst description of stock-gambling."

A Republican member of the same committee, however, while speaking favorably of the bill, pointed out that it must be made acceptable to the bankers or it may fail through their refusal to cooperate. Said Mr. Hayes (Rep., Cal.):

"But the most perfect banking and currency system in the world is useless if you can not put it into operation. The system created by this bill, or by any bill, can not be put into operation in this country, unless a large majority, of national banks, at least, go into it. On its face it appears to be compulsory upon all national banks, but, of course, in the last analysis this is not so. The time has gone by when the Government can confiscate a man's property or compel him to employ his capital and talents in any business that he does not think for his interest to engage in, even if he is a banker. Gentlemen are very much mistaken if they think that many men will engage in the banking business for the compensation of 5 per cent. on their capital. Good, absolutely safe bonds can be had that will yield 5 per cent., and all the holder need do is to cut off his coupons at the proper time and present them for collection. To get 5 per cent. on his capital,



THE NEW "DOLLAR DIPLOMACY."

THE MOTH AND THE FLAME.
—Handy in the Duluth *News-Tribune*.

HUERTA'S TEMPTATIONS.

a man need not devote all his best energies to the banking business, sweat blood whenever there is financial or industrial disturbance in the country, and be the worst hated and most 'cussed' man in the community. . . . The failure of any large proportion of the national banks to go into the new system would weaken the proposed reserve banks to such an extent as to make them ineffective, and whether such banks reorganized under State laws or went into liquidation, they would in either case retire their circulation, thus producing an arbitrary and sudden contraction of the currency which might prove to be disastrous. It is of the first importance, therefore, that the bill be made sufficiently liberal to induce the banks generally to come under its provisions. I fear the gentlemen of the majority have not given sufficient weight in framing the bill to this consideration."

THE BYE-ELECTION IN MAINE

REPUBLICANS seem to be the most interested observers of the election in James G. Blaine's old Congressional District, the Third Maine. The Republican candidate, John A. Peters, received 15,106 votes, to 14,553 for William R. Pattangall, his Democratic, and 6,487 for Edward M. Lawrence, his Progressive opponent. The official Democratic view of these facts, says the New York *Herald* (Ind.), may be well exprest by Congressman Adamson's (Ga.) remark: "The Dutch have taken Holland. What of it?" But to Republican editors all over the country, and especially in New England, the result is immensely gratifying. Many of them expected to see the Democratic candidate elected, as did Congressman Gardner, who left his own primary campaign in Massachusetts to go down to Maine and work for Mr. Peters. "Who would have supposed," asks the Washington *Herald* (Ind.), "that in a district where only 7,000 Republican votes were cast last fall, and which gave Wilson a plurality, there would be, in the brief period of ten months, such a reversal of political opinion?" "The Progressive vote showed a falling off of about 50 per cent. from what Colonel Roosevelt received in November," notes the New York *Times* in a Portland dispatch, while, on the other hand, "the Peters vote was 108 per cent. greater than the Taft vote, while the Pattangall and Wilson vote showed very little variation." And this came about despite the efforts of two Cabinet members and the Speaker of the House of Representatives on behalf of the Democratic candidate and the aid of speakers of national reputation for the Progressive nominee. Hence the jubilant note in the Republican press and the optimistic interpretations of last week's election as foreshadowing the break-up of the Progressive party, the return of the Roosevelt followers to the Republican fold, and a popular reaction against the Democratic "free-trade" tariff policy, all of which will bring about the speedy return of the Grand Old Party to its former high estate. We quote a typical Republican editorial utterance from the Boston *Advertiser:*

"This was the first test of the Democratic party strength since the Underwood tariff measure was introduced in the House. That the Maine vote should come just as the bill was expected to pass the Senate will be taken as a heavy blow to the Democratic Administration and its tariff policy. The party counted strongly on yesterday's contest to back it up at Washington. It wanted to point to that contest and say that the American people, so far as the Third Congressional District of Maine could speak for them, had repudiated the protective tariff policy. It fought the fight on those lines. The result can not be called a victory for the Democratic party. The vote of yesterday shows clearly that there has been no such repudiation, so far as this district can speak. The message of Maine's Third District rings through the country.

"The Progressive vote crumpled to nothing, because the voters who left the Republican party last fall to go careering and shouting after Theodore Roosevelt stopt this time to think, and recognized the peril of giving ratification to a tariff policy that they, in common with all Republicans, believe to be economically unsound and practically destructive to the prosperity that has been this country's, and in which Maine has shared brilliantly. They found themselves facing a great national issue at a most critical time. The Progressive candidate, Mr. Lawrence, could not lead them into the fields where they romped last November. They united with the party of their other years, and faced the Democratic party forcefully and effectively. They recognized the issue and they placed their votes where they would count."

The Advertiser is unwilling to say "how much this indicates of the fate of the Progressive party in other States," but some of its contemporaries are more confident. The "passing of the Progressive party" is clearly seen by the Republican Albany *Journal*, Philadelphia *Press* and *Inquirer*, Rochester *Democrat and Chronicle*, Pittsburg *Chronicle-Telegraph*, and Baltimore *American*. And independent dailies like the New York *Times*, *Sun*, and *Evening Post*, Philadelphia *Public Ledger*, and Boston *Herald* are inclined to take the same view. As the Detroit *Free Press* puts it:

"The Maine result, the Michigan elections of April last, the enrolment everywhere this year, all point plainly to the vanish-

ing of the new party. It is following the way of its forerunners, the Greenback, the Populist, and other independent movements that for a time were impressive, but that one and all frayed out and disappeared. . . . . .

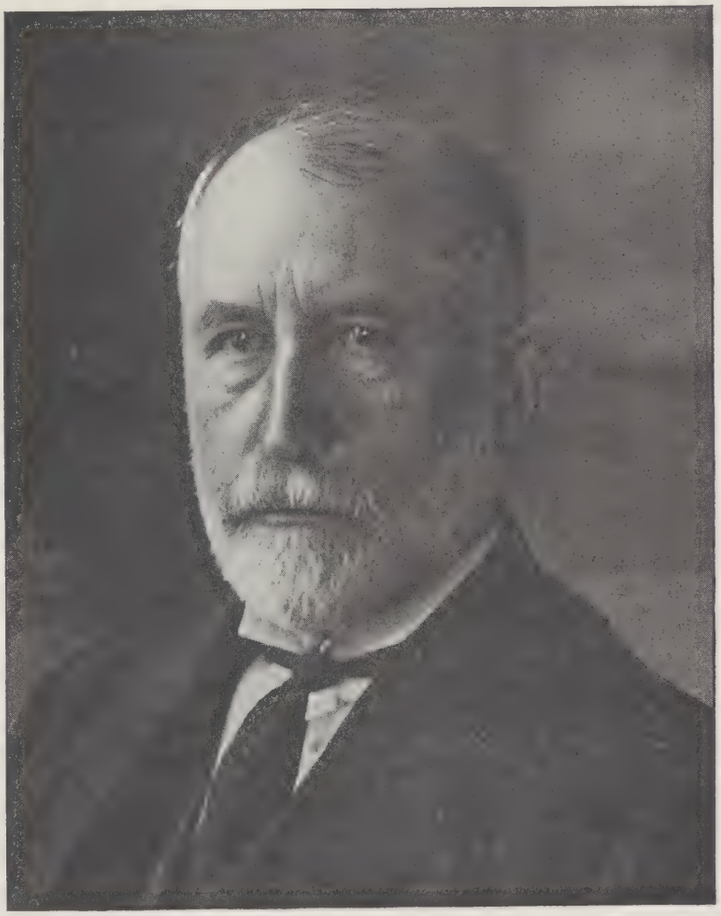
"It is only natural that proof of the decline of the latest independent movement in our politics should henceforth increase the speed of its disappearance. Nothing succeeds in politics like success, and nothing fails like failure. Let a party get the name of a weakling and men fall away from it rapidly. The election figures of Michigan and Maine are the hardest shock that has been given Mr. Roosevelt's organization."

On the other hand, the Democratic and Progressive papers, while letting the Republicans do the lion's share of the talking, do not seem to be particularly cast down. "To what a pass have things come," comments the Chicago *Post* (Prog.), "when the Republican party boasts itself upon carrying a Congressional district in Maine." The Philadelphia *Record* (Dem.) declines "to see any certain sign of the receding of the Democratic tidal wave" in the election of a Republican to succeed a Republican by a plurality of 500 in a total vote of 36,000. When the Democratic vote in the James G. Blaine district remains at a standstill, "no popular reaction against the Administration can be read in the outcome," observes the Richmond *Times-Dispatch*.

As to the Progressives, the Springfield *Republican* (Ind.) takes direct issue with its Republican contemporaries, saying:

"Possibly the fact that the Progressive strength did not fade entirely away is the most significant aspect of the election. There was nothing of the Roosevelt personality involved; yet more than 6,000 voters supported the Progressive candidate. Should so large a percentage of the Progressive strength remain intact as a separate political force in the Congressional elections of next year, the Republicans could not possibly regain control of the lower branch of Congress."

The same thought occurs to the New York *Globe* (Ind.), which does not find "much comfort to the divided party in the figures or any suggestion of a happy reunion." The Progressive New York *Evening Mail* and Boston *Journal*, however, concede that the result in Maine was "a distinct triumph for the Republican party." The victory was due, explains the Boston paper, "upon the one hand to the liberal expenditure of money by a powerful machine, and upon the other to the lack of money for either a complete organization or for proper publicity."



Copyrighted by Underwood & Underwood.

WILLIAM J. GAYNOR.

"I was not a bit afraid to die if that was God's will of me. I said to myself, just as well now as a few years from now. No one who contemplates the immensity of Almighty God and of his universe and his works, and realizes what an atom he is in it all, can fear to die in this flesh, yea, even tho it were true that he were to be dissolved forever into the infinity of matter and mind from which he came."

DEATH OF MAYOR GAYNOR

"I HAVE BEEN MAYOR." These words of Mayor Gaynor's, uttered only a few days before his death at sea on September 10, might well be taken to sum up the editorial characterizations of the man and his administration in the New York papers. Political opponents were not a whit behind the most zealous advocates of the Mayor's reelection in paying tribute to his courage, his independence, and his executive ability. Nor was the occasion simply one for recounting the achievements of an administration now ended, for mourning the loss of a strong, original, and picturesque personality. For Mayor Gaynor died on the deck of the *Baltic* just one week after he had accepted an independent nomination for reelection on the steps of the City Hall, and had begun a series of characteristically bitter attacks upon the political organization which had not seen fit to honor him with a second nomination. The Gaynor candidacy was clearly an anti-Tammany cause. Now the political experts in the great city are wondering, will the Gaynor followers flock to Mitchel, or to McCall, or to some new candidate who will suit them better? A nomination which the leaders of the Gaynor movement offered to Mr. McAneny was at once rejected by him. There are now, as Chairman Hapgood of the Fusion Committee points out, "only two tickets left in the field—one a straight Tammany ticket and one a straight anti-Tammany ticket." As many of the late Mayor's active supporters "as are honest in their opposition to Tammany will," declares the New York *Tribune* (Rep.), "promptly declare their intention of supporting Mr. Mitchel, for he is now the only hope of keeping the Mayoralty out of the boss's hands." So, too, argues *The World* (Dem.), and *The Globe* (Ind.) holds that for these "Gaynor independents" "to vote for McCall or to be inactive against him would insult the Mayor's memory in a glaring way." *The Press* (Prog.), which, with Gaynor in the running, "was emphatically for him and emphatically against Mitchel," is apparently convinced by the argument, and says:

"Yesterday has passed; another condition presents itself to-day. It is Mitchel or Tammany, and between these two *The Press* is for Mitchel."

So it appears to the Jersey City *Journal* (Ind.), just across

the Hudson, that Mayor Gaynor's death "should have the effect of making Mitchel's election certain by attracting to him the entire opposition to Tammany." Yet the New York *Herald* (Ind.) recalls that much of Gaynor's backing in his campaign for reelection came from conservative business men who "were out of sympathy with the radical views of John Purroy Mitchel and feared to place him in the Mayor's office, while at the same time they could not come out openly and advocate the election of the Tammany Hall ticket." According to *The Herald* the Fusion leaders themselves do not expect to get the bulk of this support, and *The Sun* (Ind.), which was supporting Gaynor, asserts that the "very first concern" of the good citizen "is to save New York from the immeasurable disaster of the socialistic or semisocialistic experiments portended by the continued presence of Mr. John Purroy Mitchel at the head of the Hapgood ticket."

Irrespective of their opinions as to the wisdom or unwisdom of his official acts, and whether they were attracted or not by the strongly individual personality of Mayor Gaynor, editors and men of prominence throughout the country and in all walks of life regret the passing of "a great public character." The salient points which imprest themselves upon those who knew the man are thus happily sketched by the New York *Sun:*

"There have been reformers dry as summer dust and austere as an old rural slate gravestone. There have been popular idols who were nothing but sanctity and sawdust; there have been orators and writers who were nothing but words and style, personally hollow as drums. Mayor Gaynor had plenty of faults; he was irritable—there was plenty of physical excuse for it in his last days—he sometimes went too far and fast both on and off the bench; he fought without gloves; his humor and temperament did not always tempt him to be charitable to his opponents, who, to be sure, were seldom charitable to him; he liked to swat; he was more than 'a good hater,' he was a pitiless scorner of many; he turned not the other cheek but the other fist to those who assailed him; he was hot-tempered, like many generous and placable natures; he saw his enemies in hell's own black, his friends in rose colors; he was impatient sometimes; he seemed a little fickle politically sometimes; far enough from a saint and right down near the passions, prejudices, hatreds, affections, the sympathies, and the laughter of common men.

"He had a constituency, a public which took in most of these United States. He brought 'that halting slave' Epictetus 'down to the people,' as Zarathustra would say. His letters, pithy, at times bitter, humorous, ironical, saturated in the strong juices of his character, enriched with long serious study and experience, ranging without effort from the so-called heights or depths of scholarship to the more difficult and dangerous art of saying the right thing to a child: there is one monument of his engaging and unusual mind. He had more than a little of Dr. Franklin in him, the shrewd, kindly, philosophic, life-studying and life-enjoying, tolerant pagan Franklin; and he had enough of that 'unequaled instinct for the jugular vein' which Rufus Choate attributed to John Quincy Adams."

As Chief Magistrate of our greatest city, "in a long line of commonplace and slate-colored mayors of New York," to use the New York *World's* phrase, William J. Gaynor "towers a giant among pygmies. In almost every respect, says *The Globe*, "the Government of New York has been improved during the period that Mayor Gaynor has been at the City Hall." A Socialist daily, the New York *Call*, has "no doubt that Gaynor was the most effective and intelligent chief executive this city has had in years." More specific approval comes from *The Evening Post*, which opposed his reelection:

"No politician, or group of politicians, dictated his policy; and he was afraid neither of labor organizations nor of newspapers. His masterful dealing with the garbage-men's strike was a signal proof of the former; and, tho his sweeping denunciations of newspapers in general often overshot the mark, the predominant feature in them was a scathing contempt for yellow journalism. . . . . He set his face firmly against the Tammany idea of city government, stood stanchly by the merit system in subordinate offices, and from the first stamped upon the city's affairs as a whole the mark of a business administration."

At this time his critics lightly pass over whatever errors of temper and judgment they may have noted, and which in their opinion clouded "the substantial work for progress and good government which he accomplished."

The last scene is considered worthy of his eventful history. Of his early life little is known. As the press sketches tell us, he was born in Whitestown, New York, in 1851, and was admitted to the bar in Brooklyn in 1875. His successful and dramatic fights upon political corruption in the persons of McKane and McLaughlin brought him his first fame and elevation to the State Supreme Court bench in 1893. His success as a judge and increasing popularity brought offers of nominations for higher judicial office, for Mayor, for Governor. All were refused. In 1909 he accepted independent and Tammany nominations for the Mayoralty of New York. He was elected. In office he remained, as most newspapers admit, independent of Tammany, but without antagonizing it. The attempt to assassinate him in 1910, which left him permanently weakened in body, brought messages of sympathy and expressions of approval of his work from all parties in city and nation. The police disclosures brought about by District Attorney Whitman "shook the grip of Gaynor upon the popular regard," says *The Evening Post*. Yet his prestige revived, it adds. But the Fusionists would not consider him as their candidate, and the powers that reign in Tammany councils also rejected him. Then came bitter attacks upon Murphy from the City Hall, a popular non-partizan nomination—"under the shovel," the emblem of subway digging—and a departure for England to gain strength for the campaign. The last scene of all is the sudden death on the *Baltic*. And in the closing days of his public career, as in the first, it is Gaynor, the foe of the boss. In his last message to the people of New York, he was confident that they would not throw the government of the city "into the control of a vulgar gang of grafters all of one stripe." And a friend is told in confidence in the quiet of the stateroom that—"I will tell the whole damnable story. I propose to strip the Tammany gang bare. . . . I will show the people just what Murphy and Tammany means."

FOREIGN COMMENT

A PEACE THAT IS NO PEACE

THE TREATY of Bucharest receives the approval of not a single European journal, as far as we have seen. Dr. Dillon, a specialist in Eastern affairs, speaks of it with horror and contempt. The great mistake appears to be that the Powers have sanctioned a division of territory without regard to racial differences, and various peoples are jumbled up together as if cats and canaries were put into one cage. That the end can only be confusion and bloodshed is the universal opinion of all sections of the press. Even the St. Petersburg journals join in the hue and cry against Sir Edward Grey and the "puppets" he set up at the Bucharest Conference. Russia is credited by Dr. Dillon with having the balance in her own hands, but Mr. Sasonov, the Russian Minister, has made no move either toward driving the Turks out of Adrianople, or doing justice to Bulgaria, who, tho victor over the Turks, is admittedly in a worse position than before the war. The rich territory Bulgaria loses to Roumania is considered more valuable than the barren mountain region gained from Turkey. Already clamors are being raised in favor of revising the treaty, and the Russian press are united in demanding such revision. We are told that the treaty will fall to pieces of itself unless its provisions be changed on principles of common sense and justice. Hence we find Mr. Menshikov writing in the *Novoye Vremya* (St. Petersburg) in the following strain:

THE NEW BALKAN MAP.

"Gently! Don't crowd, or else there'll be ructions again."
—*Ulk* (Berlin).

"The Treaty of Bucharest, in which the territorial principle, and not the ethnographical, has once more triumphed, is a manifestly absurd composition, which contains . . . the elements of rapid dissolution. Judge for yourself: Servia, according to the treaty, gets 1,200,000 new subjects, of which there are a small number of Serbs, half being Bulgars and half Albanians; Greece gets about 200,000 Bulgars, and Roumania almost as many Bulgars, too. Little Montenegro, whose strength has until now been in unity, will get about 200,000 Albanians. Bulgaria herself will gather into her bosom several thousand such tarantulas and scorpions as Greeks, Turks, and Armenians. The diplomats have once more revealed a lack of understanding of the national principle and the psychology which generates discord. The diplomats had before them geographical maps and tables of population, and they cut territory with inhabitants like stuffed pie, disregarding popular wishes and interests. For this rude disregard of nature . . . the Balkan Peninsula will again be punished by God, and not only with short fratricidal wars, but also with internal ills which aliens bring into every country. After a criminal war, having concluded a not altogether honest peace, the Balkan nations are pledged to new crimes: the aliens, of course, will dream of secession, and the native population of their assimilation, that is, there will begin the same historical process which has brought Turkey to her downfall. Each of the Balkan States wanted to play the rôle of a little Turkey, and has seized as many aliens as it could. Each acted like ancient Troy, which dragged within her walls the wooden horse of the Greeks. Instead of the peaceful and harmonious life of a nation bound by ties of blood and language, there will begin everywhere an internal struggle resembling Austrian or, if you wish, Russian political life. . . . Nothing good can be prophesied for this group of nations which have despoiled each other."

Nor does the *Russkiya Vyedomosti*, the leading Liberal organ of Moscow, think that the treaty ends the troubles of the Powers:

"The conclusion of peace does not mean that the Balkan affairs have been settled. On the contrary, there are a good many questions which will yet long occupy the attention of European diplomacy. The question of the southern boundaries of Albania and her future governmental organization remains unsolved. The fate of the Ægean Islands is not decided, because Italy evidently wants to retain forever if not all, at least some, of the islands occupied by her during the war with Turkey. The Turks are still in Adrianople, and the Powers are vainly trying to find means of getting them out. And, lastly, the very decisions of the Bucharest Conference, at least that part of them which concerns the cession of Kavala to the Greeks, will be subject to revision by the Powers. Thus there still remains much work for diplomacy in the Balkans, and the difficulty of solving all those questions is complicated because of the discord among the Powers and because diplomacy has not yet had time to orient itself in the changed conditions in the Near East. The majority of the Powers do not manifest in this case an inclination to intervene in the Balkan affairs; the sessions of the London Conference are proceeding with extreme slowness and threaten to continue endlessly. Just as slowly are proceeding the negotiations regarding the measures to be taken against Turkey, and there are no grounds for the hope that the revision of the Kavala question will be conducted with greater energy. None of the Powers wants to take the initiative in a more active step, and it is probable that the questions of Adrianople, the Ægean Islands, and Kavala formally will remain unsolved; that, while not giving their official sanction to the existing state of affairs, the Powers, nevertheless, can not do anything to change it in one way or another."

The *Ryetch* (St. Petersburg) remarks in the same bitter spirit:

"The Bucharest Treaty will remain a sad document, no matter how the question of Kavala will be solved. The Roumanian brokerage has helped to put a tombstone over an entire country and a whole nation—over Macedonia and the Macedonians. Instead of liberators, it will be necessary to speak of oppressors. . . . But the body of Macedonia is not a dead body, it is a live one. This is well known to the Turks and to Europe. To deliver it into Greek and Servian hands does not mean to decide its fate. It only means to change the aim and direction of the struggle for Macedonian independence."

In the *Golos Moskvy* (Moscow), the transfer of Kavala, a busy seaport, from Bulgaria, who claimed it as one of the spoils of war, to Greece, is spoken of as "an extremely imprudent act," for "Greek Kavala will always be a dangerous menace to peace."
—*Translations made for* THE LITERARY DIGEST.

INFLUENCE OF THE HAGUE IN ENDING WAR

SNEERS AT THE FUTILITY of The Hague peace conferences are plentiful as the delegates end their twentieth session in Mr. Carnegie's magnificent Peace Palace, amid the echo of the Balkan and Tripolitan conflicts. The fact that a great European war was averted in circumstances that once would have started a general slaughter is hardly mentioned. The most influential papers of France, Germany, and England refer to the gathering in a lofty tone, as if its doings were of no serious importance, except in an incidental way. The essays, the theories, the resolutions, are generally spoken of either as futilities or, at least, at the present time, Utopian impracticabilities. They are futile because they are impracticable, and impracticable because they take no account of human nature and the political and economic rivalries of the nations they are intended to influence and reform. Yet, admit some, the tendency of such congresses may ultimately conduce to the education of the world in the way of peace. This result is, however, as far off as ever, declares the London *Morning Post*, and the method of arbitration which was intended to do away with international bloodshed and settle international disputes has proved a failure. Thus we read:

"Arbitration could never have solved the problems in the Near East. How could any Court have judged between the Allies and Turkey in a way that would have been acceptable to both, or between Bulgaria and her rivals? No nation worthy of the name will allow what it regards as vital rights and interests to be disposed of by the verdict of the most impartial tribunal. Even the United States, which claims to lead the world along the path of arbitration, is unwilling to submit the Panama Canal dispute to The Hague, and would certainly never allow such a Court to settle the question of Oriental immigration."

A tone of somewhat severe, even bitter, ridicule and depreciation marks the comments of the London *Times*, which observes:

"The proceedings of the twentieth International Peace Congress illustrate once more the old truism that the advocates of a cause are often its worst enemies. The thousand or so delegates who have assembled at The Hague claim to represent and to be working for a movement that, more perhaps than any other

PEACE IN THE BALKANS.

PEACE—"Oh dear, Oh dear! The beach is horribly painful this year." —*Pall Mall Gazette* (London).

movement of the times, aims at a complete readjustment of the moral values of mankind and a radical change in the political arrangements and instincts of nations and governments. It is a movement, therefore, that can only make any headway against the well-nigh immeasurable obstacles in its path by taking frankly into account the world as it is and human nature as we know it to be. But this is precisely what its supporters at The Hague decline to do. Their method of overcoming difficulties is to ignore them, and their notion of recommending their propaganda to the judgment of the average man is to evolve from some inner consciousness a series of perfect schemes for regulating a world inhabited by perfect beings. The average man remains profoundly unimprest by all such futilities. It does not

—*Wahre Jacob* (Stuttgart).

in the least interest him to hear that a German professor has elaborated a treaty of fifty-five articles for limiting naval and military expenditure. He could do as much himself, and do it more briefly, with half a sheet of notepaper and the necessary lack of any sense of humor."

The same opinion prevails with other London papers, as *The Daily Chronicle* and *The Daily Mail*, which latter speaks of this "vain talk about peace," but approves the Congress because it witnesses to the growing desire of the nations for the abolition of war, altho such a Congress has no legislative authority and no true representative power to enforce peace legislation. Diplomacy in the various chancelleries rather than debates in a peace palace have done everything that has been done so far to sheathe the sword and still the bugle, in the opinion of these papers—a view which is also found in the German press. To quote the *Frankfurter Zeitung:*

"It might be said that in view of the fact that the Adrianople question has not yet been decided and that a collision between the United States and Mexico seems to be impending, the time is scarcely to be considered auspicious for the calling of such a Congress, and both the German and foreign press are filled with utterances making light of the 'peace enthusiasts' at The Hague and their 'Utopian aims.' Editors point to the irony which lies in the contrast between these peace orations of The Hague and the Balkan horrors."

Yet this writer allows that since the Italian invasion of Africa and the Conferences of London and Bucharest, the "peace idea" has made considerable progress. All the Powers have experienced a dread of war, and no one is anxious nowadays to rave about "military glory." Further:

"It would be too much to say that we are indebted to the direct propaganda of the pacifists for the present maintenance of peace in Western Europe. In a sense this may be true. But one thing is certain. The protracted diplomatic discussions of the present year have shown us that the sword remains more fast in its sheath than ever and people no longer regard war as a 'cleansing tempest,' but as a great calamity that must be avoided at any cost. The popular sentiment against armaments

so generally prevailing is the first faint intimation that an international conscience is wakening up through the efforts of these friends of peace. To give more life to this international conscience is the aim of all friends of peace, and this is the work of the delegates to The Hague."

But the Socialist organs of European opinion simply deride the Hague Congress and express the opinion that Socialistic inter-

A "SORT OF PEACE" PALACE.

MADAME—"A very pretty idea, darlings, and really quite charming—to look at." —*Pall Mall Gazette* (London).

nationalism, and the doing away of frontiers and governments, can alone bring in the age of peace under the domination of the organization styled the International. This opinion has been frequently dwelt upon in *Vorwärts* (Berlin), and the *Intransigeant* (Paris) speaks of the "great popular movement," which shall "weld together all the peoples on this plane and realize the advantageous union of universal labor, high and low," adding:

"It is on us Socialists that this work is incumbent, and on no others. We are the sole agents who are preparing in every country the ranks of the peace army which sooner or later shall set to rights all causes of division, of conflict, and of hatred, and which even now, in spite of its relative weakness, maintains, from time to time, some check upon the murderous caprices of the ruling classes and of those who prey upon the nations."

Perhaps the weightiest and most influential of all the Paris dailies is the *Journal des Débats*, which speaks of the pacifists in the following impartial and magisterial tone:

"Doubtless such demonstrations as those at The Hague can not be destitute of good effects, if it is only by asserting the principles of right and justice. They also serve to lay impartially before the public certain verities such as those expounded by Professor Quidde, of Munich, who acknowledged that Germany was responsible for the recent increase of armaments among European nations. But let the pacifists beware of quitting this domain of sentimental demonstration and launching out into the domain of instant practical realization. From the moment they begin to demand measures that warrant and guarantee peace, even a police of the peace which could not possibly be created except by the gradual education of the majority of mankind, they at once betray the crudity of their Utopian dreams. Of course, the spectacle of their candid naïveté is in harmony with the temper of a country whose characteristic it is in accepting fine theories to mistake them for possibilities. The newest heaven-sent remedies against war which pacificism proposes to this Europe of Balkan imbroglios can not as yet be considered substitutes for the expedients handed down to us by the ancient wisdom of the nations."

"The great Hague joke" is the term applied by the London *Standard* to the inauguration of the Palace of Peace and the discussion of the delegates. It remarks:

"Mr. Andrew Carnegie does not, we imagine, add to his many meritorious qualities the 'saving grace of humor.' We can not therefore suppose that his gift to The Hague, a 'Palace of Peace,' is an elaborate and expensive jest. The project has been conceived and we presume carried out in all sincerity; the munificent donor of this edifice does no doubt really imagine that the gift is seasonable and appropriate. . . . But it was not the Hague Court that resolved the Morocco crisis of 1911, when three Great Powers drifted very close to a quarrel. What could the Hague tribunal do on this occasion? What has it done to keep the Balkan nations from flying at each other's throats? One must really ask whether it is worth while for our own Government, or for any other Government, to take part in a repetition of the foolish farce of a conference upon peace among nations all armed to the eyes for war? We must face the fact that while every nation sincerely desires to keep the peace as long as possible, all of them are convinced that they have no guaranty against aggression but their own ability to defend themselves; and that no peace conferences or whole volumes of international acts and declarations will give them any other."

ENGLAND'S PANAMA "BLUNDER"

THAT A BLUNDER, or worse, has been made by England in refusing to join the Panama Fair is the opinion of the most eminent exhibition experts and authorities of the Kingdom. The columns of the London *Times* and other leading organs have been flooded with letters on this subject, and arguments have been marshaled, hopes held out, and participation advocated principally on two grounds —sentimental and economic. "Blood is thicker than water," and while strangers and foreigners are to gather at a celebration of a great engineering feat accomplished to draw closer the market centers of the world, why shall an Anglo-Saxon and kindred race refuse to share in the festival which Uncle Sam appoints in honor of his sons and friends, especially when it is an occasion of seeing and being seen as a manufacturer of world products? Perhaps W. H. C. Hoover, in a letter in *The Times*, has given one of the clearest statements of these two arguments. He is an authority deeply versed in international trade, and speaks as follows:

"The action of the Government, based on the belief that there is no adequate return to be had from a participation in the Panama Pacific Exposition, would appear to rest on some lack of imagination, both from a sentimental and an economic point of view.

"From the sentimental side the Exposition represents an appropriate national celebration at the completion of the Canal. The Canal is conceded to be the greatest engineering triumph of the race, and one pregnant with wide economic results to the

"STILL LEADING!"

—*Pall Mall Gazette* (London).

English people, and, despite any squabble over tolls, is sentimentally a matter in which the English people should take much pride. The Exposition represents the greatest of efforts by the Pacific Coast people, and upon it an expenditure is being incurred greater than that of any other American exposition.

"As to the economic value to the British trader of being properly represented in this Exposition, while the British trade

with the Pacific slope has not been hitherto particularly large, it must be patent that this has been due to inaccessibility, now remedied by the Canal. Several factors should be borne in mind regarding the economic situation of this territory. The Pacific slope is a highly productive region isolated from the rest of North America by 1,500 miles of desert and mountains. Its products are in mass raw material, particularly cereals, fruit, timber, and oil. The region, owing to the lack of adequate coal and iron deposits, is not, nor ever likely to become, a manufacturing center. The cost of goods transported across this 1,500 to 2,000 miles from eastern American manufacturing centers is greater than from Europe by sea via the Canal. This region will seek sea-borne markets for its raw material, and these will be paid for by the import by sea-borne manufactured goods."

While Mr. Hoover dwells upon the advantages European, and especially English, traders will have on the Pacific shores over the land-borne trade of the Eastern States, *The Times* particularly emphasizes the sentimental side of the question and scores the Asquith Government for ignoring it. Thus we read:

"We have already exprest our conviction that the Government are extremely ill-advised in refusing to take part in the Panama Exhibition. The decision of the German Government not to be represented on that occasion—a decision which German commercial organs condemn—does not at all affect our judgment. We wish, for all manner of reasons, that the Exhibition may be the striking success which its promoters will strive with all their might to make it. We believe that they will make it such a success, even if the two chief manufacturing and commercial Powers of the Old World do not officially participate in it. What would please us best is that they should appear there side by side, and in friendly rivalry submit the best that their brains can devise and their hands can fashion to the judgment of the vast jury who will assemble at San Francisco.

"We do not yet despair of seeing that wish fulfilled. The decisions of governments on such matters are not as the laws of the Medes and Persians. It is always annoying to be obliged to acknowledge a mistake, but we credit our rulers with statesmanship enough not to persevere in a blunder, when they understand that a blunder has been made. The contention that because Germany has followed our example we can not reconsider it will not bear examination. Does any Englishman seriously consider that our relations to the United States are the same as those of any other Power? Of course they are not. We are never tired of saying that they are not, or of welcoming American assurances that they are not. They never can be the same. Race and history, institutions and language forbid that they should be. We have had many differences and a few quarrels with the Americans. We may not impossibly have more. But in our hearts we have felt, and they have felt, that these have been family squabbles, and that to repeat once more the words of an illustrious American, which no time can stale and no iteration can hackney, 'blood is thicker than water.'"

England's own autonomous Dominions are setting her an example which it would be suicidal not to follow, adds this great organ:

"If we need example, on a matter where our course is so straight and plain, it has been given us by our own self-governing Dominions of Canada and of Australia. They are going to take part officially in the Exhibition. They are going to do so, first, as an act of courtesy and friendship to a great English-speaking democracy, and, next, as a sound business investment. They, whose territories are washed by the Pacific, have a deeper and a truer insight than some of our officials at home into the future of the vast new markets which the Exhibition will help to open. They know what the trade of the Pacific Coast may become, and they will not let slip this unique opportunity of getting their share in it. We could wish that on such an occasion the world should see the mother country and the daughter States working hand in hand for the commercial renown of the Empire."

THE NEW PEACE PALACE AT THE HAGUE,

Whose influence is regarded by the press of Europe as rather problematical.

The London *Daily Chronicle* thinks that even if the British manufacturers hold back and complain that the conditions imposed by the Exhibition authorities are "unduly restrictive," there are reasons why "the time is opportune" for England to respond to the American invitation. "The Government should act independently of manufacturers or other exhibitors," and provide exhibits from its own resources. To quote further:

"There are strong reasons why we should be represented at San Francisco. The western part of America, also, should offer a growing field for our traders. It appears to us, too, to be important that it should be remembered that all Latin America will be represented, and that will draw to the Exhibition traders from South America, before whose eyes it would be well to bring British products. But apart from such considerations there is that of emphasizing the friendship between England and America especially in the year of the celebration of a century of peace. Again, the Dominions will be represented, and it will, in that case, appear invidious if this country is absent. If Canada thinks it worth while to spend half a million dollars and Australia a sum approaching that, surely there is reason for Britain to be there. But any sum in reason that we spend will be well spent in exchange for what will undoubtedly result—increased good will and friendship."

THE BRITISH ATHLETIC SLUMP

ENGLAND'S athletes take third place among the nations of the world, as shown by the results of the so-styled Olympic games. From the victory of Coroebus in the foot-race at the first Olympic festival the Greeks dated the beginning of their chronology, as Christendom does from the birth of Christ, so important was this victory considered. And now England is roused because she has no Coroebus to win the crown for her, and the London *Times* publishes an appeal signed by such patriotic men of eminence in war and statesmanship as Lord Grey, Lord Harris, Lord Roberts, Lord Rothschild, Lord Strathcona, and the Duke of Westminster, demanding that the people of England raise £100,000—half a million dollars—to train and provide for a band of men fit to represent the country's athletic power in the Olympic games at Berlin in 1916. How England, to quote the Duke of Westminster, has lost "her ancient supremacy as the mother of sport" is shown by the following table of successes in athletic games, which the Duke characterizes as "a tale of national disaster" for England:

Polo	America
Rackets	America (Jack So[illegible])
Yachting	America (holders [illegible]e Cup)
Lawn-Tennis (Singles)	New Zealand (A. F. Wilding)
Lawn-Tennis (Davis Cup)	America
Tennis	America (Jay Gould)
Boxing	France and America
Billiards	Australia
Swimming	America and Australia
Rugby Football	S. Africa and New Zealand
Lacrosse	Canada
Cycling	England
Trotting Horse	America
Running Horse	America
Horse-Jumping	France and Russia
Fencing	France
Shooting (King's Prize)	Canada
Skating	Sweden
Athletics (100 yds.)	America and S. Africa
" (220 yds.)	America
" (440 yds.)	America
" (880 yds.)	America
" Hurdles (120 yds.)	America
" High Jump	America
" Pole Jump	America
Putting the Weight	America
Throwing the Hammer	America

Two important protests have been raised against this appeal. One is from Frederic Harrison, who says England ought to enter no names in the Berlin events of 1916. The whole affair, to this writer's mind, "stinks of gate money" and "professional pot-hunting." The head master of Sherborne, one of the great public schools of England, says that "these pseudo-Olympic games are rot," and "the newspaper advertisement of them and the £100,000 fund for buying victories positively degrading." This distinguished scholar and administrator, who declares that men in his position are being constantly lectured by the press for encouraging excessive athletics, thus gives his idea of "sport":

"Have these semiprofessional modern athletic games and contests anything to do with the prestige in sport of which we have been so proud? Surely our distinction lay in this—that Englishmen in their leisure devoted themselves *con amore* to field sports of all kinds, and in doing so developed certain qualities of pluck, resource, self-control, good-fellowship, and what not, and went about the world as—with all their faults—conspicuously healthy-bodied and healthy-minded men. But what has this to do with these Olympic games or with cup ties, or even with county cricket? . . . It is ridiculous, as *Punch* has found no difficulty in illustrating, to pretend that heavily financed efforts to win more events than Germany or America are going to foster sport throughout the population. Every one knows that a very few carefully selected and trained athletes will 'recover our prestige' or not (as the case may be) whether the ordinary British boy or man plays games or not. The only question is, how long the ordinary British boy and man will think it worth while to pay. The prestige which we lost at Stockholm is after all—indirectly, I grant you, but none the less really—a question of money; and when it has gone for good along with our Old Masters, to the land of the almighty dollar, perhaps we shall begin to value again, and recover, our prestige as a 'nation of sportsmen.'"

It is charged by "An Old Rugby Forward," writing in the London *Standard*, that England goes down only before "the spurious amateurism of the foreign competitor." Englishmen, he says, know what is going on and are disgusted by the knowledge that "immense sums are now being spent to buy men and to turn them into professional record-breakers." This is why, he avers, "there is no response from the great public to the appeal for £100,000, which leads people to think that it is proposed to adopt American methods."

On the professional amateur's method the Newcastle *Daily Chronicle* grows cynically sarcastic and remarks:

"It will be quite worth spending £100,000 to train teams of professionals and send them to Berlin. It will, at any rate, be just as good fun as backing horses in obscure alleyways. And it will permit the genuine amateur to proceed on his way in peace. He will go on playing cricket and football, running with the harriers, or having an occasional round with the gloves, happily indifferent to the wiles of the highly salaried 'coach,' and appreciating, tho not envying, the exploits of those who are being paid to do these things, and, being paid, naturally do them much better than he can hope to do them. But even tho we spent £100,000 and still remained out of the running at Berlin, we should not have any reason to shed tears."

Any success at Berlin, also argues the London *Daily News*, would not really revive the "national prestige" of English sport, for only a few highly trained and expensive specialists would be put to the front and this would not imply the creation of "a system of universal physical education." Therefore:

"It is really more sportsmanlike to do our best in such events, and, where inevitable, accept defeat, than to try and purchase with a great price an altogether unrepresentative victory. The lavish expenditure of the United States on its selected athletes has no doubt resulted in their securing a considerable number of trophies."

The appeal for funds is, however, supported by *The Times*, in whose editorial columns we are told that because money is spent on athletics it does not necessarily result in turning the amateur into a professional. Witness the boat-race at Oxford, which is "one of the more costly forms of amateur sport, and yet is more free than any from the taint of professionalism." *The Times* wishes England to cut a figure in the games of 1916, and therefore backs the appeal and encourages English athletics to enter at Berlin. This paper admits that some incidents of foul play disgraced former Olympic games, but complacently adds:

"We protested strongly at the time against some of the incidents which disgraced the games of 1908. But since then, tho the games at Stockholm were not altogether clear of reproach, a distinct advance has been made. We venture to believe that, owing to the greater length of its traditions, the British conception of sportsmanship has had a certain dominating influence in forming international opinion in this matter. If that is so, it may be reckoned as a really valuable result of the Olympic games, and even as an argument for their continued existence. But in any case continue they must. Great Britain can not at this stage, as Mr. Harrison wishes, retire from the contest. Not to go to Berlin would be an insult to our German friends and prospective hosts, as well as to the other nations engaged, which would be far more harmful than the possibility of international complications, which the games have sometimes threatened to produce in the past. The country, as we have said more than once, is committed to the contest. That is why we support the appeal, which Lord Grey and his fellow signatories have put before us, as a national duty. Not because we should look like sulky children who will not play in a game in which they have been beaten, but because we are in honor bound to send to Berlin the best team that we can get together, we commend the fund to the generosity and public spirit of our readers."

SCIENCE AND INVENTION

THE NECESSARY ENGINEER

ANOTHER WRECK on an Eastern road already too well known for this sort of thing revives interest in the problem of automatic train-stops. In this latest accident the engineer says there was not time to stop his train after he saw the signal set against him. He also says he had been doing two men's work in the days preceding the wreck. It is clear that the danger-signal did not stop the train, at any rate, and instances of this kind have been so numerous that for years inventors have been trying to devise some practical method of doing away altogether with dependence on the engineer's mental equipment in emergencies, and of making it possible for the signal-man actually to stop a train, instead of simply directing it to stop. The outcome has been the invention of many so-called "automatic stops," some of which work well under certain conditions. The fact that a prize of $10,000, offered by the very road on which this last accident occurred, for a successful device of this type, is still unawarded, may serve as an index to the difficulties encountered in adapting automatic stops to miscellaneous railway service. An exposition of these difficulties, with a somewhat pessimistic conclusion, has been contributed to *The Signal Engineer* (New York), by A. H. Rudd, signal-engineer of the Pennsylvania Railroad. We quote portions of an abridgment made for *The Railway Age Gazette* (New York):

THE "BANJO" SIGNAL,

Now being discarded by the New Haven road. Other roads are said to be using them, however, without accidents.

"Automatic stops are not a 'cure-all' for the dangerous features of railroad operation. They will not prevent derailments due to failures in rolling stock, track, or bridges, or to excessive speed, washouts, or landslides. . . They may prevent collisions and excessive speed over short crossovers. While some automatic-stop systems have indicators in the engine-cabs, none gives indications for diverging routes. Should the apparatus fail, the engineman would be without any signal system until repairs were made, probably at the end of his run, unless the engine were immediately side-tracked as disabled and another substituted.

"It follows, therefore, that, for safe operation, none of our present safeguards may be abandoned. We can not save in the maintenance of track or structures, reduce our policing, nor relax our vigilance in any degree. Our men must still be keyed up to watch their track and signals. We can effect no saving in cash or brains. The automatic stop must, if installed, be used solely as an adjunct to our present systems. The engine-runner should be constantly alert and should watch his track for obstructions which can not be anticipated by advance information. A [visual] cab signal constantly taking his attention from the outside observation is not only useless, but a positive detriment. The engineman is not an automaton, and the installation of anything tending to lessen his feeling of responsibility would be most unwise, to put it mildly. . . . . .

"Not over 9 per cent. of the big accidents which attract so much attention might be prevented by automatic stops, but if the signal system were complete and efficiency tests were regularly and adequately carried on, 55 per cent. of these accidents would be eliminated without the use of automatic stops. In fact, taking the Pennsylvania Railroad record as a criterion, the figures would be nearer 60 per cent., it being acknowledged that 35 per cent. are not preventable by any signal system. And it should be remembered that a stop will not prevent an accident caused by a train, after properly stopping or being automatically stopt, speeding up and passing the next signal at too great speed.

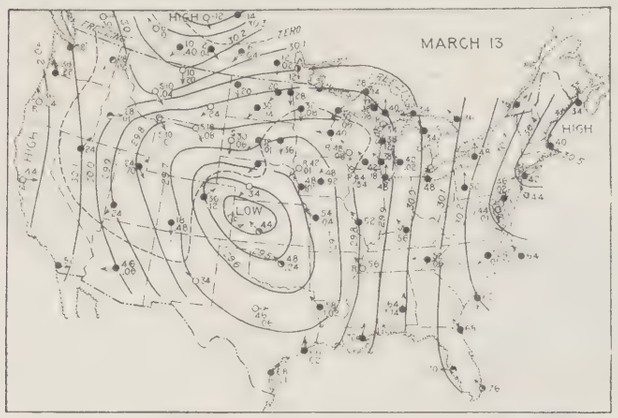
"An automatic stop can not be located at the distant signal or between the distant and the home, for, if an engineman has obeyed the distant signal and is approaching the home prepared to stop, he is doing his duty and should not be interfered with. It must, therefore, be located at the home signal, but must be so located that, if a train passes it at highest speed, it may be stopt before it has reached the danger-point, preferably with a service application. The automatic stop therefore must be located at a stop-signal at least 4,000 feet from another stop-signal placed at the danger-point."

Where the signal is to be "stop and proceed," as is often the case, means must be provided to enable enginemen to release the stop after a train has stopt according to rule. This device must be inaccessible until the train has stopt, as, otherwise, it might be used wrongfully. This inaccessibility will impose delay at each "stop and proceed" signal which would be particularly onerous in congested districts; in many cases would require additional tracks to handle passenger-traffic promptly. Mr. Rudd goes on:

"Automatic stops are impracticable in large terminals and at busy junctions and crossings. While they might be used in congested districts approaching such points, the cost of additional tracks and signals must be added to the cost of installing the apparatus on the ground and equipping all locomotives. . . . Money available could be more advantageously expended on visual signals and other safeguards which are still needed and which would prevent more accidents than would automatic stops.

It is, of course, impracticable to equip each car with a stopping device—detached cars would not be affected by its operation. Apparatus must be so arranged that the leading engine on entering the block will not apply the brakes on the second engine of a double header or on a pusher engine; and so that switching movements will not be affected by it. . . . . .

"Stops using electric contacting devices are not reliable, altho they may have satisfactorily met certain demonstrative tests, and no stop having contacting devices of any kind is desirable. There remain a few other types which may be but are not yet fully developed to meet steam road conditions. . . . It may be said that some of the automatic stops have been tested



A GOOD DAY FOR WIRELESS.

Weather-map for March 13th, the day on which Professor Taylor was in communication with a larger number of distant stations than any other. The black dots denote cloudiness.

with perfect success during winter months. But the exact conditions that will throw the whole system out of operation may not occur in several winters. The difficulty in keeping trains moving during winter storms is great enough without having them stopt by wholesale failures of an automatic device.

"The installations in our tunnels at New York, on the Manhattan Subway, etc., are successful, but simply because the exceptional conditions existing at these particular locations make the problem an easy one.

"An automatic stop located at the proper point for fast trains would require slow trains to stop at an unnecessary distance from the danger-point. Unnecessary stops of heavy freight-trains, or stops far short of the points where stops are really necessary, have a serious effect on the operation of a busy road. It takes time to start such trains and get them up to speed. The problem with which many railroad men are struggling is to keep the slow freight-trains moving rather than to get them stopt. . . . . .

"The sum and substance of the matter is that automatic-stop devices must meet the test of approval by the judgment of practical railroad men, based on years of experience with actual railroad conditions and with appliances employing similar mechanism. . . . For the present any funds available should be devoted to the expansion and perfection of our existing block and interlocking systems, which must be provided in any event and which will eliminate the great majority of collisions; and then, if it is conclusively shown that improved discipline and pride on the part of locomotive engineers in their honorable profession such that they will, of their own accord, cooperate with the managements in their efforts to eliminate careless or incompetent men and make greater efforts to perform their duties more perfectly, all fail to produce the desired results, the general use of a speed controller should be required to check against the single kind of human failure, which is its only function."

COOPERATION OF ANTS—Instances of the apparent cooperation of ants in the removal of relatively large objects are sent us by Rev. Dr. J. O. Thompson, of St. Petersburg, Fla., from whose letter we have space for only an extract. It will be remembered that a recent student of the subject absolutely denies such cooperation. Writes Dr. Thompson:

"One day recently, in a business meeting at the church which I attend, my attention was called to the rapid motion of a dead cockroach on the floor. It was steady and quite rapid, and absolutely without hesitation or change of direction. The motive power was a number, I estimated a hundred, small ants, no one or five of whom could have so much as moved the burden, which was, as I judged, a good deal heavier than the whole crowd of insects which were moving it. Occasionally a fly gets into my house. . . . I have a fly-killer at hand and as soon as one appears I kill—'swat' is the word in common use here—him. The body falls on the floor and in a few minutes it begins to move, and always steadily and undeviatingly in the same direction. I assume that is in the direction of the ants' nest. The motive power is a dozen or two or more very diminutive ants. Now if in these instances ants do not cooperate, how does it happen that there is never any halt or change of direction in the movement, and that if I kill half a dozen flies in an afternoon they all move in exactly the same direction?"

CLOUDS HELPING WIRELESS

SUNSHINE is bad for wireless, the operators tell us. The "reach" of their instruments is much longer by night than by day—sometimes several times as long. The accepted explanation is that the electric waves are absorbed in sunny weather, the absorption being favored by the "ionization," or atomic disintegration of the upper atmosphere by the ultra-violet rays of sunlight. Not only is night favorable for wireless, but Prof. A. H. Taylor, of the University of North Dakota, goes further than this, and believes he has proved that cloudy weather, by interfering with this sunlight effect, is distinctly favorable to wireless transmission. He has noted the occasions when it was unusually easy to converse with far-distant stations, and on each of these the weather-map showed great areas of cloudiness between the stations or in their vicinity. Professor Taylor, in an article contributed to *The Electrical World* (New York, August 30), remarks that if the ionization due to sunlight is unfavorable for wireless, then "it might reasonably be expected that on a night following a day which has been sunny over a long stretch of country between any two stations the transmissivity would be low, while if cloudy conditions prevail over the same area the transmissivity would be high." And "on the other hand, it may be argued that the ionization occurs in regions above the clouds, and that no connection between transmissivity and cloudiness should be expected." This is an interesting and important point for investigation, and, as he notes, there are few stations in this country more favorably situated for the investigation of the problem of absorption over land areas than the radioelectric station of the University of North Dakota, situated, as it is, in Grand Forks, just 1,200 miles from each coast, and within easy reach of the lake district.

After describing the plant at his University and citing in detail a number of conspicuous instances where cloudiness appears to have greatly improved wireless transmission, Professor Taylor goes on to say:

"It would be possible to multiply greatly these instances of the connection between cloudiness and transmissivity, as I have made many random observations after sunny days of the early winter when signals from very few stations were heard, and more often none at all. So far, of some thirty observations I have found only two which do not clearly indicate that a general daytime cloudiness over a wide area is sure to be followed by an evening of high transmissivity. It still remains to be shown whether cloudiness at transmission station or at receiving station is more favorable, altho I am inclined to think that the transmissivity is better when the sunny area, if there is such, affects only the receiving station and its neighborhood. The transmissivity is even then not so good, of course, as it is when the cloudy area includes both the receiving and the sending stations.

"If the connection between cloudiness and transmissivity be conceded, it will be apparent that the general atmospheric absorption does not occur in the regions above the clouds to anything like the same extent that it does in the regions of lower level, which is contrary to previous speculations on this point.

"It would also appear that far northern stations operating in

summer when the period of sunshine is of long duration should have a shorter range than in winter. It would be of interest to know if the operators of Alaskan and northern Canadian stations have any data bearing on this point."

The editor of *The Electrical World*, while not disputing Professor Taylor's facts or denying their importance, is inclined to think that he has not hit upon the right explanation. Ionization by sunlight, he says, is almost certainly confined to high altitudes, and such conducting layers as exist below cloud-levels could hardly extend their influence over a region 1,500 miles wide. He has another suggestion:

"The rôle of high-frequency currents in the earth's crust is daily being more seriously considered in connection with the problems of radio-signaling. There is a strong probability that at great distances a very large portion of energy received by wireless is set up by free transverse earth-currents. It is known that transmission over water or damp ground is easier than over desert or other dry land. It, therefore, seems easily within the bounds of possibility that the observations of Professor Taylor might be further interpreted by considering that after a cloudy day the earth's surface retains more of the moisture deposited nightly, and so permits the passage of radiated waves and their accompanying earth-currents with smaller conduction losses. It is hoped that other investigators who have made studies of similar conditions may be prevailed upon to place their data before the radio-engineering public, through our correspondence columns or otherwise. Only by comparison of many observations is there any hope of securing sound explanations of phenomena so complicated as those involved in radio-transmission."

MISUSED MATHEMATICS

THAT A MISTAKE is being made by our schools in teaching mathematics as an end in itself, instead of as a mere tool, especially in the case of engineering students, is asserted by a correspondent of *The American Machinist* (New York, August 21) signing himself "Entropy" and hailing from Worcester, Mass. Says this gentleman:

"A serious difficulty in most schools arises from the fact that mathematics is taught as an end rather than as a means, and by mathematicians rather than engineers. To a mathematician the solution of an intricate problem gives all the joy that a square meal does to an engineer. Fortunately there are few mathematical people who look on mathematics as an end, for the world has but a limited number of square meals to offer for that kind of work, commendable as it may be. To the vast majority the only excuse for mathematics is its use as a tool.

"A well-stocked tool-chest and skill in the use of the tools in it is a very desirable thing for a workman to possess. Next to that is a tool-chest with a limited number of the most essential tools and great facility in their use for jobs which may vary slightly from those for which the tools were designed. There is very much of mathematics with which engineering graduates should be much more familiar and sure than they are, and there is much that is usually taught that seems like a great waste of effort.

"Take, for example, the theorems of Euclid; the larger part of them involved labored proofs of perfectly obvious things. Why prove that the opposite angles made by two intersecting lines are equal? Why prove that only one perpendicular can be erected at any point on a line? The only excuse for proving these things is that they train the mind to think logically. All the geometry which an engineer uses with any degree of regularity covers only a very few pages of his handbooks. Why require more from engineering students?

"I do not mean by this that I would take away from students the privilege of studying much more, but it has always seemed to me that a technical school should require very near perfection of attainment in some things and a reading knowledge of many more. Take calculus, for example: very few men have any chance to use it at all. Of these few an infinitesimal percentage use it enough to keep it fresh in their minds. I occasionally, very occasionally, want to use it. Between whiles I forget it, so I wrote out all that I could find any application for, including the common integrations. It takes fifteen typewritten pages and fourteen figures. I did this nearly ten years ago, and this includes all the additions during that time. I am glad to have been through calculus. I am glad in the sense that one feels the power that comes from solving a difficult problem or climbing a mountain. It is probably about the same feeling that impels a hen to roost always on the highest perch. I would like to see a few such things printed in good black type where they occur in a text-book on calculus and then see the professor give his pledge to the class to base his examination on those few things with a 90 per cent. standard for a passing-mark. Would not his students be in a position of still greater power by his so doing?"

THE ROLLER-SKATE IN INDUSTRY.

The deliberate stock-room boy receives a new acceleration.

A NEW USE FOR ROLLER-SKATES—Roller-skates may be profitably used to enable employees to traverse the distances of large warehouses with greater speed, thus giving the injunction to "get your skates on" a new force and potentiality. *The Electrical World* (New York, August 30) cites an actual instance:

"Employees in the storerooms of central stations where the distances traversed are relatively large might find their work facilitated by the aid of roller-skates, a novel departure which is actually in use with considerable success by the Union Street Railway Company, of New Bedford, Mass. This company's storeroom attendants are fitted with skates to accelerate their movements, and they thus save considerable time in getting at stock. When one of the men receives a request for material at the delivery window he skates back to the section of the storeroom containing the required article and promptly returns with it to the delivery window. The use of the skates does not hamper the storeroom employees in mounting ladders for the purpose of reaching elevated bins in which material may be stored, as experience has shown that they are able to mount ladders to reach such places without removing their skates."

PIANO-PLAYERS AND PLAYER-PIANOS

WHERE SCIENCE touches commerce or industry, popular interest in it is apt to become intensified. When Prof. G. H. Bryan, in a paper on the vibrations of a piano-wire, read before the Physical Society of London last April, gave his opinion that mechanical piano-players could never exactly duplicate the touch of an expert pianist, he probably did not know that he was laying the foundation for a very pretty little quarrel. The manufacturers of mechanical players could never let such an assertion as this go unchallenged, and as for human performers, they seem to have as many opinions as they have individualities. Printed correspondence on the subject has been accumulating rapidly, and THE DIGEST has on file more manuscript material than it can print, from all points of view. It will be remembered that the question at issue is chiefly this: Does the sound of a piano depend only on the velocity and mass of the hammer as it strikes the wire, or can something happen to affect the tone while the hammer remains in contact with the wire? If the former, there should be no reason why a machine could not do all that a human finger can; if the latter, the variations of pressure on the key during contact would be difficult or impossible to achieve mechanically. So much interest has been manifested in this matter that some later opinions than those quoted already are given herewith. In *Nature* (London, June 26), Dr. F. J. Allen, of Cambridge, England, writes:

"Three variables appear to be possible in pianoforte touch, namely:

"(1) The energy of the blow of the hammer.

"(2) The duration of contact of hammer with wire.

"(3) The resonance of the woodwork.

"Of these, (1) will be admitted by every one; (3) should be in abeyance as much as possible, since it is brought into evidence chiefly when the key is struck too hard—beyond the capacity of the wire for harmonic response. . . . . .

"(2) Is assumed by many persons; but the possibility is doubted by others, because the player can not hold the hammer in contact with the wire. The hammer, as mentioned by Professor Bryan, is disconnected from the key, so that at the time of striking the wire it is a projectile.

"At some point in the mechanism, between the key and the hammer, is an arrangement called the 'escapement,' which disconnects the key from the hammer when the player's touch is so deep or firm as to cause the risk of blocking; but when his touch is shallow the escapement is scarcely brought into action.

"In the upright pianos of fifty years ago the hammer was hinged on to a vertical rod called the 'hopper' or 'sticker,' which pulled it back with a variable force, the escapement being below, between the hopper and the key. With a shallow touch in such an instrument it is just possible to avoid bringing the escapement into action, and thus not to hasten the return of the hammer, but the effect is decidedly difficult to produce, and the mechanism has become obsolete owing to its unsatisfactory working.

"In modern uprights the hammer is more free. . . . In the grand piano the hammer is left as independent as possible, so as to ensure rapid repetition. . . . Therefore in the horizontal piano (and probably in the ideal upright) the hammer at the moment of hitting the wire is an unencumbered projectile, and the variables (1) and (2) are not separable.

"It should be remembered that *staccato* and *legato* effects are functions, not of the hammer, but of the damper. But, after all, the most important element in a good touch is the player's ability to strike the different notes in chord with different intensities. The artist instinctively gives their relative importance to the various notes of a chord as surely as to those of a melody; and this is one of the features which distinguish him from the mere executant or the most perfect player-piano."

In a later issue (July 10), Prof. W. B. Morton, of Queen's University, Belfast, Ireland, takes up the discussion:

"With regard to the much-disputed point as to whether it is possible to vary the quality of the note independently of the loudness, this must, I think, still be regarded as an open question. Very positive affirmations are made by musicians on both sides. From a physical point of view the suggestion made by Mr. Tobias Matthay in his work on touch seems to be the only possible way to explain the effect, if it exists, viz., that the quality can be spoiled by vibrations of the hammer-shaft at the instant of striking the string. In accordance with this, Mr. Matthay holds that the tone is good when the final velocity is given to the key gradually, and is bad when the same velocity is imparted by a sudden blow. . . . On the other side, recent German theorists, such as Breithaupt, Steinhausen, and Ritschl, deny the effect altogether. The last-named author holds that good touch consists in the power to produce fine gradations of intensity and in complete mastery of *legato* and the use of the pedal."

Replying to some of his critics, Professor Bryan (July 17) will not abandon the idea that possibly something may happen, after all, in the extremely brief interval when hammer and string are together—something caused by the behavior of the finger that set the hammer flying.

At any rate, Professor Bryan is still sure that the mechanical player can not compete with one having a brain, altho he thinks that it may be greatly improved. He says:

"I think it may be safely said that the mechanical self-assertiveness of the instrument can be reduced to a small quantity of the second order, and can be further reduced by a method of successive approximation. So soon as dynamical considerations are introduced the possibility of accenting notes in chords (*i.e.*, proper chords, not the miserable arpeggios which are so often substituted for them in recently cut music-rolls) becomes evident, and the production of variations of tone-quality by differences of touch is probably much easier when effected this way than when the keys are played by hand. . . . . .

"The absence of these capabilities constitutes the great defect of the commercial player. But the ordinary 'practical man' can not understand anything based on the principles of dynamics and physics; consequently he treats the pressure as if it were constant instead of a very variable function of the time, and the result is an instrument which is mechanical and little else, and can only be played with an unnecessary expenditure of energy.

"I have heard a professional pianist perform a very delicate pianissimo passage in which the accented notes rang out clearly and brilliantly above the background without being played any louder. It was simply a difference of tone-quality produced by a corresponding difference of touch. My dynamically controlled piano-player is quite capable of giving a very approximate reproduction of this effect, whereas I have heard an expert break down hopelessly over a similar passage at an exhibition recital of a commercial machine."

More recently, in the pages of the same paper (July 31), Spencer Pickering tells of some practical experiments that rather favor the commercial player. He says:

"Personally, I have always held, probably with the majority of people, that touch is dependent on such peculiarities, but the evidence seems to be decidedly against it. A note was struck one hundred times in succession so as to produce sound of as nearly as possible the same intensity; on half these occasions it was struck in a pressing, or caressing, manner; in the other cases it was struck sharply; the different kinds of blows were intermingled irregularly, and according to a list previously drawn up, and the damper was held up while the note was being struck. As each note was struck a verdict as to its quality was given by a person sitting out of view of the piano, and this verdict was compared with the character of the blow given. The observer, it should be mentioned, was not a trained musician, but was exceptionally appreciative of what is called touch.

"Discarding all cases where the note had accidentally been more or less loud than the average, it was found that in 49 per cent. of the cases of uniform loudness the effect on the auditor coincided with the character of the blow given, in 51 per cent. the reverse. In another series of 100 notes the values were 51 and 49 respectively. It is evident, therefore, according to this, that different quality of touch produces no difference in the quality of the sound produced."

A correspondent of THE DIGEST, Mr. P. A. Cogswell, an engineer of New York City, writes to us as follows regarding his experience with mechanical piano-players, with which he has evidently been experimenting for some time:

"I found that in about one-third of the compositions in which

I was interested, I could get as good results as the average trained pianists; in another third, the results were not entirely satisfactory, but the effects produced were still worth while, since one could get a very fair insight into the structure and the musical essence of the compositions. Another third was 'impossible.' In this class were a few of the nocturnes [of Chopin], the Berceuse, etc. By a careful study of tone-color and the mechanism of the piano-player, and, above all, the psychology of listening, I found that in many cases the player gave results superior to the average well-trained pianist, for with the player the tendency was always away from a certain sloppy sentimentality which pervades a great deal of piano-playing and is variously considered to be 'expression.' The player, when skilfully used, has sufficient flexibility to prevent 'woodenness' and to give a dignified, yet thoroughly expressive, interpretation."

TO HUSH RAILROADS AT NIGHT

THE FACT THAT a Middle-Western railroad advertises that it is a "noiseless route" and asserts that nocturnal employees are "sworn to silence," moves an editorial writer in *The Railway Age Gazette* (New York, August 29) to commend this effort to cater to the public desire for sound and soundless sleep, and to suggest that obnoxious sights and smells might be avoided on trains, as well as ear-torturing sounds. Says this paper:

"It is good . . . to set a high standard, and to let it be known to the public. The ideal having been published in the newspapers, all hands will have a stronger incentive to live up to it. And the high degree of noiselessness already attained on our best roads is only an added reason for making the requirements still more strict; passengers make so many all-night journeys with no disturbance whatever that a single occasional offense becomes a notable annoyance. . . . We would suggest that the trainmen and switchmen are not the only offenders. Various other night noises frequently disturb and annoy the sleeping-car sleeper. . . . . .

"Many passengers find it convenient to board trains at 11 o'clock, or earlier; and in summer they thus lie by an open window in the station for an hour, and may wish to sleep. Among the things which in such circumstances prevent sleep are the pop-valves of waiting locomotives, and the noisy trucks of the men loading express-matter, mail-bags, and baggage. The fact is, that in undertaking to make a big station quiet, even in the night, the railroad manager makes a big contract, and a good many different people have got to be 'jacked up' now and then. Not unnaturally, the switching crews in the freight-yard—who often bang the cars so that the noise penetrates the ears of passengers many rods distant—look upon the demands of the sleeping passengers as pretty stiff, and as based on refinements that workingmen can not sympathize with; nevertheless, passengers have acquired the habit of expecting quiet; in the great majority of cases it is easy to accommodate them, and therefore there is nothing to do but strive for perfection. And in abating nuisances the superintendent or train-master can do good work with sights and smells, as well as noises. Often a passenger in a berth has some little trouble in adjusting the curtains so as to avoid annoyance from a powerful electric light. Barrels of fish on a baggage-truck, under the car-window, sometimes make a passenger wish that he had gone by another road. If the waiting sleeper is set on a track out in the yard, to avoid the noises in the shed, offensive odors from adjoining buildings, swamps, or gutters sometimes intrude.

"Live-stock trains are sometimes stopt alongside of passenger-trains needlessly. The officer who sets out to straighten all unpleasant things of this kind may be tempted to think that he is wasting his time on excessive refinement; but 'trifles make perfection.'"

HE EXPECTS TO FIND A CURE-ALL.

Prof. Paul Ehrlich is looking for a remedy that will be fatal to all disease germs, but not to the patient.

THE SEARCH FOR A CURE-ALL

THE PANACEA, or drug that will cure all diseases, was the dream of the ancient student of medicine. It has not yet been found, nor is it likely to be; yet there is at least one great medical authority who expects to discover it for one particular class of diseases—namely, those caused by bacterial infection. There is nothing illogical in the idea of a substance that is fatal to all bacterial organisms. Indeed, we know already of such substances, but unfortunately those with which we are familiar will kill the patient as well. In an address before the recent International Congress of Medicine, in London, Prof. Paul Ehrlich, famous as the discoverer of salvarsan, announced his hope of obtaining what he calls a "complete radical cure" of all infective diseases. We quote from a report in *The Hospital* (London, August 16). Says this paper:

"Many people associate Ehrlich simply with the much-talked-of salvarsan, his sensational discovery of three years ago; and, outside bacteriological circles, this is perhaps his chief title to fame. It is well to realize, however, that Ehrlich is a man of most exceptional genius, whose bold speculations and imaginative theories have been the outstanding features of bacteriological progress any time this last twelve or fourteen years. Backed by masses of facts, patiently accumulated and ably arranged, Ehrlich's theories had won appreciation and acceptance all over the world long before the conception of his *therapia sterilisans magna* [great sterilizing cure] was given to the world, or salvarsan ('606') invented and put upon the market.

"In the general address, Professor Ehrlich dealt mainly with his theories. . . . He was at great pains to defend his 'complete radical cure' idea of dealing with infective diseases. What he aims at—and had at first hoped to accomplish with salvarsan—is to find some substance so inimical to the microorganisms and parasites of disease that a single injection of it shall kill every one of them existing in the patient. This could, as a matter of fact, probably be accomplished as things are; but only by such a dose of some powerful bactericide as would kill the patient too. Ehrlich's ideal is to find a drug which will kill off the parasites, and yet do no harm to their host, the patient. . . . . .

"This startling conception, nothing less than the cure of all infective diseases by one dose of one wonder-working drug, has not yet been attained, needless to say. But Ehrlich believes he will attain it, or at least that it is attainable; and his accomplishments in the past have been so extraordinary that it would be unduly skeptical to deny altogether the possibility of his dream being realized. Salvarsan, it is now fairly well established, is efficacious against a good many infective diseases, tho it has not the immediate complete radical curative effect which the German professor hoped it would have. Still, it is certainly the most potent drug in existence; and it behooves us to remember that in it synthetic chemistry has achieved a triumph over organic materia medica which would have been deemed totally impossible a few years ago. Now synthetic chemistry is an infant science at present, whereas materia medica is not; so there is no telling what the future may bring about. Abstruse as Professor Ehrlich's defense of his theories was, his audience thoroughly enjoyed his address, and he was given a great reception.

"It will not be surprizing if by the time of the next International Congress in London, Ehrlich's name has been promoted to the company of the immortals—Lister, Pasteur, and the rest. As a matter of interest we may note that the professor is nearly sixty; so that if he lives to see that Congress, and if it meets in London after a similar interval of time to that which elasped between this just concluded one and its predecessor, he will be well over ninety years of age. We wish him length of years to visit us again when that times comes. *Prosit!*"

LETTERS AND ART

"FAUST" AS A NOVELTY

IT MAY BE a comfort and solace to fearsome souls who are apprehensive of innovations in music to know that previous panics have been successfully survived. "Faust" seems staid and commonplace enough now, but the same fears invaded our fathers' or grandfathers' breasts when this antediluvian opera was a novelty as now come with the strains of Strauss, Debussy, and Dukas. Whether we find it easy to believe or not, we have the word of Clara Louise Kellogg that fifty years ago Gounod's masterpiece was "just as startling, just as strange, just as antagonistic to our established musical habit" as the innovations of to-day. And she ought to know, for she tells us in *The Saturday Evening Post* the story of the first production of "Faust" in America when she figured as the first *Marguerite* of the New World. And she gives us, too, a glimpse of the revolution that has taken place in the intelligent appreciation of music, as well as the intellectual curiosity concerning it:

CLARA LOUISE KELLOGG-STRAKOSCH

About the age when she sang *Marguerite* in the first production of "Faust" in America, under the management of Max Maretzek.

"There was very little general enthusiasm before the production of 'Faust.' There were so few American musicians then that no one knew or cared about the music. Neither was the poem much read. The public went to the opera-houses to hear popular singers and familiar airs. They had not the slightest interest in a new opera from an artistic standpoint.

"I had never been allowed to read Goethe's poem until I began to study *Marguerite*. Then even my careful mother was obliged to admit that I should have to familiarize myself with the character before I interpreted it. It is doubtful, even so, whether I entered fully into the emotional and psychological grasp of the rôle. All that part of it was with me entirely mental. I could seize the complete mental possibilities of a character and work them out intelligently long before I had any emotional comprehension of them. As a case in point, when I sang *Gilda* I gave a perfectly logical presentation of the character; but I am very sure that I had not the least notion of what the latter part of 'Rigoletto' meant. Fear, grief, love, courage—these were emotions that I could accept and with which I could work; but I was still too immature to have much conception of the great sex complications that underlay the opera that I sang so peacefully. And I dare say that one reason why I played *Marguerite* so well was because I was so ridiculously innocent myself.

"Most of the *Marguerites* I have seen make her too sophisticated, too complicated. The moment they get off the beaten path they go to extremes, like Calvé and Farrar. It is very pleasant to be original and daring in a part, but anything original or daring in connection with *Marguerite* is a little like mixing red pepper with vanilla blanc-mange. Nilsson, even, was too—shall I say, knowing? It seems the only word that fits my meaning. Nilsson was much the most attractive of all the *Marguerites* I have ever seen, yet she was altogether too sophisticated for the character and for the period, altho to-day I suppose she would be considered quite mild.

"Lucca was an absolute little devil in the part. She was also one of the *Marguerites* who wore black hair. As for Patti—I have a picture of Adelina as *Marguerite* in which she looks like Satan's own daughter, a young and feminine *Mephistopheles* to the life."

There was in those days nothing like the recent first-night rush to hear "Salomé" or "Electra":

"On the first night of 'Faust' there was a good house, because frankly the public liked me. Nevertheless in spite of me the house was a little inanimate. The audience felt doubtful. It was one thing to warm up to an old and popular piece; but something untried was very different. The public had none of the present-day chivalry toward the first try-out of an opera.

"Mazzoleni, of the cheese addiction, was *Faust*, and on that first night he had eaten even more than usual. In fact, he was still eating cheese when the curtain went up, and munched cheese at intervals all through the laboratory-scene. He was a big Italian with a voice as big as himself, and was in a measure one of Max Maretzek's finds. Maretzek had taken an opera company to Havana when first the war slump came in operatic affairs, and had made with it a huge success and a wide reputation. Mazzoleni was one of the leading tenors of that company. He sang *Faust* admirably, but drest it in an atrocious fashion, looking like a cross between a Jewish rabbi and a Prussian gendarme. Of course, he gave no idea of the true age of *Faust*—the experienced, mature point of view showing through the outward bloom of his artificial youth. Very few *Fausts* do give this; and Mazzoleni suggested it rather less than most of them. But the public was not enlightened enough to realize the lack.

"At first every one was stunned by the new treatment in the opera. In ordinary accepted operatic form, there were certain things to be expected—recitatives, andantes, arias, choruses—all neatly laid out according to rule. In 'Faust' everything was new, startling, overthrowing all traditions. About the middle of the evening some of my friends came behind the scenes to my dressing-room with blank faces.

"'Heavens, Louise,' they exclaimed, 'what do you do in this opera anyway? Every one in the front of the house is asking: "Where's the prima donna?"'

"Indeed an opera in which the heroine has nothing to do until the third act might well have startled a public accustomed to the old Italian forms. However, I assured every one:

"'Don't worry. You'll get more than enough of me before the end of the evening!'

"The house was not much stirred until the love-scene. That was breathless. We felt more and more that we were beginning

to get our audience. There were no modern effects of lighting; but a calcium was thrown on me as I stood by the window, and I sang my very best. As Mazzoleni came up to the window and the curtain went down there was a dead silence. Not a hand for ten seconds. Ten seconds is a long time when one is waiting on the stage. Time and the clock itself seemed to stop as we stood there motionless and breathless. Maretzek had time to get through the little orchestra door and up on the stage before the applause came. We were standing as tho paralyzed, waiting. We saw Maretzek's pale, anxious face. The silence held a second longer; then the house came down. The thunders echoed and beat about our wondering ears.

"'Success!' gasped Maretzek. 'Success! Success! Success!'

"Yet read what the critics said about it. The musicians picked it to pieces, of course, and so did the critics, much as the German reviewers did Wagner's music dramas. The public came, however, packing the house to more than its capacity. People paid seven and eight dollars a seat to hear that opera, an unheard-of thing in those days when two or three dollars was considered a very fair price for any entertainment. Furthermore, only the women occupied the seats on the 'Faust' nights. I speak in a general way, for there were exceptions. As a rule, however, this was so, while the men stood up in regiments at the back of the house. We gave twenty-seven performances one season; seven performances in Boston in four weeks; and I could not help the welcome knowledge that, in addition to the success of the opera itself, I had scored a big personal triumph.

PAULINE LUCCA.

Who, tho she looks mild enough here, was "an absolute little devil" in the part of *Marguerite*.

"As I have mentioned we often took wicked liberties with operas, such as introducing the 'Star-Spangled Banner' and similar patriotic songs into the middle of Italian scores. But nothing could give any one so clear an idea of the universal acceptance of this custom of interpolation as the following criticism, printed during our second season: 'The production of "Faust" last evening by the Maretzek troupe was excellent indeed. But why, oh, why, the eternal Soldiers' Chorus? Why this everlasting, tedious march, when there are so many excellent band pieces on the market that would fit the occasion better?' . . . . . .

"Of course I did not know what to wear in my new part. My old friend, Ella Porter, was in Paris at the time and went to see Carvalho in *Marguerite* especially on my account, and sent me rough drawings of her costumes. As I did not like them very well I studied Von Kaulbach's pictures and those of other German illustrators and designed my own costumes. In the face of all comment and suggestion I wore in the first act a blue dress trimmed with brown, and it looked very well. Every one said I ought to wear white. Another one of my points was that I did not try to make *Marguerite* angelically beautiful. There is no reason to suppose that she was even particularly pretty. 'Henceforth,' says *Mephisto* to the rejuvenated *Faustus*, 'you will greet a Helen in every wench you meet!' In the church-scene I wore gray and at first a different shade of gray in the last act; but I changed this eventually to white, because white looked better when the angels were carrying me up to heaven.

"As for the cut of the dresses I seem to have been the first person to wear a bodice that fitted below the waist-line like a corset. No living mortal in America had ever seen such a thing, and it became almost as much of a curiosity as my wonderful golden wig."

SONGS THAT SAILORS SING

IT IS A RATHER curious contradiction that the supposed "sailors' songs," as the world accepts them, find no favor with the "salts" themselves. Such a one was "Nancy Lee," which everybody ashore sang a generation ago and straggling vocalists manage to revive now when the demands of ragtime are not too imperious. The composer of "Nancy Lee" has lately died in England, and tho he published under the name of Stephen Adams his real name was Michael Maybrick. This song is not his only title to fame, however; for "The Blue Alsatian Mountains," "The Midshipmite," "The Star of Bethlehem," and "The Holy City," were his also, and the last of this list may still be heard on popular programs. Some of the notices printed about this composer in English papers scout the idea that so well-written a song as "Nancy Lee" can ever lose its popularity. It is a "breezy song of the sea," says the London *Evening Standard*, "which Englishmen loved and adored because it gave an ideal picture, all Englishmen being at heart idealists." The peculiar quality of this song leads *The Standard* to give some interesting facts about sailors' songs:

"Probably Mr. Michael Maybrick himself never for a moment imagined that he was writing a real sailors' song of the sea. In fact, such a thing hardly exists. The songs chiefly sung and beloved by sailors refer to the land. 'Mother Kissed Me in My Dreams,' and 'Father, Dear Father, Come Home with Me Now,' are their favorites. The somewhat mawkishly sentimental seems to agree with the constitution of the 'troglodytes' of the fo'c's'le. Nor are they to blame. The inclination is at least as old as Dante, who, being translated, wrote 'Now was the hour that wakens fond desire In men at sea and melts their thoughtful heart,' etc. Next to these sentimental ballads sailors have loved what might be called the utilitarian chantey with long-drawn out and mostly meaningless phrases suitable for lightening the weary jobs centered in the capstan or windlass. The French sailors' 'J'ai du bon tabac dans ma tabatière' is an example, or that best of all the chanteys, which Sir John Tenniel was once so fond of singing, 'Farewell and adieu to you, Spanish ladies.' A good second to this came 'Sally Brown, she's a bright mulatter,' which also, it will be observed, has nothing whatever in it of delight in the sea. It is the landsmen who hymn the glories of the sea. Shakespeare could write of the 'cradle of the rude imperious surge' without once going on shipboard: neither Ruskin, who chanted of 'the subtle, fitful, implacable smiting of the black waves, all the Atlantic rushing on behind them to their help,' nor Shelley, who sang of how 'the Atlantic's level powers cleave themselves into chasms,' knew much more of the sea than the Channel.

"Mr. Maybrick wisely took the idealist line, composed and sang songs which the sailor may possibly sing in some future epoch of the world's history, tho not a single sailor chants them now. In this he was possibly less fortunate than Dibdin—another landsman—whose 'Tom Bowling' did actually have a certain vogue among the sailors of Nelson's fleets and even contributed not a little to the allaying of the discontent which

came to a head in the Mutiny at the Nore. But it is all the man in Dibdin's song: there is no breath of sea air, no swing of the waves."

Mr. Maybrick's "fighting-song," "The Midshipmite," is "even further away from actuality":

"It contains none of that tremendous enthusiasm which inspires Rouget de Lisle's great song, and, on the other hand, it is above the standard of the rather whining and sentimental, or

CHRISTINE NILSSON.

According to Mrs. Strakosch "the most attractive of all the *Marguerites*," yet "altogether too sophisticated for the character and the period." To-day she "would be considered quite mild."

callous and thick-skinned, or frankly farcical ditties sung round watch-fires. Two of the most favored songs in the Indian Mutiny were: 'We Will Catch the Whale, Brave Boys,' and 'Oh, Save Me a Lock of Your Hair.'

"Perhaps the chief failing of Mr. Maybrick was that he allowed the fashionable sentimentalism of the day to color his songs. The old ditties, if not jovial in the text, were astonishingly light-hearted in their music. That fine old Irish song, 'My Love, Nell,' with its refrain, 'Oh, I weepit and I wailit, as the big shipe sailit To the shores of Americee,' had an air that was full of jaunty and comical music. Later on it was slowed down to suit the demands for pathos. The same transformation has frequently been practised. Battle-songs again are frequently almost brutal in their callous joviality. Meredith hit off the right spirit exactly in his 'Chillianwallah,' with its lines, 'Twas as good to be there as at Donnybrook Fair, With no police when the fun is over.'

"Yet human nature undoubtedly demands pathos in its songs, in practical America as much as anywhere else. What so pathetic as 'The Old Folks at Home,' or 'Dixie's Land'? So Mr. Maybrick's 'Holy City' will live with all its tender melancholy, live longer perhaps than that song which has already taken its place in the repertoire of morris-dancers, 'The Maid of the Mill.' Tho sentimental, there is nothing mawkish about these compositions. They ring true."

"Nancy Lee," we are told, is almost as familiar in Germany as in England or America.

ITALY'S NOVELIST OF LOVE AND CRIME

TO DEPICT the crime of murder with a sympathetic view of the murderer would be a difficult feat for Anglo-Saxon novelists. But the South of Europe presents a life where love and death are often swift upon each other's heels, and their appearance in the literature of that country is consequently frequent. It is an odd fact that women in Italy succeed so well in this difficult literary feat. Hitherto it has been the Neapolitan Matilde Serao whom the average English reader has best known for her powerful tales of passionate southern life. But Sardinia, it appears, furnishes a writer of equal attainments in Grazia Deledda. She has a large public, we are told, not only among the people of her native land, but also among the Italian population of America. Her recognition in France and Germany is also wide, according to Mr. Herbert Stegemann, who pays her a glowing tribute in *Die Literarische Echo* (Berlin), the more impressive since he is obviously no great admirer of female abilities in general. He calls Deledda the greatest exponent in Italian letters of the psychological romance, "which, whatever one may think of its esthetic value, remains the weightiest human document of the present—the only form adequate for the complicated life of our day." So far only one of her novels, "Ashes," has appeared in an English translation.

Signora Deledda was born, some forty years ago, in Sardinia, and her love of portraying the scenes and characters of her birthplace has led to the accusation that she is too circumscribedly a "local colorist." Mr. Stegemann answers this criticism by saying:

"It is true that she never feels so much at home as upon the mountainous soil of her native Sardinia, whose mighty nature and whose primitive, antiquely sublime civilization—entirely different from that of the rest of Italy—correspond so peculiarly with her tragic temperament. But the spiritual conflicts which she portrays lift themselves above the level of the merely local to that common humanity which is the first and last goal of all great art."

Moreover, the critic finds that she exhibits the same keen observation as in her Sardinian stories when writing of a different theme, as when describing lower middle-class life in "Nostalgia" and "Shadows of the Past." He continues:

"The art of the Deledda shows that precious freshness and immediacy of sensation and portrayal which are not often found in the work of artistically creative women, but when it is so found is exceptionally marked in character. If she is a psychologist the temptation to which most of our modern psychologists fall victims is far from her—the temptation to present a psychological thesis . . . instead of living characters and molded destinies. The Deledda's primary vision is always of characters—sharply defined, living figures; suffering, struggling, hoping human beings, and her problems are an outgrowth of these characters."

In the preface to "Nostalgia" Signora Deledda asks that her work be regarded as "a simple portrayal of a slice of our modern life, so multiform and interesting, which, now merry, and oftener sad, but always beautiful, is like an autumnal tree laden with rich fruit, some of which is worm-eaten, and bearing both green and withered leaves." Mr. Stegemann continues:

"This, then, is the theme of the Deledda—the human soul in struggle with strong passions, with those mighty elementary instincts which have always formed the chief strength of the heart and which draw men aside from the well-paved paths of duty and propriety. The authoress is not without a certain sympathy for these elementary tendencies, and at any rate she so illumes them with the light of her art that her heroes, if not absolved, are at least psychologically comprehensible. . . . In 'Nostalgia' her hero sinks so deep as to sell his love; in the 'Paths of Sin' she shows us a robber and murderer whom every bourgeois moralist would shun with deep abhorrence. But both act under the resistless compulsion of the *daemon* who causes the

strongest to fall; both become criminals through that passionate love which ennobles humanity even in its downfall."

The critic finds this the dominant motif in all of Signora Deledda's strongest work. She does not shrink from portraying the most violent emotions, and in her most beautiful romances, in "Elias Postolu," "The Ivy," "After the Parting," "The Path of Sin," the action is based on murder.

"It is not crime in itself which attracts her, but the whole human being, from whose individuality under certain conditions crime is an irrevocable necessity. In the art of the Deledda there is a breath of the antique Fate, no longer shown as an iron external compulsion, but as the rigid mechanics of events, environment, and inherited disposition. In the shadow of this Fate the hero seems to us even in his fall still great and worthy of the purest sympathy."

The drama "L'Edera" ("The Ivy"), which appeared only last year, is accounted Grazia Deledda's finest work. Mr. Stegemann finds in this an illustration of the remarks just quoted:

"*Annesa*, the daring and deeply feeling heroine of 'The Ivy,' this creature compact of the purest love and the most heroic self-renunciation, . . . kills an old sick man incapable of defending himself—and this after the calmest and completest consideration. It is a striking witness of the power of characterization of her creator that in spite of her crime our sympathy for the heroine never wavers for an instant. We perceive that her act is based on a higher law of love—that love which is uplifted far above mere desire and is gradually transformed into that sublime *caritas* before which, in Schopenhauer's noble words, all the wisdom of the world grows pale as torches and candles before the sun. This sublimated love is the ultimate expression to which the whole art of the Deledda tends—it is the word which alone can solve the riddle of this tangled and suffering existence. . . . It is unforgettable how *Annesa*, after the murder which she has committed to save her lover, *Paul Decherchi*, is crusht by the sense of guilt, how she makes atonement by a life of penance and humility, being at last united to her lover only when both have grown old: here all that is essentially erotic is stript away, and that love which thinks not of man and woman takes its place:

"In 'Ashes' also love is the final word of all wisdom: *Anania*, proud and ambitious, is wrecked because he can not comprehend his relation to his unhappy mother from the standpoint of love, but only from that of abstract duty."

The critic finds Signora Deledda at her best in the limning of feminine characters, of which her works present a rich variety of types:

"In contrast to *Annesa's* elemental simple magnanimity, stands the complex Mme. Bovary type of *Regina* in 'Nostalgia,' this passionate, fanciful creature stretching out her hands to all the glitter and gaiety of life and driving her husband, *Antonio*, to deeds of sin and shame. He sells his love to a wealthy foreigner in order to furnish his beloved with the means of luxury. The psychic development of this husband and wife . . . is portrayed with great penetration, and that of *Regina* especially lays bare the depths of the female soul. . . . . .

"One of the most interesting female characters to be found . . . in all recent fiction is that of *Maria Noina* in 'The Path of Sin.' She is nowise the ordinary siren who drags her victim on to the path of sin, but an aristocratic figure surrounded by the most delicate charm of femininity, and passionately craves all things great, beautiful, and sublime. At first she can not bring herself to listen to the servant *Pietro*, socially so far beneath her. She demands bold and decisive deeds from her lover before she bestows herself upon him. Rather would she belong to a criminal than to some humble and bloodless creature. *Annesa*, *Maria Noina*, *Regina:* these three figures alone would assure their creator of a lasting place in literature, and assuredly they breathe warmer and deeper life than the countless pathologic female persons with which modern writers seek to entertain us."

Mr. Stegemann finds many other interesting types in the Deledda gallery. She is lacking, however, "in the humoristic figures beloved of the English novel," which he finds natural because of the tragic cast of her temperament. She has no gift for depicting mundane types, either, but is at her best describing the scenes as well as the people of her native Sardinia.—*Translation made for* THE LITERARY DIGEST.

BRIDGING EAST AND WEST IN ART

IT SEEMS that Kipling's lines about the East being East and the West West may have other significances than just his idea of the eternal separateness of Occident and Orient. There have hitherto been an occident and orient in art matters in our own little United States, but that "the twain" may meet at last in the Panama-Pacific Exposition is the hope of the interesting little journal of the American Federation of Arts—

GERALDINE FARRAR.

Who with Calvé goes to extremes in the part of *Marguerite*, and produces the effect of "mixing red pepper with vanilla blanc-mange."

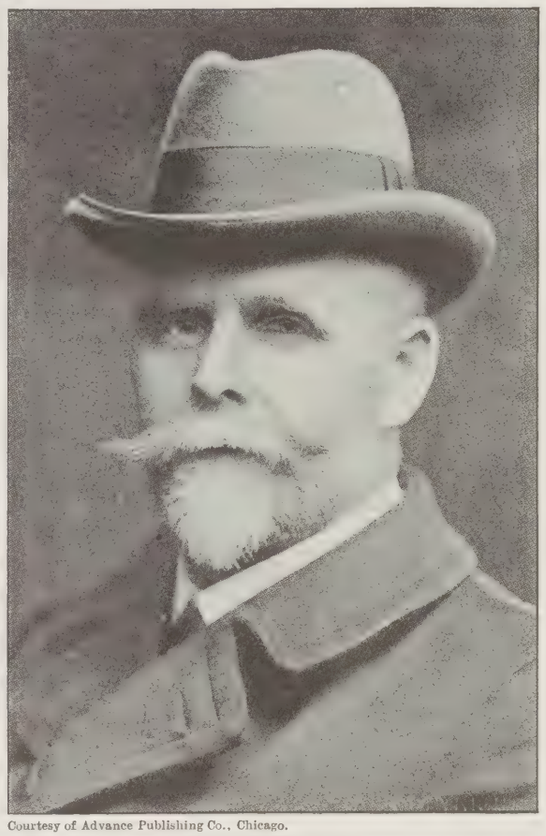
Art and Progress (Washington). The service hoped for from the exposition is of this nature:

"It may, and we trust it will, bring into closer fellowship the artists, art institutions, and art lovers of the East and the West. At far reach, the Orient and the Occident—nearer home, the Atlantic and the Pacific slopes. There is no lack of love of art on the Pacific Slope, nor of art production. Notable, indeed, are some of the private collections in Portland, San Francisco, and other Pacific Coast cities. But it is true that at the present time the Pacific Slope is cut off from participation in the general activities in the field of American art which would seem to extend as far but, generally speaking, no farther than Denver. The traveling exhibitions sent out by the American Federation of Arts, or by the several museums, rarely cross the Rocky Mountains; the artists of the Pacific Slope seldom exhibit in Eastern cities. To be sure the cost of transportation is a large factor in this situation, but it is not wholly responsible; there is a barrier which, while natural, can be overcome. Contact will do it, and this the Panama-Pacific Exposition should provide. Artists from the East are working with artists of the West, designing the buildings, decorations, landscape features, and sculpture which will combine to make a city of dreams such as has not been seen before. They are working now shoulder to shoulder, side by side, and they are unconsciously cementing unions which will survive. In 1915 the stream of travel will turn to the Pacific Coast. . . . And the works of the Eastern artists will be shown with those of the Western artists, and their achievements and efforts will thereafter be of interest to one another; the East will invade the West and be no more shut out."

RELIGION AND SOCIAL SERVICE

DAN CRAWFORD, OF AFRICA

A MAN who has shot more lions than Theodore Roosevelt ever saw, who has met the African negro in a jungle as dense as Livingstone ever knew, and who for an unbroken stretch of twenty-three years has carried the Word of God and the white man's knowledge hundreds of miles into the Dark Continent—such is the picture given by a writer in *The Advance* (Congregationalist, Chicago) of Dan Crawford, missionary, explorer, and author of "Thinking Black," which he calls "the most original and fascinating book in African missionary literature." After Dan Crawford has preached a little while "to us pagans in America," we are told, he will return to Africa "in the hope of dying a few hundred miles farther inland and marking with his grave another mile-stone of the advance of Christ's kingdom." Altho he has seen bloody murders, "unnamable cruelties, and unmentionable abominations in life and conduct," yet he is cheerful, exuberant, optimistic, with "a twinkling eye, a merry laugh, and a sunny faith." The bad African, he says, is almost as bad as the bad American or Englishman, and he thinks "the worst men among them have barely conscience enough to light them to hell." Dan Crawford speaks to the writer in *The Advance* in English, he remarks of himself, "but I think in Bantu, the language I had to learn in Africa,—a wonderful language into which I had the incomparable privilege of translating the Word of God." He reminds us that when he went into the land "the natives had no books and used only a spoken language," and he proceeds:



Courtesy of Advance Publishing Co., Chicago.

DAN CRAWFORD,

Who speaks English, but thinks in Bantu, the language into which he translated the Bible.

"When I took to Oxford the other day my grammar of that language, I showed them a tongue that has 33 tenses for the verb, 10 voices, and 19 genders. What is your puny English to that? What has English in the way of tenses? Almost nothing, no aorist, no future! Oh, yes, I know, you have faked a future tense with the verbs 'shall' and 'will'; but this is no future tense, and you adopt all manner of devices to make tenses your poor, cold, bald language does not have. We have futures, several of them. We have an immediate future and a proximate future, and a deferred future, and a progressive future, and a completed future.

"We have 19 genders. The African is far too modest to make sex—the most private and delicate of all distinctions—the basis of his categories in the classification of nouns. There are 19 categories. Everything that has a vascular system is in one. All long things, palms, cane, tall grass, are in another; all short, blunt, or round things in another; all hard things in another; all soft, flabby things in another. You would need an adjective for each of them. Not so the man who thinks black. He has 60 sounds. It is difficult to represent them with 24 letters. A changed prefix makes the difference. The thousands of verbs all end in 'ali'—a most musical ending. And can you imagine a language thus highly inflected and in which it is impossible to speak ungrammatically? It is so; the initial letter of the principal word gives all—as if you were to say, not 'God is love,' but 'God gis gove.'"

It was many years, however, before Dan Crawford completed his grammar and his translation of the Bible. All that time he had to be "a walking, talking Bible," and he says of his labors:

"Missionary work is hard, but there is a great glory in going without. I could tell you the romance of a pair of shoes that came to me in my need in the heart of the jungle; Elijah's God is not powerless now. Then there is the great law of compensation. The natives have no note-books, but they have wonderful memories; I visit them once in ten years and they can repeat my sermon, word for word, so keen is their memory. They have no artificial light; they call such lighting 'lighting God,' for they think that he has drawn down the blinds for them to go to sleep, but they have instead most wonderful eyes. They have no shoes; David Livingstone, who first came among them with boots, is called all over Africa Mr. He Hath No Toes. But their ten toes are so strong that they can trust them where I with my boots dare not go. God compensates us in his own way.

"Civilization is creeping up toward them from the south, where it means mines and liquor and sadness. When I told my native friends, as I left them at the head of the railroad, of all your wonders to-day, traveling in and under the earth and water, and tried to impress them with these modern 'improvements,' they said: 'Better off is not to be better.' In that is a whole system of ethics. They know the immortality of the soul; it is not even questioned from one coast to the other; with them the body is but the cottage of the soul, death is not departing but arriving. God is his own pioneer, and in the heart of Africa, black, 'heathen' Africa, he had preceded us, and there everything tells of him."

As did Cecil Rhodes, so Dan Crawford went to Africa to be cured of consumption, and he was cured. Also as did Cecil Rhodes, he found wealth there, not material wealth, "but the riches of human life awaiting the Gospel." His greatest obstacle in dealing with the aboriginal black, he tells us, is the slave-trader; and when his interviewer brought up the question of cannibalism, Dan Crawford retorted:

"Cannibalism? Oh, to be sure! It is not nice! I make no apology for it. But try for a moment to 'think black' with me. Come, and let us tell some of these cannibal people that in the Balkans white men fought till 4,000 were killed on one side and 5,000 on the other, and he will cry out in horror, 'Oh, venom of the serpent who slays, and not to eat!' Murder is not very pretty anywhere, and what is done with the flesh afterward is

not the only point worth considering. After all, when you read of war between white men, how much do they lack of being cannibals? . . . Even our most glorious message meets the taunt of the black man. Once when I was telling the story of the cross, a chief named Malemba interrupted me, saying: 'You white men are a bad lot. You killed the Boso One: we kill only criminals, and instead of being ashamed you cross the sea to come and tell it!' Do not think I apologize for their sin—and it is sin. . . . The Gospel of God is what we need and what they need. The night cometh when no man can work. Afar the golden-crested crane is calling. I must go back to Africa!"

VACATION BIBLE-SCHOOLS

THE DOORS of the regular day-schools have opened in nearly every city and the vacation Bible-schools have for the season passed into history, but the session of 1913 records 50,551 pupils in attendance in the 216 schools scattered throughout 34 cities. It is fourteen years since they were first started, and their growth has been continuous. They make use not only of idle children and idle churches, but idle college students as teachers. Of these latter the past summer employed 921, representing 28 colleges. In New York City there were 31 schools, with 6,009 children enrolled. Wellesley, Vassar, Mount Holyoke, and Yale maintained schools in New York this summer. Mr. John Wanamaker, who is interested in the movement, said at the opening of the season that thus was provided "a practical demonstration that the church is not only a place of worship on Sundays, but is to be used all the week in service to humanity." *The Christian Herald* (New York) observes:

AMONG THE CHINESE CHILDREN

Of New York is one of the most interesting vacation Bible-schools.

"It is easy to become enthusiastic about this good work. It goes far toward solving a number of problems that have long caused much perplexity. The problem of the idle child on the city streets is no easy one. With the restraints of school discipline and school tasks lifted, it is much easier to fall into mischief than to be good. Then, too, the problem of getting the Bible into the minds of our school children is one that is baffling the wits of religious leaders. Further, there is the problem of the cold, grim church, dull and forbidding, and shut during the sunny summer days. It has been an easy matter for children to come to think of the church as a place in which it was difficult for childhood to feel at home. The Daily Vacation Bible-School answers all these problems at once. It throws the churches open to week-day sunshine and week-day childhood; it gives the children a chance to study their Bibles under regulations something like those of their public-school life and at the same time to the accompaniment of a kind of cheer and play that are out of place in the Sunday-school; it takes them off of the streets and keeps them interested for a good many week-day hours in wholesome work and study and recreation."

In the New York *Press* an article by Mary Kendall Hyde attributes the origin of this movement to Mrs. W. A. Hawes, from whom Mrs. Hyde quotes as to the origin of the schools:

"The first summer Bible-school was held in Hoffman Hall, 324 East Seventy-first Street, in a room that had been a beer-garden. The school was started July 12, 1899 (two weeks after the close of the public schools), with an attendance that first day of 114 boys and girls. So many children made it necessary to rent three rooms instead of one. The session was held from 9.30 to 11.30 every day except Saturday. Three teachers gave instruction.

"The following summer (1900) the Epiphany Baptist Church Sunday-school room was used for the first two weeks, but owing to the complaint that it was too far from the children's homes and they felt they must dress differently to go into that neighborhood, the loan of the Alumni Association building of the Normal College on East Seventy-second Street was obtained for the remaining four weeks. With the public-school buildings open in the same block, and all sorts of games going on, the school was overcrowded with children who wanted to learn the Bible. The teachers could not receive all who applied. Besides learning the Ten Commandments, the Beatitudes, the Lord's Prayer, and many psalms, they were taught much of the Old and New Testaments.

"The third summer, 1901, a whole house, No. 183 East Seventy-third Street, became the home of the East Side Institute, as the school was then called. The following year Knox Presbyterian Church, on East Seventy-fifth Street, was obtained, and found to be admirably adapted for the purpose, having six separate rooms, besides the main auditorium. There was an average attendance of about one hundred boys and girls, and a modest leaflet of four pages—3 x 4 inches in size—was issued as an appeal for contributions in order to enlarge the work."

From such beginnings has grown a movement national in scope. Mrs. Hawes called hers an Every-day Bible-school. She engaged three teachers, who taught one hundred children. A little more of history is here given:

"Various denominations and religious organizations have developed the original idea along individual lines, altho there is general similarity of plan and program. As Mrs. Hawes was a Baptist that denomination naturally was the first to espouse the cause, and in 1901 the Baptist Mission Society began to use the unoccupied rooms of mission churches for summer schools. Four years later the Federation of Churches united in the work, and churches of many denominations thus became actively interested.

"In 1907, the National Federation of Churches, responding to a demand for similar schools in other cities, undertook to extend the work, and subsequently the National Vacation Bible-school Committee came into existence. Then the denominational note sounded again, and the Board of Home Missions of the Presbyterian Church, through its department of immigration, began in 1911 to locate vacation schools in densely populated immigrant communities. The newest group—the baby among Bible vacation-schools—has appeared this year, when several of the Episcopal churches united for reasons of economy and efficiency.

"Yet withal, there is unity of purpose and ideal . . . much the same line of Bible stories and teachings is followed."

ABSENTEE SHEPHERDS

THE CRUX of the rural-church problem of the South and West is to be found in its absentee pastors. For the most part ministers live in places other than their preaching-posts, and visit these pulpits as a lecturer comes to a platform. What the country people most need is a pastor, says the Rev. Warren H. Wilson in reviewing the discoveries made by the work of the Department of Church and Country Life of the Presbyterian Church. With the pastor at hand it would be easy to conduct the evangelistic work the country places so much desire and need. "In the country the people are ready for evangelistic work," asserts Mr. Wilson, in *The Herald and Presbyter* (Cincinnati). "It is their customary method throughout the United States, and it is an excellent method." But, continues this writer, "the hardest task we have faced is the enlistment of pastors for rural congregations."

ST. AUGUSTINE'S VACATION-SCHOOL.

"One of the practical demonstrations," says Mr. John Wanamaker, "that the church is not only a place of worship on Sundays, but is to be used all the week in service to humanity." There were 216 such schools held this summer.

"We have found it almost impossible to find ministers who will live in the country with the farmers. Among the forty-four churches of this presbytery, only two have installed pastors giving all their time, and only four have pastors living at any of the points at which they preach. The other men live where they do not preach and preach where they do not live. This is the rule throughout the West and South. The Presbyterian system, with its conception of a pastor living with his people, has broken down in the open country, or, rather, we have never yet built the system for which our Church stands. Puritanism—all that Protestant tradition which is associated with an educated ministry—depends for its furtherance upon the life of the minister as a part of the life of his people. We inherit not merely a preachment. The very gospel we preach depends for its administration and its application upon the 'teaching elder' and pastor who lives among the people and ministers to them all the days of the week in the things of the Word. This is the great issue in country life: to bring the churches of the country up to the standard which has been attained in some measure in our older States, and to make the minister of our church not merely an absentee preacher, but a watchman and a statesman on the lookout for his people all the time, and mindful of their every need.

"In Ohio we found that of the owners of the farms three out of ten are absentees, but of the preachers in the churches nine out of ten are absentees. In this the Presbyterian churches differ but little from the others. We found that the presence of a resident pastor in the villages and rural churches doubles the evangelistic power of the churches, for of the churches with pastors just twice as many are growing as are to be found growing and increasing among the churches without resident pastors. The main essential, therefore, to evangelistic power and the extension of the Church is the settled pastor."

What is true of Ohio must be repeated with amplification in the country districts of the West and South, where the number of ministers is less, where big cities are fewer and colleges and seminaries are not so many nor so near at hand. What this Department is endeavoring is—

"To awaken among the people themselves in these churches the conception of the church as a home of the people and a house of God. We find that the officers and the members of the churches are keenly alive to this use of the church, and we believe that young people will be attracted to the ministry and young men will offer themselves as candidates for the ministry, just in so far as they see the church is a great, and not a little institution, a house of every religious and human interest, rather than a mere preaching station to be used one day in the month.

"For the custom in wide territories is to close a country church on three Sabbaths of the month for preaching and to open it on only one Sabbath of the month. This results in the strange situation that one-half of the Presbyterian country churches are closed for preaching every Sabbath of the year. The actual number is 3,323 country churches, which on any Sabbath of the year are not open for the preaching of the Gospel. In this the Presbyterian Church conforms to the custom of other rural denominations. The missionary secretary of one Southern communion is responsible for the statement that 6,000 churches of their denomination are closed on every Sabbath of the year, and the missionary secretary of another Southern church adds that, of their denomination, 10,000 country churches on every Sabbath of the year are closed.

"Our difficulty in the country is the difficulty which confronts every missionary board in its work for the extension and establishment of the church. It is to assemble the divided and fractional work of the rural ministers into pastorates. That is, to bring back again the ministry of a man of God to a combined and unified people. . . . . .

"In a Missouri conference last fall a non-Presbyterian minister, who was a late speaker on the program, acknowledged, with grim humor, that he had come to rebuke us for lack of sympathy with the country situation, but he was forced to acknowledge that he himself—and others like him—was the sinner; for, he said, 'I live in Louisiana (Missouri), where I do not preach. On the first Sabbath of the month I preach nine miles from Louisiana; on the second Sabbath, twenty-five miles in another place, passing on my way to that church several Baptist churches; on the third Sabbath of the month I preach forty-one miles from Louisiana, and on the fourth Sabbath of the month sixty from Louisiana.'"

REVIEWS OF NEW BOOKS

OUR NAVY IN THE REVOLUTION—MRS. DE KOVEN'S "JOHN PAUL JONES"*

Reviewed for THE LITERARY DIGEST by
CYRUS TOWNSEND BRADY

TO HIS interesting series of studies in our early naval history previously published Mr. Gardner Allen has added a very complete and attractive account, in two volumes, of the American Navy in the Revolution. And our knowledge of that most interesting period in our sea history is further increased by a new life of John Paul Jones, also in two volumes, by Mrs. Reginald de Koven. The two books, which, altho they differ in size, contain about the same amount of material, can with great pleasure and profit be studied together. Both of them attain the very highest order of excellence in their several fields.

With discriminating care, Mr. Allen has gone to original sources for the material he presents. I am very familiar with the period. I have read and studied all the American Naval histories from Cooper to Paullin, and I have no hesitation in saying that this is the best of them. If it has a fault, it may be that it is more of a source book than an attempt to set forth naval history in one's own language. For, wherever possible, the actors in the various events described have been permitted to tell their stories in their own way with all their ingenious variations of spelling, capitalization, punctuation, and grammar. Some of the accounts are quaintly amusing. The effect is sometimes that of a scrapbook, yet on the whole, I think it is well that we should have these various recitals, drawn from innumerable sources and indicating almost an unbelievable amount of industrious research on the part of Mr. Allen, in the words of the participants.

Anybody with a facility in literary expression can tell a story after the facts are set before him. There are a racy tang, a rich freedom, a sailorly frankness, a bluff roughness, if you will, to these personal accounts of daring exploits which are worth volumes of rhetorical description.

Except in a few instances, the part played by the Continental Navy in the struggle for the achievement of our independence is more or less unknown. Popular information and interest are centered upon a few characters—Barry, Manley, O'Brien, Biddle, Coyningham, Nicholson, Dale, and others, with, of course, John Paul Jones standing preeminent and in a class by himself. But there were literally dozens, I might say hundreds, of bold, hardy seamen who commanded Continental, Colonial, and State ships who performed incalculable service. Like the Confederates in the Civil War, the Continentals largely clothed and armed themselves at the expense of their enemies. Ship after ship laden with munitions of war, clothing, and provisions fell into the hands of the Americans.

The enterprise and vigilance of these somewhat nondescript naval forces compelled Great Britain to maintain a very large and expensive armament on the coast of North America during the war. And what was of even more importance, the boldness with which American public- and private-armed ships raided European waters brought about an almost ruinous and impossible increase in the insurance rates, and did more to create a demand for peace on almost any terms than the defeats sustained by the British armies at Saratoga and Yorktown.

The regular Continental Navy was gradually eliminated by capture, but it made itself felt amazingly, considering its disparity in size, before it was finally put out of commission. Let it be noted that the first regular war vessel taken fell to John Barry, and that the last action resulted in the defeat of a British frigate by the same John Barry. The Americans came out of the war with a very high naval prestige which the United States has never lost.

All students of history, and especially those of naval matters, are indebted to Mr. Allen for this scholarly, comprehensive, impartial presentation. It is to be hoped that he may continue these studies. A discussion of the War of 1812 on the same lines is naturally inevitable. But I venture to point out to him two fields which have been but little treated by naval writers. One is, the various naval expeditions in which the colonies participated in prerevolutionary times; the other is, the work of the Navy between the War of 1812 and the Mexican War. Both of these periods were rich in adventure and fruitful in lessons. Each of them might occupy a volume which would certainly be warmly welcomed and much appreciated. Many people have done the great wars of the United States, so called, but few have attempted these interesting periods.

Now I turn from the general to the particular. Do most Americans think that Paul Jones was practically the whole navy in the Revolution? I am afraid they do. Did Paul Jones think so? With no depreciation of his character, I am afraid he did. And there is some justice in the claim; for without making invidious comparisons with other gallant officers, Barry especially, Jones was the only one who achieved not only a national but an international, and, it might even be said, a world-wide reputation. As a personality he stands far above all of the others put together. He fought the most important naval action of the Revolution and one of the most famous single-ship actions of all history. Indeed, it might be called, in the full significance of the term, an unique frigate action. It was fought, as it were, in the face of the whole world, and the engagement was carried on under the most dramatic conditions.

In war, as Napoleon, who certainly knew, said, men are nothing, a man is everything. Never did the remark receive more signal illustration than in the case of Paul Jones and the *Bon Homme Richard*. "The thing that hath been, it is that which shall be," says Solomon, "and there is no new thing under the sun." But a wide acquaintance with history discloses to me no parallel to that engagement, either before or after it. It made Jones deservedly famous—indeed immortal. His naval career elsewhere was about on a par with that of the best of the other naval officers of the Revolution, but in this action he leapt to the front rank of his fellows and to the front rank of single-ship captains everywhere and anywhere. What he might have done with a fleet is, of course, only a surmise. The Russian fiasco, which was not due to him, is scarcely sufficient for determination.

I do not know whether Napoleon ever made the remark attributed to him in which he exprest his regret at the death of Paul Jones and wished he were alive to lead the forces of France, nor do I know whether even the genius of Paul Jones could have compensated the disparity in naval efficiency between the English and the French; but if Jones had commanded in place of De Grasse, or Villaret-Joyeuse, or Brueys, or Villeneuve, the English admirals opposed would have known that they had been in a fight and they would not have had the easy time, comparatively speaking, which they enjoyed at the expense of these other brave but thoroughly unfortunate Frenchmen.

But I must refrain from pursuing that tempting theme further. Mrs. de Koven has done a splendid piece of work. There have been a number of biographies of Jones, the two most recent being written some ten years ago by the late Mr. A. C. Buell and myself. These two came out simultaneously. Mr. Buell differed from the writer on many important points. The critics almost unanimously accepted Mr. Buell's contentions and explanations, backed as they were by citations and references to alleged authorities. Those who knew Mr. Buell will at once acquit him of any deliberate attempt to deceive, difficult as this may be to reconcile with the fact that his authorities were non-existent or non-discoverable and his conclusions on every disputed point invariably wrong. But sweet are the revenges of history. Mrs. de Koven's book quietly demoralizes nearly every contention in Mr. Buell's book, and in every disputed point of importance corroborates my own statements. I can not resist calling attention to this.

But Mrs. de Koven is very far from stopping there. She goes on to illuminate and explain matters which no one before her has been able to explain, and she clears up obscurities which no one had been able to do more than call attention to. She has spent years of research in the archives of the various capitals of Europe to which Jones's story is related, and in our own archives.

---

* **Allen, Gardner W. A Naval History of the American Revolution.** 2 vols. 12mo, pp. xx–752. Boston, Mass.: Houghton Mifflin Co.

De Koven, Mrs. Reginald. The Life and Letters of John Paul Jones. 2 vols. 8vo, pp. xxii–980. New York: Charles Scribner's Sons.

Crawford, M. MacDermot. The Sailor Whom England Feared: Being the Story of Paul Jones, Scotch Naval Adventurer and Admiral in the American and Russian Fleets. 8vo, pp. viii–424. New York: Duffield.

She has had advantage of collections of documents which have been secured by the Government since she began her work, and she has set forth the result of her conclusions in a simple, direct, plain, and convincing way which makes her biography definite, and perhaps the final word, so far as anything human can be final, about the great little sailor.

It is difficult to see how any one could do any more with Jones than she has. Appreciations and estimates of him there will be without number, of course, but it is probable that all the get-at-able facts are now set forth. And some of them are very astonishing facts; as, for instance, Jones's service in his boyhood as a midshipman in the British Navy; his reason for coming to America; his adoption of the name Jones; his relations to the various women to whom he gave his affection, or perhaps it would be better to say, who gave their affection to him. It is all clean-cut, convincing, and altogether admirable. Mrs. de Koven has dodged no issues, glided over no thin ice; she has faced every problem honestly, and so far as a human being could, she has conquered them. American seamen and American citizens generally owe her a debt of gratitude. So far as this author and sailor can, he is delighted to pay it in this tribute.

The book will doubtless receive the approval of the Navy Department and ought to be included in the historical reading courses of every institution in this land which discusses naval matters and naval problems; and it could be studied with profit and satisfaction even in other countries which have an interest in sea power. I do not except England. Even there, I assume, candid and impartial historians will now have the magnanimity to eliminate Jones from the pirate and buccaneer class in which they have persistently sought to include him, and will give him his high and rightful place as the greatest seaman and fighting man of the Revolution, with a personality distinguished, unique, among the striking and mysterious figures of the world.

Two admirable books, these, from the Massachusetts man and the New York woman. I have read them with avidity and with the greatest of pleasure. I am grateful to both of them.

I append a brief notice of a third book. In this instance, the last is also the least—decidedly so! Mr. Crawford possesses some qualifications for the writing of interesting books—namely, lively style, vivid imagination, and an open mind. It is a pity that these are not conjoined to a sound critical judgment and a true historic sense. His book is a gossipy biography. It is full of amusing anecdote which ought to be true if it frequently is not. He has endeavored to be impartial and has, in a large measure, succeeded. No new or original material appears; minor mistakes abound, as, for instance, when he speaks of witch-burning at Salem and calls a seventy-gun ship a frigate. Consciously, or unconsciously, he seems to have depended largely upon Mr. Buell's now thoroughly discredited volumes. No attempt at critical judgment appears. The book is handsomely put forth with interesting illustrations and no maps. Whenever it differs from Mrs. de Koven's conclusions it is an error, and it differs a good many times. It is a pity that a book which will probably have a large sale in England, where it was published, should not live up in its facts to its author's ability to write. Perhaps the best thing that I can say of it is a free translation of the old Italian proverb, "Even if it be not true, it is very well told."

COLONEL GRACIE'S BOOK ON THE "TITANIC"

Gracie, Colonel Archibald. The Truth About the "Titanic." Illustrated. Cloth, pp. 330. New York: Mitchell Kennerley. $1.25 net.

To Colonel Gracie's clear and comprehensive account of the greatest sea disaster of modern times readers will turn for various reasons. Those whose friends perished when the mighty ship went down and those who themselves escaped in her life-boats will eagerly search the record to confirm their own memory or to find some last pathetic tidings of the beloved lost. Most carefully, with a presence of mind which was amazing, Colonel Gracie noted every person and every incident on that fatal night as if he foresaw the miracle which was to save him and to give him the opportunity, which he has so nobly met, to bring some comforting message or some last news from those who went down with him into the deep but did not rise again. To the student of the human mind and the human race the record of Colonel Gracie's own emotions during this supremely testing experience furnishes a remarkable chapter. To read such a record is a spiritual tonic. The ancient promise was fulfilled to him.

When he passed through the waters he was not afraid. That perfect love which casteth out fear shone out of many a brave heart on that dark night. Who can ever forget that transcendent instance of sublime and cheerful resignation and fearlessness in face of death when a reluctant refusal of assistance from an overcrowded life-boat met the ringing response in a deep and manly voice, "All right, boys! Good luck! God bless you!"—and the unknown hero sank out of sight? One must have a dull and a hard heart to read many of these pages without a mist before the eyes. On a few pages, altho Colonel Gracie utters no condemnation, the record brings a burning sense of shame. Some residents of New York will not proudly hand this chapter of their experience down to posterity. Indeed, some of those most prominently heralded as heroes seem to have borne a strangely passive part. To the general reader, aside from its great human interest, the book will furnish material for reflection in regard to the safeguards of ocean travel. It is a touching fact that Colonel Gracie's miraculously preserved life came to an end, as 1912, the year of the disaster, was closing, and when the brief conclusion which he had purposed is added by another hand. It was heroic to write the book, to live over and over again in memory and conversation the terrible scenes from whose effect he never recovered, in order that he might adequately describe them. Everywhere the fineness of his character, its chivalry and spirituality, illuminate the story.

MICHELANGELO'S LETTERS AND PAPERS

Michelangelo: a Record of His Life as Told in His Own Letters and Papers. Translated and edited by Robert W. Carden. Illustrated. Cloth, pp. 335. Boston: Houghton Mifflin Co. $3 net.

For more than three centuries biographies of the great Michelangelo Buonarrotti have continued to appear since first the pen of his friend, Vasari, told the story of his life. Mr. Carden has sought not to imitate these, but to make use of the abundant and easily accessible material provided by the artist himself in the letters, memoranda, and contracts which survived him. To let a man interpret himself is wise indeed. But the matter which Mr. Carden presents may not properly be called a record of the life of Michelangelo. It is not a full interpretation either of the artist or of the man, but it is genuinely valuable as a source from which to study certain remarkable phases of his character. Michelangelo himself could never have dreamed or wished that a part of his immortality should consist of these casual notes to his family about business matters, often vexing, sometimes exasperating. But they have a deep human interest. They reveal his great ambition for the resuscitation of his family name, his eagerness to endure any labor or privation that he may support his father, his brothers, this beloved nephew in ease and comfort, his constant practise of private charity "for the good of my soul," his dependence upon prayer. The letters to his nephew are especially entertaining. Lionardo's handwriting annoyed him! "Do not write to me again; every time one of your letters arrives I get an attack of the fever because of the trouble I have to read it."

Still more was his unselfish heart tenderly distrest when his nephew sent him eight beautiful shirts or a case of wine, tho he himself eagerly provided the young man's entire support, living at times in such self-denial for that purpose that he shared his bed with his three workmen. "The almost grandmotherly letters" which he sends to Lionardo, who, at his uncle's desire, is in search of a wife, are beautiful in their generosity, their anxiety, their pride in worthily perpetuating an honorable family name. We are glad when his solicitude over the choosing is happily ended and he may affectionately send "a fine string of pearls" to the bride. But what a sacrifice of divinely given genius, of power to create beauty for all the world and all time, it was, when this gifted man, this great artist, spent himself to support in idleness his untalented kindred, submitting to excessive hardships and a thousand anxieties that he might minister to their needs! Lest we regret it overmuch, we must summon our powers of spiritual discernment to the proof that through this self-effacing devotion there was wrought out in the soul of the artist that which is of higher and more lasting beauty than even his own skilled hand could bring from marble or canvas.

Mr. Carden's preface gives an excellent résumé of the most vital parts of the letters. It was surely, however, far from his intention to call Michelangelo by the least deserved of all titles, "the self-appointed drone of the family,"—did he not mean "drudge"?

modern Germany as Mr. Price Collier sees it. He finds much more than this, however, and reports it all in the clear epigrammatic style which has made for his earlier books so wide a circle of readers. Yet he is more than a reporter. He is a student of national character of very keen insight. When this is added to a thoroughly devoted "American point of view" the reader's appreciation of what it is to be an American as well as what it is not to be an American is considerably heightened. The resulting sense of responsibility gives zest to the reading.

Mr. Collier finds Germany in an adolescent stage in the family of nations—anxious to be considered one of the grown-ups, and regarding the wearing of long trousers and a pipe the demonstration of success. Yet it is a forced rather than a natural growth.

"A steaming orchid-house is not the place to go to learn to grow the fruits of the earth in their due season for the nourishment of a free people. You will find some brilliantly colored flowers there, in the gay uniforms of the artificial tropics, but they shrink and shrivel in the open air. They have been trained to grow luxuriantly in this stifling atmosphere, but they feed no one, please no one, who will not consent to live in a glass house with them."

The basis for such a severe judgment as this is laid in the preceding pages. After two chapters of historical and political description the Emperor comes upon the stage—"When the sun is behind any phase or department of Germany's life, the shadow cast is that of Germany's Emperor." Following a discussion of politics and journalism come three brilliant chapters—"Berlin," "'A Land of Damned Professors,'" and "The Distaff Side." From the study of Germany's people that these bring out the author turns to Germany's Army, her problems, her international relations, and concludes with the question whether the German national ideal is one to pattern after. "She has shown us that the short-cut to the governing of a people by suppression and strangulation results in a dreary development of mediocrity. She has proved again that the only safety in the world for either an individual or a nation is to be loved and respected, and in these days no one respects slavery or loves threats. From an American point of view, any sacrifice, any war, were better than the domination of Prussian methods of nation-making." We hope that some day Mr. Collier will write on the United States "from an American point of view."

Mr. Wile, who has represented for several years the London *Daily Mail* and the New York *Times* in Berlin, has given us the quintessence of the German "Who's Who." He has painted swift pen portraits of thirty-one of the men who lead modern Germany—not so brief as to be indefinite, yet concise enough to be of real use for reference. The selection includes leaders in art, drama, and music, among whom are Reinhardt, Strauss, Liebermann, and Hauptmann, as well as such men as Von Heydebrand, the late August Bebel, and Dernberg, in politics; as Ballin, Thyssen, the Krupps, and Von Gwimmer, in finance and manufacturing; as Von Bethmann-Hollweg, Prince Fürstenberg, and Von Bülow in statecraft; and many others. One receives a vivid impression of the real strength and eminence of Germany. The addition, however, of a scholar—as Harnack, for example—and of a theologian or ecclesiastical magnate would round out the representative character of the book still further.

In addition to studies of Germany's leaders and of her national characteristics, there is at hand also a serious and extended examination of the policies for which she seems to stand and by which she is said to be aiming for the dominant position in Europe. Professor Usher, in the book before us, investigates the weakness of England and the strength of Germany in their international relations—giving some attention to an often unrealized factor—what each thinks of itself. Russia and France are also considered in casting the balance of power. The steps which have appeared so far in the Pan-Germanistic scheme are discust, and its justifiability and prospects of success are carefully weighed. The author's conclusion is that "nothing short of the breaking of the alliance between England, France, the United States, and Russia can permit the German scheme to obtain anything more than a temporary and partial success. The first three of the allies can not leave the alliance without endangering everything they hold dear. The fourth can only do so by the renunciation of ambitions which have been the very backbone of Russian policy ever since Russia herself emerged upon the plane of European politics."

MRS. BARR'S AUTOBIOGRAPHY

Barr, Amelia E. All the Days of My Life: An Autobiography. Pp. 512. New York and London: D. Appleton & Company. $3.50.

It would be almost impossible to find a more direct, frank, and simple account of life than these "red leaves of a human heart," by Amelia Barr. She tells her story truthfully, the story of a woman who has earned her place in the world by good work. She writes for "the kindly race of women," and says if her experience "can help any sad or doubtful woman to outleap her own shadow, and stand bravely out in the sunshine to meet her destiny, whatever it may be, this book will be its own excuse, and justify its appeal."

Amelia Huddleston was born in England in 1831. She speaks of herself as a very fortunate child because she brought a good spirit into a fair and favorable environment. She is proud that she always possest a faculty for recollection. She gives every detail in the development of her life. The telling itself becomes a delight from its appealing frankness. The comments she makes on all about her are the comments of a clean, normal, wholesome spirit.

Throughout her record of eighty years, there are evidences of great spiritual sensibilities. She seems to have been always "en rapport" with spiritual powers, who warned her by dreams or visions of approaching death or danger. As the daughter of a Methodist preacher, she had to be accustomed to frequent changes of residence, but every change added to her

fund of experience and memories, and each had its influence on the development of an impressionable child. Teaching took her away from home, and in 1850 she was married to Robert Barr. Renunciation began. Robert Barr was unfortunate in his choice of business associates and soon lost the wealth that seemed secure, but he never wavered in his devotion to his wife and children, nor did his wife's loving loyalty ever fail him. Finally, misfortune drove the Barrs to America. We follow their varied vicissitudes of love and anxiety from Chicago to Texas, where they finally settled and where Mrs. Barr had to endure her supreme sorrows, the loss of husband and several children.

From this time on, her record is one of a brave fight for life and living, in which she had the sympathetic cooperation of her daughters, Mary, Lilly, and Alice. Returning to New York, she tried her hand at anything that offered an honest livelihood, principally teaching. She was nearly forty before she began to write successfully and laid aside teaching. Success crowned her efforts. From her arrival in New York she made a brave and daring fight and forced success by an indomitable spirit, after she had faced sorrow, disaster, and poverty. She won a victory with the power of her heart and pen. It is an appealing life and full of the best in human nature.

FICTION OF THE SEASON

Earls, Michael. The Wedding Bells of Glendalough. Pp. 388. New York: Benziger Brothers. $1.35.

There is not as much romance in this book as the title would lead one to suppose. It is, rather, a narrative of certain families of Boston, their pride and prejudices, as evidenced by their devotion to, or defiance of, the influence of priest and Church. The atmosphere is that of Roman Catholicism. The heroine (if there be one) shows her strength in renouncing temporarily the convent which she longs to enter. The hero does not find complete peace and happiness because his inner call to the priesthood is so long deferred. The different episodes in which these young people figure all illustrate the power of the Church to regenerate the sinner and inspire the good. The "Wedding Bells" are those which are bought with Oliver's gift to the Church on his accession to the priesthood, and are rung for the first time at his sister's wedding.

O'Connor, Mrs. T. P. Little Thank You. Pp. 262. New York and London: G. P. Putnam's Sons. $1.25.

Laying aside this charming little book, one is at a loss to tell just why he has been so moved and delighted. All the characters are fascinating—the dainty young widowed mother, big-hearted and weak Billy, and little Thank You; but it is the fascination of simple heart interest, pathetic rather than passionate, with no dramatic side-lights to complicate situations. Virginia with its beautiful country alternates with New York City as a background. The love-story is the story of three,—not the usual triangle of marital faithlessness and broken hearts, but the union of three clean

(*Continued on page* 484)

Warm as Toast

and Body Free

THERE is joy in a winter's hike. The cool, fresh air, the crisp snow under foot, your body warmly clad and in healthy glow from the vigorous exercise. Just the right sort of protection is important—underwear which is proof against cold, but light and pliable—never cumbersome—underwear which lets the skin breathe freely and absorbs perspiration—which does not chill you when you stop to rest.

WRIGHT'S SPRING NEEDLE TRADE MARK RIBBED UNDERWEAR

Wright's

WRIGHT'S SPRING NEEDLE TRADE MARK RIBBED UNDERWEAR

Spring Needle Ribbed Union Suits

give comfort, warmth and wear. Knitted with plenty of stretch and give on Cooper patented improved spring needle knitting machines. A garment wonderfully elastic. Keeps its shape even with the hardest wear. Whether made of wool, cotton or "mixed," it has no fear of the laundry and washes perfectly without matting or shrinking.

A Crotch Which Cannot Fall Open

Wright's Union Suits are all provided with a crotch which cannot fall open, affording the same protection as a pair of drawers and giving absolute comfort. No open edges to draw, pinch or chafe. No buttons between the legs. Flap is woven into the garment—no rough seams. Only one button and that in an easy-to-reach position. The flap, even if left unbuttoned, cannot fall open or roll into uncomfortable folds. Wright's Spring Needle Ribbed Underwear is made in wool, cotton and wool, and cotton. So you can get just the material you want, but get it in these really superior goods.

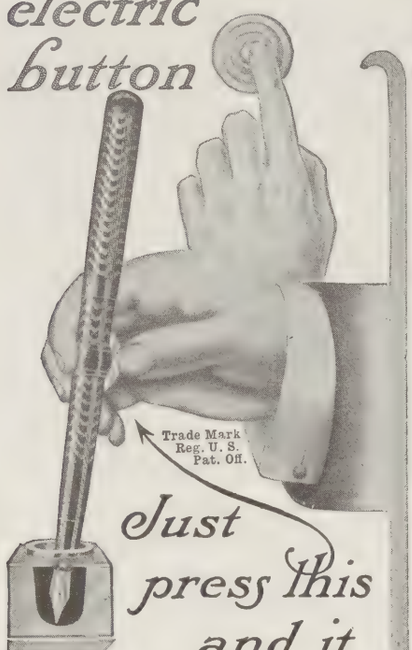
Wright's Health Underwear

An underwear with a fleece lining which provides an air space, keeping the body heat in, cold out, and giving ventilation for the skin. Absorbs perspiration and prevents the skin from becoming chilled. It protects perfectly from colds, making it a true health underwear. Its reliability has been tested for over 20 years with ever increasing popularity. In weave and material it has all the good points of Wright's Spring Needle Ribbed Underwear. Made in separate garments or in union suits.

Ask dealers to show you the underwear bearing either of the Wright labels shown in this advertisement

Wright's Health Underwear Co., 74 Leonard St., New York

Simple as pressing an electric button



Just press this and it fills itself

IN hardly more time than it takes to wet a steel pen with ink, the Self-Filling Conklin *refills itself* and goes on writing. It is the one pen that permits writing without interruption.

Conklin's Self-Filling Fountain Pen

requires only a dip in any inkwell, a simple pressure on the "Crescent Filler," and then back to the paper. Every filling flushes the inkfeed and thus prevents clogging.

Sold by Stationers, Jewelers, Druggists, on 30 days' trial. Prices, $2.50, $3.00, $3.50, $4.00, $5.00 and up. Write for catalogue and two little books of pen wit—all free.

REVIEWS OF NEW BOOKS

(*Continued from page* 482)

souls, illustrating the power of childhood and the unconscious strength of baby fingers. Little Thank You is a precocious youngster, but he is a "dear," and you don't wonder that "Billy" loved him as well as "mama." It seems quite plausible that gambling had no power strong enough to lure Billy back to "wrong nights." It is a sweet and sunny story, appealing to that which is best in our nature.

Soulie, George. Strange Stories from the Lodge of Leisures. Pp. 166. Boston and New York: Houghton Mifflin Company. $1 net.

George Soulie, of the French consular service in China, has given us here a translation of twenty-five stories from a Chinese work which contains more than three hundred similar tales and belongs to the second half of the eighteenth century. They are imaginative and subtle and are supposed to throw an extraordinary light on Chinese every-day life and to illustrate in a striking way the Chinese conception of the other world. The magicians of the Tao religion play a conspicuous part in most of the stories, and the Buddhist idea of metempsychosis gives many opportunities for complicated situations. The stories are all short, and are characteristic of the old Chinese Empire. Most of them are combination love- and ghost-stories possessing a delicate charm of imagination. Each has a suggestive moral, more or less clearly defined, while their very unusual character and phraseology make them singularly charming. "Fault and Its Consequences" is especially apt, illustrating the tremendously far-reaching and accumulative power of a single wrong act.

Onions, Oliver. The Debit Account. Pp. 295. New York: George H. Doran Co. $1.25.

This peculiarly constructed book is not to be read lightly nor thoughtlessly. One finds himself bewildered by the subtle and confusing style of the narrator, who leaves the reader to deduce much of the story from rather vague expressions. Even the reader is not taken wholly into the confidence of the hero, who tells his own story. The entire book is devoted to the life of one J. H. Jeffries, and his wife Evie, from the day of their marriage through steps of progressive prosperity. An undercurrent of inevitable fate, constantly alluded to, rather confuses the directness of the message, if there is one. Of course there is "another woman," who loves the hero and knows that he murdered the former sweetheart of the young wife, but she evidently knows why, and we don't. In spite of Jeff's unswerving devotion to his wife and children, complications arise, busy "friends" foster misunderstandings until the story comes to a tragic dénouement. Whether the account is settled in the end remains an open question.

Wilson, John Fleming. The Princess of Sorry Valley. Pp. 302. New York: Sturgis & Walton Company. 1913. $1.25.

The first impression and promise of this novel of the South Sea Islands are hardly borne out by its later development, but it contains some good material and has stimulating situations. Moira Sanderson, a Bryn Mawr graduate, determines to return to her childhood home on the island of Atui, even against the advice of her father and all her friends, believing that she can demonstrate her theories in regard to happiness and its dependence on health and beauty. Tom Sanderson is practically king and director of the islands, and when he understands what Moira wants he puts her in command of the conduct of affairs and gives her free rein to establish Bureaus of Beauty, with the power to banish all imperfect inhabitants to "Sorry Valley." Moira shows herself very blind in her estimate of character, and altho there are some very good ideas suggested, the book just misses being clever and becomes rather ordinary, but the reader can not help being interested in the failure of the beauty scheme and the development of revolution, bloodshed, and disaster, as a result of Moira's ineffectual efforts to create new conditions instead of making people contented under existing ones. There are several love-stories involved. They all reach the "happy-ever-after" conclusion.

Parker, Gilbert. Imperial Edition. Vols. XI, XII, XIII, XIV, XV, and XVI. New York: Charles Scribner's Sons.

Six additional volumes of Parker's works in the "Imperial Edition" are now ready. Vol. XI contains the first and the last of the stories that Mr. Parker wrote of the Province of Quebec, and also the series of "Parables of Province," which, in his estimation, contained the spirit of French Canada, but were too symbolic for the every-day reader, and consequently slow in justifying the author's faith in them. Vol. XII contains the best known and most universally discust of the Parker novels, "The Right of Way," a book finished in 1900, and to which its author refused to add any explanation, saying: "This book has been written out of something vital in me. I mean the humanity that becomes one's own and part of oneself by observation, experience, and understanding got from dead years." The character of Charley Steele was "a type, an idiosyncrasy of modern life, a resultant of forces all around us." Steele was the beginning of a new epoch in Sir Gilbert's literary life.

Vol. XIII contains "Michel and Angèle," "John Enderby," and "There is Sorrow on the Sea," the first of which in book form was known as "The Ladder of Swords," which seems telepathically to connect the days of Elizabeth with our own. Vol. XIV is a collection of Egyptian Tales under the title, "Donovan Pasha." The germ of most of these stories came from actual experiences. Mr. Parker visited Egypt four times before he began to write of Egyptian life. These stories were really an "avant-courier" for the "Weavers," which was published soon after. Dicky Donovan was real and lovable, and "there was nothing he did or said or saw or heard which had not its counterpart in actual things in Egypt."

Vols. XV and XVI are devoted to "The Weavers." Tho David Claridge was a creature of the imagination, the author was so saturated with all that had been written about General Gordon that doubtless something of the great man found its way into his character, but the true origin of the book was his short story in "Donovan Pasha" called "All the World's Mad," aided by the author's interest and understanding of Quaker life. Mr. Parker's own

REVIEWS OF NEW BOOKS

(*Continued from page* 484)

conception of the value of this novel is both interesting and instructive: "I believe 'The Weavers' represents a wider outlook of life, closer understanding of the problems which perplex society, and a clearer view of the verities than any previous book written by me, whatever its popularity may have been."

Richmond, Grace S. Mrs. Red Pepper. Pp. 339. New York: Doubleday, Page & Co. $1.25.

It is delightful to read a novel that has problems not concerned with the sex question. These pages, in which Mrs. Red Pepper shares the honors with her already famous and popular husband, have no lack of heart or head interest, and yet is as sweet, clean, and wholesome as one could desire. That does not mean that the story is wishy-washy and uneventful. On the contrary, the problem involved is real and vital. The love-story includes not only the strong, restful happiness of the Red Peppers, but a dramatic plot which involves friends of the Doctor and his wife. How Dr. Leaver loses his nerve and finds it again, and how Charlotte Ruston bravely faces poverty and disappointment, and the reward they earn, are satisfactorily and convincingly set forth.

Seaman, Augusta Huiell. Little Mamselle of the Wilderness. Pp. 405. New York: Sturgis & Walton Co.

Here is a story written around the life and achievements of Robert Cavelier de la Salle, the hero of the Mississippi, and the man to whom "America owes an enduring memory, for, in this masculine figure, she sees the pioneer who guided her to the possession of her richest heritage." All the characters are historically real except "Little Mamselle," and the little Indian Alisippa. The romance is well told, and thrillingly are portrayed the hardships and dramatic incidents of La Salle's adventurous pioneers. The secrecy surrounding Mamselle's presence in the little band of explorers and the truth about her birth and station in life are finally explained, but in the solution of the problem are threads of warfare and strife, love and treachery, devotion and privation. The love-story is sweet and wholesome. The scenes in which the story develops are startling and powerful enough to hold any reader's interest.

Street, Julian. Welcome to Our City. Illustrated. Pp. 176. New York: John Lane Company. 1913.

This is a collection of four papers, previously published and all written in the same vein of satiric humor. The author assumes that he is playing host to a stranger in New York and "shows him the sights," at the same time keeping up a running commentary which reveals an appreciation and lively contempt for the foibles and gullibility of the New York spender. It is the gay life of New York that the stranger sees, and the system by which he is separated from his money, first, last and all the time. The illustrations are apropos, and the pages of the little book are alive with a sparkling and witty spirit. Mr. Street speaks with feeling of the costumes "which reduce both bank account and modesty." It is the present mode to "reduce everything but prices." The New York point of view is described

Here Are Styles To Arouse Your Enthusiasm

There's a dash, a vigor, a sprightly personality about these striking Society Brand Models that's captivating to young men—and men who stay young.

They are designed by an artist—a man who is young enough to enter into the spirit of the young men's age, and whose experience fits him to create the models that young men want.

In the admiration of the perfect style and swing you forget mere details of workmanship—you scarcely realize the care with which these garments have been made. But the workmanship is there, for it is this added feature of Society Brand Clothes by which the style-beauty of each garment is *tailored* in.

Ask your dealer to show you the new Fall Styles. Try them on. Note the beautiful fit, the distinctive cut, the smartness, the just-enough "swagger" that mark Society Brand Clothes as so different from ordinary clothes. You'll find yourself well repaid when you see them.

Kno-Burn
Expanded Metal Lath

—because the mesh of "KNO-BURN" makes the plaster STICK

Proof against the effects of moisture, dampness, mold and the ravages of time or decay — fire-resisting, durable and absolutely immune from dangers of discoloration or of cracking — "KNO-BURN" is the logical plaster *base* wherever plastering work is *required.*

"KNO-BURN" is worth many times its cost because, as a plaster-gripping base for the walls and ceilings of your home, it is *permanent.* Moreover, as a means of preserving the original smoothness and beauty of exterior and interior plaster work for all time, of reducing fire risks and increasing the value of your property — "KNO-BURN" is supreme in the metal lath field and every home-builder *today* wants to know all about it.

"KNO-BURN" Expanded Metal Lath is the strongest stucco or plaster foundation it is possible to produce. It absolutely prevents the cracks that come from poor plaster base and makes crumbling of the wall coating impossible.

in this motto—"It is a shame to take your money, but we need it in our business." In a jesting spirit, the author says many a true word, and little bits of suggestive philosophy drop from his pen with a joke. "It is not the theater, but the theater-goer, that grows artificial. The actor and actress are the only human beings who are paid for being other than the Creator made them; the rest of us are doing it for nothing." "If we have vulgar 'shows,' it is because we have vulgar people to attend them. The audience can make the theater what it wills, but the theater can not make the audience." The reader will get many a laugh from this little volume; he will also get other things worth while if his mind is alert.

PLANT LIFE

Ganong, William G., Ph.D. The Living Plant. A Description and Interpretation of Its Functions and Structure. Large 8vo. Cloth, pp. 478. New York: Henry Holt & Company. 1913.

One of the most interesting and significant facts in current civilization is the disposition of the leading thinkers of all classes to share their thoughts with the average intelligent masses. The best products of human effort are thus being made an integral part of men's consciousness, to an extent never before realized in the history of mankind. This book of Professor Ganong's is an illustration of the part that scientists are taking in thus making the most up-to-date knowledge democratic. It is one of the American Nature Series, that is being published by Henry Holt & Company, and falls in Group III of that series, which treats of "The Functions of Nature."

The author tells us in his preface that his book "is not designed as a digest of our present scientific knowledge of plant physiology for the use of experts in that subject, but, in conformity with the aim of the series of which it is a part, it seeks to present, to all who have interest to learn, an accurate and vivid conception of the principal things in plant life." "I was once myself such a learner," says Professor Ganong, "and I have tried to write such a book as I would then have delighted to read." That he has succeeded in realizing the aim of the series, and his own ideal, no one will doubt who gives even a cursory glance at the book. Scientific the work is, and it satisfies the demands of exact knowledge, but it is more. It is a work of literature, and illustrates in a conclusive manner what many men have long believed in the face of much assertion to the contrary, that a scientific man can give a personal coloring to truth and yet remain truthful. In every chapter there is not only a record of the facts of plant life, but a point of view and a style of expression that are personal. Professor Ganong has signally vindicated Milton's statement in his "Areopagitica" that "books are not dead things, but do body forth the spirit of him that writes them."

Important as is this work for the literature of scientific knowledge popularly presented, it is still more important for the literature of interpretation. It not only informs the minds of its readers; it also infuses the spirit of science at its best, and gives vision of the universe of truth that makes one a different individual for having read it.

6%

Earning Money—Or Just Spending It?

THERE are two familiar types of men in everyone's acquaintance: the one who makes plenty but never has any money, and the other who earns moderately, but who always has plenty.

One spends money; the other saves it. One lives ahead of pay-day; the other lives sanely, with pay-day ahead of him.

Saving money, even in small amounts, and investing it carefully is bound to lead to financial independence. By setting aside a small part of your income, and purchasing dependable securities, you safeguard your own future and provide for those dependent upon you.

The 6% Bonds of the American Real Estate Company offer the ideal investment for large or small savings. They are based upon its ownership of New York real estate, and have back of them a great real estate operating Company with a record of more than a quarter of a century, during which it has returned to its investors over $11,000,000 in principal and interest. These Bonds are issued in two convenient forms:

6% Coupon Bonds
In denominations of $100, $500, $1000 and upward, paying interest semi-annually by coupons attached. Principal payable in 10 years.

6% Accumulative Bonds
For those who wish to save $25 or more a year, and accumulate $1000 and upward in 10, 15 or 20 years. Purchasable by annual, semi-annual or quarterly instalments. These instalments bear interest at the rate of 6% per annum which is compounded, accumulated and paid with the total instalments at the maturity date.

Printed matter fully describing both forms of Bond, map of New York City, etc., will be sent on request.

INVESTMENTS AND FINANCE

THE PLIGHT OF THE RAILROADS

THAT the railroads of the United States "continue to do an increasing business, but without drawing any additional profits by reason of that fact," is the contention of *The Financial Chronicle* in its leading editorial article of September 6. The roads, in fact, are doing "a larger business then ever before," but their net income is diminishing. Gross revenues show "practically uninterrupted gains," but these, unfortunately, "no longer furnish any criterion of the course of net earnings," the fundamental cause being "the rising cost of operations." Meanwhile additional burdens are being assumed by the roads in providing new capital for betterments, "thus extending their interest and dividend requirements."

It is several years since the rise in expenses began, but it has remained "persistent" ever since, and is now "gaining very rapid momentum," so that a stage has been reached which "furnishes occasion for the deepest solicitude." Returns for the first month of the new fiscal year (July) "tell an eloquent and harrowing tale of the hardships the roads are experiencing." Their significance should not be underestimated, inasmuch as they are "uniform in their character and tendency." Returns showing "moderate, or larger, gains in gross earnings, coincident with heavy reduced net," have been received in "a veritable succession."

The Pennsylvania returns are cited as one illustration. The lines east and west of Pittsburg together showed an increase in gross earnings for July of $1,995,053, and yet, in the net returns, there was an actual loss of $732,746, due to an increase of $2,727,799 in expenses. The record for seven months tells the same story as the record for one: gross revenue increased $16,944,763, but expenses more than wiped out this sum; they increased in the huge sum of $21,862,113, leaving the road $4,737,358 worse off in net than it was the year before.

The same has been the case with the New York Central; a July increase of $838,904 in gross became a decrease of $147,773 in net. When the entire system of this road is considered, the showing is still worse; an increase of $2,348,994 in gross became a decrease of $841,025 in net. From other parts of the country similar reports are received. The Southern Pacific, owing to increased expenses, found itself in July poorer in net by $786,183 and the Union Pacific was poorer by $671,836. The writer finds that this rise in expense is "assuming steadily growing proportions." He adds in detail:

"The Chicago & Northwestern added $733,861 to its receipts, but expenses and taxes increased $741,098, leaving the net $7,237 short. The Rock Island lines added $75,823 to gross, but suffered a shrinkage of $359,537 in the net. The Northern Pacific, with $322,144 gain in gross, has lost $20,540 in net. The 'Soo' road, tho having enlarged gross by $250,085, suffers a decrease of $19,177 in net. Southern roads are not exempt from the general tendency. The Louisville & Nashville, it is true, has managed to save for the net $61,281 out of a gain of $424,018 in gross, but the Southern Railway sustained a decrease of $30,000 in gross, attended by an augmentation of $126,946 in expenses, thus producing a loss in net of $156,946. The controlled properties, like the Mobile & Ohio and the Georgia Southern & Florida, likewise have losses in net contemporaneous with improvement in the gross.

"With net thus being reduced, while gross earnings quite generally continue to rise, what may we expect now that further expansion in gross revenues seems in jeopardy by reason of the corn-crop shortage, while other drawbacks to expanding revenues loom up as the result of tariff revision and uneasiness concerning banking and currency legislation? Even the Canadian systems, which have been having such a wonderful record of expansion, are beginning to make unfavorable returns, the Canadian Pacific for July having suffered a decrease of $59,337 in gross and of $331,384 in net."

FAILURES FOR EIGHT MONTHS

Economic writers in the past two or three years have sometimes contended that a notable business revival could not take place until there had been a considerable increase in the number of commercial failures. Further liquidation in business, it was contended, was still necessary before an upward movement of great strength and considerable permanence could set in. Statistics for the present year show that this awaited condition has prevailed in notable degree, and especially in August. For August the number of failures reported to *Bradstreet's* was 1,088. This was an increase of 2.1 per cent. over July, 1913, and 6.6 per cent. over August last year. No preceding August since 1896 saw so large a number of failures as August of this year. There were more failures by 8 per cent. than in August, 1908, while the excess over August, 1906, a year of great prosperity, was 73 per cent. The liabilities of those who failed in August of this year were 35 per cent. greater than those in August of last year. Following is a table showing the record of failures for eight months—for the first and second quarter of the present year, for July and August of this year, and the figures for corresponding periods last year.

1913	No. of Failures	Assets	Liabilities
January	1,566	$8,404,342	$15,619,192
February	1,114	16,159,858	29,802,170
March	1,235	8,308,715	19,411,481
First quarter	3,915	32,872,915	64,832,843
April	1,148	12,473,968	20,404,323
May	1,104	7,574,645	14,589,588
June	975	6,505,193	14,017,313
2d quarter	3,227	26,553,806	49,011,224
Six months	7,142	59,426,721	113,844,067
July	1,065	39,374,368	55,253,745
August	1,088	13,181,559	23,022,018
1912			
January	1,701	10,766,526	20,120,690
February	1,208	8,491,853	14,964,948
March	1,101	9,200,649	17,911,667
1st quarter	4,010	28,459,028	52,997,305
April	1,079	6,262,121	14,182,704
May	1,111	6,281,278	12,852,527

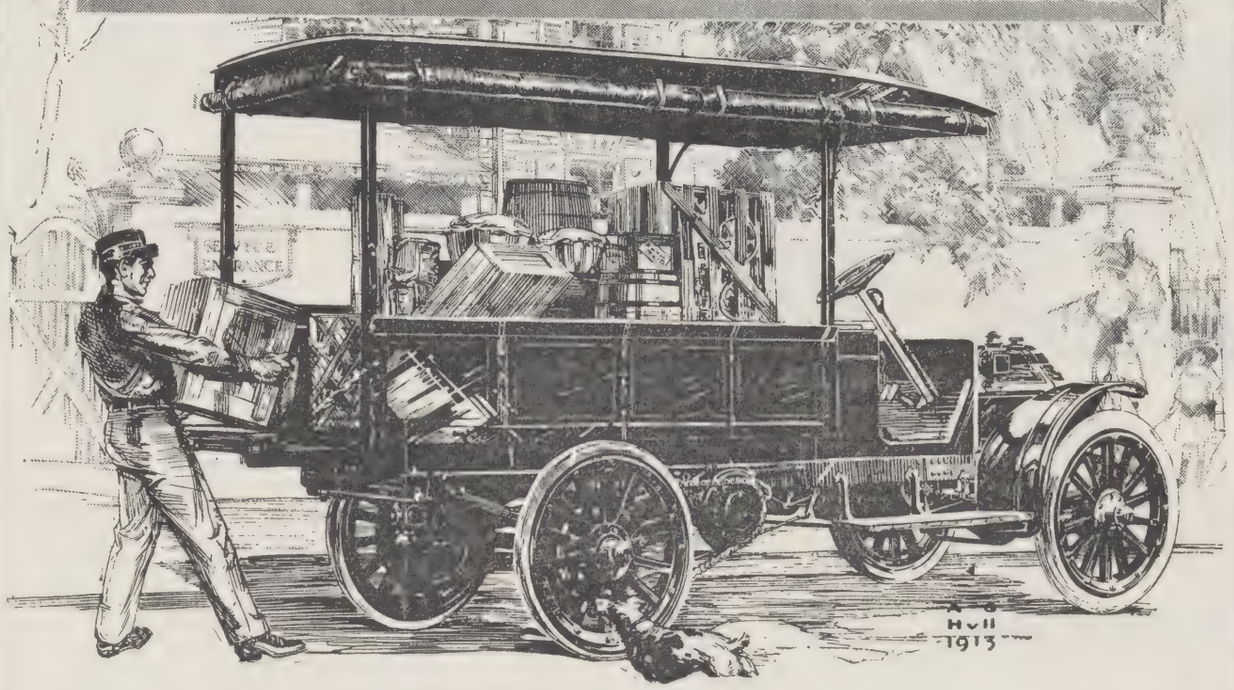
Willys Utility Truck



200% more efficient; 30% less cost

IT'S not so much what a Willys Utility Truck *can* save as how much more it *does* accomplish. What you want is Dollar *Production*, not Penny *Reduction*. You have got to tune your business up-to-date and up to *meet* and *beat* competition.

You use many modern business necessities—not because they are cheap to install but because they save that which you are continually figuring and fighting against—time.

A Willys Utility Truck can make from five to ten delivery operations where the horse makes one. It will do 200% to 300% more work than any team and do it so that the cost of your individual deliveries will be the lowest in the history of your business. And *your* business means any business that requires the transportation of merchandise.

As to cost, it is the *lowest* priced truck of its size and capacity built. On the average it costs you 30% *less* than any other similar truck made.

It is the *only* truck at the price that has a chain drive. The powerful 35 H.P. motor is controlled by our patented governor. The pressed steel frame is built to stand the most severe strains. It is thoroughly reinforced. Both the front and rear axles are unusually rugged, and are made in our drop-forge plant. It has a three-speed transmission—three forward and one reverse. The tires are 34-in. x 4½-in. pneumatic on the front wheels and 36-in. x 3½-in. solid on the rear. Its capacity is three-quarter ton.

$1250

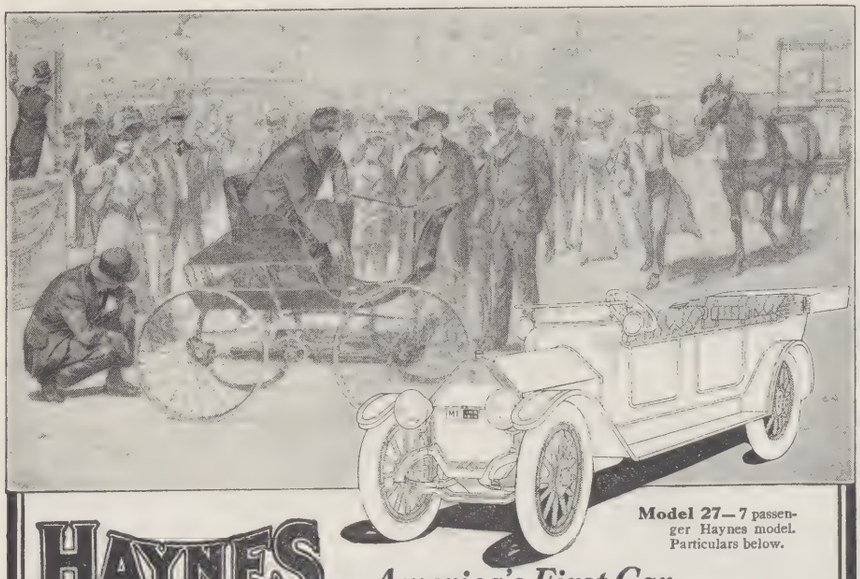
The Willys-Overland Company, Toledo, Ohio



Model 27—7 passenger Haynes model. Particulars below.

HAYNES

America's First Car

is again center of all eyes

The early models of the Haynes, America's First Car, when exhibited at County Fairs, drew spectators from many miles around.

Today, thousands of people are visiting the display rooms of Haynes dealers everywhere to see the new cars with the wonderful feature—

Gears shifted by electricity

The hand-lever shift is superseded by a dial of push-buttons on the wheel, and a mere pressure of the finger brings the desired gear changes instantly.

Electric Lighting and Starting, too

—and many other great conveniences such as mechanical tire pump, pressure gasoline feed and Collins quick adjusting curtains. Haynes cars are more beautiful than ever, and back of all is the famous Haynes engine and sturdy reliability that's the result of 20 years of car building.

Three great Models

Model 27 (illustrated)—6 cyl., 65 H. P., 136-in. wheelbase, 6 or 7 pass. $2785; limousine $3850.
Model 28—4 cyl., 48 H. P., 118-in. wheelbase, 2 pass. roadster, 4 or 5 pass. touring, $1985, coupe, $2700.
Model 26—6 cyl., 65 H. P., 130-in. wheelbase, 2 pass. roadster, 4 or 5 pass. touring, $2700; coupe, $3200.
Hand lever optional at $200 reduction.

WRITE for Elwood Haynes' Automobile Book. This book, "The Complete Motorist," contains a great fund of automobile information—you will understand your car better and get better service out of it at less expense. Tells all about the new models and the Vulcan Electric Gear Shift.

If you don't know your nearest Haynes dealer, ask for his address

The Haynes Automobile Co., 42 Main St., Kokomo, Ind.

THE

Heart and Blood-Vessels

Their Care and Cure

AND

The General Management of the Body

By I. H. HIRSCHFELD, M.D.

In ignorance lies the greatest danger!

Do you understand yourself, and how to manage your body and mind to get the best out of life?

This book discusses the correct management of the body in regard to work, play, sleep, food, sex, climate and the different values in life; and shows the way by which to reconstruct one's system after it has been mismanaged.

As an illustration: the really interesting story of the heart is told and how to lead a happy and efficient life even when the heart is sick and the blood-vessels are hardened.

One chapter treats the points which should guide in the selection of a physician, nurse, hospital, and places for recreation in America or in Europe.

Price $1.25 net; postpaid $1.39

Funk & Wagnalls Company, 354-60 Fourth Ave., New York, N.Y.

The Autoglas

PATENTED MAY 2ND, 1911

This glass is the only comfortable goggle and only efficient eye protector made.

WITHOUT rims, **hinged at the center, it is** neat and inconspicuous. Conforms to the contour of the face, and at the same time affords absolutely unobstructed vision.

Price, with plain amber lenses, $5.00
Or with wearers correction, $9.00

Any Optician, Sporting Goods or Motor Supply House can equip you. If your dealer hasn't them, write to us. We will see that you get them.

Over 12,000 now in use.

INVESTMENTS AND FINANCE

(*Continued from page* 490)

How striking was the number for August this year as compared with August in twenty-one other years, that is, for the period back to 1893, is shown in the following table:

	Number	Assets	Liabilities
1913	1,088	$13,181,559	$23,022,018
1912	1,020	5,769,827	14,912,021
1911	942	8,532,239	12,901,441
1910	950	5,288,028	11,778,436
1909	857	4,281,399	8,401,990
1908	1,006	17,168,947	25,531,161
1907	673	5,014,826	9,375,992
1906	629	8,865,816	17,219,753
1905	765	4,033,000	7,676,275
1904	840	5,213,178	9,628,511
1903	683	4,667,702	9,517,483
1902	695	2,359,658	5,600,206
1901	788	4,737,486	9,988,193
1900	704	2,952,595	6,097,719
1899	675	2,155,700	4,524,179
1898	774	3,302,215	6,992,970
1897	961	3,501,293	9,815,545
1896	1,175	16,518,461	26,110,366
1895	832	5,624,077	9,814,008
1894	753	6,264,551	12,287,318
1893	1,835	33,301,239	47,753,647

When the August figures are classified by States, it appears that there were fewer failures this year in the Middle States, the Northwest, and Far West than last year, but in the Central West and South there were considerable increases. Prominent in the total of liabilities are those reported with the suspension of a bank and trust company in New Jersey, an automobile concern in Michigan, a lumber firm in Missouri, and a department store in Pennsylvania. For the eight months' period ending in August, figures are given below for each year since 1901:

	Number	Assets	Liabilities
1913	9,295	$111,982,648	$192,119,830
1912	9,311	65,179,824	130,262,091
1911	8,348	67,251,658	121,124,188
1910	7,721	58,135,737	120,680,130
1909	7,964	47,227,384	97,008,836
1908	9,716	132,173,641	226,673,914
1907	6,198	55,749,751	99,836,341
1906	6,206	41,696,048	83,486,359
1905	6,711	43,157,306	80,843,906
1904	6,969	55,568,344	101,473,777
1903	6,191	38,303,382	79,025,327
1902	6,729	32,412,509	69,160,318
1901	7,084	44,339,870	92,067,880

THE LOSS TO RAILROADS FROM WRECKS

The stock of the New Haven road, which had already reached its lowest point, declined still further, after the fatal wreck on the morning after Labor Day—September 2. Just what the financial loss of such an accident represents to a railroad is a matter difficult to determine. No doubt the decline in the stock that usually ensues is due not so much to the actual financial loss as to the injury done to the prestige and popularity of the road with the traveling public, and the consequent loss of traffic that ensues. The financial loss includes not only the destruction of property, but the amounts which the road has to pay as damages for injuries to passengers or for deaths. A writer in the New York *Evening Post* has been studying the annual reports of railroads in order to see what light they throw on the subject. He says:

"New York Central's Park Avenue wreck occurred on January 8, 1902. That year the company settled claims for property and personal injuries aggregating $882,000, compared with $768,000 the year before. By the end of 1903 those settlements, however, reached $1,092,000, and the figures gradually increased until $2,466,000 was paid out in 1907. After that there was a gradual decline, indicating

that most of the claims were settled in one way or another within five years.

"Pennsylvania has a good record, despite its occasional wrecks. Last year was an average year with $666,000 charged off for damage to freight, $19,031 for damage to baggage, $60,654 for loss of other property, and $173,500 for injuries to persons. For a 4,000-mile system, that is an enviable record. For the same period, New York Central's expenditures, including law costs, were $2,068,000.

"New Haven, with only half of Pennsylvania's mileage, charged off $1,129,000 for the fiscal year ended June 30, 1912, including $346,000 for damage to freight, $574,000 for injuries to persons. The forthcoming annual report for 1913 will doubtless show a heavy increase in those items, as the company has had eleven wrecks during the past year, in which forty-five persons were killed and 187 injured.

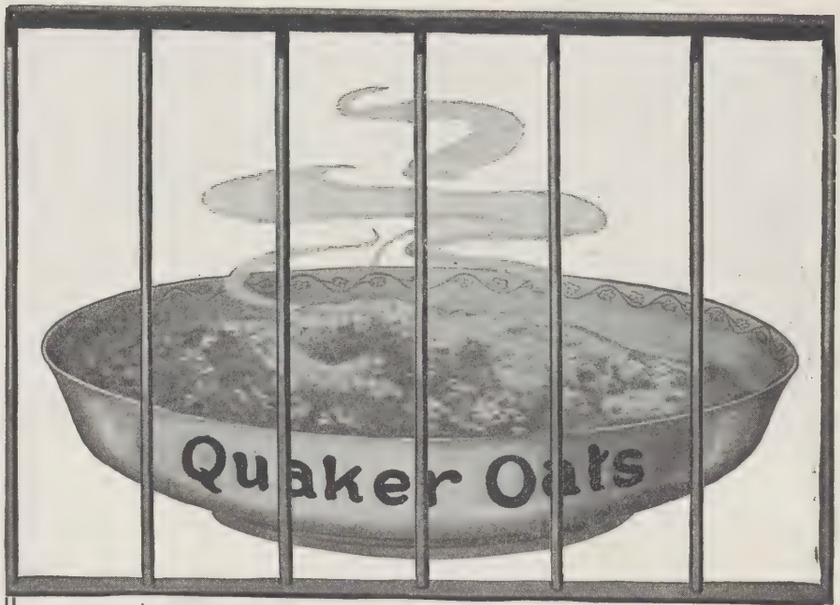
"No evidence can be found in the annual reports of the railroads to show how much money is spent annually in repairing the damage done to roadbed and equipment through wrecks, those items being included in ordinary repairs. Loss of prestige is the most intangible of any suffered by a railroad as a result of accidents. In cases where one wreck follows another, the cause can be traced to general demoralization. By the time the accidents occur the road has already begun to suffer from loss of prestige."

FEWER NEW CORPORATIONS

Statistics as to new corporations and new capital for old ones, as compiled by *The Journal of Commerce*, indicate that financial and other conditions during the present calendar year have caused a restriction of new creations. That paper, in compiling statistics on this subject, found that the new companies, having a minimum of $100,000 capital, and incorporated in the month of August, possest a total of only $118,179,000 capital as against $212,895,000 in August last year. A similar decline occurred during the eight months beginning on January 1 of this year and ending on August 31, when the total capitalization of new companies was $1,672,864,000, as compared with $2,087,197,000 in the corresponding eight months of last year. This decline, which amounts to $414,339,000, is one of 24 per cent. In the Eastern States there were few creations of companies and few increases in the capitalization of old companies. There seems to *Bradstreet's* little reason to question that this decline in the creation of new corporations and the enlargement of old ones was due to "unpropitious conditions," these conditions including war in Europe, uncertainty as to the tariff, and, in the latter part of the period, unrest on our own southwestern frontier.

THE SAFETY OF RAILROAD TRAVEL

The several accidents on the New Haven road in the past few years have led many persons to forget that railroad travel, considered in averages, is remarkably safe for passengers. The chance of meeting one's death or even injury is very slight. Travelers' insurance companies, after doing business successfully for a generation or more, demonstrate this with great clearness when they issue policies for such small sums. For example, there is one company of national reputation which, for $6.25, will insure a person for three months



Take Down The Bars

The bars of your neglect.
If they are barring your folks from the best in oatmeal let them now enjoy it.

There's a richness and flavor in Quaker Oats which common oatmeal lacks.

It is there because Quaker Oats are made of just the rich, plump grains. We use the choicest one-third of choice oats. And our process keeps the flavor intact.

Because of that flavor, a hundred nations send here for Quaker Oats. Some send ten thousand miles.

Because of that flavor, a thousand million dishes are consumed each year.

Because of that flavor, millions of mothers serve Quaker Oats to their children as their mothers served it to them.

Quaker Oats

The Luscious, Big-Flaked Oatmeal

The best oat food is the best food known for growing boys and girls. The best for grown-ups too.

As an energy food nothing compares with oats. No other grain is so rich in the elements of which brains and nerves are made.

That is why all homes should serve the oats that children love. This cream of the oats — this Quaker Oats — costs the same per package as commonplace oatmeal. It costs but one-half cent per dish.

Regular Size package, 10c

Family Size package, for smaller cities and country trade, 25c.

Except in Far West and South.

Look for the Quaker trademark on every package

The Quaker Oats Company

Sole Makers

Just as bodily health causes a healthy, wholesome complexion, so *mouth* health keeps the teeth sound and white and the breath untainted. The finest complexion, the most engaging personality of man or woman suffer a terrible handicap if teeth and breath are bad.

PEBECO TOOTH PASTE

Pebeco keeps good teeth lustrous, pearly, immaculately white, because it overcomes the mouth acids that *cause* decay and discoloration. For though you do not realize their presence, yet the chances are 20 to 1 (so dental authorities agree) that the acids in your mouth are slowly eating into your tooth enamel and making openings for the decay-germs to enter and make cavities in the softer interior of the teeth.

Pebeco is specially made to overcome this all-but-universal acid condition of the mouth, as well as to do all and more than ordinary "toilet article" dentifrices do in cleansing, polishing and whitening the teeth. Its superiority is due to this *double* service. Pebeco cleans the teeth and *saves* them.

Send for FREE 10-Day Trial Tube and Acid Test Papers

Pebeco originated in the hygienic laboratories of P. Beiersdorf & Co., Hamburg, Germany, and is sold by your druggist in extra-large, economical tubes.

HUMOROUS HITS

and "How to Hold an Audience"

A bookful of *modern* recitations — short — successful "HITS" — personally gathered and *tested in use* by Grenville Kleiser, Director of the Public Speaking Club of America

Special feature: Expert advice on use of the voice, breath, modulation, pause, intensity, gesture, impersonation, memorizing, etc. Price $1; postpaid $1.11.

FUNK & WAGNALLS CO. New York

The Marvels Beyond Science By Joseph Grasset, M.D., author of "The Semi-Insane and the Semi-Responsible."

Can You to-day draw a clear line between the *Occult* and the *demonstrated facts of Science?* This question is liable to "stump" the best of us, so great have been the advances of science in recent years. Dr. Grasset brings you face to face with a "disocculated realm," presenting phenomena that formerly were looked upon as occult, but which are now fully explained and accounted for, as: hypnotic sleep, the unconscious will of movers of tables, the unconscious imagination of mediums, and the unconscious memory of hypnotized persons. He believes that many phenomena still regarded as *occult* will in a comparatively short time be included in the catalog of accepted *scientific principles*—including *mental suggestion, direct intercourse of thought, telepathy, premonitions,* etc., etc. He reviews the whole *Occult* field, from Mesmer to Palladino. **Cloth $1.75 net.**

FUNK & WAGNALLS COMPANY New York and London

Standard Dictionary superiority quickly becomes plain to the man or woman who investigates.

60 Page Descriptive Catalogue FREE

for $10,000 against being killed on any transportation line—whether steamship, railroad, trolley, or cab. This policy also gives to the beneficiary $6,000 in case the insured is killed in any other way than while traveling in a public conveyance, and in case he is injured and laid up it will give the insured $25 a week, while he is incapacitated, up to a limit of twenty months. Still further, it will insure for his own benefit the first beneficiary for $6,000 against the beneficiary's loss of life by accident, all this being done for a single payment of $6.25. Inasmuch as that sum includes the agent's commission and the expenses of administration, the actual risk of $16,000 assumed by the company on two lives would seem to be taken for less than $4.

Statistics contained in reports of the Interstate Commerce Commission bear out the experience and calculations of the insurance companies. Following is a statement of the number of passengers who were killed or injured in this country on railroads during the past six years:

Year	Number of Passengers		Total Passengers Carried	
	Killed	Injured	Per 1 Killed	Per 1 Injured
1911...	356	13,433	2,759,970	73,144
1909...	253	10,311	3,523,606	86,458
1908...	381	11,556	2,335,983	77,017
1907...	610	13,041	1,432,631	67,012
1906...	359	10,764	2,222,691	74,131
1905...	537	10,457	1,375,856	70,654
			2,275,123	74,736

The Wall Street Journal, in printing these figures, remarks that they "utterly fail to convey to the mind what a high degree of safety they represent." In order to picture to the imagination of the reader how high this safety is, the following illustration is given:

"A typical journey for all roads in the country is now 34 miles, and there are taken on the average 2,275,122 such journeys in safety to each journey which results fatally. If a man were to ride out these 2,275,122 safe journeys at two per day for each business day in the year, it would take him 3,792 years. To have begun in time to meet his death in 1914, he would have had to start commuting in the year 1778 B.C., when Egypt was under the Shepherd Kings, and 458 years before Moses led the children of Israel through the Red Sea. That was about the time the future Assyrian empire was being settled by immigrants from Babylonia.

"By 1184 B.C., when Achilles was dragging Hector thrice round the walls of Troy, the commuter would have taken 356,400 rides, and would still have been less than one-sixth of the way toward his death. By 750 B.C., when Romulus was 'regulating' Remus by modern methods, the commuter would have ridden 21,000,000 miles, and have had 56,300,000 yet to go. When Phidias, in 460 B.C., was carving the Olympian Zeus, our wayfarer would have been but one-third of the way toward his death; and even in the year 890 A.D., when Alfred the Great was letting the griddle-cakes burn, this traveler would have spent the equivalent of 207 years on the trains running at 30 miles an hour, and would have had 87 years more of actual travel to spend before meeting his fatal accident."

The New York *Times Annalist*, discussing this subject, points out how the rate of passenger mortality has been steadily falling in this country for some years. When considered with reference to what

are known in railway parlance as "passenger-miles," a comparison of mortality in this country with that in Europe shows up even more favorably to American roads than most readers commonly suppose. The number of passengers killed per billion of "passenger-miles" is now about 7½ in Europe and 8 in this country. Following are the data for the latest years of which statistics have been completed:

	Passenger-miles	Pas. killed	Killings per billion pas.-miles
Europe, 1910	73,555,578,571	554	7.53
U. S., 1912	33,510,673,000	270	8.06

More important than the showing made by this comparison, however, is the fact that the rate of mortality in this country has been steadily falling. The writer notes that the "passenger-miles" (that is, the number of passengers carried one mile) reported by all the railways in 1912, were 33,510,673,000, and the number of passengers killed was 318. According to the Bureau of Railway News and Statistics, 48 of the killed classed as passengers were, in fact, employees, making the net number of passengers killed 270, or roughly eight passengers to each billion of "passenger-miles." In 1892 the number of passengers killed per billion of "passenger-miles" was 28. The fluctuations in the number from 1892 to 1912 inclusive, and "the remarkable tendency to decline" are shown in figures given by the writer as follows:

Year	Passenger-miles	Pas. killed	Killings per billion pas.-miles
1892	13,362,898,299	376	28.00
1893	14,229,101,084	299	21.05
1894	14,289,445,893	324	22.66
1895	12,188,446,271	170	13.93
1896	13,049,007,233	181	13.92
1897	12,256,939,647	222	18.05
1898	13,379,930,004	221	16.50
1899	14,591,327,613	239	16.37
1900	16,038,076,200	249	15.50
1901	17,353,588,444	282	16.21
1902	19,689,937,620	345	18.02
1903	20,915,763,881	355	17.00
1904	21,923,213,536	441	20.13

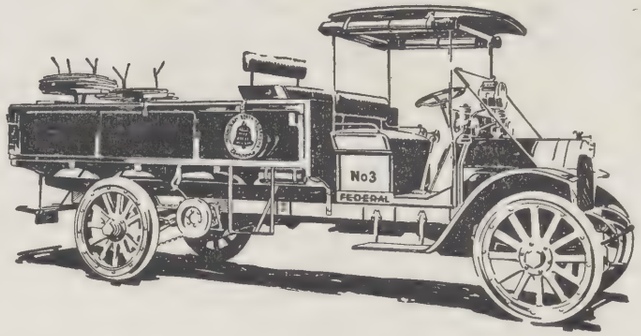
THE FUTURE OF THE NEW HAVEN

The reduction of the New Haven dividend rate from 8 per cent. to 6; the resignation of President Mellen and the appointment of Howard Elliot in his place; many and frequent railroad wrecks on the road within the past few years, and the resignation of Messrs. J. P. Morgan & Company as fiscal agents for the road, all have combined to focus much of the popular interest in railroads upon this one system and to raise the question whether the decline in the stock to a point below 90 implies anything like permanent loss of efficiency, of financial prestige, and of the old-time rate of dividends.

Most opinions, publicly exprest, are favorable to the ultimate restoration of the property. It is commonly believed, however, that the work of restoring it will be one of extreme difficulty and that it will take at least a few years. In Boston, where are centered many interests closely allied with the road, not to mention stockholders who made their investments in full confidence of the permanency of the dividend, the feeling is said now to be one of

FEDERAL



Federal Service

The American Telephone & Telegraph Company operates Federal Trucks from the Atlantic to the Pacific. For Detroit alone there are six Federals in the Bell service.

The spirit of this tremendous organization of 120,000 employees can be voiced in one word—*SERVICE*. Uninterrupted *SERVICE* in every city, town and hamlet in the country for 6,000,000 Bell subscribers.

Storms, floods, fires are fought by the repair-gangs. The line must be kept open. Repairs must be made with the least possible delay. The American Telephone & Telegraph Company must employ the most reliable men and the most reliable methods.

The Service must not be interrupted. That is the fundamental reason why The American Telephone & Telegraph Company has adopted the Federal Truck.

PRICE Includes Seat, Lamps, Tools, etc.	$1800	Body Extra. Built to meet individual requirements.

Federal Motor Truck Company, Detroit, Mich.

"CUT OUT REPAIR BILLS—BUILD WITH CYPRESS LUMBER AT FIRST!"

CYPRESS DEFIES DECAY

CYPRESS

CYPRESS AVERTS REPAIR BILLS

In response to a very wide demand we respectfully offer

ANOTHER CYPRESS HOUSE PLAN FREE

The artistic, cozy and strictly modern CYPRESS SHINGLE HOUSE shown below meets completely and delightfully the desires of people who need more room than most bungalows contain, yet who wish to "keep the cost down." This CYPRESS house has 9 rooms besides the basement, and should be built complete for close to $3,800. Complete WORKING PLANS and SPECIFICATIONS (*sufficient for any competent carpenter to build from*) are YOURS WITH OUR COMPLIMENTS in VOL. 29 OF THE CYPRESS POCKET LIBRARY, SENT ON REQUEST. WRITE TODAY.

"Stop Depreciation *BEFORE IT BEGINS—BUILD WITH* CYPRESS *AT FIRST!*"

"Everything CYPRESS except the window glass."

Mr. GUSTAV STICKLEY, the well-known Craftsman, writes: "In my experience, CYPRESS is the best American wood for all exterior use, such as shingles, timbers, pergolas, and all woodwork subject to weather. Its slight natural oil makes it practically impervious to moisture, so that it does not shrink or swell like other woods, and is very durable when protected merely by a coat of oil. In this it is similar to teak wood, in my opinion is quite as durable, and of course much more practicable."

ASK our "ALL-ROUND HELPS DEPT." *any* question about Wood. Our reply will be frank. We recommend CYPRESS only where CYPRESS can *prove* itself "the one best wood" for *your* use.

SOUTHERN CYPRESS MANUFACTURERS' ASSOCIATION
1223 HIBERNIA BANK BUILDING, NEW ORLEANS, LA.

We *produce* CYPRESS—and *talk* it—*but do not retail it.* INSIST ON IT NEAR HOME.
Probably your Local Dealer sells CYPRESS; if not, WRITE US, and we will tell you where you CAN get it.

"A Kalamazoo Direct to You" Trade Mark Registered — And Gas Stoves Too

Blue Print Heating Plans Free. Save $25 to $75—We Pay Freight—You Get a Year's Approval Test.

Who Knows Most About Furnaces?

The dealer or the Kalamazoo *experts* who have made and sold them for years? The answer true, is a Kalamazoo Direct-to-You.

And *you* can install it *yourself.* Save all tinner's bills, using our *guaranteed* instructions, clear and full. Or get any handy man to do the work. Our Free Book on Furnaces will surprise you with *proof* that a King Furnace will heat your home from cellar to garret with big saving in fuel and work. Terms Cash or Easy Payments. **Write for Catalog No. 975.** We make a full line of Stoves, Ranges, Gas Stoves and Furnaces. We have three catalogs—please ask for the one you want.

hopefulness as to some way being found for meeting the situation that confronts the road. Sentiment in New England generally has been tending more and more to a belief that ultimately the road will divest itself of its properties other than steam railroads,—that is, would part company with the trolley and steamship lines owned or controlled by it. Once this has been done, the road could settle down to the performance of the normal function of a railroad, and its future would then brighten.

A man, deeply interested in the road, obtained recently from a banker closely associated with the Morgan interests an opinion that the company's troubles are of "a temporary nature." The New Haven railway was declared to be "a great property," which, under new conditions soon to be brought about, "would, within a comparatively short time, return to its former position of financial strength and operative efficiency." This banker declared that he could not too strongly emphasize his belief that the New Haven's troubles would "pass away in time and that investors who retain their holdings of the stock will ultimately be rewarded for their patience."

THE BIG BOND ISSUE OF THE NEW YORK CENTRAL

For a year or more, it has been known that the New York Central Railroad Company was getting matters into shape for the issue eventually of a huge consolidated mortgage covering not only the main line, but other railroad properties which have long been subsidiary to it, chief among these being the Lake Shore and Michigan Central. During the present year, several of the subsidiary lines in New York State were acquired by the Central and made integral parts of it. It is expected that the Lake Shore also will soon become an organic part of the main line. Still other roads may in future be absorbed.

It is the purpose of the proposed consolidated mortgage to take up the existing underlying bonds of the entire system, substituting for them the new ones. An arrangement has already been undertaken, and in the main is understood to have a likelihood of being carried through, with the Lake Shore bondholders, by which they will take the new issue at 4 per cent. interest as a substitute for their existing bonds bearing 3½ per cent. This increase in the interest rate of one-half of 1 per cent. was necessary, in order to make the exchange attractive to holders of the Lake Shore bonds.

In Washington, during the week ending September 13, a hearing before Judge Clements of the Interstate Commerce Commission took place, in reference to the proposed issue, and in order to determine if the issue of one mortgage covering so many properties would in any way be in conflict with the antitrust law. It came out in this hearing that the proposed bonds would involve financial operations running over at least ten years. The first issue as now arranged foots up a total of $167,000,000, but in course of time the taking up of other bonds would involve an additional issue of $350,000,000, and eventually might comprize a still larger sum.

This great scheme contemplates an eventual retirement of all issues now out-

standing. With its complete success, there would exist only one general New York Central bond, its rate of interest being 4 per cent. Vice-President Harris, of the New York Central, explained at the hearing that the mortgage has already been so drawn that it may "become in time a refunding and improvement mortgage for all the New York Central's property subject to its liens," and that it would thus become "the medium of large and comprehensive financing." Counsel representing stockholders were present to oppose the proposed issue.

SUCCESS OF THE U. P.'S SALE OF ITS S. P. STOCK

Surprize was exprest in financial districts at the remarkable success of the sale of the $88,357,000 Southern Pacific certificates of stock by the Union Pacific, which closed on September 2. A week before, it had been thought that not more than 80 per cent. of these certificates would be taken up by persons owning stock in the Union Pacific. In the final accounting, however, it appeared that at least 92 per cent. of the amount had been taken up by them. The fact that so large an amount of stock was subscribed for in so short a time was accepted by many observers, and especially by *The Financial World*, as attesting "in a striking way, the marked improvement in money conditions in the last six weeks or two months." About a month before the subscriptions closed, "it looked as tho shareholders were absolutely callous to the offer, and that the syndicate, which had been formed to underwrite the issue, would have to take the bulk of the offer." In these circumstances, stockholders' rights to subscribe sank to a low level. Five days before the time expired "rights" sold as low as 18 cents, but on the last day when they could be sold, the price at one time rose as high as 80 cents.

Little remains for the syndicate managers to do. They had organized "one of the most powerful syndicates of bankers and investment houses the world has ever seen." There were over 600 participants, prepared to take over the entire amount of stock, but as matters turned out, they will get not more than $7,000,000 of the $88,000,000 that was to be sold. The amount, therefore, to be allotted to each of the 600 participants will be comparatively small. The writer finds "a world of encouragement in the final outcome of this offer." It demonstrates that "there is plenty of money around and that the public has faith in the future of the Southern Pacific." This road has been earning as applicable to dividend on the common stock close to 9 per cent.

Now that the sale is closed, expressions of disappointment are sometimes heard in Wall Street that the entire amount was not absorbed by Union Pacific stockholders. *Bradstreet's* points out that allowance must here be made for the multitude of small holdings of Union Pacific stock, the owners of which "received only fractional subscription warrants, incapable of being utilized, unless joined to other warrants to make full shares." *Bradstreet's* regards the outcome as remarkable because alike of the magnitude of the transaction itself and of the natural

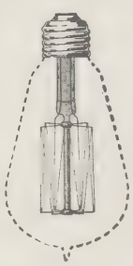
Proved by Broadsides

THE terrific shock that accompanies the firing of a broadside on a man-of-war is the most destructive test that can be applied to incandescent lamps, yet National MAZDA Lamps stand it fifty per cent better than old fashioned carbon lamps, and in addition give three times as much light and better light at the same cost—current and lamp included.

You can have at home exactly the same kind of lamps as are used in modern battleships, trains and street-cars, if you buy National Mazda Lamps in the Blue Convenience Carton of five. You won't need to worry about fragility if National MAZDA is etched on every bulb. Replace all carbon lamps with National MAZDA Lamps before you pay your next light bill and triple the lighting value of your electricity. Prices reduced again last July.

NATIONAL MAZDA

THE QUALITY LAMP



Give Your Home the Hospitality of Ample Light

Note the inside construction of the lamp at the left—the greatest achievement of the Research and Development Laboratories of the General Electric Company at Schenectady and Cleveland, which laboratories, by co-operative arrangements, have access to all the developments and improvements made in the principal lamp laboratories of the world. It is this construction that at present characterizes all National MAZDA Lamps made for general illumination. The Blue Convenience Carton at the right is the carton in which five of these lamps are packed for your convenience.

Send for free booklets, on proper house lighting and wiring, and the selection of lamps. Address

Chamber of Commerce, Los Angeles, Cal.

conditions which still prevailed in the money and investment markets.

Another notable feature of the sale is the fact that a large proportion of the subscriptions were paid for in full at the time when they were made, and this in spite of the fact that subscribers might have elected to pay at the time of subscribing only $25 per share, the remaining $75 per share being paid in instalments extending over a year. One estimate is that fully $60,000,000 was paid in at the time of subscribing. It is believed that among the subscribers were enough foreign stockholders of Union Pacific to make their contribution to the total sum received for the S. P. stock as high as $20,000,000.

RUSSIA AS A GROWING MARKET FOR US

The increase in our exports to Russia has for some few years been an important item in the trade totals. Steady growth in Russia has been shown from year to year, especially in farm implements, general machinery, and other articles manufactured by us. The trade in farm machinery has reached $50,000,000 a year. Much the largest part of the electrical apparatus used in Russia is of American manufacture. There is a large and growing trade in American motor-cars. A new line of products soon to be introduced is railway cars for refrigerating purposes, some of which will soon be shipped from their place of manufacture near Chicago. It is understood that the Russian Government is prepared to invest about $3,000,000 in American cars of this pattern for use on the Siberian Railroad. Some surprize has been exprest that refrigerating cars should be needed in Siberia. This, however, springs from a misconception of the fact that for a large part of the year weather conditions in Siberia are by no means arctic, but rather quite like those of Canada. A very significant item, in connection with the growing trade movement from this country to Russia, is the recent establishment of a direct line of steamers from New York to the Russian port of Libau, with callings at Rotterdam, regular sailings being made every fortnight. "Holland" writes on this subject of trade with Russia in the *Wall Street Journal:*

"There is excellent authority for asserting that American manufacturers expect within the next five years to find a largely increased market for their commodities in Russia. . . . . .

"American motor-cars, both those of a commercial character and the touring-cars, are now regarded with higher favor in Russia than are the motor-cars made in Great Britain, France, or Germany. American automobile manufacturers expect within the next four or five years practically to command the entire Russian market for commercial and touring-cars.

"Men of wide experience as financiers and in the promotion of cordial commercial relations between the United States and the other countries have had knowledge for some time that Russia has some very important concessions to grant to large capital. . . . As soon as normal times are restored and the fear of outbreak of war on the continent of Europe is ended, it is probable that Russian and American capital will unite in the exploitation of some of the internal resources of Russia and the building of railroads and certain public works.

You Can Use an UHL ART STEEL
Typewriter Table and Cabinet
In Your Office on 15 Days' Trial

If you will write us on your business stationery we will ship you an "Uhl" Cabinet with the understanding that if after 15 days' trial you are not satisfied with it, we will buy it back at the full price.

It meets every requirement of the modern business office and overcomes every objection to the old style typewriter desk. Ordinary desks occupy 10 sq. ft. This one takes only four. You can put two "Uhl" stands in the space of one old style desk. It not only saves valuable space, but in all other respects is

100% EFFICIENT

Has indestructible steel frame with built-up wood platforms which are noiseless under operation. Stands on its feet as solid as a rock, yet a simple turn of the lever throws the weight on leather casters and you can move it instantly and silently to follow the light or from room to room. Has ample space for a week's supply of stationery, but no drawers to serve as "catch-all" for odds and ends. Always clean and sanitary. The sides fold up, steel top rolls down and locks securely.

Write today for free trial. Orders filled through our dealer, or if we have none, through yours, if you will give us his name.

Saves Time, Space, Rent, Labor, Material

Beware of Imitations. Insist on getting the genuine "Uhl" Cabinet. Make sure of it by looking for our name.

Occupies only 4 sq. ft. of floor space Saves 6 sq. ft.

The Toledo Metal Furniture Co. 2361 Dorr St., Toledo, Ohio

CURRENT POETRY

POEMS on seemingly unpoetic topics are popular this autumn. The poet apparently is growing eager for novelty, weary of the themes on which the world's greatest literature has been written. For instance, he no longer writes sonnets to his lady's satin slipper, he sings—actually!—of an old boot in a ditch. If he is sufficiently an artist, his subject is really of secondary importance. There are sermons in stones, we know; there may well be poems in old boots.

Mr. Cochrane (whose poem below appears in *The Spectator*) has a not unpromising subject. The familiar red-backed Baedeker is sometimes ridiculed, especially by expatriates who no longer need its assistance. But those of us who know foreign travel as a rare and delightful pleasure must sympathize with this poet, admiring the sincerity of his spirit as well as the dexterity of his phrasing.

The Guide-Book

BY ALFRED COCHRANE

Come forth, and brave our Northern sky,
Old comrade of the traveled ways,
For 'twixt your battered covers lie,
On pages scored with note and phrase,
The memories of enchanted days.

Your legend, while our gray fogs drift,
And while our angry sunsets frown,
Can, like Aladdin's carpet, lift
The dreamer up, and set him down
In Lombard plain or Tuscan town.

Where shall we wander? Where abide?
Somewhere with olive and with vine,
By Tiber or by Arno side,
By Mark's or Miniato's shrine,
On Pincian or on Palatine?

Lead us through churches, those and these,
The Fountains, where the silence falls
Among the eucalyptus trees;
Show us St. Peter's or St. Paul's,
In Fetters or Without the Walls.

Come where Benozzo Gozzoli
Makes the Riccardi chapel glow
With ranks of gorgeous Medici,
Or where the convent cloisters show
Visions of Fra Angelico;

Or where the Adriatic wave,
The tideway of the Sea-queen's power,
Still murmurs round her earliest grave,
And chants her requiem hour by hour
Beneath Torcello's lonely tower.

With you in hand we turn to trace
Once more the Doge's gloomy state,
We feed the pigeons in the Place,
And board the gondolas that wait,
Black shadows at the palace gate.

Back to your shelf: on many a night
You bring for him who sits at home
Your Odyssey of sound and sight—
Bargello, Forum, arch, and dome—
From Milan, Venice, Florence, Rome.

The case of Mr. Wilson and the old boot is very different. Undoubtedly, Mr. Cochrane is genuinely interested in guide-books. Mr. Wilson's interest in his subject is (it may be supposed) only occasional. Probably Mr. Wilson was riding on a Finchley Road bus (the poem is in *The English Review*), and telling his companion about the poetry inherent in the most prosaic objects. "Well," said the companion (we suppose), "then write a poem on that old boot there!" And Mr. Wilson proceeded to do so. And, par-

The Cigars I Give Away

I have my cigars made to order, with my own private monogram band. They are made from a leaf which I discovered in a mountainous district in Cuba.

Tobacco has long been my hobby. But for 35 years I vainly sought for this mild and exquisite aroma. Now an expert on the ground picks out these leaves, and I have them made up to my order.

Since finding this leaf I have given away many thousands of these cigars. All my cigar-loving friends now smoke them. To keep them supplied I carry a stock of 50,000 in my private humidor.

They pay me $5 per hundred for this Panatela size—a trifle over cost. They get for that this rare Havana leaf.

Having quit business, I now invite others to join this limited circle. I can't supply too many. I seek only those who want something exceptional in a mild, sweet smoke. I don't seek bargain hunters.

Tastes differ on tobacco. So, before you decide, I want you to try five cigars at my expense. Smoke them with me. If you then want more, I will charge you the same as I charge my friends.

Five Cigars Free

If you will send me 10 cents—just to show your sincerity—I will mail you these cigars. Smoke five with me—then order as wanted. The price is $5 per hundred, $2.60 for 50—all charges prepaid. Use your letterhead, please, or your business card and **write now for the five cigars.**

ticularly in the fourth stanza, he was remarkably successful.

An Old Boot in a Ditch

BY T. P. CAMERON WILSON

There is an epic of the winding path
That might be sung by you—
Mornings when Earth came glowing from her bath
And shook her drowsy laughter into dew,
And little ways your younger brothers made
Went up the hills and danced into the blue.

Noons when the great sun hammered out a blade
Upon the silent anvil of the downs,
And in divine inconsequence you strayed
Over the hill kings, with their bramble-crowns
And saw, across the meadow-patterned plain,
The far still smoke of little valley towns.

And evenings, when the Earth gave thanks for rain,
And all the washen soil of her did seem
Sweeter than little children who have lain
All night among the roses of a dream;
And great white clouds went up the stairs of God
And gnats danced out above the misty stream.

Yet most, I think, the broad high road you trod
Would weave its marching splendor with your song—
The weariness that held the feet you shod,
The weariness that makes all roads too long,
Until the spirit trails its beaten wings
And finds the whole earth given to the strong,

And all the thousand crusht and broken things
Whose hope has snapt beneath the feet of Gold
Peer upward through the dust his passing flings
And see him watch the hopeless road unfold—
Staring across the passion at his feet
With yellow eyes that glitter, and are cold.

It is not so, but when our spirits meet
Old Weariness, with his rust-eaten knife,
There is no corner of our house kept sweet
That is not trampled bloody by the strife,
Until with hungry fingers he lays bare
A rawness hidden in the quick of life.

It is not so. In your green silence there
You see the world pass like a lean old witch,
You watch the stars at night, and you may share
That small, fierce love wherein the soil is rich,
And know that half the gifts of God are won
By centipedes and fairies in the ditch.

The North American Review receives more of Colonel Harvey's attention since he gave up *Harper's Weekly*. *The Weekly* printed excellent verse while he edited it, and it is to be hoped that he will make *The Review* the home of much poetry of high order. From a recent issue we take Dr. Woodberry's interesting tribute to the poet of whom he has written so frequently and with such comprehension. Poe himself would enjoy Dr. Woodberry's melodious and sympathetic verse.

E. A. P.

(On the fly-leaf of Whitty's "Poe")

BY GEORGE E. WOODBERRY

In the proudest of the nations
  Was a wandering poet born;
Skyward its accumulations
  Towered, from mine and forest torn;
Never state was so victorious
  In world-plundering wars of gold;
Never land so earthly glorious
  Of the conquering lands of old.

From the star-bound pole of heaven
  That spins in lyric mirth,
Where the Pleiads are, the Seven,
  Came that vagrant soul to earth;
Echoes of some lost existence,
  Prenatal melody,
As of angels in the distance,
  Haunted his mortality.

THE ABILITY TO HANDLE MEN

Let Us Give You

"The Ability to Handle Men"

We want to send you free this brilliant little book from the pen of Thomas Dockrell, the business analyst. It contains a vital message for big men—made or in the making.

The ability to handle men is an absolute need of the executive—or the man who hopes to become an executive. Without it he cannot get the best work from his subordinates—the best co-operation from his associates and superiors.

It is not an inborn characteristic. Mr. Dockrell proves this beyond the shadow of a doubt. And he points clearly the way to acquire it.

The book contains not a word of advertising. But it is so completely in line with the great movement we are leading—the movement for scientific business—that we want every business man to read it.

We have already given away 20,000 copies. Every one has been passed from hand to hand. A single copy was read by fourteen men in the accounting office of the Union Pacific Railroad.

We are going to give away 100,000 copies. Simply write for one on your business letterhead or give your business position. It will be sent to you without the slightest obligation.

Should Read

CRIMINOLOGY

By Arthur MacDonald, Specialist in Education as Related to the Abnormal and Weakling Classes.
Introduction by Dr. Cesare Lombroso

The author's preparation for writing this work included visits to the principal prisons and charitable institutions in England, France, Germany, Belgium, Switzerland, Austria, Italy, and America. He also passed two entire summers locked in cells with criminals at Elmira, Rochester, Auburn and other prisons, to gain a more personal familiarity with prisoners.

Among other subjects covered are: The Evolution of Crime; The Physical Side of the Criminal; Psychology of Criminals; Intelligence of Criminals; Association of Criminals; Criminal Contagion; Criminal Hypnotism; Recidivation; Special Criminology. The book concludes with a Bibliography of Crime—English, French, German, Italian, Spanish, etc.—occupying 132 pages.

Second Revised Edition. 12mo, Cloth, Price $2 of bookdealers or postpaid from

Funk & Wagnalls Company, New York

Divorce Laws of All States

and Territories at a Glance.—A unique folding chart comparing the *causes* for which divorce is obtained, and the *practice* in the courts, of the various states. So simply tabulated and so comprehensive that momentary reference often answers questions that would otherwise require many days of painstaking study. Printed on heavy linen ledger paper, folded into a neat, durable, cloth book-cover. Price $1.50 net; postage 3c.

Funk & Wagnalls Company New York

But because the poet ever
Needs befriending, most of men,
And his soul reposes never
In the gross and citizen,
From the moment that he quickened
In the heavy air
The heavenly spirit pined and sickened
Because no love was there.

Spectral thoughts—grim foes—assailed him
Only poets' minds evoke;
Naught his beauty there availed him
Dying, stroke on stroke:
Long his genius pleaded, pealing
Melancholy chimes,—
As from Paradise came stealing
The supramundane rimes.

Then his living turned to anguish
Of the demon-driven storm.
And men saw his glory languish
Into one pale form,
Ghostly, ghastly,—and his heart was torn with
Life's wan dream, Despair;
And the beauty he was born with
Faded in the sepulcher

The proudest of the nations
Watched that starvèd power decay;
Heard the maniac lamentations
Where that soul of beauty lay.
Now, men whisper, genius glorious
Flees that barbarous coast forlorn,
Lined with turrets, gold-victorious—
And no poets there are born.

From *The Smart Set*, which is becoming a storehouse of good poetry, we take Bliss Carman's lovely lines. It is a splendid picture of June that he gives us—tantalizing to city dwellers whose holidays are few. "Cool-leafed beeches" and green-bosoming hills" are memorable.

A Mountain Gateway

BY BLISS CARMAN

I know a vale where I would go one day,
When June comes back and all the world once more
Is glad with summer. Deep with shade it lies,
A mighty cleft in the green bosoming hills,
A cool, dim gateway to the mountains' heart.

On either side the wooded slopes come down,
Hemlock and beech and chestnut; here and there
Through the deep forest laurel spreads and gleams,
Pink-white as Daphne in her loveliness—
That still perfection from the world withdrawn,
As if the wood gods had arrested there
Immortal beauty in her breathless flight.

Far overhead against the arching blue
Gray ledges overhang from dizzy heights,
Scarred by a thousand winters and untamed.
The road winds in from the broad riverlands,
Luring the happy traveler, turn by turn,
Up to the lofty mountains of the sky.

And where the road runs in the valley's foot,
Through the dark woods the mountain stream comes down,
Singing and dancing all its youth away
Among the boulders and the shallow runs,
Where sunbeams pierce and mossy tree trunks hang,
Drenched all day long with murmuring sound and spray.

There, light of heart and footfree, I would go
Up to my home among the lasting hills,
And in my cabin doorway sit me down,
Companioned in that leafy solitude
By the wood ghosts of twilight and of peace.

And in that sweet seclusion I should hear,
Among the cool-leafed beeches in the dusk,
The calm-voiced thrushes at their evening hymn—
So undistraught, so rapturous, so pure,
It well might be, in wisdom and in joy,
The seraphs singing at the birth of time
The unworn ritual of eternal things.

The Merger of East and West

"But there is neither East nor West, Border, nor Breed, nor Birth,
When two strong men stand face to face, tho' they come from the ends of the earth!"
—KIPLING.

In the "Ballad of East and West," Kipling tells the story of an Indian border bandit pursued to his hiding place in the hills by an English colonel's son.

These men were of different races and represented widely different ideas of life. But, as they came face to face, each found in the other elements of character which made them friends.

In this country, before the days of the telephone, infrequent and indirect communication tended to keep the people of the various sections separated and apart.

The telephone, by making communication quick and direct, has been a great cementing force. It has broken down the barriers of distance. It has made us a homogeneous people.

The Bell System, with its 7,500,000 telephones connecting the east and the west, the north and the south, makes one great neighborhood of the whole country.

It brings us together 27,000,000 times a day, and thus develops our common interests, facilitates our commercial dealings and promotes the patriotism of the people.

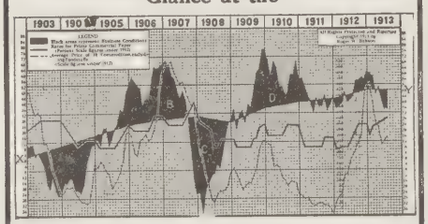
Can *You* Anticipate Business Conditions?

Glance at the



BABSON COMPOSITE PLOT

(reproduced above) showing the rise and fall in business conditions during the past ten years, and note especially how business has declined during 1913.

Couldn't you profit by having the facts which would help you to anticipate these changes? Wouldn't your business be better now by having had just such information?

You don't need to—guess at conditions—build or plan on impressions—purchase on impulse.

You *can base* your plans on the larger movements in business, which can be anticipated, provided you will acquaint yourself with the vital fundamental factors and facts affecting and causing the changes in business conditions. It is these fundamentals that the Babson Mercantile Service supplies.

Write at once for the booklet, "Ascertaining Business Conditions," which will be sent gratis to anyone interested in the work of the Babson Organization.

Address: Dept. G 9-3 of the

PERSONAL GLIMPSES

THE BIG MAN IN AUSTRIA

BESIDES being one of the brainiest and wealthiest men in Europe, Count Leopold Berchtold, Foreign Minister of Austria, and one of the most conspicuous figures in the controversy of the Power over the Balkan situation, has in his veins an uncommonly complicated mixture of blood. He is connected with the Emperor Francis Joseph in the ninth degree, with the Czar and Emperor William in the eighth, and with King Ferdinand of Bulgaria, in the fifth, and among his ancestors were Poles, Hungarians, Bohemians, Italians, Ruthenians, Southern Slavs, and Austrian peasants. He is an extraordinary personality, if we are to believe an admirer, who writes anonymously about him in the London *Daily Mail*. We read:

He is a tall, slim man with a small and finely modeled head. His features are pleasant and full of character; his expression derives at times a touch of severity from two deep furrows which betray the heavy responsibilities resting on his shoulders. Otherwise one may read in his face the equanimity of a nature which loves life and often expresses its contentment by an almost mischievous smile.

At the present moment Count Berchtold seldom smiles. He has been Foreign Minister for little more than a year, but in his diary, which he regularly keeps up, more numerous and more important entries must have been made in this short period than in many previous years.

It is believed that when Count Berchtold assumed office he did so reluctantly and only at the urgent wish of the Emperor. He is immensely rich and has a plenitude of other interests in life, artistic and social, besides politics. An excellent pianist and fond of painting, he is also a great reader, especially of English literature, for he speaks English well, while the Countess Berchtold, his wife, the daughter of a former Austro-Hungarian Ambassador in London, Count Karolyi, speaks English as a mother-tongue. It was certainly not ambition which induced Count Berchtold to assume the heavy task which he realized would come to him. He was the first European statesman to announce openly the critical development of affairs in the East. Only if the prophet can be deemed responsible for events that he has foretold would Count Berchtold earn the epithet of incendiary applied to him in certain quarters on the outbreak of war in the Balkans.

Public opinion in Austria has confidence in Count Berchtold, esteeming notably three things about him—his foresight, his absolute honesty, and his simplicity. One of his staff once remarked to me that nothing hurt the Minister so much as the supposition that he did not mean every word he uttered. The members of the Delegations, Austrians and Hungarians alike, also say that his words are not masked, and his public utterances attest

A Hundred Like It

In the Brooks Furniture Book you will find over a hundred bargains like the one illustrated above. Here is an excellently made extension dining table that is well worth $35 in any dealer's store. Our factory price is only $17.50. It's made of Quarter-sawed Oak, has 48-inch top, extends 72 inches.

The continued expansion of Western Canada for many years to come is a safeguard to the security of your investment.

REGINA
The Capital of Saskatchewan

and the *Wholesale, Manufacturing, Railway, Commercial and Financial Centre* of the Province offers particularly remunerative and at the same time safe investment in its Real Estate. Good profits can be made if your investments are handled by an established firm on the ground who are thoroughly reliable and who know conditions. We have been handling investments in Saskatchewan and Regina for many years, and *have made profits* for our clients. We can do the same for you. Write today for our *handsome free booklet* on Saskatchewan and Regina and the opportunities they offer for profitable investment.

Satisfactory references furnished on request.

ANDERSON, LUNNEY & CO.
REGINA, SASKATCHEWAN

this the more strikingly in that he is an uncommonly skilful stylist, and, among diplomatists, good stylists find it particularly difficult to speak straight out without revealing too much.

Count Berchtold has a democratic way with him of which an amusing anecdote is told. Last summer the Minister took the "cure" at Kaltenleutgeben, near Vienna. In the same "hydro" was staying a little Viennese journalist, with no particular insight into international politics and who had been more accustomed to keep watch for the newspapers at the sick-beds of dying Ministers than to speak with living ones. Count Berchtold made this modest and excellent man his daily companion on his walks during his stay.

There is yet another thing which makes the Foreign Minister popular in Vienna, and that is his elegance of dress. He is one of the best-dressed men in the Austrian capital. But, we learn,

At the same time, however, he allows himself the *coquetterie* which is only permitted to men of his gifts and position of appearing at times in public intentionally less elegant than is their wont. I recall on one occasion seeing the Minister on his way back from the Delegations enter the Foreign Office wearing an overcoat which received a stare, almost of disapproval, from the pompous porter.

Count Berchtold, moreover, is not one of those diplomatists who, willing prisoners in the thicket of politics, have already forgotten that on the other side of the hedge of conferences and reports surrounding them the garden of life is full of roses. His strict attention to duty does not allow Count Berchtold to make use of the endless possibilities which, as a wealthy grandee, he has at his disposal for recreation. Count Berchtold is a racehorse owner, and his crimson colors used to be frequently seen at the Freudenau racecourse, where once he won from Baron Alphonse de Rothschild a great state prize. The English public will hardly understand that some of the opposition papers in Austria begrudge the Minister his interest in the turf. But to pacify these good folk, I would not mind wagering that for many weeks now Count Berchtold has not once seen his trainer. For at present he is nothing but a politician, thus justifying the high opinion formed of him by the late Count Aehrenthal, who on his deathbed recommended him to the Emperor as his successor.

There is no need to explain at length the nature and manner of his policy, for as the Neapolitan artizan works in the open street, so Count Berchtold frankly carries on his policy in the full glare of European publicity. He is, perhaps, not so full of "temperament" as was Count Aehrenthal, and in his nature there is more softness and amiability, but he has the same strong consciousness of the European position of Austria, and energy enough to assert it. The record of his career shows that he has had ample opportunity for studying European politics. From 1894 to 1899 he was Secretary at the Paris Embassy, afterward spending four years at the Embassy in London. In 1903 he was transferred to St. Petersburg, and in 1906 was appointed Ambassador to Russia, acting in that capacity until 1911.

"SAVORY"

Cooking Utensils Save Work In The Kitchen

THE word "SAVORY" on a cooking utensil means important advantages over others of its class. They can be obtained at most hardware or general stores. These improvements have put "SAVORY" Utensils in more than a million homes and have delighted as many housewives.

The "SAVORY" *Seamless* Roaster makes a first-class roast even from a second-choice cut. Needs no attention; self basting and browning—makes its own delicious gravy without water. Economical, easily cleaned, and disappointment-proof. Three sizes, five finishes.

The "SAVORY" Double Boiler has hundreds of uses. It cooks by steam cereals, fruits, vegetables, puddings, etc. —all are deliciously appetizing when cooked in this utensil.

The "SAVORY" Bread Box and Cake Closet has round corners and a ventilated back. The cover fits down snug, thus keeping the contents clean and sweet.

The "SAVORY" Coffee Percolator needs only two-thirds the coffee required for an ordinary pot. Ten minutes boiling with the "SAVORY" produces delicious coffee of an aroma that cannot be obtained through ordinary boiling. The "SAVORY" Percolator presents every practical advantage of the most expensive and can be had at half the price.

"SAVORY Prize Recipe Book" Free

Contains 130 prize recipes for "SAVORY" Roaster and other "SAVORY" Utensils. *Gives valuable hints on how to buy and cook meats.* Sent free on receipt of request mentioning name of your nearest dealer.

A Happy Marriage

Depends largely on a knowledge of the whole truth about self and sex and their relation to life and health. This knowledge does not come intelligently of itself, nor correctly from ordinary everyday sources.

Sexology

(*Illustrated*)

By William H. Walling, A.M., M.D., imparts in a clear, wholesome way, in one volume:

Knowledge a Young Man Should Have.
Knowledge a Young Husband Should Have.
Knowledge a Father Should Have.
Knowledge a Father Should Impart to His Son.
Medical Knowledge a Husband Should Have.
Knowledge a Young Woman Should Have.
Knowledge a Young Wife Should Have.
Knowledge a Mother Should Have.
Knowledge a Mother Should Impart to Her Daughter.
Medical Knowledge a Wife Should Have.

All in one volume. Illustrated. $2.00, postpaid.

Write for "Other People's Opinions" and Table of Contents.

Puritan Pub. Co., 777 Perry Bldg., Phila., Pa.

THE SPICE OF LIFE

Proof of Intelligence.—CHOLLY—"Is this horse intelligent, me good fellah?"

GROOM—"Very! Look out he don't kick you, sir!"—*Puck.*

In Spite of It.—BRIGGS—"Bilkins writes best sellers, doesn't he?"

GRIGGS—"Yes, but he's all right. He's a first-rate sort. When you get to know him you don't mind what he writes."—*Life.*

The Benighted Parent.—LITTLE GIRL—"Why did your mama spank you?"

BOSTON CHILD—"Because she is too untutored and ignorant to devise a more modern reformatory method of punishment."—*Life.*

The Ishmaelite.—PAYING TELLER—"You must get some one to identify you before I can pay this check. Have you any friends in this town?"

STRANGER—"Not one. I'm the dog-catcher."—*Our Animals.*

The Master of the House.—"Er—Sophie—er—I believe your mistress and the young ladies have arranged to go to—er—Winklemouth for their holidays. Do you happen to—ah—have any idea whether they are—er—taking me?"—*London Opinion.*

Too Rapid.—"Isn't it queer the 'movies' never show us any of these Central American revolutions?"

"Not a bit. As a matter of truth, they haven't perfected a film machine yet that can revolve as fast as the revolutions."—*St. Louis Republic.*

Double Trouble.—"We've got a great road now," said an enthusiastic Western railroader to his friend. "We've got it double-tracked clear through to Chicago."

"H'm," said the friend. "I don't see what you want a double track for. You can't keep your trains on one."—*Everybody's.*

For the Collection.—Mrs. Murphy was getting the supper for the children on Saturday night when a young woman came to her door.

"I'm a collector for the Drunkards' Home," she said. "Could you help us?"

"Come around to-night and I'll give you Murphy," said the housewife as she went about her work.—*Life.*

Emporia's Aristides.—Two boys of Emporia, Kan., ran away from home to seek their fortune, after reading a biographical sketch of Dick Whittington. They got as far as Kansas City, where the centurions encompassed them and took them to the police station. There the captain questioned them closely, and, having drawn forth much useful information, finally asked:

"Why did you boys run away from Emporia?"

"Well," replied the elder of the pair, thoughtfully, "there's nothing there but William Allen White, and we got tired of hearing of him."—*Collier's Weekly.*

"I Tell You— These 'Holeproofs' Are Wonderful Socks"

GO to a furnishing, clothing or department store and see the original guaranteed hose—famous Holeproof Hosiery. Note its *texture, light weight* and *style.* In all these qualities Holeproof Hose outclass common kinds. Buy six pairs of Holeproof and begin to know them, as a million wearers do. Learn what *convenience, wear* and *saving* are possible in Holeproof Hose. *Use* six pairs *for six months.* See what *long-time quality* means.

Buy them today. They will last half a year—until February—or longer. If they wear out—*if even a thread breaks*—you get new pairs free. In that one operation you dispense with the bother and trouble you've had with other hose.

Can Hose Be Made Better

We pay an average of 74c per pound for the yarn in Holeproof. We buy only Egyptian and Sea Island Cotton yarn—the finest yarn that's sold. We pay the top market price. Common yarn costs but 32c.

But ours is *three-ply* and *long-fibre* cotton. That means *strength* with light weight. It means *soft pliability.*

The wear you get in these stockings or socks has nothing to do with the weight of the yarn.

Common yarn is two-ply, short-fibre, and weak. No such hose as Holeproof can be made with such yarn.

We use an experience of 39 years. We know the best methods. We have every machine that gets the best results.

Do you think any hose can be made any better?

Ask Dealers for Fall Styles

Holeproof dealers now have the new colors that are to be worn this Fall. They have them in many weights in cotton. Also in silk. Go see them now.

In Your Town

The genuine Holeproof are sold in your town. Write for the dealers' names. We ship direct where no dealer is near, charges prepaid on receipt of remittance. Ask for the new Mercerized Holeproof Socks for men at $1.50 for six pairs—the 25c grade with the silky lustre and 22% added strength.

$1.50 per box and up for six pairs of men's; $2.00 per box and up for six pairs of women's and children's. $1.00 per box for four pairs of infants'. Above boxes guaranteed six months.

$2.00 per box for three pairs of men's *silk* Holeproof socks; $3.00 per box for three pairs of women's *silk* Holeproof stockings. Boxes of silk guaranteed *three months.*

Write for free book which tells all about Holeproof.

FOR MEN, WOMEN AND CHILDREN

For long wear, fit and style, these are the finest silk gloves produced. Made in all lengths, sizes and colors. Write for the illustrated book that tells all about them and write for the name of the dealer near you who handles them.

Holeproof GUARANTEED Silk Gloves FOR WOMEN

Mrs Housewife—

Why not add a little variety to your good home meals by including in the baking a batch of fancy bread. Here is something very nice and not difficult to make if you use Gold Medal Flour

RUSSIAN BREAD

- 4½ cups Gold Medal Flour
- 1 cake compressed yeast
- 1¼ cups scalded milk
- ¼ cup sugar
- 1½ cups raisins
- 2 eggs
- ¼ cup butter
- 1 teaspoon salt
- Cinnamon to taste

Dissolve yeast in scalded milk, cooled to 80 degrees; add 1½ cups Gold Medal Flour and mix until smooth; let stand until light and puffy. Add eggs, sugar, butter, raisins, salt, remainder of Gold Medal Flour and cinnamon. Mix to a stiff dough and knead thoroughly. Let stand until double in volume. Divide into two equal parts for two loaves; cut each loaf into three equal parts; roll the parts into strips about 12 inches long and tapering to a point at each end; press ends together and braid. Place on buttered baking sheet, cover and allow to stand until light. Bake from one-half to three quarters of an hour. When cool, ice with an icing made by mixing a few drops of hot water with powdered sugar, flavoring with vanilla.

Combining Their Knowledge, Processes, and Manufacturing Methods, These Four Famous Tire Factories Have Made United States Tires the Most Popular Tires in the World

The Pre-eminence of United States Tires Has Been Established by an Ideal Manufacturing Policy Unique in the Automobile World

The scope of this four-factory cooperative policy and its efficiency is shown day in and day out by the fact that United States Tires dominate the automobile world.

The world's largest rubber company stands back of these famous tires.

Retained by this enormous manufacturing organization are men whose reputations are international and whose skill and genius used in conjunction with the four-factory cooperative methods have made United States Tires the standard for mileage—tire economy—real tire satisfaction.

When you purchase United States Tires you are sure of these vitally important facts:

1. Of the organization behind these famous tires.
2. Of vast experience in tire building.
3. Of a tremendous company that actually backs up its tires and has real service branches.

In the history of the motor vehicle no one industrial move has meant so much to the true lovers of the automobile. As one instance,---witness the birth of those "Aristocrats of the Road"---the "Nobby Tread" and "Chain Tread."

DELCO

ELECTRIC CRANKING LIGHTING IGNITION

The Nineteen Fourteen Delco

Delco equipment for 1914 marks probably the highest type of electrical apparatus ever made for motor car service.

Recognition of this superiority is found in the fact that our entire output for this year, amounting to 100,000 equipments, has been sold and we are still unable to meet the demand.

The 1914 Delco is simpler and more compact in construction.

It is higher in power and quicker in operation.

And—if such a thing is possible—it is more effective.

It is the Refined Delco—fundamentally and mechanically the same as the first Delco System—yet a somewhat more perfect product—due to the experience gained in the production of more than 50,000 Delco Equipments now in use.

And it is as dominantly in the lead today as it was two years ago, when for the first time Delco Equipment made the electrically cranked car possible.

And now get this thought firmly fixed in your mind.

Delco equipment occupies a dominant position today, not simply because of its ability to crank an engine—

Any electric motor properly attached to a car will do that so long as it has a full battery from which to draw current—

The Delco System is a success because it cranks a car in demonstration—and then keeps on cranking it in actual day after day service.

But even that is only half the story—the vital element in successful electrical equipment is current control—the battery must be kept fully charged all the time—no matter whether the car is driven fast or slow—no matter whether much or little current is used for cranking lighting and ignition—there must always be a fully charged battery from which to draw more current.

Delco engineers have solved this vital problem.

Thousands of Delco equipped cars that have been in use for one to two years have never been hand cranked; neither battery nor motor has ever failed to respond when called upon.

That is why the Delco System has been selected by many of the foremost motor car manufacturers of America as standard equipment for their cars.

That is why Delco Equipment has come to be about the biggest selling asset that a car can have.

Do You Believe That ?

"Our Whole System of Society is Rotten From Top to Bottom and the Social Environment is the Worst That the World has Ever Seen"?

So says our greatest living scientist—co-discoverer with Charles Darwin of the theory of evolution—

in his new book

Social Environment and Moral Progress

By DR. ALFRED RUSSEL WALLACE

Author of "Darwinism," "Man's Place in the Universe," Etc.

"One of the most fruitful and suggestive of recent works. It is a study on the one hand of the moral character and intellectual capacity of man, and upon the other of modern society as affecting man's morals and intellectual progress...A remarkably stimulating examination of the life of mankind." —*The Springfield Republican* (Mass.).

"He recalls to our minds, with stinging, uncontrovertible logic, all the social, political, and economic wrongs and injustices from which we suffer today. After treating of morality in general, and of character as a permanent attribute of humanity, he devotes a chapter to environment during the nineteenth century, tracing the gradual urbanization of life in civilized countries, the drift from country to crowded city, and all the ills of 'hectic industrialism'."— *Review of Reviews.*

"His book is bound to be an epoch making one, a towering landmark in a vast expanse of literature upon this burning subject."—*Record of Christian Work.*

"The author's position as co-discoverer with Darwin of one of the most momentous theories in the history of thought, his venerable age, his wide scientific knowledge, and deep philosophic insight, lend to his utterances an authority such as could be claimed by *no other living writer*....It comes with an authority too high to be impugned; it conveys a message of too grave import to be ignored. Not to read and earnestly ponder such a message is little short of a sin against the future." —*The Dial.*

THE
Heart and Blood-Vessels

Their Care and Cure
AND
The General Management of the Body

By I. H. HIRSCHFELD, M.D.

In ignorance lies the greatest danger!

Do you understand yourself, and how to manage your body and mind to get the best out of life?

This book discusses the correct management of the body in regard to work, play, sleep, food, sex, climate and the different values in life; and shows the way by which to reconstruct one's system after it has been mismanaged.

As an illustration: the really interesting story of the heart is told and how to lead a happy and efficient life even when the heart is sick and the blood-vessels are hardened.

One chapter treats the points which should guide in the selection of a physician, nurse, hospital, and places for recreation in America or in Europe.

Price $1.25 net; postpaid $1.36

Funk & Wagnalls Company, 354-60 Fourth Ave., New York, N.Y.

Life, Death and Immortality

By William Hanna Thomson, M.D., LL.D.
Author of "Brain and Personality"

The Independent, New York:
"Life, Death and Immortality, is a book which supplies much food for thought. Dr. Thomson's conclusions will be found a support to Christians' faith in immortality."

Examiner, Chicago:
"It is especially interesting in that the author, a scientist and physician, points in his conclusions emphatically to the doctrine of the immortality of the soul. Readers will appreciate the vigor in handling a discussion of perennial interest."

Herald, Boston:
"His argument for immortality rests upon the nature of personality. He maintains that the origin of life has never yet been discovered and that, from a scientist point of view, everything points to immortality."

Philadelphia Telegraph:
"The statement of the case for immortality on scientific grounds is clearly stated, ingeniously argued and urged with entire reasonableness as not only possible but most probable."

Herald-Republican, Salt Lake City:
"Deep thinkers will enjoy this book and find in it ideas that make them think still more."

12mo, cloth, $1.00 net; by mail $1.10.

FUNK & WAGNALLS COMPANY
354-360 Fourth Ave., New York

FOUR CARS A DAY

There are but two logical methods of building motor cars.

One method is to produce cars in enormous quantities so as to bring the price down as low as possible.

The other method is to produce cars in limited quantities so that each car will be of the highest quality.

Each system has but one real exponent. In a middle Western city "mass production" enables a good small car to be made and sold at a low figure. In a New England city, "The Best Built Car in America" is produced practically car by car, by the finest mechanics in the world.

One car carries out one ideal, the other a totally different ideal. Both are right. Both are built, not assembled. One company makes 1,000 cars a day, the other company Four Cars a Day. The idea back of one car is to give the most for the money; the idea back of the other is to give the best regardless of price.

The smaller car is turned out like the well-known and worth while "dollar watch." The greater car is built like a Chronometer. Any other car—is a compromise.

The Locomobile now occupies a peculiar position. *It is the only high grade car whose sales have increased during the past two years.*

This success of the Locomobile is due to the policy of building not more than four cars a day. All of the power and the experience of the Locomobile organization has been concentrated on a limited production.

Years ago we concluded that just so surely as the best cheap car could only be produced in very large number, just so surely could the car of highest quality be produced only in limited quantities.

Our policy from the very start was to build cars in small lots so that each car could have the most intimate attention. When others were increasing their plants and building more cars, we were increasing our quality, striving to make the Locomobile "The Best Built Car in America."

Every Locomobile has been built like every other Locomobile. Every Locomobile has been built with the utmost care. Every Locomobile has been built to carry out the ideal of quality, not a commonplace, commercial ideal.

The Locomobile will be made as it always has been made, in limited quantity—and with unlimited care. (Despite the present demand for the Locomobile and despite any rumor to the contrary, we will *not* increase our production and make more cars.)

There will always be a demand for the limited number of cars we make. Because we have been building for the future, our plant will always run at capacity, without reducing the quality of our product or price.

School Information FREE

The easiest and quickest method of choosing a satisfactory school, according to the testimony of hundreds of our subscribers, is to write our School Bureau.

Parents, guardians and students themselves seek our advice and help in choosing schools, and this service is open ***to you.***

Perhaps you are confused by the large number of schools advertising and are unable to make a final selection.

For years we have been consulted by the best families in the nation, and we are able to give you competent and unbiased advice in deciding this important matter.

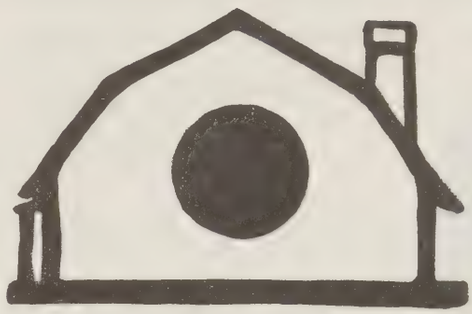
There is absolutely no charge for this service, and it is offered not only to Digest subscribers, but to their friends as well.

No time should be lost in writing us, as most schools open on or before October 1st, requiring immediate arrangement for rooms and plans for courses of study, etc.

It is very important in writing us to give us full details of your requirements, stating kind of school, location preferred, and price of tuition you are willing to pay.

We will advise you promptly and to the best of our ability. Address

The School Bureau
The Literary Digest
New York



"The Village of a Thousand Souls"

¶ On a double-track railroad, in a prosperous farming section of the middle west, is a beautiful, happy, flourishing village—"The Village of a Thousand Souls."

¶ Arnold L. Gesell, of the Department of Education at Yale, has compiled a health history of this town covering a period of 33 consecutive years. It is a unique document—a eugenic survey of one generation of ordinary village humanity.

¶ *There's nothing, mind you, to mark off this town, to indicate that its health history is abnormal or exceptional—and yet, on the chart accompanying the article, one home out of every four bears a black circle or semi-circle.*

¶ You will be amazed when you discover what these markings indicate—how little we really know of the vital facts of our most commonplace surroundings. An enlightening, significant article in an extremely interesting number—

The October American Magazine

THE NEW GARDEN OF CANADA

By Pack-Horse and Canoe Through Undeveloped New British Columbia

By F. A. Talbot

"The author traveled 1200 miles of this unbroken wilderness. He was particularly interested in its agricultural resources, its adaptation for stock and fruit raising, its mining and lumbering possibilities, and the opportunities it presents for investments."—*The Boston Herald.*

"Exceedingly interesting," says the *Brooklyn Daily Eagle.* "Here can be found statements as to the immense crops actually raised, also bear hunting stories, and as for the various experiences met with while on the long journey, they are legion."

Large crown octavo, profusely illustrated with full-page half-tones. Bound in cloth, $2.50 net; by mail, $2.65.

Funk & Wagnalls Co., 354-60 Fourth Ave., N. Y.

EVERY-DAY JAPAN

By Arthur Lloyd, M.A.

With an Introduction by Count Tadasu Hayashi, late Japanese Minister for Foreign Affairs.

This is not a tourist's notebook. It is the product of 25 years' residence and work in the country, and every chapter is written from first-hand knowledge and personal observation.

William Elliot Griffis, whose works on Japan are standard, writes the publishers: "This book on Japan has all the qualities that will keep it before the public for a generation to come. There is no other book on Japan quite like it. I shall commend it alike to my audiences and to librarians, a great many of whom I meet in the course of the year."

Illustrated with 8 colored plates and 96 half-tones. Large octavo. Cloth, $2.50 net; by mail, $2.66.

Funk & Wagnalls Co., 354-60 Fourth Ave., N. Y.

New Autumn Publications

Including Books Issued In America In Co-

Sir Herbert Beerbohm Tree

THOUGHTS and AFTER-THOUGHTS

By Sir Herbert Beerbohm Tree

In this volume the famous actor assumes a new role—that of essayist. "The Athenæum" (London) says: "They convey at the same time an impression of a Bohemian who has mixed with many classes and ties himself to none; of a man of the world who can hold his own in society, yet is most happy in the company of his own thoughts; of a dreamer whom only devotion to his art has rendered practical; of a wit whom sociability and a gift of epigram just keep from dwelling in the clouds; of a man whose natural accomplishments would have made him an artist whatever the walk of life he might have chosen."

Illustrated with frontispiece portrait of the author by J. S. Sargent, R.A., and decorations by Lovat Fraser Cloth. ***$1.50*** *net.*

THE COUNTRY OF "THE RING AND THE BOOK"

By Sir Frederick Treves

This volume concerns that portion of Italy which is the scene of Robert Browning's great work. It will appeal to all who like a travel book full of descriptive color. The book will create something of a literary sensation, for Sir Frederick has found material in Rome which proves Browning to have been wrong in a great many of his facts.

Illustrated with a colored frontispiece, over 80 photographs, and numerous maps. Cloth. ***$5.00*** *net.*

RELIGION AND TEMPERAMENT

By Rev. J. G. Stevenson, B.A.

How far is religion only a matter of temperament. It is alleged that some people are naturally religious, and that to others religion makes no appeal. This is a careful and scientific study, showing in a striking manner the effect of religion on various temperaments.

Large crown octavo. Cloth. ***$1.25*** *net.*

FROM NAVAL CADET TO ADMIRAL

By Admiral Sir Robert Harris, N.C.M.G.

A book of life in the British Navy from 1865 to the present day; full of anecdotes of service in all parts of the world — tales of adventure, sport, etc.—with the salt of the sea in every page.

Cloth. ***$4.50*** *net.*

EVERYDAY LIFE IN THE HOLY LAND

By Rev. James Neil, M.A., author of "Palestine Explored."

The author has made the study of Palestine manners and customs his life work. The book makes clear thousands of Scriptural allusions which are quite obscure without a knowledge of that everyday life of the East which the author is so well qualified to expound.

Illustrated with 32 beautiful, full-page paintings in full colors, made especially for the work, under the direction of the author. Cloth. ***$2.50*** *net.*

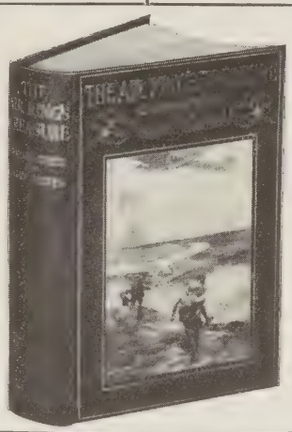
ELECTRICITY IN THE SERVICE OF MAN

By R. Mullineux Walmsley, D.Sc.

Volume II: Section I

The first volume having dealt exhaustively with the "History and Principles of Electrical Science," this second deals with the "Technology of Electricity."

Full-page plates and hundreds of other illustrations. Royal octavo. Cloth. 640 pages. ***$2.50*** *net.*



ELECTRIC LIGHTING

All about how to wire and light your home or factory, handle power-driven dynamos, etc.

Many Illustrations. Cloth. ***50c*** *net.*

GRAMAPHONES AND PHONOGRAPHS

Clearly explains the principle upon which the instrument works, shows how to choose and care for a machine, and describes it in detail.

Octavo. Boards. ***50c*** *net.*

Operation With The House of Cassell, London

THE IMMIGRATION PROBLEM

By Prof. Jeremiah W. Jenks, Ph.D., and W. Jett Lauck, A.B.

Third edition, thoroughly revised, enlarged, and brought down to date

This work, published first in 1911, was based upon the preliminary reports of the United States Immigration Commission. The new edition is based upon the final reports of the Commission. It is a book of facts from the best and the latest official sources; it deals with the immigration problem as found in America to-day and it will long stand as the standard work on the subject. The authors were both members of the U. S. Immigration Commission, and what they say is authoritative, reliable, and withal of the keenest interest to Americans of to-day.

Octavo. Cloth. ***$1.75*** *net.*

BOOKS FOR BOYS

ALL ABOUT ENGINEERING

By Gordon D. Knox

Every boy wants to know how the Panama Canal was cut, how great bridges are built, how the great Nile Dam was constructed, how water was brought to the desert goldfields of Australia, how the great roads and railways have been made; in short, how all the great engineering wonders of the world have been accomplished.

With two color plates and a large number of illustrations from photographs. 384 pages, cloth, ***$1.50*** *net.*

THE AIR KING'S TREASURE

By Grahame-White and Harry Harper

Claude Grahame-White needs no introduction, for he is one of the best-known and foremost flyers. His story concerns a voyage round the world in search of treasure, and it ends with a great flight across the Atlantic.

Four full-page colored illustrations. Large octavo, cloth, ***$1.25*** *net.*

DO-WELL AND DO-LITTLE

A Fairy Tale by Mrs. Clement Shorter

This pretty tale of the two brothers Do-Well and Do-Little is so subtly written that while it affords the young reader much pleasure, its moral is quite apparent.

Illustrated with four plates in full colors. Quarto, 224 pages, ***$1.25*** *net.*

THE ADVENTURES OF PHYLLIS

By Bessie Marchant

The heroine accepts a situation as a nursery governess on an estancia in the Argentine, arrives at the station on the wrong day, and is carried off by mistake to a lonely house in the mountains, where she finds herself in the hands of brigands. How she escapes is spiritedly told.

Four colored pictures and four half-tones. Cloth, ***$1.25*** *net.*

ENTER PATRICIA

By E. E. Cowper

An exciting tale of mystery and adventure woven about "Wings," the romantic old residence of the Belleroches. Patricia Foster, a visitor, finds life at The Lonely House, as it is called, full of interest, and her experiences there are described in a most attractive manner.

Illustrated with four colored plates. 320 pages, cloth, ***$1.25*** *net.*

THE CRAGSMEN

By W. Bourne Cooke

As a story of thrilling adventure, vivid realism, and literary quality and power "The Cragsmen" enters the same line as R. L. Stevenson's "Treasure Island." It tells of the exciting experiences of a boy among the smugglers and wreckers of the Devonshire coast.

Four full-page colored illustrations. Cloth, ***$1.25*** *net.*

THE BOY'S BOOK OF BATTLES

TOPICS OF THE DAY

REBELLION AGAINST TYRANNY IN CONGRESS

DUMMIES seated in imposing rows in the House of Representatives would make our laws very much as they are being made now, in the view of a member who has resigned from the Ways and Means Committee to give point to his criticism. The Republican minority sit idly by watching the proceedings, as powerless as the spectators in the gallery, and the Democrats themselves, this member complains, are bound by caucus rules to vote like sheep for the measures approved by the party leaders. In this way a large part of the country has no real voice in our legislation. In short, "Cannonism" is declared to be still in the saddle, only under Democratic auspices, and there are mutterings of another insurrection against its tyranny. The call for the revolt has been sounded by Representative Sydney Anderson (Prog. Rep.), of Minnesota, who prefaces his resolution for an investigation of caucus methods in the House by resigning his place on the Ways and Means Committee. This resolution provides for a committee to determine if by "secret and caucus methods" members are "deprived of their rights and prevented from serving their constituents." Mr. Anderson's claim that the issue he raises is not essentially a partizan one finds some support in the recent protests of Democratic Congressmen against the operation of caucus rule. Thus Representative Jeremiah Donovan (Dem.), of Connecticut, declares that "the secret caucus is the device of the devil," and that "the time has come for the Democrats to abandon it." And Representative Sisson (Dem.), of Mississippi, announced that he would vote against his party's Currency Bill as a means of expressing his opposition to "secret caucus methods." Nevertheless the Democratic papers are inclined to make light of the matter, while the Republican papers take an opposite stand and show an equally marked tendency to make party capital of it.

Copyrighted by Harris & Ewing.

TIRED OF BEING A DUMMY.

Representative Anderson, of Minnesota, says that "the rules of the House deprive me of my opportunity for service," so that "my membership is at once a farce and a fraud."

According to Mr. Anderson, the caucus system perpetuates the very evils which were supposed to disappear with the "gag rules" and "steam-roller" methods of Cannonism. Admitting that "some good things have been done even under the caucus system," he adds, "Yet the same reasoning which now attempts to justify a caucus would justify a despotism." The caucus, he declares, occupies the same place in legislation that the much-criticized "holding company" does in high finance—that is to say, it places the control in the hands of a few men. In his speech to the House explaining his resignation from the Ways and Means Committee, where he felt his membership to be under the present system "at once a farce and a fraud," he says in part:

"I am induced to resign my membership on the Committee on Ways and Means because the rules of the House and the system of legislation in vogue here deprive me of my opportunity for service to the country on that committee and because my continuance on that committee must be construed into an acquiescence in fraud upon those who have a right to believe and do believe that I have had or shall have some part in framing the legislation reported by that committee. The rules of the House, written and unwritten, deprive me of my opportunity for service and the system of legislation, visible and invisible, which obtains here strips me of my prerogatives as a representative of the people."

His predicament has its roots in the caucus system, of which he goes on to say:

"The caucus system is new only in form. In effect it has been in use for many years. The questions which it presents are not political. I disclaim any partizan purpose in discussing them at this time.

"These questions reach the very foundation of representative government, for the effect of the caucus is to deprive the minority wholly of participation in the actual making of legislation. Under this system 141 congressional districts are wholly unrepresented. Nine States—Idaho, Nevada, North Dakota, Oregon, South Dakota, Utah, Vermont, Washington, and Wyoming—are totally deprived of any participation in the making of legislation vitally affecting their interests, for these States send no Democrats to the House, and consequently are not

TERMS: $3 a year, in advance; four months, $1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage $1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE,** or **CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect. *Both old and new addresses* must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Entered at the New York Post-office as Second-class Matter

represented in the legislative annex, where legislation is really made. Eighteen other States are partially unrepresented. Eight out of 11 districts in California, Iowa, and Wisconsin, 9 out of 10 in Minnesota, 10 out of 12 in Michigan, and 25 out of 36 in Pennsylvania are wholly without representation. It requires no argument to demonstrate the iniquity of the situation. Its sectional and discriminative results are apparent in legislation.

"The right of the people to representation in making the laws by which they shall be governed necessarily carries with it the proposition that their Representatives, when elected, shall have opportunity to participate in the actual making of legislation and that the prerogatives and powers essential to this participation will be preserved.

"These essentials are not numerous. They may be summed up into the right of debate, to offer amendments, and to vote as one's judgment dictates, without coercion or restriction.

"The caucus preserves the shadow but destroys the substance of these rights.

"A member may debate, offer amendments, and vote, but the verdict has already been rendered by a packed jury.

"No one would claim that a man's right to a trial by jury was preserved if the jury impaneled were already bound to return a verdict against him. Yet this is the exact situation in the House.

"The caucus not only destroys the representation of the minority but of a minority of the majority, for it binds the votes of both majority and minority of the caucus as a unit in the House against all suggestion, amendment, and debate.

"It may be claimed that no action of a caucus can bind the vote of a member on the floor of the House. Doubtless this is theoretically true, but every man who has felt the sting of the party lash and the prick of the organization spur knows that actually it is not true. It is not true."

Comparing the caucus to a holding company, he says:

"The few men who desire to control the policy of legislation in the House organize the members of the majority party into a holding company—the caucus. Under a rule, written or unwritten, a majority vote of the holding company, the caucus, binds the whole membership of the caucus to vote as a unit in the House. Thus a minority of the membership of the House controls the legislative policy of the whole House in the actual making of legislation."

"Cannonism has gone, but it appears that Underwoodism is entirely able to fill the vacancy," comments the Indianapolis *Star* (Prog.), while a Republican paper, the Chicago *Inter Ocean*, exclaims that here in the secret caucus is "real 'invisible government.'" This Chicago paper goes on to say:

"An essential condition of free and popular government is that it shall proceed by discussion, in which all sides shall have a reasonable opportunity to be heard, from the original proposal to the final conclusion. In the present Congress the Democratic majority has practically suppressed discussion.

"The Tariff Bill and the Currency Bill, the most important measures considered, have been framed by the Democrats of the committees in charge of them in secret session, with exclusion of the Republican minority members, and with denial to them of a hearing by their Democratic colleagues.

"From the partizan committee meeting secretly held the bills have gone to the party caucus, also meeting secretly. Only when agreement has been reached in the secret caucus, and its members are 'sworn in' to support the measure without change, has the minority been given any opportunity for criticism or suggestion.

"Not only has there been refusal really to hear what the minority might have to advance, but the majority has pledged itself to inaccessibility to any argument that the minority might offer, however valid. This is the most dangerous, undemocratic, and un-American phase of the procedure. . . . . .

"Here is government not only invisible but impersonal, hiding behind the locked doors of the committee and caucus room and concealing any sort of personal responsibility for its acts."

"Absenteeism," points out the New York *Press* (Prog.), "is one of the evils sure to follow the rigid caucus rule which has made the Democratic program," for "why should men attend sessions to repeat the performance of the caucus?" It adds:

"The wisdom of Plato and the eloquence of Demosthenes might together be turned loose on the House, and under present conditions they would have absolutely no effect; the caucus dictum would be carried into effect without question or inquiry.

"When the old Republican machine imposed caucus rule upon the House this paper protested. Now that the boot is on the other leg; now that the Democrats are offending in this regard just as seriously as the Republicans formerly did, this newspaper again protests.

"Caucus rule of this kind is the beginning of the decadence of representative government."

Yes, agrees the stanchly Republican St. Louis *Globe Democrat*, it "is subversive of representative government." The secret caucus, bad as it is, thinks the Philadelphia *Inquirer* (Rep.), is after all merely one of the instruments by which President Wilson imposes a "one-man domination" upon Congress. The same view is taken by the Pittsburg *Chronicle Telegraph* (Rep.), which declares that Congress has been "converted into a mere agency for the automatic registering of the executive decrees and the confirmation of executive policy."

On the other hand, in a House of 435 members, argues the Rochester *Democrat and Chronicle* (Rep.), "no progress could be made at all in legislation without rules limiting debate and preventing filibustering." And it goes on to say in defense of the Democratic procedure:

"The Democrats were confronted by the same conditions when they came into power that had confronted the Republicans before them. Power must be concentrated somewhere, or it would be impossible to transact business. The Democrats made a terrible outcry against the despotism of Speaker Cannon, but that was merely for stage effect. The experienced legislators among them knew that his method was the only practical method by which any progress could be made. If the House were merely a debating society, without the duty of passing bills, the conditions complained of by Representative Anderson could easily be abolished."

Turning to the Democratic press, we find many of them patiently explaining to Mr. Anderson that the "tyranny" of which he complains is inseparable from majority rule, if the majority is to be held responsible for legislation enacted. It is "inherent in the organization of a numerous body under majority rule," says the Philadelphia *Record* (Dem.). "The caucus is not a lovely institution; neither is it superlatively odious nor so dangerous to the liberties of the people and the welfare of the country as perfervid oratory pictures it," says the Dallas *News* (Dem.), which thinks that "the method Mr. Anderson chose to denounce it is more dramatic than just." "He does not seem to understand that the country has relieved the Republican party of any responsibility whatever for tariff legislation, at least for a while," remarks the Houston *Post* (Dem.), which suggests that as a minority member he "should take his medicine without making faces." And in the St. Louis *Republic* (Dem.) we read:

"Did Representative Anderson expect that he, a Republican protectionist, as one of the twenty-one members of the Ways and Means Committee, would be allowed to shape 4 per cent. or so of the schedules of the bill? If this is not what he means to convey, then what is his meaning?

"There is no possible way in which a tariff measure could be framed by protectionists and tariff reformers working together, except the way of 'party perfidy and party dishonor.' The two sides of the committee represent theories of the relation of the Government to industry that meet in head-on collision. One or the other must be given the right of way."

Glancing at the question historically, the Washington *Star* (Ind.) recalls that prior to the revision of the House methods under Thomas B. Reed twenty-three years ago, the complaint was that the minority was too powerful—that it could halt business almost at pleasure and force terms upon the majority. Admitting that possibly the tendency since then has been too much in the other direction, *The Star* remarks that

"The tariff has been revised five times since the Reed rules were promulgated. Maybe it is time for the rules and practises of the House to be revised."

THE SPECTER OF "LAWFUL MONEY"

THE THREE-TO-ONE VOTE in the House of Representatives in favor of an amendment that insures a gold basis in the Currency Bill and practically reaffirms the Gold Standard Act of 1900 terminated the bitter warfare waged by certain Eastern editors against the taint of "Bryanism" they suspected in the clause providing for the redemption

EUGENICS.
—Webster in the New York *Globe*.

of the proposed Federal reserves. As originally published, the provision set down that the notes were to be redeemed "in gold," but in the succeeding draft of the bill, as these editors pointed out ominously, the phrase "or lawful money" had been slipt in as an alternative to "in gold." The sound-money amendment, as it is called, was passed against an opposition wholly Democratic, while the Progressives and half the Democrats voted for it. It provides that nothing in the present bill shall be construed to repeal "the parity provisions" of the Act of March 14, 1900, which was entitled, "an Act to define and fix the standard of value to maintain the parity of all forms of money issued or coined by the United States to refund the public debt and for other purposes."

The amendment was adopted, one Washington correspondent relates, "after one of the most remarkable scenes during this Congress," and he adds that it was adopted because the sound-money Democrats were "stung to the quick" by the charge that the country was to be committed to the Bryan silver theories of seventeen years ago. Warrant for this utterance was found in the record of the editorial onslaught on the interpolated words "lawful money." Scathing and frequent were the allusions to "1896 and its currency nightmare," and many were the cynical inquiries as to whether the sound-money fight would have to be fought all over again. The distinction between gold and "lawful money," explained one writer, "is as wide as the gulf which separates the sound currency of to-day from the greenbackism proposed a generation ago." To say that these Federal reserve notes may be redeemed in "lawful money," tartly observed the Philadelphia *Inquirer* (Rep.), is almost like saying that they need not be redeemed at all; and it bespoke the "vigorous condemnation and outspoken protest of an enlightened public" against the "Bryanism" in the bill. On the other hand, however, the Hartford *Times* (Dem.) did not think it made much difference whether the words "lawful money" had crept into the bill through Bryanitic or other influence because "the fundamental fact in our commercial and financial existence is the gold standard." But in the matter of the attempt, as it was said, to "Bryanize" the bill, the New York *Times* (Ind. Dem.), unshakeable in its belief that "there is but one satisfactory money of redemption," traced the words, not to Mr. Bryan's suggestion, but showed them to be actually "borrowed from the Aldrich Bill."

The Philadelphia *Record* (Ind. Dem.), considering the criticisms against the bill on the ground that it presented the most obvious opportunity for "inflation," remarked with concern that the charge did not seem to be "entirely imaginary," whereat the Philadelphia *Public Ledger* (Ind.) remarked that, far from being imaginary, the "fiatism" in the proposed law was "a real and actual menace," and it called sharp attention to the fact that all other sections of the Currency Bill were "dwarfed in importance by the one which controls the issue of paper money." As the bill stands, *The Public Ledger* explained, the Federal Government will be "the one agency to issue notes" while acting for the Government will be "a central, politically controlled body of seven men, who will have in their keeping to a very dangerous degree the volume of such notes as may be floated." Now, it continued, not only gold, but "lawful money" might have been the basis of these notes, a provision which it describes as "the essence and spirit of fiatism and inflation," and it proceeded to read Secretary Bryan's hand in the matter thus:

"Two things he aimed at—first, the political control of the banks, and next the provision which would put directly in the hands of that body the note-issuing power. He has now both points, and all the other features are non-essentials. It is true that the Government might maintain the high standard of bank-notes. It is also true that the Federal board of seven men might be patriots who thought of their country's good rather than of an opportunity to exploit a dangerous theory.

"But if the Owen-Glass measure were to put the note-issuing power in the hands of the banks, where it properly belongs, and where England, France, and Germany place it, the perils of

"COME, NOW, DON'T BE SILLY!"
—Bowers in the *Newark News*.

inflation would disappear. No political coterie, however flighty their financial theories might be, could then jeopardize the credit of their land.

"But with the Federal Government as the sole sponsor and agent of these bank-notes, and with a political body instead of a bank body at the helm, who can foresee what might happen? Let an inflationist once get the whip-hand of that Federal board

of control, which he would have as president, and nothing could prevent a flood of cheap money."

The New York *Sun* (Ind.), which precipitated the whole discussion by its attacks on the "interpolated" and hated words "lawful money," and which also examined the question from many angles, in one editorial took up the point of greenbacks as "lawful money." They would remain under the proposed law, the assertion had been made, as they are now, "redeemable in gold and protected by a large gold reserve," and also they would "figure in the reserves of the proposed Federal Reserve Banks as they now figure in the reserves of the national banks," which, *The Sun* admitted, "is quite true and good as far as it goes." But, it went on to explain, the $346,000,000 of greenbacks outstanding were not the only "lawful money" in the land in addition to gold, and it cited the $565,000,000 of silver which is legal tender and, "according to official definition," is also "lawful money." And at this time, *The Sun* continued, "on a gold reserve of $150,000,000 the Treasury is charged with maintaining at a parity with gold a total of $1,672,000,000 of currency, consisting of greenbacks and silver, plus $761,000,000 of national bank-notes," and *The Sun* concluded:

"Without any provision for larger Treasury reserves, the pending bill would enormously increase the Government's obligation through the proposed unlimited note issue unless the Gold Standard Act of 1900 should in effect be nullified by the bill."

The sum total of *The Sun's* opinion was that "the Bryan virus of unsound money notions" had to a great extent already infected the Sixty-third Congress; but the New York *Times* (Ind. Dem.) did not drag Mr. Bryan into the matter at all. *The Times* showed that the monetary commission in its report of January 8, 1912, defended the use of "lawful money, instead of gold exclusively, for the redemption of notes and the reserves of the banks." But, argued *The Times*, it must be understood and remembered that the word "gold" has a fixt meaning "which can not be changed by statute," whereas, quite to the contrary, such phrases as "legal tender" or "lawful money" might be altered in "import and scope by an Act of Congress," with the result that we might have so much lawful money on our hands as to force a suspension of gold payments, and *The Times* recalled some such enactments:

"Greenbacks were made a legal tender by the act of February 25, 1862. The silver dollar was a legal tender, altho no dollars were in circulation until the act of 1873 dropt the silver dollar from our list of coins. The act of February 28, 1878, authorized the coining of silver dollars and made them legal tender for all debts, public and private, except where otherwise stipulated in the contract. The act of March 14, 1900, made gold certificates available in bank reserves, to which, of course, there could be no objection. The use of silver certificates in reserves had already been authorized."

The construction put upon statutes, *The Times* went on to say, "depends very much upon the men who construe them," and it pointed to the possibility that at some future time changes in the law might add "other forms of money to those now made lawful." The risk of having such laws construed and applied by "the radicals of the House and Senate" was much too serious, thought *The Times*, "to be incurred in a matter so vital as the currency," and it maintained, moreover, that:

"The danger would be very great even if the new notes were made redeemable in gold alone, for being obligations of the Government the Treasury stock of gold would be subject to exhausting drains whenever serious financial troubles arose. The whole stock of these new notes issued in the discretion of the Federal reserve board without limit as to amount would be obligations, not of 7,000 member banks or of twelve reserve banks, exclusively, but of the United States Government. It ought to be as clear as noonday to the men engaged in preparing this bill that the provision for redemption must be made so sure and sound and ample that no doubt can ever arise in the minds of note-holders as to the possibility of exchanging them for gold. It is not enough for the Government to pay one debt by another. There is but one satisfactory money of redemption."

Willing to admit, on the one hand, that Chairman Glass was right when he said of the bill that "redemption of Federal reserve notes 'in gold or lawful money' safeguarded in a way the gold standard," still the New York *World* (Dem.) was moved to ask, "But why should these notes, to be issued only in time of stress, be based upon anything except gold?" And *The World* said finally:

"It can hardly be denied that the qualification of 'lawful money' introduces once more into our currency a question as to the true standard. The phrase was not in the bill as originally drawn. It was interpolated for a purpose. In the main, the new Banking and Currency Bill is a wise and conservative measure, but it is assailed on all sides by interests that find profit in things as they are. All of these interests are powerful. Some are corrupt. Some are in a position to make a strong appeal to the fears of honest men as to the stability of our monetary standard. Why place weapons in the hands of the enemy which, if it can not write new banking and currency laws, prefers to operate under the old scandalous system of concentration, speculation, stringency, and panic?"

THE HETCH HETCHY "GRAB"

FRESH EFFORTS to defeat San Francisco's plan to turn the Hetch Hetchy Valley, in the Yosemite National Park, into a reservoir have followed its approval by the lower House of Congress, and its opponents still hope for its demise in the Senate or the White House. Leaving out of consideration certain apparent discrepancies between the facts as presented by the friends and by the enemies of this enabling bill, and between the arguments based on these presentations, there remains a considerable body of opposition which takes its stand squarely on the ground that 500 square miles of public domain should not be ceded in perpetuity to any corporation, private or municipal. This opposition seems unaffected by the fact that the bill not only passed the House by a vote of 183 to 43, but has the sanction of such eminent conservationists as Gifford Pinchot, Secretary Lane, and Chief Forester Henry S. Graves. "San Francisco wants the Hetch Hetchy in order to have free, or nearly free, water," remarks the New York *Telegraph*, and adds: "It is a benign Government which pays municipal water bills." "No part of the accumulated argument can obscure the fact that what is sought is possession of property of the nation for the use and benefit of one town," notes the Providence *Journal*. "The more the Hetch Hetchy matter is looked into the worse it looks," says the Brooklyn *Standard Union*, which declares that the passage of the bill by the House "ought to spur its opponents to victory in the Senate." "The bill will give up 500 miles of government land to a corporation which will profit at the expense of the American people," says the Albany *Journal*, and the Springfield *Union* insists that the measure "is a grab." "If such a scheme can succeed, what public property will be safe from private grabbers?" asks the New York *Tribune*, and the Boston *Transcript* declares that this method of subsidizing San Francisco's water-supply "at the expense of ninety millions of people" is "not simply colossal folly," but "base treachery as well."

Many editors are convinced that San Francisco's preference for the Hetch Hetchy as the source of its water-supply is largely due to the possibility of water-power development connected with this project. What this possibility is may be inferred from the fact that there is a drop of 4,000 feet between the Hetch Hetchy Valley and San Francisco. "The politicians of San Francisco," says the New York *Times*, "are nurturing a power project under the guise of providing a water-supply for the city." The Springfield *Republican* shares this view,

Courtesy of the Outdoor World Publishing Company.

SAN FRANCISCO THINKS THIS WOULD LOOK BETTER AS A LAKE.

The lower end of the Hetch Hetchy Valley, in the Yosemite National Park, which San Francisco proposes to dam and convert into a reservoir for the city's water supply. The scheme involves about 500 square miles of the public domain.

and quotes an estimate placing the value of the water-power rights involved at $45,000,000. "This is one of the boldest grabs engineered on the Pacific Coast since the timber thieves were run to earth," declares the Memphis *Commercial Appeal*. Among other papers from various sections of the country that join in the protest against this concession we note the New York *World*, Jersey City *Jersey Journal*, Milwaukee *Journal* and *Free Press*, Indianapolis *News*, and Louisville *Courier-Journal*. "The milk in the Hetch Hetchy coconut," remarks *The Courier-Journal*, "seems to be that San Francisco realizes the advantage of a free government grant." And the same paper goes on to say:

"San Francisco is ready enough to spend money on other things for herself that are not nearly as important as a water-supply. She has also shown very little consideration for the feelings of the rest of the country in the matter of Japanese land-holders. What good reason exists for making her a present of a cherished and valuable public reservation now under governmental control? Has San Francisco deserved it of us?"

The Indianapolis *News* notes that in the past "four Secretaries of the Interior have denounced the Hetch Hetchy water scheme," and that Secretary Lane, who favors it, "is an Oakland-San Francisco man." Finally, the case for the opposition is thus summed up by the Milwaukee *Journal:*

"It seems sufficiently evident that the house has not yet waked to the idea that in the people's view graft is rapidly coming to mean every form of privilege which taxes the many to enrich the few.

"Let it be remembered that there is no issue of forcing San Francisco to do without a sufficient and good supply of water. The question is whether San Francisco shall do what every other city is compelled to do; that is, get its water from the best available source and pay the cost, or whether, for the benefit of a single city of less than half a million, a public park set aside for the public more than twenty years ago shall be diverted from its present use to save San Francisco money. A single city is asking the whole nation to sacrifice a cherished possession and delight in order to help it out with its financing, and the House of Representatives has not been able to see that this is graft."

On the other hand, we do not have to go to San Francisco to find newspapers championing this bill. Thus the Chicago *Post*, which formerly opposed the Hetch Hetchy scheme, thinks that the bill in its present form has been shorn of its objectionable features and deserves to become law. Says this paper:

"Regret as we may the invasion of a national park and the flooding of a lovely valley, there can be no reasonable doubt that the Hetch Hetchy issue has reached as fair a settlement as has ever been worked out in any similar problem. . . . Every amendment demanded by the forestry, geological survey, reclamation, and other Federal officials has been granted. The bill is now a government affair instead of a narrow, selfish San Francisco project.

"Furthermore, investigation has convinced such authorities as Mr. Pinchot that the supposed choice of another water-supply than the Hetch Hetchy Valley really does not exist for San Francisco. Pinchot believes that the city must have water, and might get it, as has been said, from other valleys. But he is now convinced that this would be but a temporary solution, and that for the sake of the irrigated lands of California the water must come from the Hetch Hetchy basin, where it is now going to waste. 'There is not enough water to go around, judging by the State's future needs.' . . . . . .

"The twelve-year fight, however, has not been in vain. The 'water-grab' feature of the proposed bill has been knocked out; the protection of the adjacent forests in the Yosemite Park has been made sure; the rights of the public to visit the new lake have been protected. Above all, the sound general principle that only acute public need can justify park invasion has been pretty well established."

Among other papers siding with San Francisco we find the Kansas City *Star*, Washington *Times*, and St. Louis *Republic*. *The Star* and *The Times* are both convinced that the private water company now supplying San Francisco with water is secretly instigating much of the opposition to the measure.

OPPOSITE VIEWS OF WHAT THE TARIFF WILL DO TO US.

Again, San Francisco's side of the case is thus presented in a letter to the Providence *Journal* by John R. Freeman, an engineer of distinction who argues that transforming part of the Hetch Hetchy Valley into a lake will make it "even more beautiful than it is to-day," and more accessible to the public. We read in part:

"The Hetch Hetchy is off in one corner of the large reservation within which lies the Yosemite Valley, twenty miles distant, and since its beauties are on a smaller scale and less varied than those of the Yosemite and the road to it difficult and not particularly interesting, comparatively few tourists have visited it; moreover, as I can testify from personal experience, in early summer and midsummer the mosquitoes, which breed by millions in its swamps, make a night's rest in the valley or a stroll in the tall grass most uncomfortable. . . . . .

"The lands which the city seeks to acquire, and in return for which it gives the public extra scenic roads and new highways which will cost the city about a round million dollars, are largely steep granite slopes and talus, of no particular value for any purpose and which form such an insignificant part of the full height of the cliffs that their submergence in the proposed lake will not detract from the apparent height, but will enhance it by reflection. . . . . .

"It is asserted that there are plenty of other water-supplies to be had if the city would only pay for them, but the facts are, as verified by a board of army engineers which last year, and also in the previous year, visited the valley, that the development of the least expensive of these alternatives would cost $20,000,000 more than to develop the Hetch Hetchy and be not nearly so good. . . . . .

"The power that the city may develop from the water in the aqueduct on its way to the city is merely a by-product, and the power opportunity which the city proposes to utilize is without commercial value, except through the millions of dollars first to be spent in miles of tunnel-aqueduct and at the great masonry dam."

Turning to the San Francisco press, we find *The Chronicle* predicting the bill's passage by the Senate "either during the present or the regular session," and going on to say of its opponents:

"Some of the Easterners were evidently moved by a desire to 'cinch' San Francisco by saddling our people with enormous unnecessary cost in our acquirement of water, and particularly object to our lessening that cost by the sale of any surplus power or water which we may develop. We are planning for water for a century to come. The Government insists that we shall develop rapidly in order that power and water may be promptly put to beneficial use. Necessarily that will produce a surplus beyond the requirements of our present population, and still there are those who would in all possible ways hamper us in disposal of any surplus pending the increase of our population."

HUERTA'S PACIFIC MESSAGE

A VINDICATION of President Wilson's Mexican policy is seen by some in the conciliatory message of Huerta to his Congress. A defiant message might have roused popular feeling in Huerta's favor, made him a national hero, and insured his reelection, but it would also have strained still further the relations between Mexico and the United States. So he judiciously mixed a little defiance with a little conciliation, and the Washington correspondent of the New York *World* reports that those close to the Wilson Administration read it with a feeling of relief. Many of our editors find the message unimportant and only significant because it is "encouraging in its pacific tone." The promise to spare no effort to guarantee a free election next month, the emphasis on the Provisional President's expectation of approaching peace in Mexico, and his statement that "negotiations have not yet been broken off" with the United States, are pleasing features of the message. Less agreeable to American editors are the insistence upon our responsibility for continued disorder in Mexico, an effort to draw a distinction between the attitude of "the Government of the United States" and that of "the people," and an intimation that American war-ships will not be expected to remain in Mexican waters after the expiration of the present term of authorization on October 25. Considering all these things, the New York *Journal of Commerce* sees in the message "a vacillating between waning resentment and an evident desire for reconciliation, which indicates that those negotiations may not have been in vain."

President Huerta's peace pledge was especially pleasing to American ears, to judge by the comment of our press, since his mention of a "successor" is taken as an intimation that he will not be a candidate for reelection. He said in the opening paragraphs of his message:

"I will spare no effort and no sacrifice to obtain the coveted

peace and to guarantee fully in the coming election the free casting of the ballot.

"You may be sure it will constitute the greatest possible triumph for the interim Government to surrender office to its successor if the latter, as is to be expected, enters upon its functions with public peace and order an accomplished fact.

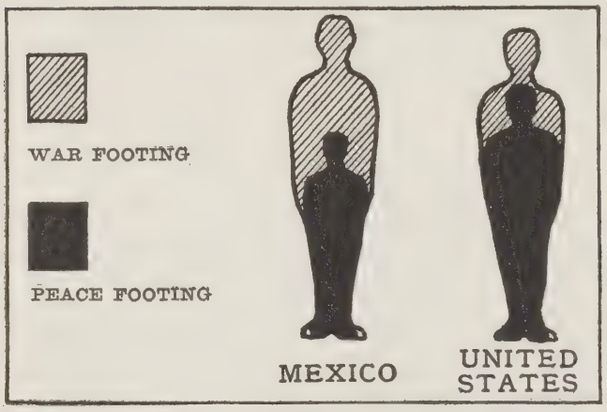
"Never, perhaps, has an executive appeared before Congress, in the fulfilment of his constitutional obligation of giving periodically an account of his acts, under circumstances more momentous than the present ones. The fratricidal struggle that has been draining the nation's blood is, fortunately, if such a word can be used in connection with a contest between brothers, on the point of terminating, thanks to the unremitting efforts of the glorious Federal Army, on which no sufficient amount of praise can be bestowed.

"But in addition to that struggle, the tenseness of our relations with the Government of the United States of America, altho, fortunately, not with the American people, has focused universal attention upon us and has subjected us to not a few undeserved embarrassments and has retarded the complete and definite pacification of the Republic.

"Inasmuch as this is a matter of a delicate nature, and as the standing committee of Congress and the entire nation have been informed as to the state of negotiations, which have not so far been interrupted, I have only to say that the Government has well-grounded hopes that an early solution will be found for the difference which just now holds in suspense the relations of good and long-standing friendship, destined, we hope, to bind us for the indefinite future with our powerful and civilized neighbor."

If Provisional President Huerta carries out his purpose, remarks the New York *World*, "almost everybody should be satisfied." Yet the New York *Evening Sun* finds in the message "little encouragement" for hope of his eventual compliance with the program laid down by our own Government:

"Huerta refrains equally from concession to American wishes and from expressions of opposition that could in any way block the road to subsequent yielding or compromise. While he avoids all expression injurious to the United States, his observations continue to voice the Mexican Government's dissatisfaction with our course and its concern as to possible American encroachments upon its sovereignty."



Population	13,607,259				91,972,986

Mexico may find some comfort in this diagram and table from Chief of Staff Leonard Wood's annual report, which seem to place the military strength of Mexico and the United States practically on a par. The militia will also be interested in the statement that we have no reserves.

TWIN MILITARY POWERS.

In the opinion of *The Times*, the message means little. It "reveals no new trait of Huerta's political character, throws no new light on the internal situation." The Democratic *World* and the Republican *Tribune* take equal pains to inform the Provisional President that he errs in trying to distinguish between the Government and the people of the United States. As *The Tribune* puts it: "The obvious implication of his words, that there is a difference between the attitude of this Government and that of this people toward Mexico, must be unhesitatingly and unequivocally disclaimed." *The Tribune* and *The Sun* agree that "General Huerta's suggestion that American naval vessels should be excluded from Mexican waters after the expiration of their six months' leave of entry, is technically in accord with international law." But *The Tribune* observes that whatever Huerta says, they are likely to stay there as long as they are needed for the protection of American citizens. And *The Sun* refuses to take Mr. Huerta too seriously—"it is safe to say that Mexico intends no threat or hostile purpose by Huerta's war-ship hint, for none at the present moment can be less anxious for war with this country than is the Huerta Government."

"Negotiations have not been broken."—Huerta.
—Bowers in the Newark *News*.

DARK DAYS FOR CONSULAR SPOILS

THE FINISH of the spoils system in the Consular Service, after a crusade of several years, led by organizations interested in import and export trade, is discerned by many in President Wilson's thirty nominations for consular posts. Twenty-eight of the thirty appointees are in the service and are being promoted, while the remaining two have qualified by passing the required examinations. But the praise for the consular appointment policy is mingled with criticism for the more "practical" kind of politics seen in the selection of Ministers and Ambassadors. It is all very well, say some, to act on the "merit plan" with the consuls, and, as long as the country does not provide embassy residences, it may be expedient to appoint party men of sufficient means to head our foreign posts; but why shouldn't the diplomats, especially the minor ones who are just above the consuls in rank, be treated with the same civil-service courtesy? And there are those unkind enough to hint that if it were not for the pressure brought to bear on the Administration by merchants' associations and by commercial influences generally, the consular appointments would have been made precisely, they say, as the diplomatic were engineered. Men of the consular class, it is shown, are practically commercial agents, and it is a matter of national business interest to continue the advanced efficiency of the service, which showed the first signs of it under President Roosevelt and Secretary of State Root, was maintained by President Taft, and is loyally fostered, according to the New York *Journal of Commerce*, by the present Administration, altho—

"Some doubts began to be felt on that point when the Presi-

dent's diplomatic appointments showed a consistent disregard of past service and when the fitness of the individual appointee, in one or two cases, was open to very serious question."

That some of the Democratic members of Congress are "bitterly disappointed" because the consular appointments do not include "favorites" for whom they have been working, is remarked by the Chicago *Record-Herald* (Ind.), which predicts, nevertheless, that the President's nominations are "certain of confirmation" because "there is not a constituency which would back up a Senator in a fight on the merit system in the consular service." Again, it is most gratifying to the St. Louis *Post Dispatch* (Dem.) that the Administration has made good "its pledge to respect the civil-service ideal," and it hopes "that hereafter the same ideal will be more rigidly adhered to in respect to the diplomatic service," but in this connection the New York *World* (Dem.) explains:

"The diplomatic service stands on a footing quite distinct from that of the consular service. In the nature of things a United States Ambassador to Great Britain or Mexico must represent the existing Administration and be in sympathy with its policies. It is not to be supposed President Wilson is under any moral obligation to keep officials in the diplomatic service because they were appointed by President Taft or President Roosevelt."

Of like mind the St. Louis *Republic* (Dem.) points out that "such a change in diplomatic ideals as marked the transition from the 'dollar diplomacy' of President Taft to the humane diplomacy of President Wilson requires a new set of representatives," while it adds with an eye to thrift:

"And then, too, the diplomatic service, with its meager salaries and heavy financial demands, makes it necessary for one who would follow it to punctuate his service with periods of financial recuperation."

But the New York *Times* (Ind. Dem.), recognizing that "the maintenance of the integrity of the consular service is an acceptable half-loaf," says:

"It is a pity that the same disregard of political influences could not have been shown in the appointments to at least the less important offices in the diplomatic service, and the good work of men who had given many years of their lives to the upbuilding of that important branch recognized and encouraged."

The regret of the Cleveland *Plain Dealer* (Ind. Dem.), too, is that "rich men wholly without special training appear necessary as the nation's highest representatives abroad until long-desired changes have been wrought." Quite different is the tone of the New York *Tribune* (Rep.), which, under the caption "Something Saved from the Looters," admits that the country ought to be thankful for "the self-restraint which President Wilson has exhibited" in his consular reassignments, which are made in accordance with "the provisions of the executive orders which protect the consular service from political looting." Then it calls attention to the fact that, in the diplomatic service, where the protection given extends only to the appointments in the grades of Secretary of the Legation and Secretary of the Embassy, the spirit of the merit system has been entirely ignored, which causes it to say:

"How much more to the Administration's credit it would be if the vital spirit of the merit theory had been lived up to in the entire foreign service instead of the mere narrow letter!"

Putting aside all vain regrets on this score, the Springfield *Republican* (Ind.) indicates the way before the diplomatic service, saying:

"It will rise to the efficiency of the consular service and become as attractive in tenure of office and prospect of promotion to the highest places only when Congress makes it possible for men without great wealth or millionaire wives to aspire to first-class ambassadorships. Public sentiment must force Congress to provide the official residences in foreign capitals necessary to that end. If public sentiment remains indifferent, nothing will be done, and it will be idle to expect President Wilson to attempt the impossible, in placing the upper levels of the diplomatic service entirely beyond the reach of millionaire contributors of campaign funds, ornamental prose-writers, and those various nondescript personages whom it becomes politically expedient to 'recognize.'"

FOREIGN COMMENT

EUROPE ON MR. BRYAN

THE OLD WORLD, used to such formal diplomats as Bismarck, Disraeli, Nesselrode, and their latter-day imitators, can not understand those of our time and our country. Mr. Bryan's method of taking his ideas to the people is beyond them, and, like many a critic, what they can not comprehend they ridicule. The gravest Berlin organs refer to our Secretary of State in terms of the circus and comic-opera stage. He is called "a variety star" whose Chautauqua "antics" are "astounding." Then, too, it seems to them incongruous that the foreign affairs of a great world-Power should be in the hands of a pacifist. The *Intransigeant* thinks it leads to strange contradictions:

Copyrighted by the International News Service.

THE TENT

Where Mr. Bryan's lecture followed the performance of the "Tyrolean yodelers."

"Mr. Bryan is a sincere disciple of Tolstoy. His dearest dream is of universal disarmament. He has devoted a large part of his life and of his great intellect to the elaboration of arbitration treaties that all Europe has not yet adopted. If he had his way all the faithful followers of Tolstoy would refuse to undertake military service as contrary to the law of Christ."

Mr. Bryan is simply following the lead of his chief, "the pacifist President of the United States," and yet:

"See how these peace-loving democrats are already threatening Mexico with war! They also send a ship of war into Venezuelan waters, and in accordance with a new project of Mr. Bryan a protectorate over Nicaragua is to be imposed under threats of invasion, as well as over the other little states of Central America.

"What dreadful fellows these pacifists are!

"But we must not laugh. This good example teaches us that to read Tolstoy is one thing and to conduct the affairs of a great nation is another. When a man rises to power, he finds himself face to face with realities which were but vaguely perceived when they were theorized about in his hours of leisure."

THE YODELERS.

This gentle bantering, half condoning in temper, is not shared by all the Paris papers, and we see condemnatory invective in one of the most important of them, the *Temps*, which speaks as follows:

"Talleyrand, Metternich, and Gortschakoff would have looked askance at Bryan's initiative. In our skeptical times, when diplomats are no longer taken seriously, his venture is still more dangerous. Bryan's tour is another proof of the small consideration attached to a political career beyond the Atlantic. In the United States this career is the meanest of professions.

"Europe, however, does not properly understand that America is being transformed more rapidly than any other country. The enormous immigration has swamped the old-time American ideals, which are now found only in towns like Boston. One can imagine what an American of the old race of Henry Cabot Lodge, or Olney, would have felt about Bryan's circus spectacle, but there is an abyss between the old-fashioned Americans and the popular masses.

"The American Man in the Street takes as a matter of course what shocks us. That is why the American Government often appears to us a monstrous paradox.

"When one has followed the tenor of Bryan's political career one is less surprized to see him in a circus than in a ministry. The only thing we could not conceive of is why this loud-voiced orator was ever called to direct the Union's diplomacy. The United States, like Russia, contains such an accumulation of human forces that it is able to afford to make such an experiment as this.

"Washington now has on hand a serious conflict with Mexico, difficulties with Japan that are full of pitfalls, and delicate negotiations with Latin America.

"At such a time the Secretary of State goes to figure at a music-hall between an acrobat and a juggler and pocket half the takings.

"Old Europe, which has seen much, never expected such a turn."

The German papers are equally hard on Bryan as representing American diplomacy in foreign affairs. The *Hamburger Fremdenblatt*, which deals with foreign affairs and particularly with Germany's commercial interests in Latin America, thinks that Mr. Bryan has bungled over the

situation in Mexico and remarks: "The muddle goes on merrily, or rather tragicomically. It can not be doubted that each party to the dispute fears the other." The *Tägliche Rundschau* (Berlin) shifts the burden from the shoulders of Mr. Bryan to those of the President, and ironically styles his Mexican message "a masterpiece — not destined to yield him much renown."

Of Mr. Bryan's "peace dreams" *The Evening Standard* (London) says that it is very deplorable that American diplomacy "is left to a group of politicians who in foreign affairs are the most amateurish of amateurs, with a Secretary of State at the head of them who is too much occupied in delivering popular lectures to devote all his time to his official duties." This paper further makes the following sarcastic remark on sports and diplomacy in our country:

"The United States, as we have all learned lately, distrusts amateurishness in sports. It knows that if you want to win in any contest you must rely on the expert and take care that this expert knows all the details of his business. It is therefore rather surprizing that the United States does not apply the same admirable principle to the conduct of its public affairs."

Of the "moral force" which Mr. Bryan would fain bring to bear to settle foreign difficulties without firing a shot, *The Pall Mall Gazette* (London) speaks in these terms:

"The application of moral force consists in urging all the citizens of the United States in Mexico to abandon their occupations and to clear out of the country, and in proposing measures which must rest on physical force for preventing the entry of arms and munitions into the country either for provisional President Huerta or for the rebels. We shall watch the result of the steady pressure of moral force with much interest, but without much belief in its success.

"We have preached many times during these past troubled months that physical force not backed by moral force is both brutal and futile, but we are compelled also to accept the converse idea that moral force not backed by physical force is no less futile, and in consequence is apt to become even more brutal.

"The golden dreamers of The Hague and of the Capitol shrink from recognizing a fact so fatal to their theories. We shall see what Mexico has to teach them."

MEXICO RILED

THE AWFUL CHARACTER of our President is not fully realized until we turn to the Mexican press. He is an anarchist or something in that line, we learn, because he refuses to recognize legitimate government—meaning Huerta's. He is an ally of bandits, the Zapata brothers, because he stops the supply of arms to the Mexican Army. As if this were not enough, he is taunted with being a "clergyman" in his idealistic dreams of statecraft. His character is contrasted bitingly with that of the noble and high-minded Gamboa, Huerta's Foreign Minister, who hurled back with scorn the attempt to purchase Mexican honor that was hidden in the suggestion that the Wilson peace plan would be followed by a loan. "Huckster" and "bunco-steerer" are the epithets used in this case. Without further delay, let us turn to the words of the *Republica*, of Tampico, which lifts its terrible voice in wrath against a foreign ruler, who, it says "dispatched Lind from Washington to insult us," and continues in the following excited strain:

"Never in the black record of human perfidies is a parallel case to be found!

"The classic dictum about the lion's share, 'quia nominor leo,' we do not all of us consider to be fabulous, and we can never believe that any one in practical life, simply because 'his name is lion' can erase from the table of fact the stated rights of other people and with the effrontery of a bunco-steerer arrogate to himself those which by the laws of nature are in another inalienable and inviolable.

"But here, as upon a mountebank's stage, the boards whereon is enacted that tragicomedy, the 'diplomacy of the dollar,' rises the figure of the Puritan Wilson, and before the startled eyes of an auditory which comprizes the whole world changes the tone and color of the representation, abandons the soft euphemisms of the diplomatic ritual, and sharply and dryly assumes the rôle of those bandits who demand 'your money or your life!' He thus produces an unexpected dénouement in which no knightly sword, but the poinard of a bravo is employed to put an end to the dramatic conflict. . . . . .

"Mr. Wilson has attempted traitorously to curtail our sovereign independence, and to buy outright means for its destruction through the farcical insolence of his confidant, Mr. Lind, in conflict with the patriotic integrity of Mr. Gamboa.

"He tried to buy it and to buy us.

"We can give no other explanation of his offer of a loan of millions, as conveyed through the second note of Mr. Lind, in such honeyed terms as were more suitable on the tongue of a common huckster, terms only employed by men who have lost all personal dignity.

"Minister Gamboa knew how to repel the brutal attack thus directed against our national honor and blew a blast clear as that of an epic clarion.

"Our illustrious Foreign Minister seemed to us indeed to rather overstep the mark in his tone of diplomatic courtesy.

"Neither Mr. Wilson nor his minion Lind deserved it.

"The only answer which should be given to these outrageous proposals is contained in the defiance of the Old Guard at Waterloo."

The *Courrier du Mexique* (Mexico City) charges President Wilson by implication with encouraging Zapatism, by his embargo on the exportation of American arms for Huerta's Army, and we read:

"However little he may know Mexico, Mr. Woodrow Wilson can not have failed to hear of the Zapata brothers, of Genovevo de la O, and of the thousands of brigands whom they command. To deprive the Mexican Government of arms and ammunition is to incapacitate that Government to protect the population of whom it has charge against the outrages of those marauders; it is to deliver up the country, its great cities, their riches, their thousands of inhabitants, all of us to the ferocity of the Zapatista bandits. Is that what Mr. Woodrow Wilson wants?"

The American President is a mere preacher of sermons, continues this paper, which speaks as follows of his Mexican message to Congress:

"In form, it is a sort of sermon, a homily. It savors more of the 'clergyman,' like Mr. Wilson's father, than of the professor of history which he himself was for so long at Princeton. For a historian, called on to study at close range the historical and social antecedents of an event, to analyze thereof the causes and circumstances, would have judged the Mexican situation otherwise than he has judged it."

As a mere idealist, a dreamer and doctrinaire, our Chief Magistrate fails to see things as they really are in Mexico, declares the *Pais* (Mexico City). He is a Jacobin, reveling in abstract thought as an exotic in a country where Jacobinism is unknown. The Jacobin is a man who despises a legitimate government, its principles and its authority, and the Mexican Government is legitimately constituted, as legitimately, we are assured, as that of the United States in Washington. But Mr. Wilson is false to his own as well as to the Mexican order of things, and stands among other American statesmen like a strange and incongruous growth. Hence we read:

"Woodrow Wilson is no doubt a sincere believer in democracy. He has formed for himself a perfect type of social and political institutions, in which all citizens possess and practise exquisite rules of culture fashioned from the gold and marble of Truth, Justice, Liberty, Honor, etc. Woodrow Wilson is dominated by that fixt idea. The day he abandoned it, he would undergo a change of nature; he would no longer be Woodrow Wilson.

"For such a man, who does not live in this world of miseries and wickednesses and crimes and brutal violations of laws human and divine, recent events in Mexico, especially the Ciudadela cuartelazo and the killing of Sres. Madero and Pino Suarez, must be inexplicable, barbarous, worthy of a land of savages. And with his abstract ideas of a free election the mere probability that General Huerta may be a candidate for the presidency of the Republic makes him furious to the point of paroxysm, wounds his most delicate instincts as a puritan of democracy."

ALBANIA BETWEEN TWO FIRES

ALBANIA, with a population of 2,000,000—according to the last returns—is now on the eve of great changes. The Powers have decided that it shall be independent, and the question of who is to be its King or Prince is occupying the minds of diplomats. It already hoists its own flag—a black

A BROKEN LULLABY.

EUROPA—"Oh hush thee, my baby!"
THE INFANT ALBANIA—"How can I hush me with all this infernal noise going on?"
EUROPA—"Well, you must do as I do, and pretend you don't hear it." —*Punch* (London).

eagle on a red ground. But it is significant to see that in the northern cities of the province side by side with this ensign flutter the colors of Austria, and in the maritime towns opposite Otranto floats the red, white, and green of Italy. For Austria and Italy are both attempting to make Albania their own sphere of influence with a view to ultimate annexation, declares Mr. P. Ronzy in the Paris *Temps*. This writer tells us that the Austrian Government spends millions in promoting the spread of Austrian influence chiefly by means of the Catholic Church. Of this propaganda we read:

"Austria believes that the hour is come, or at least is approaching, for her to reap the fruit of a propaganda in which neither money nor pains have been spared. This propaganda, Austro-Catholic in the north of Albania, Austro-Mussulman in the South, commercial on the coasts, anti-Slav and anti-Italian, is the expression of a policy equally tenacious, persistent, and subtle.

"In the north this propaganda takes a Catholic form, for Austria claims the protectorate over all Albanian Catholics, who are especially numerous in the northern districts. In 1855 the Jesuits, supported by funds from Vienna, established their famous seminary at Scutari. An actual agreement was entered into by Francis Joseph and the Vatican on this subject, the former engaging to pay down a sum of 8,000 florins in gold and guarantee the establishment 3,000 florins a year."

The opening of this seminary was the signal for a Mussulman riot, but the Turkish Government put it down, and since then the work of the Jesuit educators has flourished. But in the Mussulman regions Austria changes her tactics, says Mr. Ronzy, who proceeds:

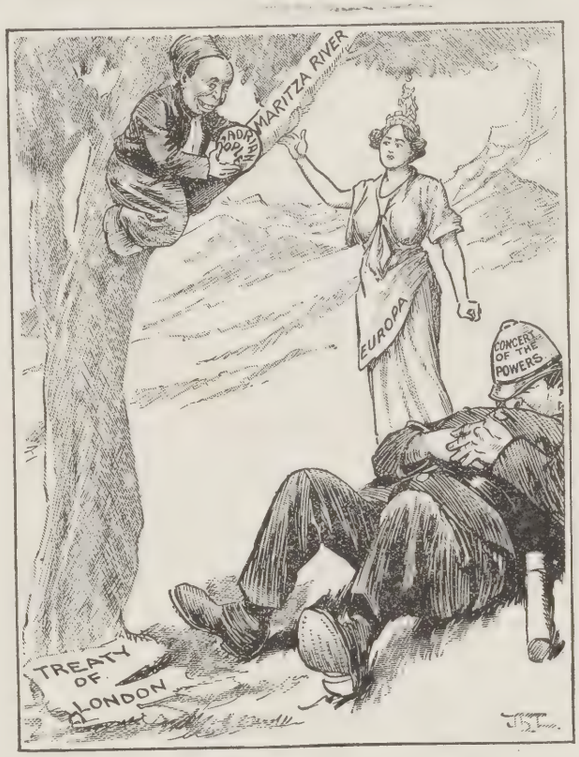
"In Central and Southern Albania another method is adopted. There the Catholics are not numerous, and to establish institutions like those in the north would incur the risk of alienating the Moslems and the members of the Orthodox Greek Church, who form the majority of the Christian population."

Austria has a hard row to hoe in this part of the province, but she makes friends with the Moslems, who are anti-Slav, while conciliating the Orthodox churches, which look to Russia for protection. But schools are founded with Austrian gold. "In short," concludes this writer, "Austrian influence is strong in the north through the influence of Catholicism; in the south and center it is maintained by trade relations. As a general thing, Austria's prestige in Albania stands like a majestic edifice which no storm can shake."

Austria meets in the Balkans, however, a formidable rival in the form of Italy, which is connected with Albania by blood-relationship:

"The Italians have excellent intermediaries in their efforts to ingratiate themselves with the Albanians, for there are Albanians in Italy. It is well known that during the fifteenth and sixteenth centuries many Albanian families emigrated to Southern Italy, to Apulia, Calabria, the Abruzzi, and Sicily. These immigrants, in number about 50,000, have preserved their traditions and their language, and frequently renew relations with the land of their origin. Crispi was an Albanian of the Sicilian group. These Albanians of Italy have played such an important part in the development of national ideas in Albania as the future historian of the Balkans can not overlook."

It was Italy that gave to Albania her first newspapers, which were originally written in Italian, such as the *Idea Albanese* and *Nazione Albanese*. Moreover, the Italians have more tact than the Austrians. "This tactlessness, especially in German-



EUROPA—"Now then, youngster, drop that apple and come down, or I'll call the policeman."
YOUNG TURK—"Not me, Mum! You can't rouse *'im!*" —*Daily Chronicle* (London).

Austrian emissaries, is extreme," declares Mr. Ronzy. "I met one of them in the course of my travels who never approached a native without shouting out in Albanian, 'Arnoefte Austria' (Long Live Austria). You may guess what effect he produced." How different is the smooth Machiavellism of the Italian, he says:

Copyrighted by the Topical Press Agency.

THE WORLD'S LARGEST FIGHTING SHIP, THE NEW JAPANESE CRUISER *KONGO*, AT PLYMOUTH.

"The Italian influence asserts itself in a manner totally different from the Austrian influence. Instead of openly imposing itself upon the people by force, it gradually twines itself around its object with adroitness, courtesy, and pliability. The Italian has a friendly address which the Austrian, however much he wished it, could never attain. It is by this means that the Italian gains a footing on the land, turning aside obstacles with unparalleled dexterity and never knocking his head against them. No clash and no friction appears to be his rule of procedure."

Italy also has its schools in Albania, and they are more popular than those of Austria, and freely admit all nationalities and creeds. As Venice formerly held possession of Albania, so it seems natural, observes this writer, that Italy should put forth a claim to a region to which she is bound by a sea-borne commerce as well as by ties of blood. Of the commercial activities of Albania previous to the Balkan War, Mr. Ronzy writes that "Italy seems to have recognized what a great field of commerce this country would yield her, ever since it was under the sway of Venice," and he gives the following figures to support his statement:

"If we remember that before the period of her troubles, Albania, now sorely reduced, exported under Turkish rule $3,000,000 worth of goods and imported goods to the amount of over $6,000,000, that she exports $400,000 in furs, a large portion of which goes to Italy, that her olive-oil, to the amount of $500,000, goes most of it to Italy, while her wool, of about the same value, is taken by the Peninsula, and that Italy furnishes her with grain, wines, spices, and dried fruit as well as with printed fabrics, it will easily be seen what Albania's importance will be when her facilities of communication are improved by foreign capital and enterprise."—*Translation made for* THE LITERARY DIGEST.

JAPAN'S COLD SHOULDER TO MEXICO

JAPAN'S REFUSAL to receive General Felix Diaz as official representative of the Mexican Republic has stirred up considerable talk in Tokyo. Such journals as the Tokyo *Nichi-nichi*, the Osaka *Mainichi*, and the Tokyo *Hochi* regard the act of the Government as another instance of the timorous, inefficient diplomacy which they think it is devoutly following in dealing with America. On the other hand, more conservative journals, such as the Tokyo *Jiji*, *Chuo*, and *Kokumin*, while regretting the Cabinet's failure to welcome the Mexican envoy, discuss the matter in more temperate tones. All agree that Mexico's good will toward Japan is sincere and worthy of hearty appreciation. Altho the Japanese Government's suggestion that the Diaz mission be postponed is couched in the most courteous terms and based upon plausible reasons, there is no doubt, the Japanese press believe, that the Cabinet was obliged to take this course for fear that the cordial reception of the embassy might hurt the feelings of the United States. "Thus," the *Hochi* declares, "the Yamamoto Cabinet made itself a laughing-stock by disregarding both its own dignity and the sincere friendship of the Mexican people." To the *Nichi-nichi* the motives of the Foreign Department in requesting Mexico to postpone the Diaz mission appear childish, especially when the avowed object of the embassy is to return the courtesy of Japan, which sent a special envoy to Mexico on the occasion of the centenary celebration of Mexican independence. "If the Mexican envoy," this journal argues, "had any political purpose in view, Japan might be justified in declining to receive him, but the Government at Mexico City has repeatedly asserted that the mission has no political meaning." Further:

"The authorities say that they do not want to be made a catspaw of the Mexican Government in its struggle with the United States; but why should the United States feel offended by Mexico sending an envoy merely to reciprocate our own courtesy? And why should we not welcome such an envoy with all the cordiality of which we are capable? We need not worry ourselves as to what ulterior motives the Mexican Government may harbor in dispatching the embassy. We can take the envoy at his word and treat him accordingly. Our unnecessary diffidence will win neither the respect of the United States nor the good will of the Mexican Republic."

The Tokyo *Asahi* dismisses as absurd the rumor that General Felix Diaz intended to approach the Mikado's Government with a view to negotiating an alliance, and says:

"An alliance between any two nations must be an outcome of very intimate intercourse extending over many years. Without mutual knowledge and trust as well as the identity of interests, no alliance is possible.

"The Mexican people seem to have great confidence in the Japanese, but we must frankly admit that our people know very little of our republican neighbor across the Pacific. Frequent exchange of missions will no doubt enable the two nations to become more friendly and better informed of each other's conditions. Viewed in this light, our Government's failure to accord General Diaz a hearty welcome is highly regrettable.

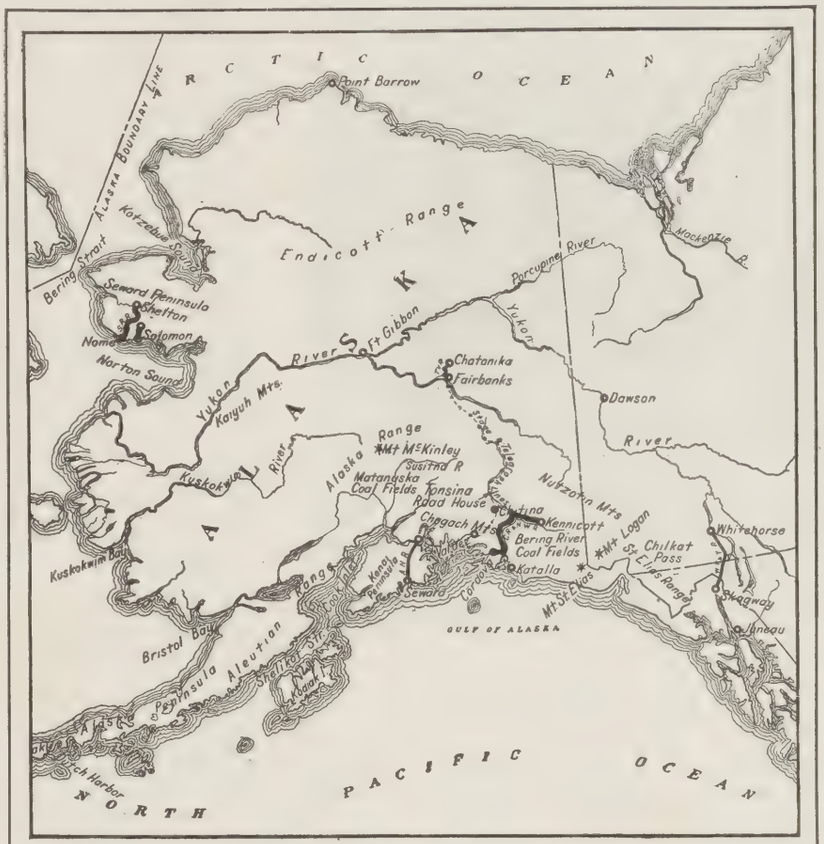
"The peoples of Mexico and Japan are bound to become good friends. It is a traditional belief among the Mexicans that the two peoples came from the same stock. Physically they have unmistakable resemblance to each other, while their customs have much in common. All Japanese travelers testify to the fact that in the country districts of Mexico, where the native Mexicans constitute the majority of the population, the Japanese are welcomed far more cordially than any other people. Many Mexican names sound exactly like Japanese names. Is it a mere flight of imagination to say that long before Date Masamune, a hero in our medieval history, sent an envoy to Rome by way of Mexico, some adventurous souls of our country had migrated to Central America and there became the ancestors of the present people of Mexico?"

The *Chuo* regrets that Japan can not feel at liberty to receive the Mexican embassy on account of the ill-feeling existing between the United States and Mexico: "Japan desires to be friendly with Mexico as well as the United States. It is much to be hoped that Mexico and the United States will both be our friends. Mexico would do well to recognize that the United States is still her friend and well-wisher."—*Translation made for* THE LITERARY DIGEST.

SCIENCE AND INVENTION

WANTED: A RAILWAY SYSTEM

A VAST COUNTRY of rich mineral wealth, fine water-power, extensive coast-line, and untold future possibilities, but without a single railway line worth speaking of! This land does not belong to Turkey or Patagonia; it is the property of the United States of America, and its name is Alaska. According to an article contributed by E. E. Swergal, of the New York Central road, to *The Railway Age Gazette* (New York, September 5), more railway transportation is Alaska's crying need. "A definite and businesslike development program" is imperative for the Territory, and the first and most important item in this program is the construction of an adequate system of railways. The lines in present operation are: the White Pass and Yukon, built in 1898–1900, only 25 miles of it in Alaska; the Copper River and Northwestern (197 miles), and the Alaska Northern (70 miles), leading inland from points on the southwestern coast, and one or two short narrow-gage lines. Writes Mr. Swergal:



From "The Railway Age Gazette," New York.

ALASKA'S INADEQUATE RAILROADS.

Three or four little roads in a Territory twice as large as Texas.

"Regarding the pointed question as to who can best develop the transportation for the common good of all, it appears to be the consensus of opinion of the men who know the country best that the work should be continued by private enterprise, as has been permitted in the States, and with equitable financial assistance and regulation by the Government. The Interstate Commerce Commission now has jurisdiction in Alaska, and, considering the agitation that has been engendered by this question, there is little probability, if any, of corporation abuses being practised or even attempted in the future. Many of the railroads built in the States were liberally assisted by the Government; therefore, why should not assistance (stript of political and financial abuses) be extended to private railway enterprises in Alaska?

"As regards actual construction and ownership by the Government, some people raise objections, generally to the effect that the cost would impose an indirect and unprofitable burden upon the taxpayers of the United States proper, inasmuch as the development is wholly within Alaska and ostensibly for the direct benefit of its people. This primary objection sounds substantial at first thought, but when facts and figures are analyzed the results do not support it.

"It is commonly known that Alaska was purchased from Russia in 1867 for $7,500,000. Since then there has been taken out of the Territory not less than $350,000,000 in diversified products, mainly gold, copper, furs, and fish, a profit on the purchase of approximately 4,500 per cent. This profit has been absorbed in the national wealth of the United States through various avenues of commercial interchange. There remains in Alaska great potential wealth in the same products, and in addition thereto the anthracite and bituminous coal deposits are untouched, lack of development alone standing between the coal and the warming of homes and production of energy for industrial purposes along the Pacific seaboard of the United States. This coal will tend to lessen the cost of domestic and commercial fuel by reason of additional competition in the market."

As regards agriculture in the districts adjacent to railroads already built and proposed, Mr. Swergal expresses some doubt as to the successful production of grains; corn, he says, probably never will be grown because of the absence of long hot seasons. Wheat, oats, and barley have been experimented with for home consumption, but altho with some success, there is ever present the hazard of destruction by frost. Grass grows rapidly and in abundance during the early summer, and with proper attention sufficient hay can be produced for domestic purposes. The Government has established experimental agricultural stations in the districts susceptible to cultivation, but it remains to be seen whether or not grains can be grown with certainty. To quote further:

"As regards the climatic effects upon railroad operation in Alaska, experience has demonstrated that operation can be successfully conducted, and altho intermittent interruption has occurred on the lines already under operation during the winter months, the hazard and interruption have not been more serious, if as much so, as in the operation of lines during winter months through the mountainous sections of our Western States.

"Through the coast ranges of Alaska snow rotaries are necessary for operation during a portion of the winter, usually in January, February, and a portion of March. This necessity, however, will become less marked as the hazardous points are determined by experience, and fortified by sheds, fences, grade reinforcement, or other improvements. Beyond the mountain ranges trains are being successfully operated during the winter months with the aid of pilot-plows and flangers only, as the snowfall rarely exceeds two or three feet in the valleys, which is much less than the precipitation encountered, in the form of rain

or snow, along the coast. This disparity is accounted for by the prevailing warmth along the coast due to the influence of the Japan current.

"Regardless of obstacles encountered up to the present time in the maintenance and operation of Alaskan railroads, there is much hope for the future, as experience has demonstrated that all railroads, wherever their location may be, during early years of maintenance and operation, are subject to trouble in greater degree than is the rule in later years, when sufficient time has elapsed to permit of substantial adjustment through a gradual coordination of physical features."

Reverting to the question of government ownership, Mr. Swergal reminds us that the Government has expended millions of dollars and many lives in the military and civil administration of the Philippines, Hawaii, Porto Rico, and Cuba, with no substantial proof that its efforts have been understood and appreciated, and with no assurance of reasonable profit. Alaska, on the other hand, has contributed immensely to our national wealth, and there still remains vast wealth to be developed. Its settlers have undergone hardships, as did the pioneers in the early days of our Western States, and in return, as Mr. Swergal believes, they have been neglected, even imposed upon, by their Government. He goes on:

Photograph by Brown Bros.

PRINCE ALBERT I., OF MONACO.

In the laboratory on his yacht *Hirondelle*. The Prince stands at the left.

"Summed up, the burdensome results of national political quarrels and governmental indifference have fallen upon the people of Alaska to such an extent that many of them have been forced by idleness to leave the country, many have failed in their small business enterprises, mining development has been seriously retarded, and the development and extension of railroads discontinued. The present population does not exceed fifty thousand, including native Indians and Eskimos, and this in a country famed for its natural wealth and in extent of territory one-third [one-fifth?] of the size of the United States proper.

"What is needed as a remedy is the adoption by the Government of a definite and businesslike development program, embracing five general items: (1) Early development of railroads by private enterprise, assisted and regulated by the Government, or wholly undertaken by the Government. (2) Revision of mining laws, particularly coal-land laws, to permit of practical and early development. (3) More liberal appropriations to the army engineers (who have charge of highways and telegraph and cable lines), to enable them to effect a more rapid extension of trails, and for the substantial bridging of streams at dangerous fords. (4) A comprehensive plan for additional fixt aids to navigation along the coast. (5) Construction of fortified coaling bunkers for naval and merchant vessels. . . . The latter item is a gravely important one when we consider the possibility of an American-Asiatic war."

MUSIC BY WIRELESS

WHEN the *Hirondelle*, the Prince of Monaco's remarkable combination of yacht and scientific laboratory, entered New York Harbor on September 9, her arrival was made known to all wireless stations in the vicinity by a concert, the music being heard and enjoyed by all who were at the receivers of wireless apparatus. The "wireless piano" that was the source of this music is part of the wireless plant of the yacht, which is remarkable for its power and ingenuity. It is a German invention, but is controlled by a French company. We quote from an account in the New York *Herald* (September 11):

"Albert I., Prince of Monaco, sportsman and scientist of world-wide fame, arrived in the Hudson River yesterday morning on board the steam yacht *Hirondelle*, while melody from her wireless was wafted through the air. . . . . .

"This vessel of unusual type reached Quarantine on Tuesday night, her coming made known by the music which vibrated from the antennæ high on her masts. . . . The voice of this sea swallow was due to a pianolike attachment to what is considered the most remarkable wireless equipment which ever has come to this port. The notes may be heard over sea and land for many a mile. Several incoming vessels, including the *Grosser Kurfürst*, of the North German Lloyd line, reported hearing siren strains as they neared the coast, and the mystery is now solved.

"The *Hirondelle* last night at half-past nine o'clock gave a wireless concert, having first asked the *Herald* station to notify all vessels within range. There were popular selections, the 'Marsellaise' and 'America' upon the program. The music was heard by operators at wireless stations for many miles and at the Brooklyn Navy Yard and by persons who were permitted to put on the telephone head-pieces at the stations. The vessels within call thanked the *Hirondelle* for the entertainment. . . . . .

"Truly a vessel of wonders is this craft, where science reigns and equipped with appliances which have been used in fathoming the riddles of nature. Much of the apparatus employed was invented by the owner, and there are workshops and a well-equipped laboratory on board where his new ideas can be put in practise.

"All the electrical equipment represents the last word, but the wireless piano causes looks of astonishment to come upon the faces of operators ashore and afloat. The wireless system in use on the *Hirondelle* is the invention of Baron von Lepel, and the patents are controlled by the Compagnie Générale Radiotélégraphique of Paris. It employs a continuous current with a high pressure of 1,500 volts, which charges the condensers without a transformer. It has a revolving sparker, a series of small wheels. The spark is only a tenth of an inch in length and is always the same for the different powers. The whole apparatus is remarkably compact, for both the sending and receiving appliances easily are placed on one small table. . . . . .

"With this system, which is called an impulsive one, it is possible to get high-frequency oscillations. The vibrations are so many that often it is impossible for the ear to perceive them and the note to be heard. The inventor has put on the sparker another oscillatory circuit and a variable condenser. He can thus lower the frequency of the system. The use of a variable condenser in the second circuit makes it possible to get different frequencies, which may be tuned to musical notes. The variations are made by striking a bank of ten keys, arranged in the form of a keyboard of a piano.

"The operator, Pierre Boutteville, sitting at the table, can let his fingers stray over them and by certain adjustments can get twenty variations. This is a stock of notes enough for a Paderewski. From the wireless piano of the *Hirondelle* have come 'God Save the King,' national anthems, and even waltzes from such sprightly operas as 'The Merry Widow.'

"The Prince was highly amused when I told him of the sensation which the musical début of Mlle. *Hirondelle* had made in these latitudes.

"'It always causes astonishment,' said he, 'and we have been asked at sea if the music could possibly be made in this way. Yet it is all very simple. The harmony is produced as easily as playing on a piano. The system on board is really a remarkable one. Much better, in fact, than others, which are far behind the times and seem to be devoted to stopping progress. We are able to communicate fifteen hundred miles, and so, in crossing the Atlantic, are not likely to be out of touch with land for very long. There is one instance where we received messages from both sides of the Atlantic.'"

PLAYING THE WIRELESS PIANO.

POISONOUS LUMBER

WE ALL KNOW that it is dangerous to handle nettles, poison-ivy, poison-sumac, and other irritant plants, but it will be news to most to learn that this poisonous quality is present in the cured lumber of various trees, and may affect the carpenters and joiners who handle it. The subject is discust in a late number of *Prometheus* (Berlin) by Dr. Heinz Gräf, who says:

"The maladies occasioned by the handling of poisonous plants and woods are called 'phytonoses.' To these belongs the inflammation of the skin caused by touching poisonous sumac. This has the reputation of being so poisonous that its mere effluvium suffices to produce inflammation of the skin."

This belief as to the poisonous character of the effluvium is denied by Dr. Gräf on the authority of the scientific investigators Rost and Gilg, who were employed to determine the question in a suit for damages brought against the directors of the Berlin Botanical Garden in a case of alleged injury from proximity to poisonous sumac. The suit failed because the investigators showed, first, that affection by floating pollen-grains was impossible, since all the plants involved were female; and second, that the minute hairs on the glands and other parts of the plants were not self-shedding either at the beginning or the end of the period of vegetation. It was thus proved conclusively that for poisoning to occur the plant must be injured and the injured portion must come in contact with the skin of the person affected. Dr. Gräf continues:

"In every part of the poisonous sumac there is present a resin which even in minute traces produces inflammation. However, this skin-affection is quickly allayed by a saturated solution of lead acetate in 50 to 70 per cent. alcohol. The lotion is especially soothing to the violent smarting."

THE *HIRONDELLE*.

The Prince of Monaco's yacht, which carries a laboratory and a wireless piano.

Dr. Gräf also quotes the report of A. Nestler in the Annals of the German Botanical Society with reference to the poisonous characteristics of "amberwood."

"Two different kinds of wood are included under the term amberwood: the genuine East Indian or Asiatic satinwood, or 'silkwood,' and the satin hardwood or amberwood. The two are quite different in external appearance. Nestler succeeded in extracting the active substance only from the latter. This is a stearin-like substance soluble only in ether. A small quantity of it placed in contact with the skin of the under-arm, in the course of about five hours produced a tensely swollen yellowish blister surrounded by a red area of inflammation. After the bursting of the blister an ulcer remained which required four weeks to heal.

"Further studies were made by the same author on the irritating skin properties of 'cocobolo' wood.

"The poisonous substance is easily soluble in alcohol and benzol, less so in water. It is apparently an ethereal oil. . . . The placing of fine sawdust of this wood on the moist skin causes first a violent smarting. Following this, red spots or pimples appear, accompanied by redness and inflammation of that part of the skin, followed by scaling.

"Similar phenomena are caused, according to Nestler, by the plant *Cortusa Matthioli*, but they are even stronger, since blisters are produced. Touching the plants is enough to cause the irritation, and the infection may be transmitted to other persons by hands so infected. The bearers of the irritating substance in this case are the gland-hairs, as in the case of the primrose. This substance is a crystallizable sap which can be extracted from the gland-hairs."

The plants above mentioned are irritating in nearly all circumstances, but there are others which seem to require a special sensitiveness of the skin in order to be operative. Such an instance was reported by Kölsch of the sawdust of the Mexican blue-gum:

"A workman who was suffering from tuberculosis, and who later died from it, was attacked, after splitting this lumber, by an eruption of the under-arm which forced him to stop work. Others who did similar labor for years had no ill effects. In this case the tuberculosis may have created the disposition.

"It is obvious that joiners who have to work in satinwood, and gardeners who come in contact with poisonous plants must be guarded from direct contact of hands, arms, and head with the wood, the sawdust, and injured portions of such plants. It may

be possible by the help of chemistry to discover special lotions or washes which will neutralize the poison. Meanwhile, such maladies must be regarded as accidents whose victims should be put under the care of a physician, preferably of a dermatologist."—*Translation made for* THE LITERARY DIGEST.

A $5,000 PRIZE FOR TELEPATHY

A PRIZE of five thousand dollars offered by an Englishman over two years ago for satisfactory proofs of thought-transference is still unclaimed. The donor, who remains hidden under the signature of "A Business Man," contributes to *Bedrock* (London, September) an article entitled "The Truth about Telepathy," embodying some of his experiences in connection with this offer. In a recent article in the same review, Sir Oliver Lodge, Principal of Manchester University and a prominent member of the Society for Psychical Research, alludes to the proposed reward in the following words:

"The business man takes another line and offers a thousand pounds for proofs which will convince him. *He has, of course, no intention of parting with the money, and is quite satisfied that he can resist any temptation to be convinced.* . . . A thousand-pound note is a weird argument in Science. . . . To all wagers of this kind I trust that those connected with the S. P. R. will always turn a deaf and contemptuous ear."

To this "A Business Man" makes reply as follows:

"I do not know what evidence there may be of 'wagers'; but let me ask, in all seriousness, what are the reasons for making the defamatory statements which I have put into italics? They certainly are not true, if intended to refer to a case I have in mind; and they are unworthy of the Man of Science to whom, in all good faith, liberal payment was offered for particulars supposed to be available, but which he failed to supply. He had often declared that, to him, telepathy is 'perfectly clear and certain'; and nobody ought to doubt the sincerity of Sir Oliver Lodge's belief; but, requiring facts and not beliefs, I waded through volumes of 'records' to which he had referred me, and worked back to his first experiment with a square and a cross, as described by him in a letter to the editor of *Nature*, dated June 12, 1884. Being unable to find anything but statements that would not bear to be looked into carefully, or accounts of phenomena that had occurred under conditions in which trickery was always possible, I prest Sir Oliver Lodge for definite information, and finally got from him this gem:

"'I am surprized that you imagine that incontrovertible evidence can be obtained at all in an inductive problem.'

"After writing to many others, I caused the following advertisement to be inserted in *The Times* for several days in August, 1911:

"'TELEPATHY

"'The sum of £1,000 has, during the past six months, been offered privately to the leading authorities and writers of repute on this subject for satisfactory proofs of so-called thought-transference, but not one single case could be found; and it has now been decided to advertise publicly for the particulars required. Persons applying to the undersigned are requested to name their own terms for evidence that will stand cross-examination, and to state whether or not their communications are to be treated as confidential. MATTHEW JARVIS, Solicitor, 4, Finsbury Square, London, E.C.'

"There is no suggestion of 'wagers' in the above—only a plain statement of fact and a request that persons shall name their own terms; but, tho the replies were too numerous to acknowledge the receipt of separately, no evidence could be obtained. The advertisement was copied into many foreign and colonial newspapers, so that dupes all over the world were put on their guard against believing something that might not be true.

"Remembering that Sir Oliver Lodge had specially vouched for the movements of a chair in the moonlight, on one occasion when he had tried to control a female medium for hours at a stretch, I next proceeded to arrange for the payment of £5,000 to any one who could perform or prove a case of levitation; and, on my informing Sir Oliver Lodge of this, he wrote: 'To me these offers of money seem quite preposterous and never likely to obtain anything at all.' So I took this as an indication that he was again unable to produce any proof. But, supposing I offered him a large fee for writing a book on some mental incursion into the realms of the unverifiable, would there be, in such an offer, anything objectionable to which a deaf and contemptuous ear should be ever turned; or would it be readily accepted by the Man of Science acting for the time being as a business man? . . . . . .

"It . . . appears strange to me that present-day members of the S. P. R. should attach any importance whatever to opinions and expressions of belief, instead of trying to prove facts. Perhaps they do not consider that there is any credit in believing what is merely true—because any fool can do that—and they find comfort in the Bergson-Lodge philosophy, which has become fashionable because it is so 'scientific'! You start by accepting something which may or may not be true, but which is highly improbable and has not been proved; and, on such a want of basis, you build up your system—making everything as obscure as possible in order that it may seem profound. . . . . .

"I can give an amusing instance of how some members of the S. P. R. can be brought 'to heel,' for when I approached Sir W. F. Barrett (whom I take this opportunity of again thanking for his kind promise of help), he was very keen to assist me in finding a case of telepathy; and he was good enough to offer to call upon me the next time he came over to England from Dublin. He made no objection to being paid £1,000 for proofs, and his letters show that he was genuinely anxious to be of use in the matter; but, after seeing Sir Oliver Lodge in London, Sir W. F. Barrett wrote to me:

"'I could not undertake to prove the results of a long and difficult investigation to order or for a pecuniary offer.'

"My reply was to point out that I had not asked for any long investigation, but that I merely wanted one single case of telepathy, which he, as its father or discoverer, thirty or more years ago, ought to have no difficulty in finding for me. I never got one, however, nor did I have any better luck with Sir William Crookes, who was too busy with other scientific work to help me. . . . . .

"I have no desire to advertise myself; and my name need not appear, tho it is known to Sir William Crookes, Sir Oliver Lodge, and many others who are interested in this matter; but I shall be happy to place at their disposal all the information I have collected and to assist, as a business man, in getting at the facts. These, so far as they go, certainly confirm the statement of Sir Ray Lankester, on page 66 of the April number of *Bedrock:* 'I say that Sir Oliver Lodge and his associates have not (in answer to the question "Does telepathy exist?") given any demonstration of its existence nor even any evidence which makes its existence probable.'"

A NEW IDEA IN VENTILATION

UNDER THIS HEAD, the artificial renewal and deodorization of air in schoolrooms and other occupied spaces is treated in *The Electrical World* (New York). The belief seems to be gaining ground among hygienists that such frequent renewal of air from outside sources as has generally been advocated is unnecessary, provided the inside air be ozonized, dried, freed from odors, and kept in motion. That such a radical departure from orthodox ideas will not lack opposition is of course true, and we shall doubtless see, on the one hand, the open-airists conducting schools with open windows, and on the other, the ozonists keeping them tightly shut. Possibly both plans may be equally successful and equally sanitary. Says the paper named above:

"The haze of honest doubt that has surrounded the ozone machine in some quarters should be largely dispelled by the results of the ventilation tests reported before the Buffalo meeting of the Society of Heating and Ventilating Engineers by trained physiological and psychological experts who point out, as reported in an earlier issue, that an ozonizer performed important service in keeping sweet and wholesome for three hours at a time schoolroom air which was being simply recirculated without the introduction of outside oxygen. These experiments place on a scientific basis the fact long suspected that the usual empirical allowance for ventilation has no relation whatsoever to the actual physiological needs of the human system. And they prove with finality that even a roomful of school children can work at full efficiency and comfort, breathing

the same air three hours or more at a time, if that air is properly 'renewed' and deodorized. The psychological tests were continued over a period long enough to prove that no after-effects were to be felt. The efficacy of the ozonizer was also demonstrated on the occasions when its operation was interrupted for a half hour or so, the resulting 'stuffiness' of the air in the room making itself at once apparent to teacher and pupils. And if we have now proved that instead of unnecessarily burning tons of coal to heat large cubic sections of cold outdoors which are simply passed through our buildings and discharged back to the winter breezes, it is only necessary to consume a negligible number of watt-hours to keep fresh and sweet air that has already once been brought to the temperature of comfort, it looks as if the scouted ozone machine were really one of the greatest little engines of conservation of this prodigal age."

WHY MILK SHOULD BE KEPT COLD

IT IS NO NEWS that milk will sour unless it is kept cold, but probably few persons realize the necessity of keeping its temperature low during all the processes of handling between dairy and consumer. Milk may be on the point of souring, and may swarm with germs, when it is still fairly sweet to the taste; and consumers who are in daily receipt of this "near-sweet" milk must exercise treble caution to prevent the processes of deterioration from proceeding further. This is clearly indicated by simple tests reported in the thirty-first annual report of the Health Department of Springfield, Mass., just issued in pamphlet form. We quote the following paragraphs:

"The temperature at which milk is held plays so important a part in its keeping qualities that the following laboratory tests were made as to the length of time which ordinary market milk would remain sweet under varying temperatures. Two quarts were purchased from different dealers.

"The milk was about twenty-seven hours old at time of purchase. A record was made of the bacterial count and acidity of each sample of milk. No. 1 had a bacterial count of 280,000 colonies per cubic centimeter, No. 2 had a bacterial count of 16,400 colonies per cubic centimeter, which indicated immediate cooling after milking and subsequent careful handling. Each bottle of milk was then divided into four samples, and one sample from each bottle was maintained at the following temperatures until it developed a faint trace of acidity, when it was eliminated from further experiment. The milk from each bottle was thoroughly mixed every twelve hours and a sample taken for bacterial count and acidity. The diagram shows the comparative length of time the samples of the two grades of milk remained sweet, and affords a striking illustration of the necessity of keeping milk at low temperature during the entire process of handling until it is consumed.

DIAGRAM SHOWING BY LINES THE COMPARATIVE LENGTH OF TIME DIFFERENT PARTS OF SAMPLES 1 AND 2 HELD AT 100° F., 75° F., 55° F., AND 40° F. REMAINED SWEET.

No. 1 at 100° F. — 12 hours.
No. 2 at 100° F. — 36 hours.
No. 1 at 75° F. — 36 hours.
No. 2 at 75° F. — 60 hours.
No. 1 at 55° F. — 80 hours.
No. 2 at 55° F. — 180 hours.
No. 1 at 40° F. — 180 hours.
No. 2 at 40° F. — 396 hrs.

Further experiment in regard to the number of bacteria in milk handled in the usual way between the dealer's ice-box and that of the customer showed that the increase of germs during this interval was about six times more than between the milk-tank of the farmer and that of the dealer. On an average there were about 20,000 bacteria to the quart at the farm, 53,000 at the dealer's, and 360,000 at the consumer's. The temperature at the farm was 47°, at the dealer's 44°, and at the consumer's 58°. This not only shows the reason for the bacterial increase, but how small an increase in temperature will bring it about. That improvement has already taken place in Springfield is indicated by the fact that the bacterial count of market milk, made daily by the Health Department, has, in three years, been lowered from 577,000 to the quart to 46,600. Obviously all this indicates that milk should be kept ice-cold not only before delivery, but during that process.

RIVAL STEADIERS

TWO SYSTEMS for preventing vessels from rolling in a heavy sea have recently been tested in the United States Navy, with the result that the use of a heavy rotating fly-wheel or gyroscope is pronounced the better. The other system—the use of twin connecting reservoirs in which a movement of liquid is maintained contrary to the roll of the vessel—is less effective and takes up about ten times as much space. The comparison, made by Elmer Sperry before the Society of Naval Architects, is thus summarized by a writer in *Cosmos* (Paris, August 7):

"The antirolling reservoirs are effective only when the ship's period of oscillation is quite regular, which is not the case in the open sea, because the period of rolling of a ship is dependent both on that of the waves and on the ship's speed. A difference of one-third has been observed between the period of oscillation of a ship at rest and that of the same ship at a speed of 15 knots.

"On the other hand, the gyroscopic stabilizater is effective in all cases; it has also the advantage of acting, not when the oscillation has already begun, but before the ship has begun to roll; it does not lessen the rolling, it prevents it. Altho the first trials on ships did not give good results, that was because the movements of the gyroscope were not sufficiently regulated and it was allowed too much liberty. The power necessary to maintain the rotation of the fly-wheel is very small. . . . . .

"The gyroscopic balance installed on the *Worden* is the most powerful yet constructed. For convenience, the device has been made in two identical parts, one on each side, and the two gyroscopes have been installed on the bridge, in small turrets. An automatic controlling apparatus, consisting of two other small gyroscopes weighing nine pounds, regulates the movements of precision of the principal gyroscopes, so that they neutralize immediately the direct effect of the sea's impulses."

To give a concrete idea of the relative merits of the two systems, it has been calculated that to stabilize a vessel of 5,000 tons, selected for the purpose of experiment and normally rolling by about 35 degrees, two reservoirs would be required, weighing 900 tons; while with the gyroscopic system the total weight would be 51 tons and the space occupied only about one-tenth of that required by the reservoirs. The writer concludes:

"The gyroscope has another advantage: with it we may impress a rolling motion on a vessel at will. This may be of use in preventing ships from being caught in the ice, or in enabling them to break a passage through an ice-field. The gyroscope proposed above could give the vessel a roll of 8 to 10 degrees."

RAISING CROPS WITH GUNPOWDER—The old brown gunpowder, formerly standard in the United States Navy, but disused since the introduction of smokeless powder, has been found by the Navy Department to possess value as a fertilizer, we are told by *The Inventive Age* (Washington, September). Says this paper:

"Brown powder contains about 80 per cent. of potassium nitrate, consisting of potash and nitrogen, both of which are constituents of fertilizers. The authorities at Indian Head, the Navy proving-station, wrote to the Agricultural Department and asked the experts if they did not want to experiment with the gunpowder as fertilizer. The offer was refused. Then the Navy officials determined to use it themselves on the truck-patch in connection with the proving-grounds. Water was poured on the powder, and the concoction was worked into the ground. The result is reported to be most promising. The garden truck succeeded beyond all previous records. The plan is to be tried on a larger scale."

LETTERS AND ART

CHRISTIAN MARTYRS BURLESQUED

BERNARD SHAW'S latest play is called "an enormously clever insult thrown in the face of the British people." If there is any novelty about the act it must be in the quantity of his present offense, for it is long since he first began to mix cleverness with insults to hurl at this target. Nor is this the first time he has attacked religion, but he hasn't before, perhaps, turned the early Christian martyrs into figures of the burlesque stage. His people of Imperial Rome are "only modern London in fancy dress," says *The Standard* of that city. "The Roman dandy is really the 'nut' of Pall Mall in a toga, and the early Christian martyrs are any people you can think of with a kick against the existing order of things." They are said to resemble militant suffragists as much as anything. The old fable from Aulus Gellius about Androcles and the lion is the framework for his "elaborate squib" — a characterization that this same paper awards to the play produced by Granville Barker at the St. James's Theater. Mr. Shaw of to-day is estimated as "about equally compounded of kindliness, contempt, and sheer love of mischief," and his plays are, after everything, voted "delightful because they sparkle with a wit unequaled on the stage in these days; irritating because of the impression of a growing indolence or self-satisfaction on the part of the author, who seems perfectly content to raise an easy laugh by means frequently not distinguishable from mere buffoonery." *The Standard's* account of the play is worth reproducing:

Copyrighted by Newspaper Illustrations Ltd., London.

"*ANDROCLES* AND THE LION,"

Executing a *pas de deux*. The lion is said to resemble Mr. Hall Caine.

"The curtain rises on the agonies of the lion, a wonderful creature of a mild vegetarian sort of countenance, roaring with the pain of the thorn in his foot as gently as any sucking dove, and occasionally rolling a pathetic eye in the direction of Mr. Shaw's box. *Androcles* nears the lion's den in company with his wife, a red-haired shrew who is very angry because she has had to leave her comfortable home on account of her husband's religion. She loudly complains that Christians are the 'lowest of the low.' *Androcles*, a deliciously mild professor of the faith —with some gift, however, of repartee—reminds her that in his unregenerate days he was a toper. 'I could forgive that,' she replies; 'I can understand a man being addicted to drink, but I can't understand his being addicted to Christianity,' and so on and so forth. Then the lion emerges, and *Androcles*, trembling for his life, performs his feat of surgery, afterward waltzing joyously about the stage with the King of Beasts.

"Then we are introduced to Rome, where a party of Christians have just arrived for the next performance at the Colosseum. They are of all types, from the fair patrician *Lavinia* to hermits in sheepskin coats and a squalid little wretch whose Christianity has been chiefly displayed in what *Androcles* calls 'a gay time' in the way of robbing temples. The militant-suffragist flavor is very strongly marked just now. The *Roman Captain* (Mr. Ben Webster) is on good terms with his prisoners, but warns them that now they are at Rome the license allowed on the march can not be permitted. Above all, there can be no singing of those profane and blasphemous hymns. 'But they march better for it, Captain,' says the comic *Centurion*, whom Mr. Shaw conceives as a kind of sergeant. 'Yes, that's true,' admits the *Captain*. 'An exception may be made to the march tune of "Onward, Christian Soldiers." The words, however, must be altered, and I suggest the substitution of "Throw them to the lions."' Then follows an exchange of Shavian argument between *Lavinia* and the handsome *Captain*, who suggests that the whole trouble might be overcome by casting a little incense on the altar of the gods. 'If you can't cast incense as a matter of conviction,' he pleads, 'you might at least do it as a matter of good taste.' He points out the absurdity of suggesting that there is any persecution in the disciplinary measures taken by the Government. 'In throwing you to the lions the Divine Emperor is merely upholding the interests of religion,' he explains. 'Of course, if you were to throw him to the lions that might be called persecution.'"

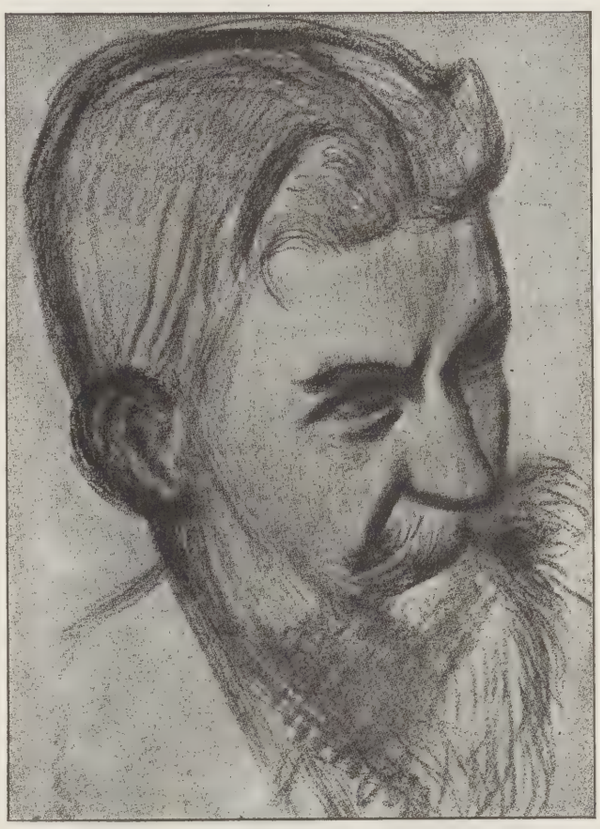
Following this comes the scene in the "wings" of the Colosseum, where the Christians are awaiting their fate amid the bustle of a very modern sort of theater, the call-boy rushing in announcing the next "turn," and the acting manager full of anxiety lest anything should happen to spoil the show. But—

"It is spoiled, in a sense, by the old warrior *Ferrovius*. Aware of his weakness, he has decided to enter the arena unarmed and without harness. But once in, the old fighting spirit comes on

him resistlessly, and he kills no fewer than six first-rate gladiators, much to the delight of *Divus Cæsar* himself, who in delight pardons all the other Christians, and announces himself as a protector to a creed which can produce such swordsmen.

"One victim, however, has to be found, if only to quiet the populace, and poor *Androcles*, as a Greek and a tailor, is selected. The lion, of course, spares him, and together they wander through the mazes of the Colosseum, Emperor, Senators, courtiers, and keepers all flying in terror before them. *Cæsar* himself bounds from pillar to post with the lion after him, and is only safe when he embraces *Androcles* with affection. It is pure tomfoolery, but undeniably laughable. But having given the public its fill of amusement, Mr. Shaw proceeds to puncture its hide with his little pins of sarcasm. Poor *Ferrovius* is in an agony of self-abasement. Whileothers are calling him a hero, he denounces himself as a renegade, and, having been false to 'the god that is to be,' he decides to serve 'the god that is,' and accepts the *Emperor's* offer of a post in the Pretorian guards.

"*Lavinia*, too, while in the moment of danger she does not blanch, seems to be far from an orthodox Christian. She is, in fact, just a mouthpiece of Mr. George Bernard Shaw. *Spintho*, the disreputable fanatic, the author claims to be no malicious invention of his own, but a character easily to be paralleled in the records of the Fathers of the Church. So far as it is anything, *Androcles* is a protest against any kind of persecution."



THE OLD OFFENDER.

Bernard Shaw, pictured here by Will Rothenstein, is reported to be up to his old trick of throwing clever insults in the face of the British public.

The Morning Post (London) is just a little shocked or bored with Mr. Shaw's antics, saying:

"When, however, Mr. Shaw is out for a lark there are few things he will stick at, and so the *Captain* authorizes the Christians to sing 'Onward, Christian Soldiers,' provided they change the words to 'Christians to the Lions,' and so on. It strikes one as all very cheap: like so much of Mr. Shaw's iconoclastic performances, such effect as it has comes of the augustness of the subject and of its degradation by the use of means hardly beyond the reach of the schoolboy, who, coming on a picture of Cæsar, adorns the head with bowler hat and a pipe. Is it really clever or funny to make *Androcles* address his wife as 'wifiepifie' and her address him as 'Andy'? There is some differentiation of character. The *Emperor*, a cynical, esthetic creature with a relish for cruelty and a terror of suffering in his own person, is not unamusing, nor is the *Captain*, who can think of nothing but the regulations. . . . But one soon tires of it; the game, if it be a game, grows monotonous, and one feels that almost all that was worth doing Mr. Shaw has done before and better."

Mr. Shaw as a jokesmith does not escape the drubs of *The Saturday Review*, where we are told the jokes in the new play are "not of the finest quality":

"Very significantly the lion, who did not talk, was the best joke of all. But the effect of the whole—despite characteristic bravura parallels between early Christianity and modern suffragism, and despite some intellectually emotional passages concerning love, religion, and death, which, at their finest, were extremely sensible, and, at their worst, were touched with that irritating vagueness which characterizes all attempts at rational theology—the effect of the whole was a conviction of cheapness."

WHY OUR COLLEGIANS CAN'T WRITE

THE SINS and shortcomings of the college boy in his struggles with English composition have so long been almost a matter of scandal that the results of Mr. Bok's recent questionnaire given in *The Outlook* are only an added grief. Mr. Bok's article "is devoted to showing that the college men and women of America, if they have anything to say, can not say it in decent English nor with any distinction." Their sentences are "involved, incoherent, and perplexing." And they are so, declares Frederick Lynch, of *The Christian Work and Evangelist* (New York), because "the whole tendency of our colleges is directly away from those studies that give one the power to express himself in correct and classic style." Mr. Lynch cites the more fortunate state of the "average English graduate who can write both correct and lucid English":

"One has only to compare the editorials in the English papers with those in American papers to see what I mean. We simply have no editors in America—with one or two exceptions—who can write such editorials as appear weekly on the London *Spectator*, *The Saturday Review*, *The Nation*, *The Economist*, *The British Weekly*, *The Christian World*, to say nothing of the daily papers. Why, Mr. Brierly's and Sir Robertson Nicoll's editorials are bound into books year by year and take their place among the classics of the day. When Tolstoy died the editorial on his death in *The Spectator* was copied all over the world. Every sentence in it arrested one. The letters from educated people to the English papers show capacity to write clearly and interestingly. It would be interesting if Mr. Bok could get 400 letters from Oxford and Cambridge seniors. I imagine he would get vastly different results. The simple reason that English college graduates can write is that they have been trained in the classics. They begin back in Rugby, Eton, Repton, and Winchester, translating the Latin and Greek poets into blank verse. Day by day this English verse is corrected and criticized, that it may be perfected. The prizes in these universities encourage the writing of poetry; and there is nothing gives one such command of forceful, terse, and happy English as the composition of verse or its translation. But the drift is all away from the classics in our colleges. We are substituting courses in life-insurance for philosophy, and lectures on commerce and banking for the translation of Homer and Horace into English. We turn out good engineers, but one of them—quite eminent, too—from one of our great universities asked me, myself, once, 'Who was Shelley?'

"Nothing can replace this strict classic training in teaching boys to write correct English. Its revival in America, with our disdain of culture and our acclamation of the hustling qualities, is far off. The two things we could do in our colleges are these: First, require a weekly composition from every student for four years; these compositions to be carefully corrected by competent instructors in rhetoric. Extemporaneous writing would greatly help. Let subjects be announced beforehand, but compel the students to write for an hour on the subject with no assistance

from books. Along with weekly writing the students of our American colleges should be encouraged—sometimes I wonder if they should not be compelled—to read the great masters of the English tongue. It is almost a disgrace that a man should leave a college who had not read Chaucer, Milton, Shakespeare, Wordsworth, Shelley, Browning, Carlyle, Ruskin, and Tennyson, to say nothing of the other great poets, essayists, and prophets. And they should be read until their great and lofty diction passes into one's thought.

"Ruskin attributed his ability to write English to his training in the King James version of the Bible. But I suppose the Bible is an outgrown book with most of our colleges, and there is little hope there."

LAUNCHING THE OPERA SEASON

THE PRAISE offered by the critics for the first performance of opera in English at the New Century Theater is properly enthusiastic if mingled with necessary qualifications. "Aïda" has had "worse presentations in New York," asserts the *Times* critic, "at two and a half times the money." The latest venture of giving grand opera at reduced prices is not the first one, "but its prospectors hope that a more favorable set of circumstances, or a more intelligent use of them, will bring a lasting success to this one." The auguries are all good. "No production of serious opera at low prices has ever started forward with more substantial support," observes the *Sun* critic. "Not only is the money provided, but last evening personages of social importance showed their interest in the enterprise by their presence and their plentiful applause." The linguistic scheme is a novel one, as in the case of each opera a single performance in the original tongue is to follow the week's run in English. Hence *The Sun* speculates on the likelihood of some unannounced purpose behind this project. It says:

"No one would be astonished if the close of the season witnessed an application of the referendum to musical politics. A popular vote, for example, showing a large majority in favor of giving the operas in English would confound those doddering old creatures who persist in arguing that operas can be sung more artistically in their original texts than in translations, and would at the same time buoyantly bear aloft the hopes of those whose hearts have long told them that they can make translations just as good as the originals, and frequently much better."

This pronouncement is directly contrary to Mr. Krehbiel's view uttered in *The Tribune:*

"If the question at issue is whether the English language is a better vehicle for the lyric drama than Italian or any foreign tongue, it may be said that considerations which ought to be obvious to every cultured mind have settled it long ago; the proper language to sing operatic music in is the language for which the music was composed, the only language to which the musical idiom can be said to be native. It is as destructive of the spirit of Italian or German or French music to sing it in English as it would be to sing English opera in Italian, German, or French. No paraphrase can be fitted to music without loss to the beauty and potency of the original text, as well as the music. No people can feel the power of the phrase 'For the Lord God Omnipotent reigneth' in Handel's 'Hallelujah' chorus as the English can feel it unless it be sung in the original and understood. There is no English, no French nor German equivalent for 'Oh, patria mia, mai più ti rivedrò,' when sung to the music which it called forth from Verdi's soul. There is no equivalent in any other language for that exhalation of Isolde's spirit, 'Mild und leise wie er lächelt.' The essence of French melody departs when another vessel is substituted for French verse. These are facts; incontrovertible, enduring, because they rest upon the genius of national art. They are not to be set aside by appeal to any popular forum.

"What remains of the question of language is the effectiveness and expediency of the compromise of singing foreign operas in the vernacular, for as yet we are not confronted with the prospect of English opera in English. That and the old one, which is not an esthetic question at all, except as esthetics are involved in the matter of translation, whether or not English can be sung so as to be intelligible. Except when the methods of the composer intervene and the difficulties are enhanced by the translator, English can be articulated in song as well as any other language. It can be. Any one of a dozen operetta soubrettes in New York proves that every night; but as a rule it is not in serious opera. Why? Partly because of the stilted and awkward phrase of operatic speech; partly because of the affectations of the singers; partly because of the singers' lack of intelligence; partly because of their want of training, chargeable in a measure to their want of opportunity."

The critic of the New York *Evening Post* finds the first night performance "surprizingly good," and speculates on what the future may reveal:

"It would naturally be unfair to give a definitive opinion either of the prospects for the whole season or of the capabilities of the individual artists, some of whom showed distinct signs of nervousness. But the sum total compelled immediate respect and admiration for the way the great task before the new company had been grappled with. The chorus is full of promise, its costuming was brilliant, the pageantry last night quite impressive, and the stage-setting all that could be asked. 'Aïda' is being given less well to-day in many cities abroad which pride themselves upon their opera. For one thing, one felt that the management had confidence in itself and its ability to work out the problems, and, considering that it had no Caruso and no other stars, its beginning may be said to have been as satisfactory as any one could reasonably have expected, and there was evident promise that still better work will be done later in the season.

"For one thing, the Century Opera gains by its smaller stage. There is something much more intimate about it, notably when two or three of the principals appear alone, than could be the case with the Metropolitan. This had surely something to do with the complete sympathy and appreciation with which the fine audience—there was standing room only after 7:45—listened to and inspired the singers. Of these, Miss Elizabeth Amsden, Morgan Kingston, an English tenor of distinction, and Miss Kathleen Howard carried off the honors. Miss Amsden, the *Aïda*, who has previously sung in Boston and Montreal, is gifted with a voice that has purity, freshness, and beauty of quality to commend it, tho it is rather light of texture, and not capable, apparently, of a wide range of dramatic utterance or color. She seems unable, however, to achieve pianissimo tones in the upper register. There were moments in which she departed noticeably from the pitch. Her share of the Nile scene was most commendably sung. . . . . .

"The *Amneris*, Kathleen Howard, is an American girl, until lately a member of the Darmstadt Opera, where she sang a variety of rôles to operetta parts. London, too, has heard Miss Howard, and at Covent Garden. . . . That she has clear dramatic talent was perfectly obvious, and her splendid bearing and fine presence added greatly to the value of her impersonation, which was on the whole of a high order."

KATHLEEN HOWARD.

An American girl with European experience who sang *Amneris* at the New Century first night.

THE TURKISH NOVEL

IT IS NOT UNNATURAL that Pierre Loti's devotion to Turkey should connote some sort of a literary interchange. French writers, it appears, have appealed more than others to the Turk, and a considerable literature of manners has grown up among the younger writers of Turkey that owes its inspiration largely to France. The opening wedge was formed of Turkish translations of Racine, Lamartine, and others of the classics, made by Ibrahim Schinasy, one of the founders of the young Turkish school; but these have been followed by studies of Turkish life from the Turkish point of view, tho modeled upon the form of the French writers. This modern school is studied by Mr. Tony Kellen in *Die Literarische Echo* (Berlin), where we read:

"At first novels were translated, and not merely the edifying 'Télémaque' of Fénélon and the works of Voltaire, but also the principal works of Victor Hugo and the two Dumas. But the piquant stories of Paul de Kock and the romantic novels of Eugène Sue and Xavier de Montépins as well as the naturalistic novels and stories of Zola and De Maupassant met with more favor."

MARY JORDAN,
Who presented another conception of *Amneris* on the second evening of the New Century Opera.

We pass over a list of Turkish romances written in imitation of these models in the late middle of the nineteenth century to more recent specimens. Uschschaqyzade Chalyd Zija, the translator of Zola and De Maupassant, published in 1889 two pessimistic novels, "The Hopeless" and "The Book of a Dead Man." Later:

"A new group is formed by Achmed Rasim, Mechmed Mueneddschi, and Huessen Rechmi (born in 1876), with their realistic novels; Wedschihi and Achmed Hikmet (born in 1870), with their psychological novels; and Nazym, with his peasant tales. They all like to stage their scenes half in a 'frankish' (*i.e.*, European) setting, or even partly in foreign lands, and they seek to portray both the good and the evil side of European culture in typical examples. . . . . .

"Schems Samy, who translated 'Les Misérables,' treated of unhappy Turkish marriages in 'The Love of Telet and Fitnet' (1872). This is the essential theme also in 'The Lute Player,' by Fatma Alié Hanem, and 'A Desert Adventure,' by Ali Kemal Bey. . . . Neither of these two novels is longer than a long short story, but if they are less extensive than our novels this must be ascribed to the fact that they are written in a terse style, presenting events simply . . . without artistic elaboration. They are written in the style—so unaffected and yet always so engaging—of an eighteenth-century French tale. On this account it was tolerably easy for Gustave Léon to translate them into French for the 'Malumat' Library."

Mr. Kellen gives here a description of the plots of these novels, of which the first seems the most interesting and important:

"*Bedia*, the heroine of 'The Lute Player,' marries in Damascus an officer who is not worthy of her, *Captain Maïl Bey*. She leaves him, returns to Constantinople, and in order not to fall into that mode of life which drags down so many women, she gives music lessons, fighting her way through life gamely until at last she succumbs to death with honor still untarnished.

"A great rôle is played in the story by the Jewish dancer, *Halula*, for whose love *Maïl* is faithless to his wife, whose ornaments he even takes away to bestow them on his lady-love. *Bedia* knows of his infidelity, but is silent. In a social gathering *Halula* approaches her and seeks in some measure to excuse herself: she might have given her favors to much richer men, but she had a genuine love for *Maïl*, and she was forced to follow her mode of life to support her poor mother and younger brothers. *Bedia's* pride makes her pretend that she does not care for her husband and that his 'affairs' are a matter of indifference to her. In reality she is so cut to the heart that she falls ill with consumption, of which she eventually dies.

"One evening her husband comes to her and begs her to help him free himself from this woman. *Bedia* acts as if she knew nothing of the matter. She is indignant that he should make such a confession to her; she is his wife, not his sister; he should have asked the latter for counsel. Such a view would seem a trifle peculiar to a European wife. . . . . .

"Three years later *Bedia* meets again the same dancer, now a married woman. After having plundered so many men she has reformed and turned to a respectable life. She has come to perceive that tho men are at times unfaithful to their wives, they really have for them a more genuine love than for women whose love is venal. None of the men who had heaped gifts upon her had been willing to marry her, and that she finally obtained a young merchant for her husband was due to her property. But *Bedia* makes her way as a music-teacher till consumption claims her. This malady is very prevalent in Turkey, and is therefore often met in *belles lettres*. Abdel Kerim Hady has called a book of poems 'Complaints of a Consumptive' (1891), and in the drama, 'An Unhappy Girl,' the heroine is one of those consumptives who have been so popular in Turkish literature since the 'Lady of the Camellias' first appeared."

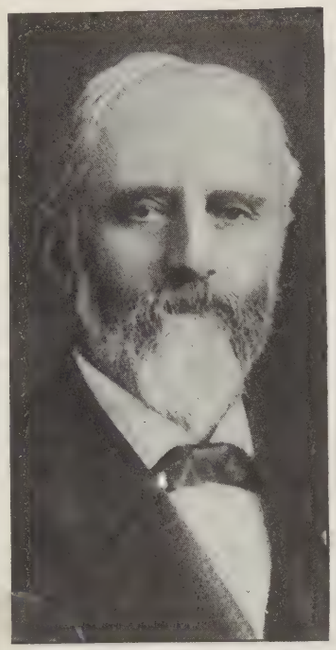
The second story whose plot is outlined is called "A Desert Adventure." *Sabuhi Effendi*, living in the Syrian desert, has married a second wife, *Safret*, much younger than himself. She is frivolous and fond of pleasure and spoils her step-children, especially the daughter *Syhir*, a dreamy and romantic girl of sixteen, for whom they long strive in vain to find a husband. At last the son of the Arab Sheik *Sataan* appears on the scene and marries *Syhir*. *Safret*, meantime, has made the life of her husband a real inferno. He is old and feeble, and his coquettish wife has no more use for him. The comedy turns to tragedy when the old gentleman discovers her guilt and is killed on the spot.

Mr. Kellen comments on the fact that neither of the two novels analyzed contains forced and improbable invention, but seems to be founded on observation of the facts in real life. He says also: "The art of the two is about equal, but Fatma Alié Hanem describes dwellings, costumes, and such matters, upon which her masculine colleague is silent." Both novels have a tendency to teach, not, however, obtrusively, but in a way that springs rather " from the naïveté of half-cultivated races who seek in their light literature not merely entertainment, but an agreeable mode of instruction." Drunkenness, marital infidelity, and sexual excess are represented as the chief vices of the Turks, but writers avoid frank treatment of such things. "There is nothing prurient in the novels, and yet things are spoken of which it is impossible to mention in our own polite literature. . . . Yet the very fact that in novels meant for the widest circulation certain things are spoken of entirely without reserve merely proves that the Turks are free from our own excessive delicacy."

RELIGION AND SOCIAL SERVICE

PROVING JONAH AND THE WHALE

THE HABITUAL SILENCE of the religious press on the subject of Jonah and the whale might lead some to think that Jonah has no friends left. His name is seldom mentioned in the pulpit. But in New York a new magazine is out called *The Bible Champion*, continuing the more modestly named *Bible Student and Teacher*, and it begins its championship by throwing down the gage to Jonah's critics. Prof. Luther T. Townsend, LL.D., who has been a professor of theology for forty years and has written over a score of religious works, fills many pages with his proofs, many more than the original story covers in Holy Writ. He remarks that one may well think it "the most vulnerable narrative" in the Bible because of the attacks made on the "historical integrity" of the story. Not only is it discredited, he tells us, but it is regarded by some critics as "quite suitable for the amusement of children, and is labeled 'The Pickwick' and 'The Bigelow Papers' of the Bible." If the story is "wholly fiction," says Professor Townsend, and the Church teaches that it is "really historic," then we have a right to laugh at it; but if it is "regarded by many intelligent and scholarly people as veritable history," then the case is different and a reinvestigation is in order. Beginning at the beginning, he sets out to establish by evidence the historical character of Jonah, the actual existence of Nineveh, and Jonah's mission and voyage. His reason for doing this is because there have been critics who did "not hesitate to affirm that Nineveh, as well as Jonah, was a myth." Having proved the existence of both the sinful city and the prophet sent to preach repentance to its citizens, Professor Townsend leads us on to see how credible is the recital that on being thrown overboard "a great fish (*dagh gadhol*) was near the ship, and seized Jonah the moment he struck the water." He stresses the fact that the two Hebrew words just quoted "mean simply a great fish, or sea-monster," while the word "whale" is the translator's word, and he proceeds:



DR. LUTHER T. TOWNSEND,

Who controverts the argument that the Jonah tale is "the most vulnerable narrative" in the Bible.

"So far, therefore, as the Hebrew and Greek words are concerned, the highest criticism makes it perfectly clear that the fish that swallowed Jonah may have been a whale, a shark, a sea-serpent, a sea-lion, or any other large monster of the deep. And even if the skeptic insists that in this discussion the word 'whale' should be used, still one need not suffer embarrassment, for while it is true that the right whale has a throat of small size, the sperm-whale has a throat sufficiently large to swallow a man without the least difficulty. There is not a shipmaster or a sailor who has been on a whaling voyage who will question the following statement made by one of the crew of a New Bedford, Mass., whale-ship, that he, tho a man of large build, weighing one hundred and seventy pounds, frequently had passed through the mouth and throat of a dead sperm-whale. He says he did this after the head of the whale had been cut off from the body, and when the jaws and smallest part of the throat had been taken on deck."

The writer adds to this the testimony of M. P. Courbet in *Cosmos* (Paris), who, writing of a scientific expedition of the Prince of Monaco, gives an account of the capture of a monster sperm-whale near the Azores, and remarks: "The discoveries of the Prince of Monaco were such as to relieve us of all difficulty in believing the Bible story that a whale could swallow Jonah." Another authority brought forward is M. Joubin, who states, in an article in *The Academy of Sciences*, that "a sperm-whale can easily swallow animals taller and heavier than a man," altho Prof. Ray Matthews, in a report on the Japanese fisheries, we read, believes that "it was neither a sperm- nor a bow-head whale that swallowed Jonah, . . . but a right whale; and that Jonah was not taken into the food-stomach but into the air-chamber of the whale, which was large and commodious enough to serve as a refuge."

Several other authenticated instances of the astonishing swallowing capacity of sea-monsters are offered by Professor Townsend, who concludes that "the time is forever past for any one to say that whales and sea-monsters do not have throats large enough to swallow men." Yet while the skeptical critic may no longer call into question these points of the story, which are "indisputable history," Professor Townsend reminds us that in coming to the record of Jonah's preservation in the whale and his subsequent escape to dry land, we reach parts of the narrative that "cross the line of the non-miraculous and become supernormal, and in the judgment of many people are on that account altogether untrustworthy." He continues:

"But, in reply, one may remind the destructive critic that he should move cautiously, for his own logic may prove as remorseless as that of the believer, for no one knows, or ought to know, better than he, that the whole question of the origin of things is to-day passing into the realm of the supernormal. There is not a naturalist who does not know that science is now pointing her index-finger to a time when the entire substance of the earth was nothing but a glowing vapor, and that naturalism knows absolutely nothing as to the origin of that fire-stuff. Then there followed the cooling, condensing, and hardening processes, till at length the fire-stuff became the earth fitted for life. But there is not a naturalist in the world who at the present time can give a scientific explanation of the origin of the lower forms of life, vegetable or animal."

There remains therefore, Professor Townsend maintains, in the light of the highest criticism, only one logical conclusion, which is this:

"The infinite and eternal Author of life must have interposed, or the earth as we see it never would have been, or having been, would have remained forever desolate; there would have been no first oak to cast upon the earth its shadow, and no first man to walk its surface. But if God could interpose, then the earth could bring forth grass, and herb yielding seed after its kind, and every tree after its kind, the fish and the bird after their kind, and lastly man after his kind.

"Hence it follows that the destructive critic, who decided a moment ago to abandon Christianity because its logic required him to believe in miracles, must not only abandon Christianity, but, to be consistent, must abandon himself, that is, must deny his own existence, for the origin of the human race requires

supernatural interposition as much as did the preservation of Jonah in the stomach of the sea-monster. But the moment such interposition is admitted, that moment riddles are solved and all Bible miracles accounted for.

"By such interpositions Israel could pass unharmed through the midst of the sea; Daniel could remain for a night in safety among the lions; Shadrach, Meshach, and Abednego could walk unhurt 'in the midst of the burning, fiery furnace,' and Jonah could remain unharmed for three, or, for that matter, for thirty days in the stomach of a sea-monster.

"We may condense this part of the argument into two sentences: If God could create Adam, he could save Jonah. He did create Adam; therefore he could save Jonah.

"This, then, is the evangelical confession of faith: We believe the Bible narratives and miracles because on scientific grounds they are possible; because they are supported by circumstantial, monumental, and other indisputable proofs, and because there were purposes of sufficient magnitude to justify divine interposition."

A THIRTEENTH-CENTURY JONAH.

The mosaic decoration of a pulpit in a church in Ravello, Italy, where the medieval idea of a whale seems strangely mixed with that of a dragon.

HYMNS OF THE POET LAUREATE

HIGH RANK is taken by the new Poet Laureate, it appears, among Church musicians in England, and the Rev. Percy Dearmer places him first among living hymn-writers. This is a view of him neglected by all the other estimates of his career and work that we have noticed since his recent appointment. He began a reformation in church music, we are told, years ago, "when the public taste both in the music and the words of the hymn was at its lowest." He once trained a choir in Yattendon, where he lived, and sometimes discarded the words of an old hymn, when he disapproved of the translation, and supplied a new version. His "Yattendon Hymnal" is called "a gem of a book, not only for its superior hymns and music, but for the art of its printing." "Dr. Bridges shares with Morris the distinction of being an authority on the printing as well as the writing of books," and this one, "with charming tadpole-shaped notes of seventeenth-century music," is prized by lovers of fine books. Dr. Dearmer writes in the London *Daily Mail:*

A JONAH OF OUR DAY.

Figured by a modern artist who may or may not have seen a whale.

"It is a long time since a Poet Laureate was a hymn-writer. The seventeenth century produced one such; but only a few verses have survived from the bathos of Tate and Brady which our forefathers used to sing. Now we have another; and it may be confidently predicted that Dr. Bridges will be remembered in future ages by his hymns, even should his other verse come to be almost forgotten. They have the qualities of great hymnody —restrained intensity of thought, nobility of manner, faultless workmanship; and, above all, they are not poems set to music as an afterthought (like Tennyson's 'Crossing the Bar'), but are real songs, written for immortal music and wedded in perfect union to it.

"We have been—and still are—passing through a period of exceedingly bad taste in hymnody, both as to its words and its music. Weakness and gush are the characteristics of the great majority of our churches. The music of our average popular hymns fits the words very well; for it has exactly the treacly sentimentality which they require. It is indeed characteristic of our time that, altho new versions of nearly all the popular hymn-books have been issued during the last fifteen years, in none of them (if my memory serves me right) do any of Dr. Bridges's hymns appear, except in the Oxford University Press's 'English Hymnal.'

"In this book there are thirteen of our new Poet Laureate's hymns; and, as the 'English Hymnal' is already used in some three or four hundred churches, the work of Dr. Bridges is now beginning to be popularly known—tho even those who use the book may not always have noticed that the initials Y. H. stand for the 'Yattendon Hymnal' and its editor, and that the hymns thus marked are to be attributed to Dr. Bridges.

"If a Poet Laureate ought to be able to write national hymns as well as congratulatory odes, then Dr. Bridges has been well chosen. Let me give one or two stanzas from such a hymn, based on a Jacobean work and set to a splendid melody from the Genevan Psalter:

The King, O God, his heart to thee upraiseth;
With him the nation bows before thy face;
With high thanksgiving thee thy glad Church praiseth,
Our strength thy spirit, our trust and hope thy grace.

Unto great honor, glory undeservèd,
Hast thou exalted us, and drawn us nigh;
Nor, from thy judgments when our feet had swervèd,
Didst thou forsake, nor leave us, Lord most high. . . .

Unto our minds give freedom and uprightness;
Let strength and courage lead o'er land and wave;
To our souls' armor grant celestial brightness,
Joy to our hearts, and faith beyond the grave.

Our plenteous nation still in power extending,
Increase our joy, uphold us by thy word;
Beauty and wisdom all our ways extending,
Good will to man, and peace through Christ our Lord.

Could anything be nobler than this? asks Dr. Dearmer with enthusiasm, continuing the account of the Laureate's little-known achievement in this field:

"Dr. Bridges has written other hymns, not less fine but in styles quite unlike the sonorous rise and fall of these lines which almost enable us to guess their tune. There are translations of some of the old long-meter Latin hymns, and of the oldest Christian hymn in the world, a Greek hymn, which he has set, as 'O gladsome light, O grace,' to a fine old Bourgeois tune. There are other translations, for Dr. Bridges is too sound a critic not to know that some of the best literature in the world is translation, like the English Bible itself. Some from the German, to carry such famous choral tunes as 'Herzliebster Jesu,' or 'Innsbruck.' Here is a fragment, by way of example:

The duteous day now closeth,
Each flower and tree reposeth,
Shade creeps o'er wild and wood;
Let us, as night is falling,
On God our Maker calling,
Give thanks to him, the Giver good.

Now all the heavenly splendor
Breaks forth in starlight tender
From myriad worlds unknown;
And man, the marvel seeing,
Forgets his selfish being
For joy of beauty not his own.

"I might quote a good deal more, but enough has been given to show that the Poet Laureate has not been a choirmaster in vain, and that his hymns are the advance-guard of a movement which will lead the Englishman of the future to read hymn-books for the poetry that is in them—a thing which he does not dream of doing at the present day."

AN ENGLISH VIEW OF RELIGIOUS AMERICA

THE OPPORTUNITY to see ourselves as others see us is a frequent one with Americans, as evidenced in the numerous books by visitors from other lands and in their newspaper interviews; but to see ourselves in our "religious life," as is the expression of an English clergyman in *The Christian World* (London), is to experience a new sensation. No reasonable man, says the writer, will "dogmatize hastily" about such a matter as "religious life in America," for in this, as in other particulars, the size of the country must be taken into account. In passing from one State to another he finds the differences in the population so striking that they "would seem to indicate the presence of another race." On his way across the ocean, for instance, he met an American woman who assured him that "American men never went to church," while an Episcopal clergyman in Philadelphia, denying this statement, "boldly affirmed that religion was still the most powerful agency in American life," and added that "the leaven of New England has entered into the life of the whole continent." Speaking from his own observation, the visiting writer notes as "very remarkable the zest and eagerness with which the young American confronts life." He is impressed with the college women, teachers and students, who act as waitresses during the summer at such a place as Chautauqua. Also in his book of discoveries is the type he calls "the Educated Porter," a Cornell man studying architecture and working his way through college as a railroad-station porter. This man the writer finds to be "one of the most splendid representatives of democratic manhood" he has ever met; yet side by side with this energy and zest in living, he finds a corresponding deficiency in the "absence of the spirit of brooding and contemplative leisure," and he goes on to show that:

"One result of this is that Christianity in America is divided into two camps. The one is orthodox. Its orthodoxy is apt to degenerate into the senile attachment to the letter of Scripture. I heard one man of this school say that he never read anything but the Bible, and he thanked God for being able to confine his attention to the one Book. There is a lack of mental breadth, of intellectual enlightenment, about the members of this school which is a little disheartening to one who is in agreement with them on the central matters but knows only too well that this is not the way to win the battle for Christ. The other school seems to have sacrificed almost everything which makes Christianity distinct from a temporary philosophy. Its members have the bad habit of preaching eugenics or sociology in place of the Gospel. They appear to be afraid of the great epistles and the nobler passages of the Gospels, and are apt to speak in terms which would suggest that there was nothing distinctive in Christianity which can make it an absolute and universal faith. They have become afraid of the historian and the natural scientist. Unless they are careful they will prove to have sold the pass to the enemy from an unmanly and needless timidity. What the American thinker needs is a thorough drenching with a genuine skepticism. He is already skeptical about religion. But his infantile belief in education, in mechanics, in science, in everything which seems to be translatable into material profit, is pathetically amusing to a reflective Englishman. He needs to ask questions about the value of these things. He must learn to be dubious about the very things whose virtues are trumpeted in his ears day after day."

That America is "not entirely without her brooding spirit," he tells us, however, may be learned from a visit to some of her famous cemeteries, which he describes, in referring to the cemeteries of Arlington and of Concord, as "these homes of her mighty dead." It is in her thinkers, her dreamers, her lovers of the beautiful that America is great, he points out, and remarks, "some day she will know this." Meanwhile, attending Trinity Church at Boston, where Phillips Brooks preached, he carries away this impression of a present-day sermon:

"The sermon that I heard was certainly not inspired by the memory of Brooks, but it was strangely suggestive, for the preacher indicated plainly enough that sense of disappointment with the civilization of this great land which is felt and exprest by the best and bravest men of the time. He sees that Carlyle's prophecy is coming true. Here, in the New World, the problems which the Old World has known for so long are being discovered once more. Poverty by the side of wealth, a justifiable disbelief in the honesty and disinterestedness of those who make the laws, a consequent anarchy which has its real roots in the immoral nihilism of the rich and powerful. America has for many years enjoyed the fruits of civilization and freedom. Secular education has had its way. The school-teachers have been abroad in the land for decades. And the result is that America literally cries aloud for the justice, the pity, the love of man for man, which find their most glorious expression in the Cross of Christ."

"ROMANTIC" LIFE OF NUNS—Fiction writers from the late Marion Crawford down to lesser lights have invested the life of the nun with a halo of romance. But the Boston *Pilot* asserts that it is "a life of hard work, of earnest prayer, and as far removed from any suspicion of sentimentality as one pole from the other." These facts are beginning to be learned by the novelist, but the "newspaper man" has yet to find them out. *The Pilot* deals with a recent "story":

"A little child at the age of eight was placed in a convent. In imagination you can see the entrance of the scheming nuns who finally prevailed on the girl to become a member of their community. And finally at the age of sixteen she 'became a novitiate.' Not a simple novice, but a whole novitiate! And that poor reporter thought he was writing up the thing in true technical style.

"After twenty-five years in the convent—reckoning of course from the age of eight—the said nun decided that she wished to leave the convent. That was her own business, and we may well presume that if she did leave the community it was with the knowledge of her confessor and of her superior. There are no chains to keep women in convents, and it happens at times that for very good reasons they come back to the world. There are no escaped nuns outside decayed fiction. . . . But this reporter found a truly escaped one; for he tell us that she took one of her pupils into her confidence 'and clothing was smuggled into the abbey.' And thus of course she reached liberty and life!"

MOTOR TRUCKS

DEPRECIATION

CHARLES WHEELER, an automobile engineer, discusses, in *Automobile Topics*, the intricate question of just what is the depreciation which motor-cars undergo when in use. The first factor to be considered, he says, is "the estimated working life of a car," and this depends largely on the specific circumstances in which the vehicle is used. A motor-bus may be run seven hundred miles a week, while a motor-truck used by a department-store may be run only one hundred and forty miles a week; as between these two, the element of "working life" would be considerably in favor of the store truck. Again, the "working life" depends upon the quality of the vehicle in design and manufacture, and hence is closely connected with initial cost. Another factor is the care with which the vehicle is kept in service, all of which depends upon conduct in driving and supervision and the amount expended on renewals.

Once a decision has been reached as to the "working life," the next question to determine, says Mr. Wheeler, is the method by which the initial cost shall be spread over the period, that is, how depreciation shall be written off from year to year. He cites three methods as worthy of consideration:

"(1) To divide the capital outlay, *C*, by the number of years at which the 'working-life,' *L*, is estimated and charged the quotient against each year's working costs.

"(2) In the first year to write off a high percentage of the cost; in the second and succeeding years to write off the same percentage on the diminished value, that is, the balance left after deducting the previous year's depreciation.

"(3) To divide the capital outlay, *C, less residual value, R* (that is, the estimated value of the vehicle at the end of its 'working-life'), by the number of years, etc."

In each of these methods renewals and repairs are charged against general running expenses. Mr. Wheeler remarks that the first method "can not be recommended where any degree of accuracy is required." The second "is perhaps financially the soundest, if it be desired to ascertain from one's books the actual realizable value of the vehicle at any moment"; in the end this method will give "a fairly true result," but it has the objection that, in the earlier years of the truck's life, "the cost of the service is overloaded." The third method he recommends "as the most practical and accurate."

A factor that must always be considered is "obsolescence" for, by some combination of circumstances, an owner may find it desirable to dispose of a particular truck before it is really worn out. Obsolescence may not in itself be depreciation, but it is a factor that is at least sufficiently important to affect any percentage of depreciation that may be determined by other considerations. In the future should greater perfection in machines make it possible to extend the working life, obsolescence will become still more important; a truck still mechanically efficient might become uneconomical in use because of the introduction of greatly improved types.

MOTOR-BUSES AND STREET-CARS IN LONDON

During a recent twelve months' period, the motor-bus system of London, according to a United States consular report, made a phenomenal advance, while the street-car system declined. In a period of twenty-three weeks, ending on September 4, the City Council tramway system showed a decline in receipts of $233,592, and other systems showed a decline in six months of $311,456. Meanwhile, the receipts of the General Omnibus Company, for eleven months ending September 30, showed an increase of $2,501,381, while the National Steam-Car Company in forty-four weeks more than doubled its receipts. *The American Motorist* quotes further from this report:

"In North London, where the full comparative power of the motor-omnibus is felt, the receipts of the Metropolitan Electric Company are declining in spite of increased facilities offered by the street-car system, the return for the week ending September 6 showing a drop of some $5,061. Until the middle of September it was the only street-car system in London or Greater London which showed an increase on the receipts for the current year.

"In spite of this showing, however, it does not appear that the number of passengers has materially declined on the street-car systems, as the following table for the month of May, 1912, contrasted with the same month in 1911, indicates:

Week ending—	Passengers carried 1911	1912
May 8	10,027,908	9,933,028
May 15	9,946,946	10,212,113
May 22	9,888,051	10,024,053
May 29	10,310,087	10,351,432
Total	40,172,992	40,520,626

"The following table gives the names of the several street-car companies, the number of weeks in the financial year which have passed, and the increase or decrease in receipts compared with those of the corresponding periods of the preceding year:

Companies	Weeks	Total Receipts	Decrease
London Co. Coun'l	23	$4,682,502	$233,563
London United	23	1,116,458	59,323
Metropolitan	36	1,548,073	12,555
East Ham Corp	32	120,548	1,659
Ilford Council	23	59,347	4,925
Walthamstow	23	88,711	2,076
West Ham Corp	22½	295,888	10,779

"On these seven systems there is a decrease on six amounting to $313,125, and a gain of $2,555 on one, making a net decrease of $310,570 as an average for half the year. In contrast to this the increases in the receipts of the two leading motor-omnibus companies were as follows:

Companies	Weeks	Receipts	Increase
London General	48½	$11,078,660	$2,503,902
National Steam	44	347,716	218,180

"There are some 2,000 omnibuses operated in London by these two companies, and the type of vehicle which is now in operation is so noiseless and is operated with such speed that it is becoming more popular all the while as a method of travel."

HORSES, CARRIAGES, &C.

VAN DYKE EXPRESS CO.,

40 YOUNG WORK, EXPRESS

Horses and Mares, 1,100 to 1,600 pounds; these horses were bought green within the last 2 years and all in first-class condition. Among them are 12 matched pairs, ranging in weight from 2,200 to 3,000 pounds; prices $200 to $425, a pair; single horses, $90 to $150; some in foal, several mares, pavement sore, suitable for country work; single and double harness; five trial allowed; if not satisfactory return at our expense, will ship to purchaser to any town within 300 miles of New York City free of charge, with new halter and blanket and free passes home to purchaser. Call at office and stable.

Van Dyke Express Company,
160 West 15th St., Corner 7th Ave.
New York City. Tel. 5348 Chelsea

Ten Minutes' Ride from Ferries to Depot.

PENNSYLVANIA TERMINAL Express Co.

Must Dispose of 65 Young Work Horses and Mares; 1,000 to 1,500 Pounds.

Horses have worked in city, are in good condition; also several pavement sore horses, suitable farm work; matched teams and collectors' horses; 30 days' trial allowed; will ship to purchasers free of charge, with halters and collars; horses must be sold within the next 60 days. Call at office and stables, 211-213 W. 35th st.

AT ONCE MUST BE SOLD

At the Lexington Express Stables
154 E. 27th, bet. 3d and Lex. Aves.

AUTO TRUCKS AND WAGONS REPLACE

50—Young Horses & Mares—50

Among them two mares in foal; single horses and mares, $90 upward; matched teams, $150 upward; will also sell single and double vans and several wagons, harness &c.; no reasonable offer refused; trial allowed.

METROPOLITAN CAR BARNS
611-615 E. 15th St.
between Av. B and C. Main Stable.
40—HORSES—40

weighing from 900 to 1,400 lbs., suitable for farm work or any general business, price $90 upward; 15 days' trial allowed; will ship every horse within 300 miles of New York City with blanket and halter. See Foreman; phone 723 Stuyvesant.

Department Store
Stables 425 East 54th St.

Will sell choice 85 chunky, young horses and mares; been used at city and suburban branches; among them are mated teams and single horses, some pavement sors; also single and double harness; prices from $25 upward. See Traffic Manager at stable.

OUTFITS

HORSES, CARRIAGES, &C.

Chance for Farmers and Teamsters.

BELT LINE CAR BARN

MAIN OFFICE AND STABLE.
No Connection With Any Other Stables.
435-437 East 23d St., Near Ave. A.
700 Horses & Mares 700

weighing from two to 1,900 lbs.; all in first class condition; ages from 6 to 10 years old; among them several matched pairs; some a little pavement sore; suitable for any business; prices from $40 upward; among them 60 heavy mated to road trucks; 30 days' trial allowed; if not as represented can be returned at total time; will also new halter, all cars transfer to 23d St., connecting car, which takes you direct to stable door. See Supt. Phone 622 Gramercy.

Account of Lease Expiring
May 1 at 412-414 E. 59th St.

We are compelled to dispose of contents of our stable, consisting of 65 horses and mares, matched teams, weighing 1,000-1,900 lbs. each; also single horses; 5 horses used for driving purposes, some pavement sore, suitable for the country; above horses were bought green within the last 2 years and are in first class condition, ranging in age from 6 to 9 years; 15 days' trial allowed; wagons and harness; will ship horses to purchaser any-where free of charge; above horses will be replaced by motor power at our new stable after May 1. Inquire Stable Foreman, beer bottling department.

United States Transfer Stables
REPLACING MOTOR POWER.
150—HORSES AND MARES—150

To be sold in 60 days, said horses are young and in good condition. One large pair have been used in 6-ton truck. Also 50 horses for general purposes; 40 days' trial allowed. If not as represented, can be returned in trial time. Horses can be seen at main stables

409-411 EAST 24TH ST.

Near 1st. av. See Supt. Phone Madison 1892.

Must Sell on Account Using Auto Wagons
at the Large Dept. Store Stables
138-140 East 25th St., near Lexington Av.
80 Young Horses and Mares

weighing from 900 to 1,500 pounds, single horses and mares, $40 upward; matched teams, $150 upward; will also ship horses free of charge with robes and halters; trial allowed. 138-140 E. 25th st. 5352 Madison Square.

ACCOUNT WORK COMPLETED

contract to compelled to sell 40 young, strong, seasoned horses, grays, mules, some lighter forward, weighing 1,000-1,300 pounds, teams, mares, collector horses, carriages, harness, price $90 to $90 upward; trial allowed.

See FOREMAN, 441 E. 103d.

ACCOUNT LOSING CONTRACT

Truckman must sell two matched teams heavy young truck horses, weighing 1,200-1,400 lbs., several single delivery horses, from $50 upward; 1 truck, wagons, sleds and double harness. Inv. allowed. 310-312 E. 63d st.

ACCOUNT OF OUT-

From "The Edison Monthly."

THE DISAPPEARING TRUCK-HORSE.

Specimen advertisements of horses for sale in consequence of the substitution of motor-trucks for horse-drawn trucks.

NO MORE ALCO TRUCKS AND CARS

At a meeting of directors on August 13, the American Locomotive Company decided to discontinue its entire automobile business. Cars and trucks then on hand were to be sold at reduced prices, and those in process of construction were to be completed and then sold, the process taking, it was thought, about three months. Meanwhile, arrangements had been made by which spare parts would be available to owners of Alco cars and trucks for some years to come.

The Automobile says news of this action by the American Locomotive Company "came like a flash of lightning out of a clear sky." The reason for it is said to "lie in the fact that the company has lost money on practically every passenger-car, taxicab, and truck sold by it since 1906, when it entered the field. From those who have been close in touch with the affairs of the automobile department it is evident that of late these annual losses exceeded $500,000, due largely to poor production methods and general uncertainty regarding the policy to be followed from one year to another." The writer sets forth the consequences of these poor methods:

"Altho the car program called for 250

vehicles annually, there was never any reduction in this number, no matter how late the policy for the year was decided upon, the result being that the following July or August found the company with 25 to 150 unsold passenger-cars on hand at a time when other companies were marketing their models for a succeeding year. In such a situation there were but two policies to follow: First, cut the price and so demoralize matters in general; and second, work these models over and carry them along as new types for the following year. The second policy was often followed, and it proved a most expensive matter. These held-over models were dismantled and changes in chassis and bodies made, changes which added enormously to the price, so that when finally disposed of they were marketed at a great loss. Taxicabs were sold at $2,100, which showed a factory cost of labor, time, and materials of $2,600. Added to this loss of $500 per vehicle was that of selling, advertising, overhead, etc. Four-cylinder cars that were said to show a factory cost for time, material, and labor of $3,700 were sold at $3,600."

From "Horseless Age," New York.

TRACTOR DRAWING DISK HARROWS AND OTHER IMPLEMENTS.

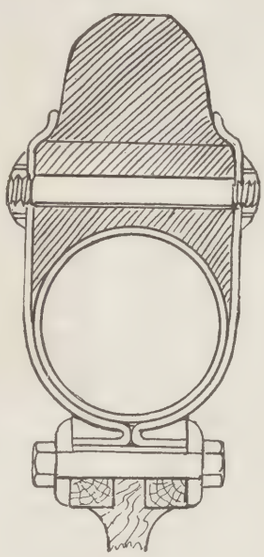
In discussing the significance of the company's action, the New York *Evening Post* remarks that "when this great company entered the field its enterprise was portrayed as heralding the beginning of the standardizing of the business; at least it was felt that this company would construct high-grade cars guaranteed first-class by the maker's name alone; that its automobile product would equal in reliability its locomotives." This paper believes that the disappearance of the Alco car "will be accepted, in some quarters, as another proof that the cheap car is making even greater headway than has been believed." The vogue of a certain cheap car made in Detroit is now "tremendous"; the factory has become "one of the wonders of the modern industrial world," and its car has become "a genuine 'American peril' for English and German manufacturers." The secret of this success has been "scientific management, the production of a single type of engine with only three or four varieties of body, the cutting out of all waste, such as unwise advertising and costly headquarters and agencies in the leading cities, with the result that last year the company paid out ten million dollars in dividends." The writer comments further:

"The success of this small car has helped to force down the prices of its nearest rivals; but a still better reason for the cutting of prices is the steady improvement in methods of construction. Thus another of the cheaper cars has gradually reduced its cost to the user from the $1,400 it charged in 1905 to $750 for the 1914 model. There is, moreover, no comparison between the 1905 and the 1914 cars. The former would be a cause for mirth on Broadway to-day, while the latter is a handsome and efficient five-passenger touring-car. Where in 1905, and for some time thereafter, it was necessary for the purchaser to supply top, speedometer, etc., at a cost of between $250 and $300, the buyer to-day receives his car perfectly equipped and does not have to expend a cent except for spare tires. This constitutes an appreciable saving in cost. Still another reliable car has reduced its price from $1,250 to $950, and its makers explain that this is solely due to manufacturing economies. That the movement in this direction has ceased, no one believes. Builders are bound to procure for themselves a wider field of purchasers, and so certain are they of the future that there are no fewer than 370 different cars on the market, as against the 40 produced in England."

A NEW TIRE

Motor World, in terms rather flippant, if not ironical, describes a new tire now under exploitation in Detroit, which is said to eliminate successfully the more serious sources of trouble. The accompanying cut illustrates it. Stock in the company is said to have been readily sold. "They came so fast they had to turn 'em away," says *Motor World* of a recent sale of stock. That paper continues:

"So far as is made plain, the company has not yet acquired a factory, but it does possess a 'fiscal agent,' and also has 'on exhibition at our store a 40-inch tire which sells for $75, and it costs us only $12 to make it.' The par value of the stock is $10 per share, and 'a great many careful, conservative business men have told' the people that they are making 'a reasonable statement' when they say they 'will without doubt pay from 25 to 50 per cent. in dividends the first year' they do business. 'As they can sell all the tires they can make at a profit of from 300 to 500 per cent.' they apparently have no doubts on that score.



From "Motor World."

A TIRE THAT MIGHT ELIMINATE MANY TROUBLES.

"The tire itself appears to be a combination of the solid- and pneumatic-tire principle. The rubber tread is 3½ inches thick, the inner tube being confined between a pair of steel rims and this thick rubber tread, all of which makes perfectly plain why the tire can not puncture or blow out, or cause trouble of any sort."

GROWTH OF THE INDUSTRY SINCE 1904

Donald M. Lacy has made a digest of statistics pertaining to the automobile industry as compiled for a special census bulletin. His article is printed in *The Automobile*. It appears that between 1904 and 1909 the increase in the industry in this country was about sixfold. In 1909 there were 265 concerns making trucks and cars as their chief industry, which produced in that year 126,593 machines at a total cost of $210,690,666, or an average of $1,607 per car. The machines produced in the same year by companies whose chief products were of a different character numbered 694. Other concerns at the same time were producing bodies and parts. The grand total of all concerns engaged in producing machines or accessories was 743. In 1904 the automobile industry ranked in the value of products as the seventy-seventh of the country; in 1909 it was the twenty-first. Other items in Mr. Lacy's article are given below:

"Of the automobiles turned out by establishments engaged in the industry in 1909, 95.1 per cent. were gasoline vehicles, the proportion being considerably larger than was the case five years previous when the percentage was 86.2. The number of gasoline-cars made in 1909 was almost six times as great as the amount made in 1904. Steam and electric vehicles gain much more slowly in number, showing increases of 51.4 and 168.5 per cent. respectively, and each of these classes constituted a smaller proportion of the total number in 1909 than at the preceding census. In 1904 more steam than electric automobiles were reported, but in 1909 the reverse was true.

"The most important of the types in point of numbers and of value is the touring-car class, the total number of these vehicles turned out in 1909 being 76,114, representing a value of $113,403,188, as compared with a production of 7,220 cars, valued at $11,781,521 in 1904. These machines constituted 60.1 per cent. of the total number and 69 per cent. of the total value of automobiles manufactured in 1909.

"Runabouts stand second as a class, the production for that year comprizing 36,204 cars with a value of $28,030,479. These figures appear very favorably when compared with the 12,131 runabouts built in 1904, which represented a value of only $8,831,504. Of all the varieties of pleasure and family vehicles, including motor-buggies, limousines, cabs, surreys, victorias, etc., there were manufactured 9,550 during the year 1909, representing a value of $14,387,664.

"In the number of delivery wagons built in 1909, Michigan was surpassed by Ohio and Illinois in respect to number and by Illinois and Pennsylvania in value. New York reported the largest number of motor-trucks in 1909, but the aggregate value was less than that reported by Michigan. This is interesting in view of the fact that in 1904 New York led both in the number and value of such vehicles, having 71.1 per cent. of the value. New York led in the value of 'all other varieties' of business vehicles in 1909, reporting 30.3 per cent. of the total. In 1904, Connecticut was the leading State in this respect, with 40.6 per cent."

If you believe in music you need a Victor-Victrola

If you believe in the power of music to elevate your thoughts and broaden your intellect, to stir your imagination and quicken your emotions, to soothe your mind and lighten your toil, you can appreciate what it would mean to have a Victrola in your home.

Music is no longer a luxury to be understood and enjoyed by a select few. Music has come to be an actual necessity in every home, and its foremost exponent today is the Victrola.

With this wonderful instrument, you bring some music into your life each day to add to your happiness and make your home more complete.

Victor-Victrola XVI

Mahogany or quartered oak

There are Victors and Victrolas in great variety of styles from $10 to $500.

Any Victor dealer in any city in the world will gladly demonstrate the Victor-Victrola to you and play any music you wish to hear.

Victor Talking Machine Co., Camden, N. J., U. S. A.

Berliner Gramophone Co., Montreal, Canadian Distributors

New Victor Records demonstrated at all dealers on the 28th of each month

REVIEWS OF NEW BOOKS

SOME RECENT BIOGRAPHICAL WORKS

Pearson, Henry Greenleaf. James S. Wadsworth of Geneseo. Large 8vo, pp. 321. New York: Charles Scribner's Sons. $4.

This is another contribution to anti-slavery and Civil War history. General Wadsworth had been well known as an abolitionist for some years before the war broke out. He went into the movement for the emancipation of the blacks of the South with an ardor that was exemplary. His early death at the head of his troops in the Battle of the Wilderness adds a pathetic interest to this well-written biography of him. Up to his sad but glorious end he had been present at the most important engagements in the war as far back as Bull Run, in which he played a creditable part.

We commend highly the industry with which Professor Pearson has gathered his materials from so many personal sources and share his regret that the correspondence of the General, consisting of letters written on the field of battle and from his office as Governor at Washington during a critical period in our history, has not been preserved. We have, however, here published a few of his official notes to Lincoln, in which we get a glimpse of the often-described perplexity of the President in view of the inactivity or incapacity of his military commander, and particularly as to McClellan in the early weeks of '62. To the incompetent class Wadsworth did not belong. We read in these glowing pages much that furnishes ample justification of John Lothrop Motley's eulogy, "When foreign calumniators and domestic traitors spoke of Southern chivalry and of Northern mercenaries, the single name of Wadsworth was answer enough to all their vulgar babble." Grant, Meade, Humphreys, and Hancock testified to the example set by this brave man. "The moral effect of his example," writes a contemporary, "his years, and high social position as a country gentleman and a stainless political leader, his distinguished personal gallantry and daring bravery, all tended to place him in a most conspicuous position, and to give him an influence over the soldiers which few men possess."

The record of General Wadsworth's life is not all war and camp, or even politics. We are shown how he and his immediate ancestors kept up the traditions of a beautiful and hospitable home; how he was a landowner who set a good example in farming to those of his neighbors who practically rented farms from him at eighteen bushels of wheat an acre. This book of Mr. Pearson's presents a picture of a man who in any other country would have claimed the title of aristocrat and illustrated in his own life and character the best features of American politics.

Nystrom-Hamilton, Louise. Ellen Key, Her Life and Work. Pp. 187. New York and London: G. P. Putnam's Sons. $1.25.

It would perhaps be impossible to find a woman more talked about and talked against than Ellen Key. It is strange, but true, that nowhere has she been more severely criticized and misunderstood than in the land of her birth, her native Sweden. She was born at Sundsholm, December 11, 1849, and lays great stress on the fact that she was the first child of young and happy parents, a "love-child" in the most beautiful meaning of the word. She possest a sweet and wholesome nature, a desire to create happiness, a love of all good music, and a love of reading so passionate that she believed herself capable of committing crimes to get books.

The author of this life of Ellen Key has had every opportunity to know the truth about her. She claims that all the misunderstandings and the unjust things said of her have come from quotations of detached sentences which could give correct meanings only when quoted more fully and accurately. Like most great thinkers she went through many stages of religious beliefs and disbeliefs." The history of her lectures, her popularity, and her power of commanding attention are intensely interesting. We are glad that there exists one so fair as to write this estimate of her: "We ought to be glad that there are women, even without a scholastic degree, who have courage to communicate what life has taught them. As regards Ellen Key, she has touched on these intimate and delicate subjects as only a master in the art of language could do." Those who will not understand her ought not to read her.

Deakin, Mary H. The Early Life of George Eliot. Pp. 188. Manchester: The University Press. $2.

A biography of George Eliot is not needed, nor is one here offered; but we are glad to get even a meager description of the early years of Mary Ann Evans and to trace the relationship between her formative years and the books she created out of her memories and beliefs. This book is a description of the "adolescence of genius," an attempt to bring together, with greater fulness, the details of George Eliot's early life and to make more generally available the "salient matter of her letters and journal." After a comprehensive chapter on England and its conditions at the time of Mary Ann's birth, we have some delightful pages dealing with her home, family, and friends. It seems to have been a marked characteristic of the young genius to have an engrossing passion always acting either for some one in her own family, some ideal, or some public character. That trait remained with her as she grew older. Her devotion to her brother Isaac was the first manifestation of this characteristic, her feeling for Scott and his writings another. Later came periods of extreme religious fervor followed by doubts and absorbing free-thought. The book is not quite true to its title, in that it goes beyond the early childhood and dwells at length on her life after it came under the influence of George Henry Lewes, but we need only remember her exquisite humor, soul-moving pathos, and dramatic skill as an outgrowth of childish loves and ideals.

U. S. Marines loading Post Toasties on Battleship Michigan at the Norfolk Navy Yard—(From actual photograph).

Post Toasties

Follow the Flag

Uncle Sam provides the best of food, so it naturally follows that his fighting men have these delicious golden-brown bits of toasted Indian Corn, afloat as well as ashore.

The use of Post Toasties has become so general in our Naval service that one may find Jack Tar enjoying "Toasties" wherever the Flag takes him.

Many carloads of this appetizing food leave the model factories of the Postum Co. at Battle Creek each day and provide the world with one of the daintiest breakfast dishes imaginable—

Wholesome
Nourishing
Easy to Serve

The best proof is a trial in your own home.

Post Toasties are sold by grocers everywhere — so you may

Electric Lighting, Cranking and Ignition.

Note These Advance Features

Streamline Body—gradual taper without angles or breaks from the tip of the Radiator to the back of the car. This is a brand new creation—a pure design, not a compromise.

Extremely large doors carried on concealed hinges—making the body lines entirely smooth, without projections or disfigurement. **Special wind shield** designed as a part of the cowl and not something added to or built on.

Clear running boards. Gasoline tank and Tire carriers in the rear. **Left hand drive and center Control. Both front doors opening.**

Low swung body, trimmed with our own type of Dutch upholstering—fits the "back."

Four speeds ahead and reverse, with direct on third.

Delco Electric Lights—Electric Cranker—Ignition with automatic spark control.

Disappearing seats, **motor tire air pump, taper hood.**

Transmission
Selective type; four speeds ahead, one reverse; mounted on six imported Annular Bearings, guaranteed for 90 horsepower; Gears of Chrome Vanadium steel, heat treated.

Timken Bearings
In rear axle—full-floating. Housing, one-piece crucible steel, tested to 11 tons. Bearing Seats integral with Housing, insuring permanent alignment of Differential and Pinion.

Instrument Board
Under Cowl, illuminated by two concealed lights. Delco Switches, Regulator and Automatic Starting Button, Speedometer, Eight Day Clock, Hand Pressure Pump, Air Gauge, Air Adjustment for Carburetor, Portable Light Switch, and Locker for convenience of driver, all set in flush, and within comfortable reach of driver.

1914 MOON
Light Weight Six—50

SOME dealers already have them, others are being shipped daily. Have you seen the car? Do so—it is a mechanical treat. You've always wanted a six—you'll buy a light weight six this year. For—mark these words, everybody spending $2,000 for a car in 1914 will be wanting Light Weight Sixes. However large the supply, demand is going to be greater. The few reliable manufacturers making light weight, medium price Sixes will be physically unable before the season's end to turn them out fast enough to keep up with orders. You know what happened with the first Delco-started cars—and the first fore-door cars. People had to wait. If you are wise then you will do your investigating of cars *now* and place your order early.

This is not an attempt to rush you into ordering, but it is a sincere and confident prediction. 1914 will see it fulfilled.

Light Weight Six Facts

The Moon Light Weight Six gives *all* the advantages of the heavy, expensive six—evenness of Torque, smooth running, easy riding, strength, power and roominess—all you've ever wanted a six for.

It costs *no more* in upkeep than a Four of the same power—and weighs no more.

It *looks* and is substantial—not a "light" looking car but classy of line—showing what it is; a refinement of the heavy six "Percheron" into the Light Six "Arab".

The Moon Dealer

in your city will be glad to show you this car and the *New* Moon Four-42. He will explain them in detail. Should there be no Moon dealer where you live, write us and we will send literature and put you in touch with a Moon man.

MOON MOTOR CAR COMPANY
ST. LOUIS, U. S. A.

"Here Are the Inquiries From Our Sales-Letter. They Jumped from 12% Last Year to 21% This Year!"

"You were right. The Quality, Weight and Finish of paper used for a sales-letter *do* count.

"The same list we used last year—the same proposition—practically the same letter—but *different paper*—and an increase of 9% is shown in the results!

"It surely paid us to be guided in our selection by the advice given in the portfolio, 'How to Buy Business Correspondence Paper'."

If *you* are planning a sales-letter campaign, why not be sure to use the Quality, Weight and Color of Paper that is most effective for your particular product—the most effective for the class to which you are to appeal? Why guess—why theorize?

Profit by the analysis of shrewd Advertising Men and other Paper Buyers as contained in the portfolio "How to Buy Business Correspondence Paper"!

REVIEWS OF NEW BOOKS

(*Continued from page* 534)

Pickett, La Salle Corbell. Pickett and His Men. Pp. 303. Philadelphia and London: J. B. Lippincott Co. 1913. $2.50.

The Heart of a Soldier. Letters of George E. Pickett, C.S.A. Pp. 215. New York: Seth Moyle (incorporated). $1.30 net.

Mrs. Pickett has written so many books out of, around, and inspired by her husband's eventful life that we have become quite familiar with her delightfully poetic style and her very natural loyalty, but each new book has an especial charm and its own peculiar message. The first of the above volumes contains a historical record of General Pickett in his different engagements, in relation to different prominent men, both of North and South, and throughout his connection with the Army. She describes his actions as a man and soldier, and relates events great and small that combined to make him the lovable and heroic figure whom the world recognizes. George E. Pickett's greatest work was done at Five Forks, on April 1, 1865, but "wherever fighting, duty was his polestar." This book is an interesting, intimate history of Civil War events, and a loyal and worthy tribute from a brave and loyal woman to her hero husband.

For the second work we owe gratitude to La Salle Corbell Pickett who gives us an opportunity to read the letters which General Pickett wrote her before and after their marriage. It must have been difficult to share with any one such love-letters, betraying as they do the man's great qualities as well as his complete devotion to her, but her pride in his bravery and the universal sympathy persuaded her to share her glory with the world. His personal account of the tragic events in which he participated and the narrative of his personal experiences and opinions make thrilling reading. He gives us intimate glimpses of national heroes on both sides of the battle-line: Grant, Lee, Stonewall Jackson, Longstreet, and Burnside. General Pickett who never faltered in his allegiance, but never lost sight of the other side nor gloried in victory: "I can fight for a cause I know to be just, can risk my own life and the lives of those in my keeping without a thought of the consequences; but when we've conquered, when we've downed the enemy and won the victory, I don't want to hurrah. I want to go off all by myself and be sorry for them." It seems almost sacrilege to read his personal messages of tenderness to his absent wife, but, interwoven with his longings and devotion are descriptions of events in the war which justify the fame which is linked inseparably with the day at Gettysburg when he led his men in one of the most heroic charges in history. One reads these letters with tears of sympathy and admiration.

Abbot, Willis J. Notable Women in History. Pp. 448. Philadelphia: John C. Winston Company.

The author of this large and comprehensive work seems to have recognized the times as peculiarly opportune for such an exposition of woman and the wonderful things she has accomplished. He has written the lives of seventy notable women: "Women who in all ages, all lands, and in all womanly occupations have won fame

(*Continued on page* 538)

HUDSON MOTOR CARS

HUDSON MOTOR CARS

Accept Howard E. Coffin's 1914 Automobile Review—We'll Send It!

NO AUTOMOBILE buyer should fail to read Mr. Coffin's Automobile Review.

He shows why six cylinder cars are now so popular.

He explains the reasons for their smoothness, and why they are so desirable. With diagrams, and in the clearest language, he makes you understand why so many makers are now manufacturing sixes exclusively.

He tells about wire wheels and wood wheels—about left side drive and right side drive—about gasoline economy—electric and other gear shifts—streamline bodies—speedometer drive—new things in lighting, and other features embodied in the 1914 designs.

No man is more eminently qualified to prepare such a review. Mr. Coffin's reputation as an engineer, and his many contributions to the progress of the automobile industry both as a designer of many successful cars and a contributor to engineering literature, make this review authentic.

Of course he also describes the HUDSON SIX 54. No discussion of automobile tendencies would be complete that omitted mention of this new car.

It approaches a new ideal with its true streamline body—135-inch wheel base—six cylinder motor of extreme flexibility and smoothness—electrical lighting and starting by an improved Delco system—left hand drive—center control—and entrance to the driver's seat from either side. These are features that make the HUDSON SIX 54 a prominent car in the 1914 announcements.

Can you afford to consider the purchase of any car over $1,500 without knowing what such an authority as Mr. Coffin has to say upon the subject?

Send your name and address.

HUDSON Motor Car Company

PHOTO BY EVANS' STUDIOS, PHILA.

A $92,500 residence at Atlantic City, N. J. Heated with a Pierce American Boiler and 2277 feet of Pierce Louraine Radiation. Druckenmiller, Stockhouse & Williams, Philadelphia, Architects. Mulford T. Sharp, Steamfitter.

Our Heat Primer makes your Heating Problem as Plain as A B C

If the question of heating has been a puzzle to which you could get no satisfactory answer, you should read our Primer on Heat. It will interest you because in it the whole subject of heating has been treated, simply and intelligently, with all the technicalities left out. It is called

"What Heat for Your House"

It shows you how the different heating systems work, why some cost more to operate than others, and how any house can be comfortably heated in any weather at small cost, and it will show you how more than three hundred thousand houses are being so heated with Pierce Boilers. The Primer will help you to decide on the heat for your house, or the new system for your present house.

Your steamfitter can advise you the type of Pierce Boiler to get and the cost of installation, but before you go to him be sure to send for our Primer—it's sent free upon request.

REVIEWS OF NEW BOOKS

(*Continued from page 536*)

and put their imprint on the world's history." His pages give pen portraits of the frivolous Nell Gwynn and the stately Martha Washington, each of whom exerted influence on the history of her times. He groups his characters under "Classic Dames," "Queens and Martyrs," "Women of Wit and Pleasure," "Priestesses of Woman's Cause," "Women of the Footlights," "Women in Art and Letters," and "Women Who Stand Alone," giving as concisely as he can the history of each life and all it meant. Tho the book was not written to advance a cause or push a propaganda, the author expresses his complete sympathy with the women who strive for equality of opportunity and equal rewards for like service for both sexes. As a book of reference it will be invaluable, especially among clubs devoted to the advancement of woman's cause.

AN ENCYCLOPEDIA OF BUSINESS

The American Business Encyclopedia and Legal Adviser. In 5 vols. 8vo. Illustrated. John D. Long and William P. Wilson, Editors-in-Chief. Boston: J. B. Millet Company.

These volumes are well illustrated, well printed, and well bound. In appearance and bulk they resemble closely the excellent "Business Encyclopedia and Legal Adviser," originated by William Stanley MacBean Knight and published in England several years ago, but the text is thoroughly American. Exactly why the "Editors' [we note there are several] Introduction to Legal Topics" should preface the entire work is not made apparent. As there is no general introduction, its purpose is not clearly set forth.

The publishers state that, so far as they know, "there is no other publication of this sort in the country." The main object has been to "produce a work that is entirely devoted to such subjects as are of value to business men, either in building up business, increasing profits, scientific management, establishing partnerships, etc., or in safeguarding established interests both public and private."

Particular attention has been given to the legal side of the work, for had this not been done, the publishers would not feel safe in asserting that "the legal information pertaining to every-day problems will be found of value in solving or avoiding the difficulties which are found in the path of every-day work." Notwithstanding this, the warning is given that "no one can be safely recommended to take his law from a book in his library, and thus save lawyer's fees." All that one gets is an exposition of certain principles of law and the practises and customs of the legal profession, which the intelligent business person ought to understand.

This work should meet with a ready reception from the public. The intelligent business person who possesses it will be careful to read and inwardly digest its contents. It will help to qualify him to avoid the losses and pitfalls a business career entails. The legal articles are tersely written and are in language usually divested of legal cant. They are easily comprehensible to the ordinary layman. Those treating of advertising in its various phases occupy nearly one hundred pages, and are not the least attractive features. In general, the information conveyed presents to the prospective investor or working business man the facts he would wish to know concerning the various industries and occupations as he may be interested in them, before he invests his capital or engages in work.

WORKS DEALING WITH SOCIOLOGY AND EFFICIENCY

Boyd, James Harrington, A.M., Sc.D. Workmen's Compensation and Industrial Insurance Under Modern Conditions. 2 vols. Cloth, pp. xviii, xii–1622. Indianapolis: The Bobbs-Merrill Co. $9 net.

There is no doubt that this large and important work will rapidly become the standard book of reference on workmen's-compensation acts, their principles, and their operation. More and more countries and more State legislatures are giving attention to industrial insurance and compensation of workmen for injury. It is one of the distinctive marks of readjustment to the tremendous and complex conditions of the industrial era. While there have been available heretofore the reports of State and Federal labor bureaus on this subject and special studies by economists, it is the first time that so inclusive a presentation has been made. Tho prepared for American consumption, Mr. Boyd does not omit from his book important sections from foreign codes and practise. He begins with a comparison of the common law, employers'-liability laws, industrial-insurance laws, and compensation laws, and then turns to a historical survey, concise, but adequate for his purpose, of industrial insurance and compensation in the United States, Great Britain, and Germany. The bulk of the two large volumes is occupied by chapters on the acts of all the States and countries which had passed such legislation up to January, 1913. In the case of the State acts, the Federal act, and the British and German acts, a chapter or more is given to each. The text of the act is quoted, court decisions validating constitutionality and operation are cited, forms of procedure are given, and the numerous legal aspects of each receive due attention. In addition to these chapters there are important sections on the legal and economic basis of the principles involved and special treatment of such corollary topics as amount of compensation, relation of the law to dependents of the worker, definitions according to statute of "injuries," "workingman," and "responsibility," and other valuable material. One can not fail to be imprest with the thoroughness and completeness of the volumes. Economists, lawyers, and legislators who are concerned with the topic will find them indispensable. The author, who is a lawyer, has been the chairman of the Employers' Liability Commission of Ohio, and drafted the Industrial Insurance Law of that State.

Marden, Orison Swett. The Marden Efficiency Books, viz., The Progressive Business Man, The Joys of Living, The Exceptional Employee. 3 vols., 12mo, pp. 166, 403, 202. New York: Thomas Y. Crowell Co. $1 per vol.

The author of the "Ars Poetica" teaches us that it is difficult to state the trite and the obvious in an attractive form;

Model 48 Detroit Duplex Drive

Big Volume - Finer Quality - Lower Prices

This is the Detroit Electric policy for 1914—to make ***more*** cars and therefore ***better*** cars than have ever been made by an electric manufacturer; to sell these cars for ***lower*** prices than have ever been asked before; to take only a small profit on ***each*** car, relying on ***large*** volume for an adequate yearly earning.

We believe that this new policy is something people have been waiting for, that it marks a big step forward in the electric car business. We believe it means that thousands of people will buy electrics who have not bought before.

Our Output—Two to One

In the past twelve months we have sold ***more than twice as many cars*** as any other maker of electric pleasure vehicles.

Our factory and service organizations have grown to be the largest in the world devoted exclusively to electric cars. Our manufacturing facilities have been brought to maximum efficiency.

So we have determined to go after even larger volume, to reduce our prices, but at the same time to put into our cars the very utmost in quality. And our 1914 models are the result.

Why Our Prices Are Lower

Every one of the six models listed above, if priced according to the usual methods of figuring, would sell for $300 to $400 more.

Take the worm gear Detroit Duplex Drive car, $3000. The factory cost of this car, plus the ***usual*** rate of profit, would make the list price $3350.

Take the bevel gear Forward Drive Brougham, $2800. Last season's corresponding model sold for $3000. We have added $140 ***actual factory cost,*** in new features and finer quality—and yet we ask only $2800. And so all through the line.

How Quantity Produces Quality

Bear in mind that the reduction in the prices of Detroit Electric cars means no reduction in the quality. Exactly the opposite.

The large volume that makes possible these lower prices also makes possible the highest quality in materials, in workmanship, in improved features.

It requires ***quantity*** to produce ***quality.*** The old idea that small production means better quality, more care, finer attention to detail is a fallacy. When a maker builds 1800 to 2000 cars, his standard of quality is higher than when he builds the average output of 400 to 500 cars.

The large manufacturer can afford to have a higher standard. He can and does put better workmanship into his cars—because he can afford the mechanical equipment necessary.

Small production means near-accurate handwork, instead of absolutely accurate machine work. It means steel castings instead of the stronger drop forgings. It means fitting and filing instead of standardized, uniform parts.

Don't Let High List Prices Blind You

The high prices asked for many cars are not evidence of quality. You don't make anything in buying an overpriced car. A few hundred dollars added to the price ***and then taken off again*** by a cut in price or an excessive allowance for a used car, doesn't change the quality of the car. Price doesn't really mean anything except in relation to value.

Detroit Electric cars are lower in price than any cars even approaching them in quality. They are sold at ***catalog prices.*** They are marketed with a smaller discount to the dealer than other cars.

Please see these cars at our dealer's. You will find him to be the most substantial electric car dealer in your city. 1914 advance catalog sent on request.

Anderson Electric Car Company, Detroit, Mich.

"THESE non-skids are ALWAYS in place"

No need to take chances with slippery spots, or to get out in the rain and mud to put on chains, if your tires are equipped with the right sort of protectors.

It is not difficult to protect pneumatic tires: the main point is to **keep the protectors tight,** so that they cannot chafe. That is accomplished by the patented side springs of

Woodworth Treads

The Woodworth Side Springs take up the stretch which is inevitable with any covering: **Woodworth Treads** are as smooth and snug on their last day as their first. They are specially finished for permanent softness; and their steel rivets last as long as bare tires in similar service. Tire life is **increased three-fold** by using **WOODWORTH TREADS.**

How many times do you risk a skid sooner than bother with chains? You needn't run that risk **even once** with **WOODWORTH TREADS,** because they are **always** in place. And you will avoid punctures, cuts, fabric decay and fussy home repairing—the whole calendar of tire troubles, in fact—at less expense than your bare tires now cost.

WE GUARANTEE Woodworth Treads not to injure the tires, and we will repair or replace free any tire so damaged. We guarantee them to outlast any other style of protector, and we will refund the full purchase price within 60 days after purchase on any pair that does not do all we claim.

Wet roads are soon coming. Repair your tires now, and get the full fabric life by covering them with **Woodworth Treads.**

All big supply houses sell Woodworth Treads. If it is not convenient to order of them, we will ship direct, express prepaid.

Write your name and address on the margin of this page, and mail to us for booklet on tire preservation, useful to any motorist.

REVIEWS OF NEW BOOKS

(*Continued from page* 538)

it is difficult to make people keep constantly before their eyes truths which may be commonplace, truths which every one acknowledges, but which many people do not call to mind and act upon. Such truths are the heritage of civilized man if only he knew it. The book before us has overcome this difficulty. It contains no Machiavellian aphorism aiming at the education of an intriguing climber or ruler. All is common sense, square dealing, openness, and sweetness. Dr. Marden is an optimist of the purest water, and his counsels are likely to help and soothe thousands of lives. He believes in success, and holds that a business life is the shortest path to success, which means the attainment of money with the ease and freedom it brings, together with the development of character and the opportunity of exercising power in a useful and beneficent way. Then he takes occasion to conclude with the following homily on the text: "The mind that is vacant is a mind distrest." Success to be perfect must be something more than material, to quote his words on growing old:

"A person who has always kept up the habit of improving himself, reading good books, thinking, and contemplating great truths . . . finds plenty of employment for his last years. One of the most pathetic pictures in American life is that of the old men who have retired, but had nothing to retire to, except their fortunes. They had never prepared for old-age enjoyment. In their younger days they did not develop the qualities which make leisure even endurable, to say nothing of enjoyable. Everywhere abroad we see the retired American who feels out of place and homesick, hungry for the exercise again in the office."

The books are written in a clear and sprightly style and may be read with ease and pleasure.

Münsterberg, Hugo. Psychology and Industrial Efficiency. Cloth, pp. 321. Boston: Houghton Mifflin Co. $1.50 net.

Professor Münsterberg's effort here is to call attention to a wider application of psychology than is currently considered—to introduce to the world the science of psychotechnics, the use of the psychological laboratory and its data in manufacturing and business life. This has its bearings on one hand with the efficiency-engineer's problems and on the other with the vocation-bureau's task. It deals largely with the best way for a man—psychological being that he is—to perform a given industrial operation and with the finding of the best man to do what has to be done in a given way. This involves a large variety of problems, and to it must be added the special investigations into fatigue, attention, monotony, training, and the like. Professor Münsterberg draws much very fascinating material from such a range of sources as ship service, telephone operation, advertising, electric-railway service, pencil factories, lamp-wrapping, typewriting, and his putting of the problem is always clear and pointed. There is without doubt an important opening for pioneer work of this kind. Civilization needs all the aid it can obtain in making itself endurable and successful. Yet one

BEAVER BOARD

Mr. A. P. Shattuck, of Buffalo, has Beaver Board walls and ceilings not only in his living-room, but in every room in his home.

No Wall-Paper Here

IN this living-room the walls and ceilings are painted. Mr. Shattuck says that the effect of the color-scheme and the beautiful pebbled surface of Beaver Board could not be equaled by wall-paper—to say nothing of the freedom from the nuisance of re-papering, and from the cracks which are sure to come in plastered walls.

The colors are always fresh and bright, as the walls can be easily cleaned with a damp cloth. Being made of pure wood fibre, the unsanitary features of wall-paper are entirely eliminated.

Sold by lumber, builders' supply and hardware dealers in sizes to meet all your needs.

Be sure it's the genuine, patented Beaver Board with trade-mark on back and cream-color all through.

Beaver Board has many other advantages over lath and plaster. You will find them described in "Beaver Board and Its Uses," an illustrated book, showing many actual interiors. Sent free with painted sample.

is not always sure—however clever the laboratory method may be—that some important factor in the original problem may not be overlooked. Most of the results must be exceedingly tentative, but the book should stimulate wide-spread study of the subject and that general experimentation in it which will be necessary before it passes from the stage of a device to that of a science.

DR. A. R. WALLACE'S LATEST BOOK

Wallace, Alfred Russel, O.M., D.C.L., F.R.S. Social Environment and Moral Progress. Cloth, pp. 185. New York: Funk & Wagnalls Company. $1.25 net.

The thesis which, at the close of his ninth decade of life, Dr. Wallace presents in his recent book is that there has been no real moral or intellectual advance in the human race during the whole historical period, that there can be no progressive improvement in inherent character until some selective agency is set free to act upon it, and that that agency is now restrained from operation by the evils of our social system which is the worst that the world has ever seen. At first glance one might find here but the pessimism of age, but a careful reading of Dr. Wallace's lucid, direct, forceful argument gives another verdict. His solution of the problem of human progress by means of the survival of the fittest is not through the artificial schemes of the modern school of eugenics, but in such amelioration of the evils of our competitive and antagonistic social system as shall enable the laws of evolution to operate for the benefit of mankind.

"Nature—or the Universal Mind—has not failed or bungled our world so completely as to require the weak and ignorant efforts of the eugenists to set it right, while leaving the great fundamental causes of all existing social evils absolutely untouched. Let them devote all their energies to purifying the whitened sepulcher of destitution and ignorance, and the beneficent laws of human nature will themselves bring about the physical, intellectual, and moral advancement of our race."

The social evils, to which Dr. Wallace devotes a trenchant pen in summing up the increasing moral degradation of the times, are the industrial servitude of large numbers of women and children, unsanitary and crowded dwellings, deadly trades, the injustices of law, the high cost of its processes, adulteration, bribery, gambling, and other results of the passion for wealth which seeks its end by economic antagonism, monopoly, and social injustice. When civilized government performs its most important duty, that of organizing the labor of the whole community for the equal good of all, these evils will cease. In this beneficent social order woman, set free from industrial burdens and political inequality, will have a higher position than any which has been claimed for her, and its responsibilities she will nobly fulfil. The women of the future will become the regenerators of the whole human race, and the intellectual and moral inheritance of later generations will gain in ever-increasing value.

CURRENT POETRY

FOR a man to be at once a poet and an editor is not unusual. There was William Ernest Henley, for example, who made the Manchester *Guardian* a real force in the literature of his time. We have never seen any verse by Mr. Robert Sterling Yard, but his two predecessors in the editorship of *The Century Magazine*—the late Richard Watson Gilder and Mr. Robert Underwood Johnson—were known through their poems as well as through their direction of the magazine. In England there is a striking instance of the success which a poet sometimes attains in journalism. About a year ago Mr. Stephen Phillips, whose "Marpessa," "Christ in Hades," and other poems had made him famous, was put in charge of *The Poetry Review*. He was, so far as is generally known, without editorial experience. But under his editorship *The Poetry Review* has become a magazine of international eminence. The verse which it contains is varied in *genre* and high in quality; the critical essays are sincere and illuminating. The September issue contains a number of poems decidedly above the average in thought and technic. One of them (by an American poet, by the way) we reprint below. Mr. Walsh's rime scheme is unusual but effective; in structure and perhaps in spirit his poem suggests the irregular odes of Coventry Patmore. He writes tenderly and convincingly and his lines are not readily forgotten.

Coelo et in Terra

BY THOMAS WALSH

Earth is a jealous mother; from her breast
She will endure no separation long
From aught she bore;
So one by one
She claimeth evermore
The parent, and the friend,
The loveliest, the best,
The meek, the faithful, and the strong—
Link after golden link undone,
Until the tomb, which seems
To youth the dismal gulf of all that's fair,
Becomes the very hearthstone of our dreams,
A wonder-house of all that's rare,
And deathless, and most dear;
Where the bereaved heart
From exiled life apart
Returns for love-warmth and abiding cheer.
Yea, earth can be so kind—
Then ye that rule the wind,
Are ye of less appeal?—
Ye spirits of the stars
And regions where the suns
Themselves as atoms wheel
Beneath your thundering cars?
Cerulean ones—
Or goddesses, or saints,
Or demiurge, or trinities,
Wherewith heaven highest faints!—
Are ye less kind than these
Dim vaults of clay,
Ye boasts and fathers of the ancient day?
Thou god Avernian, Dis, behold
What timid form and old
Adown thy purple gulf descends

The importance of fire-safety embraces every building—and fire-safety can be bestowed upon every building by a construction of

NATCO·HOLLOW·TILE

It is true that **Natco Hollow Tile** has become most prominent as the fire-proof and permanent material used in the great modern skyscrapers and the more expensive residences. It is just as much a fact that **Natco Hollow Tile** has succeeded the other building materials for industrial plants and modest homes—buildings of all descriptions.

Every one interested in any way in any building project should have personal acquaintance with **Natco Hollow Tile.** The buildings of the future, whether small and guarding the lives of a few, or large and housing the many, must be *fire safe.* **Natco Hollow Tile** in its adaptation to the different types of buildings and with its efficiency established, affords the opportunity to build every building *fire safe.* The additional expense incurred is more than offset by the increased value from every point of view. More permanent than other materials and with a natural insulation against heat, cold and dampness from the air inside the tiles.

Don't make the mistake of assuming that any Hollow Tile will do for your Home. Insist on blocks bearing the "**Natco**" Trade Mark. This Trade Mark is put there so that you can distinguish **Natco Hollow Tile** from the Hollow Tile that has only a lower price with which to claim your consideration.

Before defining your building plans, send for our 64-page handbook "Fireproof Houses," fully describing, with illustrations, every detail and phase of **Natco** construction. Contains 80 photographs of **Natco** buildings. Mailed anywhere for 20 cents to cover postage. *Write for it today.*

JOHN T. STANLEY
650 West 30th St.
New York

Unto the arch of Death (grim friend of friends,
Be thou placated!) 'tis a mother, see,
Takes her first step into eternity!
Leave her not fearful there
Who was of love entire,
So gentle and so fair;
Thy majesty and dread withhold
For the high head and bold,—
Imperial Death, mock not thyself with ire!
Nay—then it was not fear
That stayed her foot the while?
For now her lovely eyes,
Unclouded, brown,
Are lighted with their greeting smile—
The Hand awaited through the gloom
Is seen?—her whitened forehead lies
Upon the Shepherd's shoulder down—
Yea—her own Jesus comes—to lead
Unto the meadows where is Peace indeed!

Here, to remind us that summer is not forgotten, is a "Nature poem" from the pen of Miss Edith Wyatt. She has little that is new to say, but she has listened with advantage to the mighty music of the Falls. The alternation of masculine and feminine rimes is most effective. We quote from *Collier's Weekly:*

Niagara

By Edith Wyatt

Cool the crystal mist is falling where my song is calling, calling
Over highland, over lowland, fog-blown bluff and bouldered shore:
Proud my snow-rapt currents leaping from Superior's green keeping.
Down from Michigan's gray sweeping toward the Rapid's eddied floor.

Rain, hail, dew, and storm-cloud swing me; from the heights the hollows wring me;
Filtered clay and field silt bring me silent through the dark-breathed loam,
Down the thousand-terraced highlands till the skyland lake beds wing me—
Flying down and down in beauty through the chasm's flocking foam.

Down from Huron, down from Erie, tho the wild duck's wing grow weary,
Tribe and nation part and vanish like the spin-drift haze of morn,
Fresh my full-fold song is falling and my voice is calling, calling
Down from far-poured lake and highland as I sang when I was born.

South, North, East, and West untiring speak my brother seas in splendor,
Tell their dominant desiring, claimant over coast and main,
Mine the choiring of a woman's chord immortal, of surrender—
Of the splendor of desiring, deep to give and give again.

Chord of star-fused loam and silver-surgent lake cloud's generation,
Here I sing the earth's still dreaming down my green-poured currents' length,
Voice of river-rocking valleys, rich heart plains, and heights' creation,
Clear-veiled chord that locked in you your mother's life, your father's strength.

Cool the fog-flocked mists are swinging. Soar, my dream; and silver winging,
Call my air-hung music ringing, toward the crystal-buoyed morn—
Full-fold music from the highlands, where my splendor's voice is singing,
Fresh from flooded shores and skylands as I sang when I was born.

The Living Age reprints (probably from some English periodical) the following poem. Enough poetry has been written expressing the town-dweller's longing for the country to make a very large book, but the possibilities of the theme are not therefore exhausted. There is a delightful lilt in Mr. Masefield's verses and a wholesome beauty which may be sought in vain in some of his more pretentious efforts.

London Town

BY JOHN MASEFIELD

Oh, London Town's a fine town, and London sights are rare,
And London ale is right ale, and brisk's the London air,
And busily goes the world there, but crafty grows the mind,
And London Town of all towns I'm glad to leave behind.

Then hey for croft and hop-yard, and hill, and field, and pond,
With Bredon Hill before me and Malvern Hill beyond.
The hawthorn white i' the hedgerow, and all the spring's attire
In the comely land of Teme and Lugg, and Clent, and Clee, and Wyre.

Oh, London girls are brave girls, in silk and cloth o' gold,
And London shops are rare shops, where gallant things are sold,
And bonnily clinks the gold there, but drowsily blinks the eye,
And London Town of all towns I'm glad to hurry by.

Then hey for covert and woodland, and ash and elm and oak,
Tewkesbury inns, and Malvern roofs, and Worcester chimney smoke,
The apple-trees in the orchard, the cattle in the byre.
And all the land from Ludlow town to Bredon church's spire.

Oh, London tunes are new tunes, and London books are wise,
And London plays are rare plays, and fine to country eyes,
But craftily fares the knave there, and wickedly fares the Jew,
And London Town of all towns I'm glad to hurry through.

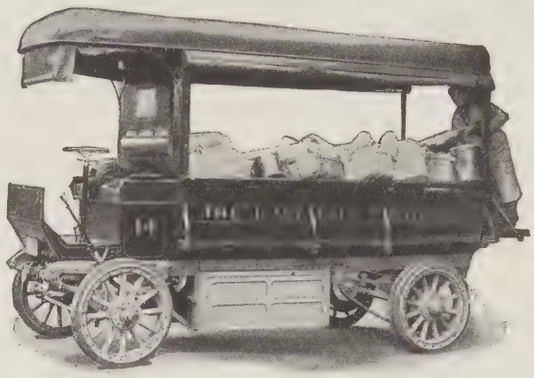
So hey for the road, the west road, by mill and forge and fold,
Scent of the fern and song of the lark by brook, and field, and wold,
To the comely folk at the hearthstone and the talk beside the fire,
In the hearty land, where I was bred, my land of heart's desire.

Mr. Hodgson writes of the hills with a vigor that recalls the sturdy rhythms of Hawker of Morwenstow. The picture of the "marching rain" in the fourth stanza is well drawn, and so is that of the gorse "like a host of warriors in gold." We take the poem from *The Spectator*.

The Hills

BY W. N. HODGSON

Now men there be that love the plain
With yellow cornland drest,
And others love the sleepy vales
Where lazy cattle rest;



Baker Trucks
cost more than any other electrics now being manufactured, and they should. Every extra dollar put into their construction is worth ten to the owner in the saving of repair bills for ten years to come

CRESCA COMPANY, *Importers*, 370 Greenwich St., N. Y.

Which Letter Would You Trust?

Here are five letters from five manufacturers to whom you wrote in connection with something you had decided to buy. Their claims being in a measure equal, how may you judge of their reliability? Are their products as good as their word?

If you could visit their plants and meet their officers, you could judge what manner of men they were. This being out of the question, your clue may be had from their stationery. Probably one of the letters has impressed you, though without your having fully realized it. Learn to trust the value of those first impressions.

So that you may know OLD HAMPSHIRE BOND, we will gladly send you some sample sheets showing examples of modern letter headings. Better still, enclose 10 cents in stamps and we will mail you a liberal sample box of *OLD HAMPSHIRE BOND SEMI-BUSINESS STATIONERY*—a form of paper and envelopes which every business man should have both in his office and at home, for there are many letters that should express a feeling impossible to secure from business stationery.

It has been our experience that a man must be proud of his business and its methods before he feels any incentive to put his letters on such paper as OLD HAMPSHIRE BOND.

The selection of stationery for a business house is not a matter of chance. There are papers and printers of all kinds, and in the great majority of cases the house that buys good stationery does so because it is its general policy to use the best under all circumstances. There you will find the best men, the best machinery and the best methods. A house that does not skimp on its stationery, will not on its product.

Look in the letters that come to you for the water-mark OLD HAMPSHIRE BOND (hold them to the light) and prove this for yourself. Then (if we may repeat the suggestion) trust the value of your first impressions.

The Man Who Would Govern Others Must First Learn to Govern Himself—These 3 Books a Proved Help in Learning One of Nature's Most Needful Lessons

JULES PAYOT'S

"Education of the Will"

translated into English from the 30th French edition, cannot but assist in the improvement of any man who reads and meditates upon it.

"There is only one cause of almost all our failures, and nearly all our misfortunes," says Payot in the opening paragraph. "This is the weakness of our will—a universal laziness—which is to human nature as gravity is to matter."

This book gets right down to brass tacks. It is no academic discussion of the power of the will but a *prescription for the attainment of self-mastery* which mankind in general urgently needs at the present moment.

Substantial cloth binding, 424 pp., price $1.50, postage 10c.

DR. PAUL DUBOIS'

"Education of Self"

(formerly published as "Self Control")

is another strong "Mental How-to" book written in simple, every-day language, for the man and woman desirous of self-improvement. It should be read by all those, irrespective of age or condition in life, who wish to escape from neurasthenia, or who want to cure themselves of the "worry-habit."

"*It is so delightfully personal* that it inspires you with a desire to begin your own training at once," says Elizabeth Atwood in the N. Y. EVENING MAIL.

Substantial cloth binding, 337 pp., price $1.50 net, postage 10c.

Charles Brodie Patterson's

"Dominion and Power"

has sold steadily for nine years—good proof of its value. The *seventh edition*, just issued, contains seven entirely new chapters. The author defines his purpose as "to call into conscious existence latent powers of being that are resident in the soul of "every man that cometh into the world." He is buoyantly optimistic throughout, and decidedly helpful to courageous and wholesome living. The book shows the *strong man* at work in life, cheering others, blessing right and left, succeeding and "getting on."

Do you doubt the inspiring influence of such a book in *Your Life?*

Substantial cloth binding, 297 pp., uncut leaves, price $1.20, postage 12c.

FUNK & WAGNALLS COMPANY, Publishers, 354-360 Fourth Ave., NEW YORK

But some men love the ancient hills,
And these have chosen best.

For in the hills a man may go
Forever as he list,
And see a net of distant worlds,
Where streams and valleys twist
A league below, and seem to hold
The whole earth in his fist.

Or if he tread the dales beneath
A new delight is his,
For every crest's a kingdom-edge
Whose conqueror he is,
And every fell the frontier
Of unguessed emperies.

And when the clouds are on the land
In shelter he may lie,
And watch adown the misty glens
The rain go marching by,
Along the silent flanks of fells
Whose heads are in the sky.

And in the hills are crystal tarns
As deep as maiden's eyes,
About whose edge at middle-noon
The heavy sunshine lies,
And deep therein the troll-folk dwell,
Can make men wondrous wise.

The gorse of spring is like a host
Of warriors in gold,
And summer heather like a cloak
Of purple on the wold,
While autumn's russet bracken is
Monks' livery of old.

Our lord the sun knows every land,
But most he loves the fells;
At morning break his earliest torch
Upon their summit dwells,
At eve he lingers there to catch
The sound of vesper bells.

The men who dwell among the hills
Have eyes both strong and kind,
For as they go about their works
In heaven's sun and wind,
The spirit of the stablished hills
Gives them the stedfast mind.

Mrs. Katharine Tynan-Hinkson is courageous to write again about lambs, for her early poem "Sheep and Lambs" is so beautiful that almost any other verse on that subject suffers by comparison with it. "Lambs," which we take from *The British Review*, is charming in its simplicity. The tragedy—particularly in the third and last stanzas—is exprest with consummate art.

Lambs

BY KATHARINE TYNAN

The lambs frolic and bleat
After their woolly dams;
They are fed full with milk so sweet,
Fed full, the baby lambs.

But from his mother's milk
One lamb hath turned away;
And from the pastures, soft as silk,
Wherein he would not stay.

One little lamb, new-born,
Goes back to God so fast,
The milky stream his lips did scorn
Runs all to bitter waste.

In pastures white and gold
The tired lambs fall asleep,
Safe in a green and watered fold
Each by its mother-sheep.

For him in Paradise
Such milky fountains flow,

As sure shall still his hungry cries
With honeyed milk enow.

Oh, when at even-fall
The lambs in fold are fed,
The mother's heart begins to call
Her own lamb from the dead.

And to and fro she rocks,
Nor puts her pain asleep;
For still she hears the bleating flocks,
The lambs call to the sheep.

And when the lambs will feed,
With milk are satisfied,
'Tis then her heart begins to bleed,
That was a stone in her side.

In his prose Mr. Maurice Hewlett has forsaken romanticism for mysticism. But the mysticism in such a book as his recently published "Lore of Proserpine" is perhaps only a phase of romanticism. Here (from *The Westminster Gazette*) is some rimed mysticism, or rimed psychological speculation. The first three stanzas are excellent, and the idea of the dawn coming out "in cold gray sark" certainly is striking. But the rest of the poem is a little too fantastic, a little too intense, to be effective.

Night-Errantry

By Maurice Hewlett

Three long breaths of the blessed night
And I am fast asleep;
No need to read by candle-light
Or count a flock of sheep.

Deep, deep I lie as any dead,
Save my breath comes and goes;
The holy dark is like a bed
With violet curtains close.

And while enfolded I lie there
Until the dawn of day,
My body is the prisoner,
My soul slips out to play.

A-tiptoe on the window-sill
He listens like a mouse,
The calling wind blows from the hill
And circles round the house.

Above the voices of the town
It whispers in the tree,
And brings the message of the Down:
'Tis there my soul would be.

Then while enchain'd my body lies
Like a dead man in grave,
Thither on trackless feet he hies,
On wings that make no wave.

The dawn comes out in cold gray sark
And finds him flitting there
Among the creatures of the dark,
Vixen and brock and hare.

O wild white face that's none of mine,
O eager eyes unknown,
What will you do with Proserpine,
And what shall I, alone?

O fleeting feet, O naked sides,
O tresses flying free,
And are you his that all day bides
So soberly in me?

The sun streams up behind the hill
And strikes the window-pane;
The empty land lies hot and still—
And I am I again.

Here is a delightful lullaby which appears in the New York *Sun*. Like all good slumber-songs, it is musically phrased. In the second stanza Mr. Cawein's sympathetic observation of nature is evident.

The Twilight Witch

By Madison Cawein

The twilight witch comes with her stars
And strews them through the blue;
Then breathes below the sunset bars
A breath of meadow rue;
She trails her veil across the skies
And mutters to the trees,
And in the wood, with firefly eyes,
She wakes the mysteries,
The twilight witch, with elf and fay,
Is coming down the slumber way,
Sleep, my dearie, sleep.

The twilight witch, with crescent moon,
Stoops on the wooded hill;
She answers to the owlet's tune,
And to the whippoorwill.
She leans above the reedy pool
And wakes the drowsy frog,
And with the toadstool, dim and cool,
Rims gray the old dead log.
The twilight witch comes stealing down
To take you off to slumber town,
Sleep, my dearie, sleep.

The twilight witch, with windlike tread,
Has entered in the room;
She steals around your trundle-bed
And whispers in the gloom.
She says: "I brought my steed along,
My faery steed of gleams,
To bear you, like a breath of song,
Into the land of dreams.
I am the witch who takes your hand
And leads you off to faeryland,
The far-off land of sleep."

INVESTMENTS AND FINANCE

THE EXPECTED U. P. "MELON"

IN the second week of September rumors that the Union Pacific managers would distribute to stockholders a substantial extra dividend persisted in high financial circles, both here and in Europe. The result was a rise in the stock to the highest point it had reached in many months. Predictions as to the amount of the possible distribution varied from $10 on each share to $34. No official, not even an unofficial, statement on the subject, however, emanated from the management or from any important person connected with the road, everything predicted being based on probabilities, conditions, etc.

By the disposal, under the terms of the Supreme Court decision, of its large holdings in Southern Pacific, Union Pacific has within a few months acquired stock in the Baltimore & Ohio road, now worth in the market about $40,000,000, and cash from subscribers amounting to $80,900,000. These Union Pacific holdings of Southern Pacific were originally purchased by the issue of bonds, the average price paid for the stock being about $75. The recent exchange of part of this stock for Baltimore & Ohio stock and the sale of the remainder to Union Pacific stockholders has netted to the Union Pacific a substantial profit, the exchange for Baltimore & Ohio showing a profit of $11,500,000 and the sale to subscribers a profit of $8,800,000.

In the general opinion that a distribution to stockholders will be made, there are differences as to the proper amount of it. The lowest estimate is based on the contention that the road, having purchased the Southern Pacific stock by an issue of bonds, has no right to return to stockholders the entire amount derived from the exchange and sale, but could properly distribute to them the profits—that is, the sum of $20,000,000. This would give to stockholders a dividend of between $9 and $10 per share.

Other estimates, which go as high as $34 per share, assume that the road will decide to distribute to stockholders the entire proceeds from the exchange and sale of Southern Pacific stock, and, in addition, some part of the other enormous cash holdings of the Union Pacific company, believed to amount to as much as $60,000,000.

Serious question arises here as to the propriety of making a larger distribution than the $20,000,000 of profit would yield. Conservative opinion generally holds that not more than this profit should be distributed. Some experts have held that it would not only be quite proper, but a matter of actual right, to distribute at least that sum, inasmuch as profit in an enterprise belongs to the partners—that is, to the stockholders.

Not all, however, take this view. *The Wall Street Journal* believes that the opportunity that has now arisen for the Union Pacific Company is not that of "fattening its stockholders' bank accounts, but of setting all other railroad directors an example of wholesome moderation, and of administering a rebuke to the thousands of citizens of all sorts and conditions who regard railroad financiers as fit only to be distrusted." It is added by the writer that, if the directors of the Union Pacific take the latter course, "their stockholders will have nothing to regret, for the benefit foregone will return unto them more surely and more effectively than bread on the waters ever did."

RISING RETAIL PRICES AND RISING WAGES

Statistics as to the increased cost of living are often published; corresponding statistics as to increases in wages are less familiar. We have an up-to-date index-number for commodities, but stand in need of one for wages. Once we had this it would be possible to show whether the average wage-earner's condition as to income and living costs has grown worse or grown better. For years previous to 1907 we have, it is true, an index for wages; what is wanted is an index of wages for the six years subsequent to 1907.

The New York *Times Annalist* prints a table, based on figures obtained from the Bureau of Labor Statistics of the United States Department of Labor, showing the cost of wages, hours of labor, and retail price for food from 1890 to 1907, one hundred being taken as the average in each case. The data for wages were derived from more than four thousand industries, those for food prices from nearly one thousand retail merchants in different localities. The table is as follows:

Year	Food Prices	Wages per Hour	Hours of Labor
1890	102.4	100.3	100.7
1891	103.8	100.3	100.5
1892	101.9	100.8	100.5
1893	104.4	100.9	100.3
1894	99.7	97.9	99.8
1895	97.8	98.3	100.1
1896	95.5	99.7	99.8
1897	96.3	99.6	99.6
1898	98.7	100.2	99.7
1899	99.5	102.0	99.2
1900	101.1	105.5	98.7
1901	105.2	108.0	98.1
1902	110.9	112.2	97.3
1903	110.3	116.3	96.6
1904	111.7	117.0	95.9
1905	112.4	118.9	95.9
1906	115.7	124.2	95.4
1907	120.6	128.8	95.0

While, for the period since 1907, there exists no index-number as to wages or hours of labor, there do exist data from which *The Annalist* has been able to compile a table, showing "the course of average wages and hours of labor in contrast with retail price of food," as follows:

Year	Food	Wages	Hours of Labor
1907	100.0	100.0	100.0
1908	103.5	102.1	99.2
1909	109.6	104.1	98.8
1910	116.0	108.5	98.2
1911	114.8	110.0	97.6
1912	123.4	113.2	97.2

It will be seen, from the first table covering the period ending in 1907, that wages on the average rose faster than food prices, so that wage-earners became better off; but the second table, covering the period since 1907, shows the contrary, the cost of food having risen faster than wages. The one period therefore represents a gain for the wage-earner, the other a loss. With the two combined, his condition over the long period thus arrived at may not have been on the whole worse, but, on the contrary, better. In any study of this

sort it is always to be borne in mind that food prices fall as well as rise, and they are likely sometime to fall in the future, whereas wages, having once risen, seldom fall—at least not very much, while over a long period their fixt tendency is to rise and stay risen.

LESS BUILDING ACTIVITY

Building activity showed for August a notable decline; compared with August of last year, it was heavy; it was "the largest reported for any month since July, 1910," says *Bradstreet's*. Except for July, 1910, it was "the largest for any month since 1908." Reports from 135 cities give a total expenditure for August this year of $60,604,696, as against $78,752,037 for August last year, or a loss of about 23 per cent. Only 49 cities report gains over August of last year, while 86 report decreases. Following are the returns from many important cities in the list:

Cities	Aug., 1913	I. or D. from Aug., 1912	July, 1913
Akron, Ohio	$354,125	D. 36.1	$707,265

The Investment With Multiple Safeguards

No. 5—Solid and Permanent Underlying Security

Real estate lasts not for a day nor a term of years, but for all time. It is the source of all value, the basis of all wealth and one of the prime necessities of existence. A loan on the best class of real estate is, therefore, an investment based on the very foundation of the whole financial and commercial structure of the nation.

Such an investment secured by carefully selected, improved Chicago real estate is particularly attractive and especially safe, since land values in Chicago are stable, high and constantly growing and far advanced beyond the stage of booms and speculation. Realty in this city represents solid and permanent value, steadily increasing with the growth of its millions of population and the tens of millions of population of its tributary territory. It is a matter of record that Chicago real estate has maintained not only its stability but a constantly increasing value during even the severest business depressions.

First Mortgage Bonds—5½ and 6%

In view of these facts, the First Mortgage Bonds owned and offered by us are of especial interest to every conservative investor who seeks an opportunity to combine a generous income yield with the maximum assurance of safety and stability. Each issue is secured by improved, income earning, centrally located and carefully selected Chicago real estate of the very highest class. In no case is the conservatively estimated value of the security less than double the total bond issue. The bonds are issued in denominations of $100, $500, $1,000 and $5,000, and mature serially in two to ten years without any release of the original security.

It is of especial interest to note that no investor has ever lost a dollar of either principal or interest on any security purchased of us in the thirty-one years in which we have been engaged in handling this class of investments exclusively.

Investors Manual and Investors Magazine Sent Gratis to Investors

A carefully prepared handbook of investment information, the Investors Magazine—a monthly publication, and a list of selected issues which we highly recommend, will be mailed gratis to bona fide investors on request. Write for Circular No. 2477

Standard Dictionary superiority quickly becomes plain to the man or woman who investigates.

Buying Bonds for Income

Present market conditions—prices being at unusually low levels—offer an attractive opportunity for the investor who buys bonds primarily for income, with the intention of holding them to maturity. He is chiefly concerned with safety of principal and stability of earning power which assures prompt and regular payment of interest. These two requirements are fulfilled in the bonds of conservatively financed and well-located public utility companies. Earnings of public utility companies are largely independent of financial and industrial depressions, foreign disturbances or changes in the tariff.

Good public utility bonds can be purchased at the present time at prices to yield from 5½% to 6¾%.

We can recommend several issues as attractive investments of their kind.

AMORTIZATION MORTGAGES

AN amortization mortgage means that the borrower pays a small amount of the principal every six months. By the time the mortgage is due the whole debt is cleared. Thus the security behind the mortgage continually grows, for the mortgage is binding on the whole property until the last payment.

Mortgage Bank Bonds

are secured by first *amortization* mortgages on Illinois (exclusively) *farms* and *homes*. They are also the *direct obligation* of the Woodruff Trust Company.

6% FARM MORTGAGE NOTES

Six good reasons why you should write us for complete information about these notes before making your investment.

1. They are secured directly by first mortgage on highly improved producing farms *worth practically three times the amount of the loan.*
2. The loans are all on the Serial Plan, which provides for the payment of the principal in annual installments, *thus rapidly increasing the margin of security.*
3. The Notes are in $100, $500 and $1,000 denominations and the serial maturities *enable you to place any amount for any time desired.*
4. The interest is payable semi-annually and is represented by Coupons which are *collected through your bank without charge.*
5. The Notes bear the identification *certificate of a prominent Trust Company.*
6. In addition to the physical security your investment is protected by the entire assets of this Company which *unconditionally guarantees the payment of both principal and interest of these Notes.*

HOW TO MAKE CONSERVATIVE INVESTMENTS

When you purchase an article through a concern that has established a reputation for the quality of its merchandise, you do not hesitate to accept their statement as to its value. Why should you act differently in your investments? The principle is exactly the same. Assure yourself first as to the responsibility and integrity of your banker, and then be guided by his judgment and experience. You will find that a reliable firm is just as much interested as yourself in surrounding your investments with strong safeguards.

*New Work. †Alterations.

TWO SEVEN-PER-CENT. ROADS PAYING FIVE

Illinois Central and St. Paul, which for years were 7-per-cent. stocks, now pay only 5, and yet the former is selling at about 110 and the latter at about 108. Meanwhile, other standard rails paying 6 per cent. are selling lower, Atchison for about 95, Baltimore & Ohio about 95, and Southern Pacific a little under 95. Why should this be?

A writer in *Investments* undertakes to answer the question by saying, "the investing public refuses to regard Illinois Central and St. Paul as 5 per cent. stocks, altho they are paying that rate now." While it is true that they may go on paying only that much for some time to come, the record of the two roads "stamps them as better than 5-per-cent. dividend-payers." The former high-price range at which stock in these roads was held has not been forgotten. Illinois Central in 1909 sold as high as 162, and in earlier years sold higher. St. Paul in 1910 reached 158 and a few years before almost touched 200. Conditions which made those high quotations possible may, or may not, return, but it is generally believed, in the best financial quarters, that "under normal conditions each of these roads can earn enough to pay 7 per cent."

The reasons why dividends on these roads were reduced are well understood as not permanent. The Illinois Central was brought to its unhappy condition by a prolonged shopmen's strike and by devastating floods; the St. Paul by the vast expenses undertaken in extending its line to the Pacific coast. The action of the two companies in reducing their dividends in these circumstances has been generally commended, and no one with good financial judgment believes reductions will lead to any permanent harm. *Investments* inclines to think the dividend on St. Paul will be restored to 7 per cent. before the Illinois Central resumes the old rate, this judgment being based on that road's handsome increase in earnings. In its last fiscal year St. Paul earned $15,000,000 more in gross than in the previous year and $9,000,000 more in net.

The annual report of the Illinois Central, issued in the week ending August 13, showed that the road's condition was improving. *The Wall Street Journal*, after a study of the report, found indications of "a considerable degree of convalescence." This was due, not only to better transportation earnings and profits, "but to the inauguration of very substantial returns" on the company's Central of Georgia investment and other subsidiary interests. The writer comments further:

"Considering the operating conditions of the preceding twelve months, Illinois

A. G. DANFORTH & CO., BANKERS
Founded A. D. 1858
WASHINGTON ILLINOIS

Central's expense accounts could hardly fail to bear a healthier aspect than they did then. Transportation expenses, for instance, absorbed only 38.49 per cent. of gross earnings as compared with 40.28 per cent. the year before. Maintenance expenses, while actually larger than in 1912, took up but 34.96 per cent. of gross as against 36.70 per cent. Last year's maintenance ratio was still strikingly high for a Western or Southern railroad, no doubt for reasons which have already been alluded to. No one wants to quarrel with liberal charges to operation for the upkeep of the property, but it would appear that the Illinois Central, once restored to thoroughly good condition, could, and probably will, be maintained for less than 34 per cent. of gross earnings. The increase in its maintenance charges has been a striking feature of this road's recent finances. There was a very decided increase over the five-year period, but apparently no great increase, particularly in maintenance of equipment, last year, as compared with 1912. But the 1912 equipment account included an item of $1,133,335 for 'other expenses,' which last year all but disappeared. This was the extra cost of meeting the strike in the shops, none of which did the company's equipment any good. The result is that expenditures per item of equipment, except passenger-cars, show very substantial increases for last year. The company's balance-sheet is not that of a railroad in comfortable capital circumstances. Loans and bills payable stand at $6,500,000. Exclusive of these, current liabilities are only just about equaled by current assets, excluding from the latter treasury securities and materials and supplies on hand."

It appears further from the Illinois Central report that the road's net revenue for May this year was larger than in any other May since the road was built, while for June it closely approached the highest net revenue ever obtained in June. *The Financial Chronicle*, commenting on this fact, says it is merely what ought to have been expected, in view of "the steady development of operating efficiency in the face of all the drawbacks experienced by the road." How great this operating efficiency has been made is shown in a table giving for 1913 the average train-load of revenue freight as 407 tons, whereas last year the average was only 356 tons; and in 1911, 358 tons; in 1910, 361 tons, and in 1909, 351 tons,—in other words, an increase over any one of the previous four years of about 50 tons, or one-seventh.

HIGHER FREIGHT RATES FOR RAILROADS

In October the plea of the railroads for permission to raise their freight rates will be laid before the Interstate Commerce Commission. *Investments* finds that "not a few shrewd people think the next impulse in security prices up or down will come from the granting or denial of this petition," a condition which promises to put the security market "in the midst of speculation as to the probability of the railroads winning or losing their fight." Reports of railway earnings and the general character of the annual reports are now being "watched with unusual interest." While the Commission may not base its decision wholly upon these reports, it is believed that the result of railroad operations under present rates will have much influence with them in reaching a decision.

In most reports gross earnings "show record-breaking increases," but coincident with these is the more vital fact that "net earnings are making a very indifferent showing indeed." The cause lies mainly in the great increase in operating expenses. *Investments* believes the railroads will use this fact as "their trump-card." It believes also that the Commission will reply with an inquiry as to whether there has not been "an undue increase in expenses." While with some railroads appropriations for maintenance of way and structure "have been increased beyond all reasonable bounds," notably in the case of the New York Central and Pennsylvania, with the large majority of roads the increases were "entirely legitimate and unavoidable." It is believed by the writer that this question of proper or improper increase in these expenses will be the vital one in any decision the Commission may reach.

DIVIDENDS PASSED AND REDUCED

The passings and reductions of dividends by railways and other corporations during the past year "make an imposing list," says *The Wall Street Journal*. Many of these are by corporations that have maintained unchanged payments to stockholders for considerable periods. Five railroads have passed their dividends and five have reduced their rates. Fifteen industrials have passed their dividends and one has reduced its rate. As to increases, there were none of importance among railroads, but a few of the industrials made increases, among these American Tobacco and United States Rubber. Some of the public utility companies also made advances; one of these the Brooklyn Rapid Transit Company. Following is a list of the companies that either passed their dividends or reduced them:

DIVIDENDS PASSED

Railroads	Capital	Old Rate

The loss to stockholders in railroads by the reductions above mentioned amounts per annum to nearly $11,000,000. The New Haven stockholders lose $3,600,264; the Illinois Central, $2,185,920.

BOND PRICES TODAY

Ordinarily your money will earn returns in proportion to the degree of risk you are willing to assume.

At rare intervals like the present, opportunities arise offering the highest returns without speculative risk.

High money rates here and abroad have reduced the prices of bonds to a point lower than the average of any year in 20 years.

Shrewd investors are recognizing this as an opportunity to be improved to the utmost and are taking advantage of the following unusual values,

	Maturity	Price to yield about
Schenectady, N. Y., Municipal 5's	1915-27	4.60%
City & County of San Francisco 5's	1917-18	5.00%
Milwaukee & Northern R. R. Con. Mort. Ext. 4½'s	1934	4.55%
Virginian R. R. Co. First Mortgage 5's	1962	5.15%
Tri-City Railway & Light Co. 1st & Ref. 5's	1930	5.45%
Western United Gas & Elec. Co. 1st & Ref. 5's	1950	5.12%
Virginia Railway & Power Co. 1st & Ref. 5's	1934	5.40%
United Light & Railways Co. 1st & Ref. 5's	1932	5.75%
Southern California Gas Co. 1st 6's	1950	5.90%
American Pub. Service Co. 6's	1942	6.00%

Why a Good Bond Is a Good Investment

1. It insures a steady income on your money.
2. You do not have to worry about frequent reinvestment.
3. A bond is convenient in form, either for keeping or conveying.
4. It can be converted into cash in case of need.

We will be glad to submit a descriptive list of good bonds on application.

Save fuel and stair climbing

Would it not be nice to set an instrument in your living-room at 70° this fall and let it regulate the draft- and check-dampers of your heating boiler—keeping all rooms evenly warm until next spring? That is what you secure by using an

IDEAL SYLPHON **Regitherm**

You can forget the regulation, but the REGITHERM never forgets to work. It saves much stair-climbing and fuel-money—no wasteful overheating, no underheating. Every change in the weather expands or contracts the brass accordion-bellows of the REGITHERM which moves a cable that operates the dampers of the boiler. You have the needful degree of warmth without watching thermometer; you only shovel coal into boiler (less of it) and take up ashes—the REGITHERM controls the fire day and night. No electricity, no clock-work, diaphragms, or machinery to mend—nothing to wear out. Few hours work installs it in OLD buildings.

REGITHERM is also a money- and time-saver for regulating heating in factories where varnishing, painting, glueing or drying requires steady, low, medium or very high temperature to save materials and insure good workmanship.

In our "New Heating Aids" booklet (free) is much advice on heating improvements secured by REGITHERM, Sylphon Packless Radiator Valves, Norwall Air Valves and Sylphon Boiler Regulators (steam or water.) May we send it?

PERSONAL GLIMPSES

"BIG TIM'S" BEGINNINGS

IN death as in life, "Big Tim" Sullivan did the unexpected. For, as the New York newspapers are saying, who would have expected that the body of the city's most popular politician would lie for two weeks unrecognized in the morgue after a lonely death on a railroad track in the outskirts of the great town? But the beginnings of this career are as interesting and more pleasant to think of. Timothy D. Sullivan was one of those men who live by nicknames. First it was "Dry Dollar"; then, in recognition of the man's physical size and growing political importance, it was "Big Tim" or the "The Big Fellow." *The Sun* tells how he earned the first name:

One day about forty-five years ago a seven-year-old kid was walking up the Bowery on his way to school, an alert Irish youngster, with eyes that took in everything along the humming street. In front of a saloon near Grand Street a shaggy individual was piling up empty beer-kegs for the brewery wagon to haul away. The boy saw something that made his eyes pop.

He dropt the battered 'rithmetic that was swinging from a strap, waited till the roustabout had slouched back into the saloon, rapidly peeled from one of the kegs the green revenue stamp, and ran like a scared rabbit. He hardly stopt till he got to school. His desk was near a window where the sunlight streamed in and he laid the wet stamp on the desk top, smoothing it very carefully. The teacher had seen him.

"Timmy," he said sharply, "what are you doing?"

"Dryin' a dollar, sir," said the boy.

And for years and years afterward the man who became the absolute boss of Manhattan below Fourteenth Street was known to friends and foes as Dry-Dollar Sullivan.

The nickname stuck to him while he was in school, and it was yelled after him by the boys in the streets when he went to work selling papers and hustling for his widowed mother.

To these early days, likewise belongs the origin of the annual Sullivan distribution of shoes. *The Times* tells this story:

In 1873 he was going to school in Elm Street, and one mighty cold day in February his teacher, Miss Murphy, told him to stay behind when the other boys were let out. As they ran off he said:

"Miss Murphy, if you've got to punish me let's get it over, 'cause I've got to get some papers out before it's too late."

"Timmy," said Miss Murphy, "there's no punishment. I didn't want you to go out with the others so that they could see your shoes."

She gave him a ticket to Timothy Brennan, a shoemaker, and there he got a new pair of shoes. And so, when fortune smiled on him, in every year on the same day in

Be Sure of Your Powder

A GOOD eye and a steady hand amount to little with powder you cannot depend upon. Many a clean miss is made—many a beautiful chance is lost—because the powder was a bit weakened by dampness. Have your shells loaded with

HERCULES BRAND
"INFALLIBLE"
Smokeless Shotgun Powder

"Infallible" is waterproof and weatherproof. Soak it in water a week—a year. Then remove the dampness with blotting paper and it is as good as ever. "Infallible" is free from smoke and doesn't corrode the gun-barrel. Light recoil. High velocity. Uniform. You can get "Infallible" in any make of shell. Insist on it.

A beautiful colored picture, "The Game Bird of the Future", together with "Infallible" booklet, mailed free on request. Address Dept. No. 15.

Knowledge a Young Husband Should Have.
Knowledge a Father Should Have.
Knowledge a Father Should Impart to His Son.
Medical Knowledge a Husband Should Have.
Knowledge a Young Woman Should Have.
Knowledge a Young Wife Should Have.
Knowledge a Mother Should Have.
Knowledge a Mother Should Impart to Her Daughter.
Medical Knowledge a Wife Should Have.

All in one volume. Illustrated. $2.00, postpaid.

Write for "Other People's Opinions" and Table of Contents.

Puritan Pub. Co., 777 Perry Bldg., Phila., Pa.

February shoes were distributed at his expense to all who applied for them.

In the same paper we find it told how he first became a political force:

One day as he was passing the Tombs he saw a local pugilist beating a woman. He went to her rescue and a mighty battle began. He won out after a contest that is still remembered, and thenceforth he was hailed as the leader of the "gang." Tammany needed such men to consolidate its power, and from that street-fight grew up the one-time all-powerful "Sullivan Clan."

Then, by acts of personal kindness and physical prowess, by sheer hard work, and the use of all the tricks of the trade, Tim Sullivan worked his way up until he became the political potentate over the swarming East Side below Fourteenth Street. It would be easy, says *The Sun* editorially, "to exaggerate the number of his personal intimates and devoted friends, but that at the heyday of his power he had a vast constituency which was obedient to his orders and automatic to his manipulations no one has ever doubted." Elections to the Assembly, State Senate, national House of Representatives, came when he wanted them. He made money and lost much, for he was an inveterate gambler and race-track bettor, tho he prided himself on his abstention from drink and tobacco. It is said that he could have been the leader of Tammany, but he remained a loyal follower of Croker and then of Murphy. Office-holding did not get him out of touch with his constituents. On the contrary, says *The Times*:

His authority on the East Side was still further strengthened by his kindness to those accused of crimes, big or little. In one of his speeches in the days of his power, when the announcement that Big Tim was to speak would fill any hall on the East Side, he told how a good woman who had adopted him bade him go to the Tombs and see if in the morning line-up there were any whom he could aid. He went, and kept on going daily, until he had acquired so great a following among the downtrodden and disreputable that he was sometimes hailed as the "King of the Underworld." But as he told the story he added earnestly:

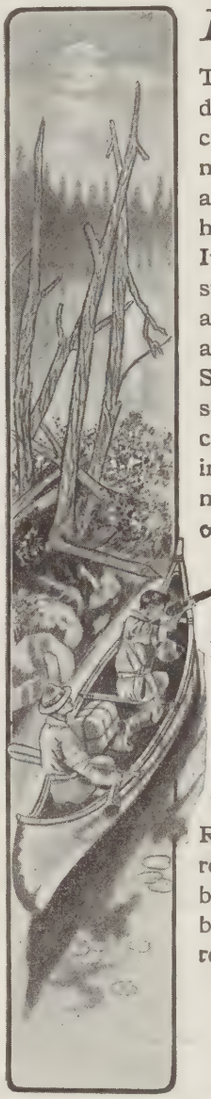
"I never got money from any thief, any gambler, or any dive-keeper. That's so, so help me God."

Tim Sullivan's career in Albany, where he usually got what he wanted, and in Washington, where he was less conspicuous, was told at length in the papers when they learned of his death. His advocacy of woman-suffrage was a peculiar feature of his legislative activity.

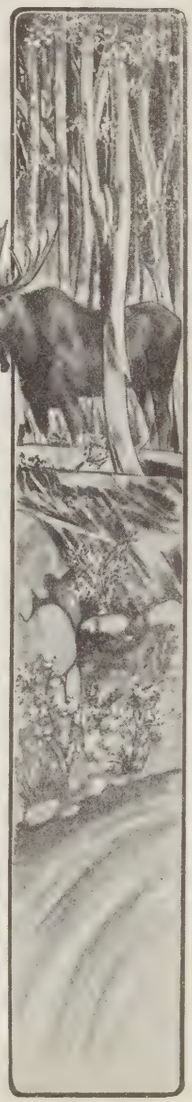
The decline in strength of the Sullivan clan and the end of race-track gambling lessened "Big Tim's" influence somewhat. But in 1912 he was again elected

WINCHESTER

HUNTING RIFLES



The ideal hunting rifle is one that is designed on sound mechanical principles, made with care of the best materials, and consequently is strong and durable so as to stand the rough, hard usage of camp and trail. It must shoot accurately, be sure to operate, be well balanced, symmetrical in outline and handsome in appearance. Some rifles have some of these features; some rifles others. Winchester rifles combine them all. Winchester repeating rifles are made in eleven different models. From these you can select one of the ever popular lever action repeaters, or one of the most modern recoil-operated types. These eleven models embrace rifles that will handle low, medium and high-power cartridges in all desirable calibers. Whichever Winchester rifle you select, you can count on its being well made, accurate and reliable.



WINCHESTER BIG GAME CARTRIDGES: The time of all others when reliable cartridges are invaluable is in big-game hunting. Winchester—the **W** brand—big-game cartridges are always reliable. When buying, insist on having

to Congress, tho he never took his seat, owing to the failing of his mental powers in the last year of his life. The funeral at old St. Patrick's in Mott Street was such a gathering as will probably never meet again to mourn the passing of a political leader. As we read in the New York *Evening Post*:

United States Senators and Representatives, prize-fighters, Justices of the Supreme Court, clergymen, gangsters, thugs, saloonkeepers, merchants, lawyers, business men, and laborers, honest men and thieves, rich men and poor men, good women and women who stand across the line, joined together to-day to pay a final tribute to "Big Tim." . . . The most remarkable thing was that the dominant feeling with all these people of many degrees was sympathy, not curiosity. There were tears in men's eyes, and every now and then a woman wept openly.

THE SPICE OF LIFE

Too Needy.—A friend in need generally needs too much.—*New Orleans Picayune.*

An Infallible Recipe.—What to do to obtain white hands:—Nothing.—*Woman's Home Companion.*

Not Vacuum Cleaners.—"Mind cures are not always successful."

"Of course not. They've got to have something to work on."—*Baltimore American.*

Spineless.—"Yes," said Mrs. Twickembury, "you seldom see Mr. Twickembury without a cigar in his mouth. He's a most invertebrate smoker."—*The Christian Register* (Boston).

A Thoughtless Spouse.—MRS. NEWLYWED—"I wonder why we are growing tired of each other."

NEWLYWED—"I haven't an idea."

MRS. N.—"Yes; maybe that is the reason."—*Boston Transcript.*

Competing Consumers.—"You used to say 'competition is the life of trade.'"

"So it is," replied Mr. Cumrox, "only instead of competing to sell things, the idea now is to corner 'em up and get people competing for a chance to buy."—*Washington Star.*

Will Be Tame.—"Do you think your wife will be happy when she gets the vote?"

"I'm afraid she won't," replied Mr. Meekton. "Merely going to the polls and casting a ballot will seem pretty tame compared to organizing these great suffrage demonstrations."—*Washington Star.*

The Tactless One.—"I will confess to you," she said, "that I am older than I look. I will be 31 my next birthday."

"Really?" he replied. "Hardly anyone would guess that you were more than about 29."

"That's the last time," she said when he had departed, "that I'll ever try to be nice to a brute."—*Chicago Record-Herald.*

FROM first to last, they are hand made. The final touch is the "hand-curl finish" illustrated by the picture. No spraying of tobacco with mouth, no licking of ends. No molds, no paste, no binders; strictly high grade, long filler tobacco, with best quality, prime, shade grown Connecticut wrapper.

Box 17, LOVINGSTON, VA.
T. M. Horsley, Owner

Pity the Poor!—"Boy, you ought to know better than to beg from a poet."

"Please, sir, father is an essayist."—*Life.*

This Is from Boston.—MOTHER (to park policeman)—"My little boy wants to see the monkeys. Can you direct us to the apiary?"—*Boston Transcript.*

Trained.—BROWN—"You seem more satisfied with your wife's cooking than formerly. Has she learned with time?"

SMITH—"No, I have."—*Woman's Home Companion.*

Omission.—TEACHER—"Mabel, in making your 'i's' you have omitted something. What is it?"

LITTLE MABEL—"Oh, I forgot to put eyebrows over them."—*Chicago News.*

Lending a Name.—"Waiter," asked the impatient customer, "do you call this an oyster stew?"

"Yessuh," replied Mr. Erastus Pinkley.

"Why, the oyster in this stew isn't big enough to flavor it."

"He wasn't put in to flavor it, suh. He is jes' supposed to christen it."—*Washington Star.*

The Modern Hero.—"Grace, you know, always said she'd never marry a man until she felt he would be willing to go through fire, water, wreck, and disaster for her."

"She finally found him, I suppose, because I hear she is engaged."

"Yes. His name is Jack something. Comes to see her three times a week over the New York, New Haven & Hartford."—*St. Louis Republic.*

Insulted.—"What a graceful dancer your daughter is," breathed the insinuating youth.

"Sir," replied the alert mother, "I want you to understand that my daughter dances only the latest dances. She learned several years after gracefulness went out of style."—*Washington Star.*

In London.—The door-bell rings. The mistress of the house answers it. A small child, the child of a near neighbor, is discovered on the door-step.

THE MISTRESS—"What is it, Cissy?"

THE CHILD—"Please, ma'am, mother wants to know if you'll be so kind as to lend her your recipe f'r makin' bombs. The last one she made only smelled bad and wouldn't bust!"—*Cleveland Plain Dealer.*

A Chicago Make-Up.—Among the curiosities of typography a prominent place must be given to the achievement of a Chicago paper in the mixing up of headlines in a most startling manner. First there was an article with this caption:

"THE CONDOR OF THE ANDES
Albert Seaton Bery, of Kentucky, Bears That Distinction."

In another column, on the same page of the paper in question, was this announcement:

"TALLEST MAN IN CONGRESS
Soars Far Above the Eagle and Reaches a Height of Six Miles."

—*The Christian Register.*

TYPES FROM CITY STREETS

Unusual phases of life on "the East Side" of New York City. By **Hutchins Hapgood,** with several illustrations. $1.50 net; by mail $1.60.

"The author manifestly knows his Broadway and all its divergent avenues and dark byways. Then after he has presented all, he dwells upon its pathos and its deep philosophy." —*Pittsburg Post.*

Not so much a picture of the squalid side of life as of its charm. A record of actual experience.

FUNK & WAGNALLS COMPANY, N. Y.

Scottish Irreverence.—He was a chubby, brown-faced, bare-legged little urchin, from whom, during my vacation, I inquired the way to the nearest golf course.

"Weel," said he, "ye'll gang straight alang here till ye come to the first on yer richt, an' ye'll see a minister—I mean a sign-post," he corrected hastily, "and ye'll get the road frae it."

Thanking him for his information, I next inquired why he called the finger-post a minister.

Shuffling his feet and gazing longingly at the copper I held out to him, he stammered out, "Folks ca' it a minister, 'cos it pints the richt road but disna gang it itsel'," and he rushed off to join his companions, while I retired thinking deeply on the spread of disrespect to the cloth.—*Glasgow News.*

September 16.—Secretary Daniels holds up bids for battle-ship armor from the Midvale, Bethlehem, and Carnegie steel companies until he can learn whether their rates are justified by the cost of production.

GENERAL

September 11.—Ardolph L. Kline, Republican, President of the Board of Aldermen, becomes Mayor of New York, to serve out Mayor Gaynor's term of office.

September 12.—It is reported that the Standard Oil interests will embark in the automobile manufacturing business.

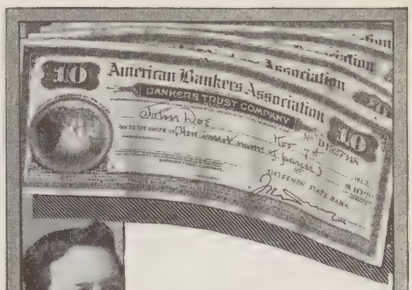
September 13.—The body of Congressman Timothy D. Sullivan, the New York Tammany politician, is found and identified, after lying in the morgue since his death on August 31.

September 15.—The conference of the General Commission on Evangelism, appointed by the Federal Council of Churches of Christ in America, meets in Atlantic City, N. J.

The first season of grand opera in English begins at the Century Opera-house in New York City.

September 17.—Maury I. Diggs and Drew Caminetti are sentenced to terms of imprisonment for violation of the Mann "White Slave" law.

The German liner *Imperator* arrives at New York with 4,981 passengers, the largest number ever brought to this country on a single ship.



William J. Burns Detective Agency protects "A.B.A." Cheques

"A.B.A." Cheques are the most convenient, most economical travel funds. They are SAFE TO BUY because they are issued by thousands of American Banks under authority of the great American Bankers Association.

They are SAFE TO CARRY because they are of no use to a thief without your signature, and *because every crook of prominence in the civilized world knows that the Burns Agency protects them.* Anything in the care of the Burns Agency is considered in the underworld extra-hazardous to meddle with. That is why this famous detective has been retained by the American Bankers Association to protect its clients.

Get them at your Bank

Ask for booklet. If your bank is not yet supplied with "A.B.A." Cheques, write for information as to where they may be obtained in your vicinity.

BANKERS TRUST COMPANY
New York City

A sharp knife for a thin slice

Those dainty sandwiches of wafer-like thinness are no problem at all if the knife is sharp, and it's easy to sharpen it if you own a Pike India Kantbreak Knife Sharpener.

For putting a keen-cutting edge on bread and paring knives, kitchen and carving knives, nothing can equal the

PIKE INDIA KANTBREAK KNIFE SHARPENER

Better by far than a steel. Rubber-mounted—practically unbreakable. Price 50c at your hardware dealer's or sent prepaid. *"Pick a Pike."*

FREE Send us your dealer's name and 4 cents for packing and mailing and we'll send our Pike India Sample Stone free. Fine for sharpening penknives, ink erasers, etc. We'll include our book, "How to Sharpen." You'll be pleased. Write today.

Pike Mfg. Co., 173 Main St., Pike, N.H.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnalls Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"P. L. P.," Blackshear, Ga.—"Kindly advise if the following expression is correct, and one that would be considered good form in a business communication: 'We would be pleased to get you to attend to the matter for us.'"

Use *should* instead of *would;* then the sentence will be correct. It would be in somewhat better form, however, if one said, "pleased to *have* you *attend*" instead of "pleased to *get* you *to attend.*"

"R. M. S.," Yellow Pine, La.—"In the sentence, 'What preacher need moralize on the story?' taken from Thackeray's 'The Four Georges,' how would you analyze *need moralize?*"

A few verbs in English may in some cases omit the third singular present indicative inflectional *-s;* as, "He *dare* not go; he *need* not do it." The infinitives depending upon these forms are used without the sign *to.* But these verbs may be used with the inflectional *-s:* "He *dares* not go; he *needs* to do it." Here, then, you have the explanation of the structure of the sentence you ask about. *What preacher* is subject; the remainder of the sentence is predicate. The predicate consists of the main verb, *need* (present tense, 3d person, singular), the infinitive verb *moralize* depending on the verb *need* and the adverb phrase *on this story* modifying the verb *moralize.*

"I. T. P.," Northfork, W. Va.—"Kindly state which is correct, 'Every one *were* completely overcome,' or 'Every one *was* completely overcome.'"

Every one, the subject, is singular in number, and hence the verb must be singular; therefore say *was.* Put the noun *man* in place of the pronoun *one:* would you say *every man,* or *every men?* That shows you what number to use. You would never say "Every *man were* overcome."

Hamilton Watch

"The Railroad Timekeeper of America"

Every minute of every day the Hamilton Watch tells dependable time. When it says seventeen after three, you know that it is just that time. The feeling of perfect confidence in your timepiece, which a Hamilton gives, is a great comfort. Railroad watches *must* be accurate. Statistics show that

Over one-half (56%) of the railroad men on American railroads where Official Time Inspection is maintained carry the Hamilton Watch.

Hamilton Watches are made in correct sizes for men and women, and sold by jewelers everywhere. Movements only are $12.25 and upward. Complete watches, certain sizes, are $38.50 to $150.00. Ask your jeweler about them; also about fitting your present watch case with a Hamilton movement.

Write for "The Timekeeper"

It illustrates and describes the various Hamilton models and is a book well worth reading if you are thinking of buying a fine watch.

HAMILTON WATCH COMPANY, Dept. L, Lancaster, Pennsylvania

Engineer W. J. COWAN, of Rock Island Lines, has carried a Hamilton Watch for years with perfect satisfaction.

Tuxedo—The General All-Around Smoke

RICHARD HENRY LITTLE

Richard Henry Little, the distinguished war correspondent, author and humorist, says:

"I have found Tuxedo a faithful companion in the field and in the camp."

Richard Henry Little

TAKE it with you anywhere—in the misty morning, whipping the stream for trout or stalking deer down a woodland road; or on the golf links in the crisp afternoon; or into your library after dinner for an hour's thoughtful smoking.

Take it to the office and make the day's business run smoothly and cheerfully.

Smoke it companionwise over your lathe or drill—in the factory or out on the road—in the engine room or on the farm. Let Tuxedo help you while the time away on a railroad trip.

Wherever your work lies or your play lies make Tuxedo your playmate; it's a grand smoother-out of crooked lines—in your face and in your job.

WM. J. MATTHEWS

Wm. J. Matthews, Past Potentate of Mecca Temple, one of the best known Masons in America, says:

"Tuxedo is ideal. It gives THE perfect smoke, absolutely."

Wm. J. Matthews

J. N. MARCHAND

J. N. Marchand, the illustrator, whose "Western Types" have made him famous, says:

"Fill my pipe with Tuxedo and I'm content. You can't beat Tuxedo for mildness and purity."

J. N. Marchand

Tuxedo

The Perfect Pipe Tobacco

is first and foremost, sweet and pure and mild and wholesome. Made of the finest Kentucky tobacco, mellow and ripe and full of flavor, treated by the original "Tuxedo Process" so as to take the sting out (it *cannot bite* your tongue), granulated so as to smoke freely and coolly, and packed *40 pipefuls to the 10c tin.*

Try Tuxedo today and you'll know why thousands of leading Americans endorse it as the best, the greatest all-around smoke.

WALTER WELLMAN

Walter Wellman, celebrated journalist, explorer and aeronaut, says:

"In the Arctic regions, through weary days in camp at Spitzbergen, or sailing 1,000 miles over the Atlantic in the airship America, my favorite tobacco has always been Tuxedo."

Walter Wellman

YOU CAN BUY TUXEDO EVERYWHERE

Jersey City, N. J.

JOEL HILLMAN

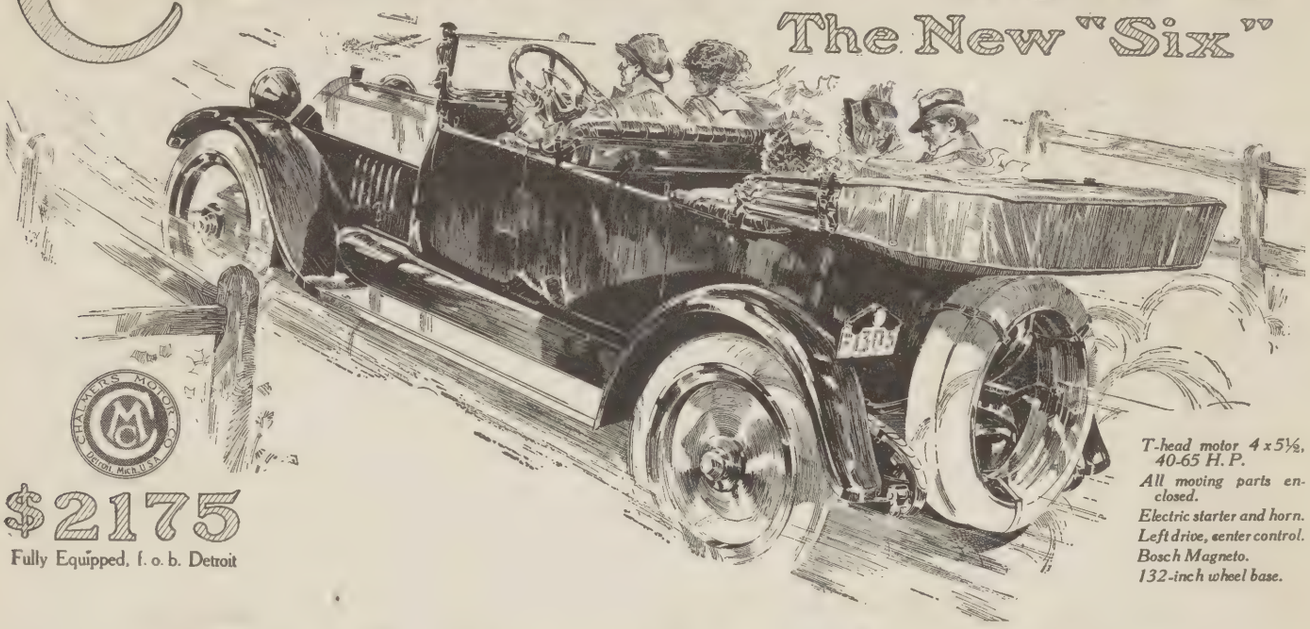
Joel Hillman, proprietor of the famous "Harvey's" restaurant at Washington, D. C., says:

"Tuxedo is a good, wholesome tobacco, with a mildness and fragrance all its own. It adds many degrees to my pipe pleasure."

Joel Hillman

Chalmers—1914

The New "Six"



$2175

Fully Equipped, f. o. b. Detroit

T-head motor 4 x 5½, 40-65 H. P.
All moving parts enclosed.
Electric starter and horn.
Left drive, center control.
Bosch Magneto.
132-inch wheel base.

The Ruler of a Kingdom

The man who sits at the steering wheel of his new Chalmers "Six," rules an empire. Here within reach of his arm is a little world all his own. Power, speed, endurance—the forces that make for change and enjoyment — are under the sway of his scepter.

Let's Take a Day Off

Don't you feel like cutting the traces and getting away to the hills? Let's strike out—what do you say?

Push the switch of the electric starter. There—the engine is running with scarcely a sound. It's the silent Entz starter—the best yet—it never fails.

Floating Away Like a Swan

Close your eyes now as we let in the clutch and see if you can tell when we start. This new clutch is a wonder. The steel discs, with their many fingers of cork, grip so firmly, yet so gently, that we move away with the silent grace of the swan.

Notice how flexible the power—mounting quickly to 20, 30, 40 miles an hour. Now we throttle it down to a crawl, without shifting gears.

This wondrous flexibility is in the motor itself. There's no need to resort to cumbersome double gearing.

Easy Chair Comfort

Have you noticed that you don't feel the vibration you do in most cars? The six cylinders of this Master Motor give an unbroken stream of power, there is no interruption in the push of the pistons. So there's a smoothness impossible in any "four"; a lack of vibration that adds years to the life of the car.

The new "Six" costs but little more than a "four" at the start and a lot less in the end.

A Little Friend In Need

Try to stall this motor once. Throttle it down to a snail's pace—run it into that deep sand ahead.

It's no use—this motor is unstallable. Even should the gas be cut off accidentally, the electric starter—always on duty—keeps the motor running. It can never "go dead" in a crowd or on a crossing.

Beauty That Has Utility

Don't shrink as we run through this stretch of mud. Those graceful oval fenders sit so close not a drop of mud can reach you. The extra wide doors fit like a watch case. The long under-slung springs cushion the bumps of the roughest road.

Left hand drive and center control leave room to enter on either side.

Put This Car To The Test

Let our dealer take you out on our Standard Test Ride. It imposes no obligation. It's a part of our regular sales plan. It is our way of proving to you that this car will do things that no other car will do.

But first write for our literature. Get all the facts.

Roadster	**$2175**	**Six Passenger**	**$2275**
Four Passenger	**2175**	**Coupé**	**2850**
Five Passenger	**2175**	**Limousine**	**3600**

All bodies interchangeable. Wire Wheels $80 extra (five)

This LAW Library Made For You!

SENT FREE—EXPRESS PREPAID

Millions of dollars are lost annually through legal loopholes. Every man and woman—especially those in business—should know Law—should know their legal rights—should be able to protect themselves against legal risks on contracts, leases, collections, management, insurance, shipping, mortgages, partnerships, claims for damages, etc. This complete La Salle Law Library enables you to do it as capably as a lawyer—it makes you your own legal adviser.

Modern, Authoritative, Standard

The most noteworthy publication of the century. Used as easily as a dictionary or encyclopedia.

Over 6000 Pages, FULL STANDARD LAW SIZE, 9½ x 6½, ¾ Sheep, 15,000 Citations

Answers Your Legal Questions

This is the most wonderful, non-technical complete Law Library ever published. Nothing is left out—nothing half explained—everything thorough, written in plain language so that anybody can read and quickly understand the law when necessary. Covers each point of law authentically—giving quick, easy answers to any legal question that may ever arise in your family or business, that affects the rights of individuals, public officials, corporations, schools, churches, societies, etc. You—everybody—should have this authentic Law Library—many need it daily. Ignorance of the Law will not excuse you.

Edited By Greatest Legal Authorities

This remarkable complete Law Library was **written especially for your needs** by the greatest legal experts. Law teachers and professors in the big Universities and Law Colleges, such as Harvard, Chicago, Michigan, Illinois, Wisconsin, Iowa and others.

Your Quick Reference Legal Adviser

The possession of this massive, authentic Law Library may save you thousands of dollars a year. Thousands of business men and women lose fortunes through ignorance of law that might have been saved with this quick-reference Law Library. Don't hold yourself open to risk—don't lose money—own these books—learn how to act quickly, deliberately, accurately, safely. Sharpen your judgment—don't be imposed upon. These authoritative books make you as capable as a lawyer—save you lawyer's fees. They are a boon to everybody—a necessity to every home and office—a pressing need at last realized—absolute, sound, legal guidance and advice of twenty-six of the world's foremost legal authorities. You consult these books the same as looking up a word in the Dictionary—simple, quick, easy, just like getting the sound, accurate advice of more than a score of the world's greatest legal advisers.

FOREMOST LAWYERS PRAISE IT. America's noted corporation lawyer says: "My examination of the work satisfies me that it possesses great merit as an elementary statement of the body of our law as it exists today. **What a boon such a work would have been to an unassisted student like myself." John F. Dillon,** Counsel for Western Union Teleg. Co., Mo. P. Ry. and other big interests. Hundreds of similar testimonials. This is the greatest Law Library of the century—absolutely unlike all others—only accurate, thorough, standard, authoritative, complete. Recognized by bench, bar and legal educators as most modern and thoroughly reliable non-technical authority on all American Law.

Sent Free—Express Prepaid

That's what we mean, what we do—sent FREE, express prepaid—the greatest, biggest, most broad and astonishingly liberal offer ever made on anything of such wonderful value. Don't pay us a cent down—these 14 volumes will be sent you, express prepaid—right in your hands without trouble or expense to you. All you need do is to send the coupon below. Examine the books carefully—satisfy yourself that they should be yours permanently—**keep them seven whole days—FREE,** before you make up your mind. Then if you wish to own them, simply send us first payment of $4.00 and PAY $3.00 EACH MONTH UNTIL PAID FOR. If you decide **not** to keep them, **we will pay return express charges** and you will not be out one cent.

1,000 SETS SPECIAL!

This is the most startling offer ever made on Law books. **We have set aside 1,000 sets to be sold direct** to the public, as a sales test. This **cuts out the middlemen's profits** which **we turn over to the one thousand people who send the coupon now. Edited By

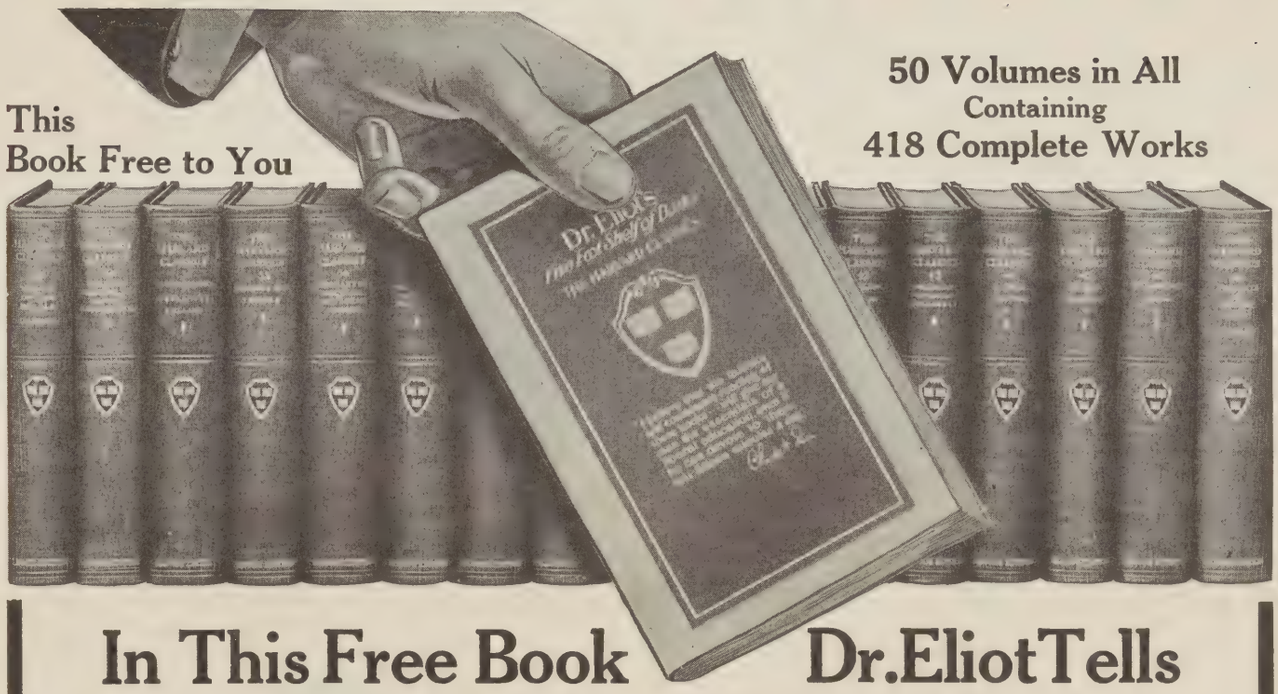
James Parker Hall, A. B., LL.B., Dean of Law School, University of Chicago, and by James DeWitt Andrews, LL. D., of the New York Bar, Formerly of Law Faculty Northwestern University, noted legal writer, known as the "BLACKSTONE OF AMERICA."

Legal Experts Praise It

I am indebted to you for the fourteen volumes of "American Law and Procedure—Text-Book Series." Allow me to congratulate you upon the great excellence of the work. I am pleased with its clearness, simplicity, and comprehensiveness. One of the Assistant Attorneys-General of this State says he found your treatment of "Carriers" very fine and very helpful to him in a case he had in hand. I happen to be interested just now in the subjects treated in volume thirteen, by Dr. Andrews, and I find the matter delightfully clear and most interestingly stated.—WM. M. O. DAWSON, Ex-Governor, West Va.

We have adopted your "American Law and Procedure" and find the work eminently satisfactory. It is sufficiently simple to be readily understood by the business man, and at the same time so written as to afford the prospective practitioner that thorough understanding and grasp of law principles so necessary to the development of a first-class attorney.—B. F. WILLIAMS, Sec. DES MOINES COLLEGE OF LAW, Des Moines, Iowa.

The professors who have been secured to write the text-books are men of the highest rank in our best colleges of law. The books, prepared especially for the purpose, are extremely valuable.—GEO. E. MacLEAN, Ex-President State University of Iowa.



In This Free Book Dr. Eliot Tells How He Has Selected Your Reading

In the famous Harvard Classics, known as Dr. Eliot's Five-Foot Shelf of Books, Dr. Eliot has given every ambitious man and woman the essentials of a liberal education.

He has selected from all the world's best literature, just fifty volumes—418 masterpieces by 300 authors.

This great library represents the march of human progress as recorded by the foremost authors, travelers, scientists, historians and thinkers of the ages. It is a library which will better equip you for the battle of life—one that will give you a deeper and truer conception of human nature and human affairs than you could get from 10,000 books picked at random.

In a free 32-page book, Dr. Eliot himself tells the great story of the selection of these books. He tells you why he selected just these books from all the books of the world. He tells why these are just the books that the twentieth century man needs to read.

Copyright, 1899, by Notman, Boston

Dr. Eliot's Five-Foot Shelf of Books

The Harvard Classics

Now Yours at Only a Few Cents a Day

Having selected your books for you, Dr. Eliot further counsels you in your reading. His reading courses, introductions and footnotes make your reading a pleasure—and every minute count.

What Dr. Eliot Brings to You

In these books Dr. Eliot brings to your side the greatest of the world's leaders. You live with them through every age, know their best achievements, travel with them, participate in the glory of their great discoveries, hear their splendid lectures, listen to their profound logic, enjoy their beautiful verses and fine stories.

That is what Dr. Eliot means when he says "a picture of the progress of civilization—the essentials of a liberal education."

76,000 Indexed Topics

Do you want to find instantly a certain quotation, or lecture, or story, or the name of an author, or refer quickly to any particular reading subject? You do not have to rack your brains or consult a dozen books. Dr. Eliot has *anticipated* your needs. Just turn to the magnificent index and there you will find 76,000 subjects indexed for instant *reference*, a master-key to all literature.

The Popular Edition, Yours for a Few Cents a Day

The Popular Edition places this great *efficiency* library within your easy means. It costs you but one-tenth the price of the De Luxe Edition, yet is printed from the same clear-cut type used for the costlier edition. The printing and binding are distinctly "Collier's," the result of thirty-eight years' experience in the making of good books by P. F. Collier & Son—and that is the best that can be said of *any* book.

STUDY LAW

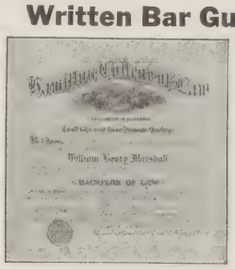
AT HOME—BECOME AN LL.B.

Only Law School of its Kind in America

Special and Exclusive Features

ONLY **recognized resident law school in the United States conferring Degree of Bachelor of Laws-LL. B.—by correspondence.** ONLY law school in U. S. conducting **standard resident school** and giving **same instruction, by mail.** ONLY law school giving **over 450 class-room lectures** to its **extension students.** ONLY law school giving a full **3-year, University Law Course, by mail,** having an **actual faculty** of over **30 prominent lawyers,** in **active practice.** ONLY law school in existence giving **Complete Course in Oratory and Public Speaking,** in conjunction with its law course.

Written Bar Guarantee



Our Degree Bachelor of Law, LL.B. NOT a Diploma or Certificate

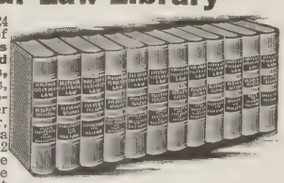
We give an absolute written guarantee to prepare our students to pass bar examinations.

The Hamilton College of Law IS a **regular, thoroughly recognized, bona-fide College of Law** and NOT an "institute," "correspondence school," etc. It occupies the entire third floor of the New Advertising Bldg., where its **large** and **commodious resident classrooms** and executive offices are located.

Direct From Class-Room to Student is the way we teach law. We are the **only school** doing this. Our system of teaching is intensely interesting—not dull and dry like the average law course. Our system of conducting examinations is the most **thorough, complete** and **expensive** (to us) of any examinations ever given. A student can, if he chooses, take **part of our course** by mail and finish in **our resident school** where he will receive **full credit** for all work done **by mail.** Our resident school **is recognized** by all standard law schools in the United States.

The Hamilton College of Law is highly endorsed and recommended by **Government Officials, Business Men, Noted Lawyers, Graduates** and **Students.** We have as students a number of practicing lawyers (not graduates of recognized law schools) **who are now earning their degree of LL. B.** Many other lawyers are using this course as a review. A probate Judge, (one of our active students) says: "I am delighted with the course prescribed and your method of teaching law. It is far in advance of what I expected to receive."

Our Law Library



consists of 24 volumes of **Student's Standard Text Books,** two volumes, bound together under one cover, making a total of 12 books. These books were prepared at an **enormous cost especially for the students of the Hamilton College of Law,** by one of the **largest** and **best law book publishers in America.** This is the **only set of text books** ever prepared **exclusively** for **students' use.** We would be glad to have you submit these books to any lawyer or judge in the country and get **his** opinion regarding them.

These 12 Volumes are Free to Students

This handsome book and one full size sample card in color of the Sistine Madonna for 3 two-cent stamps.** Address

The Closson Art Galleries, 112 W. 4th Ave., Cincinnati, Ohio

What 15c Will Do

The little matter of **15c** in stamps will bring you the **Pathfinder** for **13** weeks on trial. The **Pathfinder** is an illustrated weekly, published at the Nation's Capital, for the Nation; now in its **21st** year of increasing success. The paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the **Pathfinder** is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper, and we will send the **Pathfinder** on probation **13** weeks. The 15c does not repay us, but we are glad to invest in New Friends. **Or send $1 for full year; money back any time if not satisfied.**
Address **Pathfinder, Box L, Washington, D. C.**

HOW TO SPEAK IN PUBLIC

By GRENVILLE KLEISER

Formerly Instructor in Elocution and Public Speaking at Yale

A Most Suggestive and Practical Self-Instructor

This New Book is a complete elocutionary manual comprising numerous exercises for developing the speaking voice, deep breathing, pronunciation, vocal expression, and gesture, also selections for practice from masterpieces of ancient and modern eloquence. It is intended for students, teachers, business men, lawyers, clergymen, politicians, clubs, debating societies, and in fact every one interested in the art of public speaking.

OUTLINE OF CONTENTS:

Mechanics of Elocution
Mental Aspects
Public Speaking
Selections for Practice
Previous Preparation
Physical Preparation
Mental Preparation
Moral Preparation
Preparation of Speech

Hon. Joseph H. Choate, New York, says: "Many useful suggestions in it."

John W. Wetzel, Instructor in Public Speaking, Yale University, New Haven, Conn.: "The work has been very carefully and well compiled from a large number of our best works on the subject of elocution. It contains many admirable suggestions for those who are interested in becoming better speakers. As a general text for use in teaching public speaking, it may be used with great success."

Hon. Albert. J. Beveridge: "It is admirable and practical instruction in the technique of speaking, and I congratulate you upon your thorough work."

CAN YOU CARRY ON A CONVERSATION IN

French—German? Spanish—Italian?

The other day the father of a young lady of our acquaintance promised her a summer in Europe if she would for three minutes carry on a conversation in *French.* This girl had studied the language two winters, and for six months had been a pupil of the most fashionable "French and English boarding-school" for young ladies in New York. Her reports showed that she had studied well, and in French grammar she stood high in her class. *She failed utterly to carry on for three minutes only a simple conversation on a general topic.*

In THOUSANDS of "Digest" readers' homes a similar test would have a like result. If you really want to *speak* and *understand* one of these common foreign languages, use the *ROSENTHAL METHOD* for private study, or organize a *ROSENTHAL CLUB* among your friends. By the

ROSENTHAL METHOD of PRACTICAL LINGUISTRY

you can learn to converse in a new language as naturally and easily as a child learns to speak. Like the child—or like a foreigner learning English here—*you learn first the most necessary and most useful words and sentences.* You quickly get a mastery of ordinary, necessary, conversation and correspondence in the new language you wish to USE.

The *ROSENTHAL METHOD* is for BUSY men and women—ten minutes three times a day will lead within a marvelously short time to complete mastery of every-day business and social conversation. The study is a pleasure—never a task.

If you want to learn to *think* and *talk* in idiomatic French, German, Spanish or Italian quickly, pleasurably, and FOR PRACTICAL USE, send a postal for *DR. RICHARD S. ROSENTHAL'S* **Free booklet, "Revolution in the Study and Teaching of Foreign Languages."**

Country Life Press, Garden City, N. Y., where The World's Work is made.

THE WORLD'S WORK

is covering subjects which should have energetic and immediate attention to make this country a better place to live in. One great need is **Swift and Cheap Justice.** George W. Alger, a brilliant member of the New York Bar, has written a series of articles telling what has been done and what must be done to get **Swift and Cheap Justice.** The first article, called

"Organizing the Courts for Business"

is in The October World's Work

"Why Should I Wish To Be Napoleon When I Can Be George Washington?"

says Yuan Shih Kai, the Strong man of China and President of the Republic. A man who has seen this strangely fascinating man, studied him at close range—***frequently spoken with him***—has written an amazing story about him. Yuan Shih Kai might have stepped out of an Eastern fairy book.

And there will be the following articles and departments—Man and His Machines, March of the Cities, Forward to the Land, Editorial Portraits, The Church Militant Against the Saloon, The March of Events, Who Governs the United States? What I Am Trying To Do, etc.

The World's Work believes that the time has come when all sensible people in this country should combine to ***build up*** and ***strengthen.*** This, after all, best represents the American spirit and this has always been the particular hobby of the magazine:

1500 pages or more each year and more than 1000 graphic illustrations

THE IMMIGRATION PROBLEM

Third Revised Edition
READY IN OCTOBER

What is America's future?
How is immigration affecting it?
Is immigration raising or lowering the standards of American life?
Shall immigration be further restricted?
If so, who shall be excluded?

What is the general adaptibility, desirability, and value of the types of prospective citizens from the various nations, such as Russia, France, Ireland, Italy, Germany, Spain, Norway, Sweden, Greece, Austria-Hungary, and so on throughout the list of countries from which immigrants come?

What is the percentage of literacy or illiteracy among the recruits from the various nations?

How many are skilled tradesmen, and how many unskilled, etc.?

These and hundreds of other questions are answered in this new edition of

The Immigration Problem

Based upon the final reports of the United States Immigration Commission.

By two members of the U. S. Immigration Commission, JEREMIAH W. JENKS, Ph.D., LL.D., Professor of Government, Director Division of Public Affairs, New York University, and W. JETT LAUCK, A.B., formerly Assistant Professor of Economics in Washington and Lee University. Gives the latest—right-down-to-the-minute facts on both sides of this important question which is attracting the serious attention of our foremost statesmen.

"It covers the entire field of immigration—causes, conditions, influences, extent and effects—from every land, and in every phase known to American life and industry. It is certain to give one many ideas as to the future generation of America."—*Inquirer, Philadelphia, Pa.*

FUNK & WAGNALLS COMPANY, Publishers, NEW YORK CITY

Efficiency's First Aid —Good Light

"You're working in the dark!" said a Western plant manager to his friend who had asked him to visit the latter's publishing offices in an Eastern Ohio town.

"How do you make that out?" asked the publishing man with a little astonishment. "We've had electricity here for five years."

"That may be," said the Western man. "And I don't mean that you can't see your hand before your face. But you haven't really emerged from the dark age. Honest, have you changed your lighting arrangement in those five years?"

The publishing man admitted that he hadn't.

"I thought so," said his frank visitor. "They were pretty poor to begin with, and they're entirely out of date. They're out of date because we're living in an age of really good light. More than half of your floor space is gloomy, partly because you use old-fashioned lamps—the Edison Mazda gives three times as much light with the same amount of electricity that is used in these ordinary carbon lamps—and partly because they are not placed to advantage. You're handicapping yourself and your entire force. You're putting a check on your office efficiency, which is bad business, and you're wasting money on old methods, which is bad business again. Good light is a big factor—it's efficiency's first aid. It would be worth all it costs even if it cost a lot of money. And yet it's cheaper than ever it was—been going down in price while the cost of everything else has been going up."

The result of this plain talk was that the publishing man got into communication with the local lighting company next day, and found himself keenly interested in the plans laid out by the electrical engineer who called to see him. Seven months later when he saw his friend again he declared: "You put it bluntly about my lighting, but you saved me money. My system now costs me no more, and you wouldn't know the place as it is now. It has put snap into all our work —I think we turn out fully thirty per cent. more than we did, and we do it with fully fifty per cent. more comfort. I'm a light enthusiast from now on."

This incident reflects an experience in a certain type of business, but there is no sort of business to which the outspoken philosophy that stirred this particular manager might not apply with equal force. For manufacturer and merchant, banker, broker or business man anywhere, good light is a basic business factor.

Good light is good business. It brings people into a store, for example, and helps sell goods to those people. It helps the display of goods, and it affects not only customers but the selling force.

It affects equally the brain output and the physical output of every sort of business. It raises the percentage of sheer efficiency in every unit of a force, whether it is a small office force of a dozen or a large force of a thousand. That percentage of increase in efficiency would be considered highly important in a group of machines. It is even more so in a group of men or women.

Perhaps you have realized this fact in your business without guessing exactly how the thing might be worked out to meet your special needs and opportunities. It is possible that you have not ascertained the cheapness and facility of modern wiring—that you may not know of the growing cheapness of electric light itself.

These are matters which an electrical engineer knows, and can lay before you.

The electrical expert will tell you about the Edison Mazda lamp. He will show you the comfort—for you personally and for your force—and—he will show you the real economy that lies in modern ways of lighting.

Take up the matter today with your electric power and light company, or any General Electric Company agent in your vicinity. You will find them more than glad to co-operate with you, and no matter how complex your problem may be, they have at their command the service of any part of our organization that may be most helpful to them and to you.

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Published by Funk & Wagnalls Company (Adam W. Wagnalls, Pres.; Benj. F. Funk, Vice-Pres.; Robert J. Cuddihy, Treas.; W. J. Funk, Sec'y), 354–360 Fourth Ave., New York

VOL. XLVII., NO. 14 NEW YORK, OCTOBER 4, 1913 WHOLE NUMBER 1224

TOPICS OF THE DAY

STEEL-CAR EFFICIENCY IN WRECKS

AS NO WRECK was ever prevented by steel cars, some observers are asking just now if the popular craze for these vehicles would not be better directed toward the elimination of causes of accident, instead of taking it for granted that every train will some day go to smash and building it like a safe-deposit vault. One editor inquires if it wouldn't be better to insist that there be no collisions of trains of whatever material rather than to rest content with steel cars "to make collisions perfectly safe and customary." The New York *Evening Sun* is willing to admit, for instance, that steel cars may diminish the death toll, but adds that "they need to be reenforced with intelligent engineers and prudent dispatchers," and one railroad authority goes still further, and claims that steel cars are in themselves the cause of many wrecks because of their extreme weight on unprepared rails and roadbed. Meanwhile, persuaded of the steel car's value in mitigating the horrors of a wreck, Representative Allen, of Ohio, has introduced a bill into Congress requiring all railway passenger-trains in interstate commerce, after July 1, 1918, to be composed wholly of steel cars. Objection is raised in some quarters against such a bill on several grounds, as, that it imposes too great a hardship on the railroads, which, between the difficulties of rate regulation and wage elevation, are having their day of trial. It is argued also that if enough factories were established to provide the enormous number of steel cars that would be needed under the proposed law, as soon as these cars should be built "there would be ruinous waste (of factories) and a cruel displacement of labor." That is the stand of the New York *World*, which calls attention also to the fact that in cases of slow trains on inactive lines, and in the local service of larger systems, "steel cars are little needed." Besides, adds *The World*, it is dubious "how far the steel cars will solve the problem of safety in electric trains"; yet it suggests:

Copyrighted by Underwood & Underwood, New York.

THIS WAS A STEEL CAR.

Result of the head-on collision of September 22 between two trains of steel cars on the Long Island Railroad at College Point. Fifty or more passengers were injured, but none killed, altho three employees of the railroad lost their lives.

"By all means let steel equipment be employed as fast as possible in services where the best railroad judgment agrees that it is most needed. But it will never avert death and injury by accident so long as accidents occur; and the chief causes of the accident are recklessness and lack of discipline. Coroner Mix shows that on the New Haven Railroad alone in thirty-two months 101 cases of improper flagging were reported, and 158 cases of engineers running past signals. In every such case human life may be endangered."

Nevertheless, while sticking to the point that no precaution of car-building can ever make up for lack of good management on a railroad, *The World* is bound to recognize that steel cars did prove life-savers in the recent head-on collision near College Point, Long Island, while the Brooklyn *Eagle* picks out as the "most obvious and easiest lesson" of the White Mountains Express wreck on the New Haven road the fact that "the wooden car must go," and from its store of memory cites a modern instance to prove the necessity for legislation in the matter:

"Thirty years ago, the car stove was banished from railroad

TERMS: $3 a year, in advance; four months, $1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage $1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE,** or **CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect. *Both old and new addresses* must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

STEEL CARS AFTER THE COLLISION AT TYRONE, PA., ON JULY 30.

In this rear-end collision, according to *The Railway Age Gazette*, "the shock was largely absorbed by the crushing of the platforms and vestibules of the cars." The engineer of the following train was the only person killed.

trains, following the dreadful burning of victims of a wreck at White River Junction, Vt. The railroads were only driven by law into the expense of heating their trains from the engine. They can be driven to-day by like legislation into substituting steel cars for wooden ones, a change which is hardly greater, in view of the increased volume of traffic, than was the abandonment of stoves in the elementary railroading of a generation ago."

. The Philadelphia *Public Ledger*, too, would send wooden cars "to the scrap-heap" and make the roads replace them with steel ones; but at the same time, it argues, the railroads "should be permitted to increase their income sufficiently to do so," and it adds: "The United States will not tolerate cheap fares and low freight rates at the expense of human life." The steel car must come, the St. Louis *Globe-Democrat* agrees, but how it is to be made to come "is something Congress will have to wrestle with at its next regular session."

On the other hand, considering the proposed steel-car legislation from an adverse and also from an expert's point of view, James O. Fagan, author of "Confessions of a Railway Signalman," says in a letter to the New York *Times:*

"Before permitting or compelling the railroads to add an unlimited number of ponderous steel cars to their equipment would it not be well to secure from the Interstate Commerce Commission an opinion as to the present preparedness of the railroads to carry in safety this additional weight? An opinion of this kind in advance would certainly mean more to the people than any number of discoveries and rulings of the usual post-mortem description. Surely, these tracks and road-beds are matters of the first consideration, and any cart-before-the-horse legislation should be looked upon by the people with the greatest disfavor. At any rate, I think there is evidence enough of a cautionary nature to make both the railroads and Congress proceed very carefully with this steel-car proposition. . . . . .

"In fact, a careful scrutiny of the records for the past year or two warrants the suspicion that the unusual weight and speed of these trains have been the probable causes in most of these accidents. Saving lives in this roundabout fashion is something new in railroad and human economy. It reminds one of Dickens's hero who saved a small fortune in his mind by purchasing at bargain sales articles for which he had absolutely no use."

Referring to our propensity to try to correct every wrong by writing a new law in the statute-book, the New York *Journal of Commerce* questions whether it is physically possible to equip all the railroads with steel cars in two, three, or four years, and asserts that it could not be done in any case "without imposing a great strain on the finances of the companies." Then *The Journal of Commerce* emphasizes the oft-mentioned axiom that "safety of operation depends more on the personnel than on the material." This is echoed, too, by the Washington *Post*, which proceeds to disclose the situation that the railroads face:

"Eleven railroads have protested against the enactment of the proposed law compelling all roads to be fully equipped with steel cars on the ground that it would cost them $633,000,000. While this may sound like putting the dollar above human life, there is a great deal to be said on behalf of the railroads. They can not be expected, for one thing, to stand the strain of constant lawmaking which puts financial burden after financial burden upon them. Either the Government, through the Interstate Commerce Commission, must permit them to charge increased rates to shippers and passengers to make up their losses, or else some of them will go into bankruptcy."

The real solution of the problem, continues *The Post*, is to be found in this statement of George F. Baer, President of the Reading Railway:

"By discipline—firm, rigid, unyielding discipline—alone can railroad wrecks be averted. I do not believe in all-steel cars. I think the half-steel cars are the safest. But steel cars will not prevent wrecks. Discipline alone can do that. Without discipline there will always be wrecks. By discipline I mean a strict obedience to rules and orders. The human element enters into railroading to such an extent that men always must be depended upon, and men are not machines. So they must be trained to do what is expected of them."

THE FAMINE AND THE FARMER

THE DIZZY SOARING of meat prices is caused by the farmer's failure to raise enough live stock, declared the American Meat Packers in their annual convention in Chicago last week, and unless he mends his ways we must face the prospect of a meat famine. For in this case growing prices, we are told, are the direct result of a dwindling supply—a contention supported by the latest government statistics. According to these statistics, as quoted in the New York *Journal of Commerce*, since the beginning of 1907 the number of beef cattle in the United States has decreased from 51,565,000 to 30,030,000, and the number of sheep from 53,240,000 to 51,480,000, while in the same period the population of the country has increased by 10,000,000. Thus the supply has been diminishing even more rapidly than the demand has been increasing. And we read in *The Wall Street Journal* that during the same time the price of fat cattle at Chicago advanced more than 50 per cent., while the wholesale price of drest beef kept pace. Among the remedies suggested by speakers at the Packers' Convention, Chicago dispatches tell us, were the following:

Every small farmer should raise at least two beef steers a year to offset the decreased production of the great ranches of the West.

The remaining ranges should be cut up into farms, to put all farmers on an equal footing.

Development of the hills of New England, with their bountiful springs and prevailing shade, as a beef-producing country.

Substitution of corn for cotton in the Southern States, and the consequent development of the cattle and hog production.

And the seriousness of the situation was thus set forth in the report of the Executive Committee:

"The American meat-packing house situation and that of consumers of meat-food products in this country are both in a condition more precarious than at any other time in our history.

"We are facing conditions in the production of meat-food products which would have been thought impossible ten years ago. The shortage of live stock which has been imprest upon us as packing-house producers for several years has been intensified during the last year. Our population is growing at its normal rate. We have passed the point where demand has overtaken production, and we are now on a basis which shows that demand exceeds the supply of meat-food products to such an extent that we have abnormally high prices for meat-food products.

"The farmers are not furnishing nearly a sufficient number of animals to keep the packing houses in operation on anything like full time, and this results in heavy losses, owing to lack of volume of business. And there seems to be no prospect of relief. Despite the higher prices for live stock of all kinds, statistics show that the farmers not only are not increasing their production of meat-food animals, but that such production is decreasing at an appalling rate."

"The problem of our future beef supply is to be worked out in our own borders, and the sooner we realize that fact the better it will be for us," agrees *The Wall Street Journal*, which goes on to argue that the South is peculiarly fitted to supply the solution:

"What better breeding place could be asked for than in the South? Between Virginia and Louisiana are millions of acres of cheap, well-watered lands that could carry cattle. Climatic conditions would make the carrying cost less than in the North. The fever-tick is being eliminated. North Carolina, for instance, is now two-thirds free from the pest. There is room in that section (and need, too) for thousands of cattle.

"In the last census year the two Carolinas, Georgia, Florida, Alabama, Mississippi, and Louisiana had 5,766,000 head of cattle, worth $72,000,000. With their total area of 348,715 square miles, that would average 16.5 head to a square mile. New York and Pennsylvania are by no means well stocked with cattle, yet on their total area of 94,330 square miles they carried that same year 4,010,000 head of better cattle—worth $140,000,000, averaging 42.5 head to the square mile.

"In that same year these seven Southern States spent $60,000,000 for commercial fertilizers, and their crops were worth $916,550,000. Those of New York and Pennsylvania (without counting animal products) were worth $706,000,000. This is not because the Northern soil is more fertile. The enormous yields of cotton on some of the experimental farms, and the extraordinary results obtained by some of their boys' corn clubs, show what the Southern lands can do. Less cropping and more cattle would mean larger returns per acre.

"The census valuation looks as if a large part of the Southern cattle is native 'scrub,' of which even New York and Pennsylvania have too much. To prepare such a steer for market is like trying to fatten a fence-rail—and the product is about as juicy. But to establish herds of thoroughbred stock is a costly undertaking. The North Carolina Commissioner is trying to grade up the native stock by placing thoroughbred breeding animals in different parts of the State. The plan commends itself to common sense.

"If the farmers of the South will be satisfied to raise more corn and forage, and learn to look upon well-graded cattle as mills to condense that feed for market, they can raise an equal amount of cotton on a smaller acreage, and save a part of their immense bill for fertilizer. Incidentally, also, they will be on the way to solving the question of rural credit."

In Pennsylvania, remarks the Philadelphia *Public Ledger*, there are thousands of idle acres good for the production of beef; and the same paper suggests that "a general publicity campaign, carefully planned and carried out, would doubtless increase the production 20 per cent., or even more."

The advisability of splitting up the great cattle-ranges into smaller holdings is discust in the New York *Commercial*, in which we read:

"Many who should be well able to judge maintain that the division of the ranges into small farms has caused a steady decrease in the supply of American cattle, but the truth of this statement is disputed by some of the large ranch owners of Texas, who find that the industry in their State was never in a more prosperous condition than it is at present. One Texan authority on the subject says that the 'vest-pocket ranchmen,' as he calls them, are now raising more cattle to the acre than ever before in the history of that part of the country, and they can do this because they can put up the forage in silos, which

TWO VIEWS OF DEMOCRATIC TARIFF LEGISLATION.

he thinks is the solution of the cattle problem. On the one hand, we have the meat-packers predicting that the supply of cattle will soon be insufficient to feed the people of this country, and on the other hand we have the statements from cattle-raisers themselves, especially in Texas, that the Western farmer will produce plenty of live stock if he can get a fair share of the price which the ultimate consumer pays."

Declaring in favor of the small farm rather than the large ranch, *The Commercial* goes on to say:

"The open ranch was suited only to cattle that were capable of covering a great deal of ground in a day, and this made it practically impossible to raise the best class of beef cattle without feeding them quite heavily to supplement the wild grasses which they found on the open range. It pays the cattle-farmer best to finish his stock at home, but the cattle herded on open ranges have to be shipped to the corn country in order to have the necessary weight put on before they are sent to the packing houses. A farmer with anywhere from one hundred and sixty acres to a thousand acres of land can turn out five times as many cattle in proportion to acreage as would ever be produced on the old-fashioned ranches, and his chance to lose by disease or accident, including the depredations of wild animals, is much less."

"CASH-DRAWER" DIPLOMACY

DIPLOMACY of several varieties, as practised by the Roosevelt and the Taft Administrations in dealing with certain troublous republics of Latin America, whether it happened to be the "Big Stick" brand, the "Dollar," or the "Drumstick" brand, was harshly termed "radical" and "high-handed" by Democratic critics, Washington press correspondents remind us, as they review the course of action pursued by the Wilson Administration in snuffing out the latest local conflagration in Santo Domingo. The previous Dominican revolution, we read, lasted about eleven months, while the present came to an end in less than one month, thanks to what is now called in Washington "Cash-Drawer Diplomacy." Two chief features are noted in this "new and radical extension" of our policy with Latin America. First, the United States Government serves notice on the Dominican rebels, through Minister James M. Sullivan, that even if they should succeed in dismantling the Bordas Government, they will not receive recognition from the United States. Second, in the event that the rebels should obtain control of the government by force, they are furthermore informed that the United States will withhold Santo Domingo's share of her customs receipts, of which the United States is collector and custodian under the convention of 1907.

HE EXTINGUISHED THE SANTO DOMINGO CONFLAGRATION.

Minister James M. Sullivan, who conveyed the message from our Government which induced the Dominican rebels to drop their revolution.

Advised of these conditions, General Horacio Vasquez, leader of the revolution, promptly agrees to discontinue the movement and persuade his followers to lay down their arms, whereupon the American Minister proceeds to Santo Domingo City to offer his credentials to President Bordas. The Dominican adjustment meanwhile, we read in the press, encourages some Washington officials to predict that the last days of Latin-American revolutions are in sight, even if the United States has not the same control over the finances of other such countries as it maintains over those of the Dominican Republic, because the prophets consider "non-recognition" an equally strong arm as withholding of funds in dealing with "cantankerous insurrections."

Tracing the development of the insurrection that began at Puerto Plata, the New York *Times* relates that its leader, Horacio Vasquez, has been regarded as the patriot of the revolution that overthrew the Presidency of Eladio Victoria, and known as the close personal friend and political maker of President Bordas. The reason that Vasquez turned on him, *The Times* says, is because "Bordas has failed to institute the reforms for which Vasquez brought about the revolution of 1912." A new constitutional convention was to have been called, and an equal extension of the suffrage throughout the Republic was promised. The calling of the convention has been postponed and again postponed with the result, as *The Times* remarks, that the plan of constitutional reform has been "defeated by the familiar Spanish method of procrastination." Meanwhile Vasquez partizans accuse President Bordas of "aspiring to a perpetual dictatorship," and *The Times* continues:

"No sooner did General Vasquez form this judgment of the Administration than he entrenched himself in the Province of Puerto Plata, of which he is Governor, by manning the government railroad, which leads seventy miles inland to Santiago and Moco, with 1,000 trained soldiers. The Bordas Administration retaliated by opening negotiations for renting this railroad to a private company composed of Bordas's partizans. The revolution, begun by a pitched battle on August 30, pivoted about the possession of the railroad."

On examination into the reasons for the Administration's drastic handling of the uprising at the very outset, the Brooklyn *Eagle* (Ind. Dem.) points out that:

"Nobody is better aware than President Wilson of what has been called 'the divine right of revolution,' the Cromwell-Danton-Washington right to end tyranny by resistance. But President Wilson is convinced that there is no public-spirited motive, nothing but brigandage, in the minds of the rebels in Santo Domingo. And the public-spirited motive is what differentiates rebellion, wise or unwise rebellion, from brigandage. To the thinker it is clear that this forcing of peace in another land involves morally the duty of a certain supervision over the existing Government that is being protected. That Government must be made decent, and kept decent. No barbarism can be tolerated. With this qualification, however, the American people will agree that our power of the purse in Santo Domingo may well be used to check the movements of looters who steal the livery of patriotism to serve the devil in."

Just what "our power of the purse" amounts to *The Eagle* goes on to show by citing the provisions of the Roosevelt convention of 1907 for the collection of customs duties, "which constitute the greater part of the income of Santo Domingo." It notes parenthetically:

"One hundred thousand dollars a month of these customs receipts are set aside for interest and sinking-fund. Taking out this $1,200,000 a year, any further amount up to $3,000,000 goes for Santo Domingo's current expenses. Above $3,000,000, on the surplus, Santo Domingo and her creditors share and share alike. Not quite $2,000,000 is the share to be spent by Santo Domingo officials on last year's income. Without this, a revolutionary or provisional Government would be helpless."

In President Wilson's policy the New York *Commercial* sees the purpose of teaching the people of Santo Domingo that "the only way to change the government is to vote against it at a regular election, and that the long line of Presidents who attained office as military dictators has come to an end." Proceeding, *The Commercial* casts a side glance toward Mexico, and says:

"If by withholding recognition the United States can make it

THE CANAL FLOODED.

And nearly ready for traffic. Altho the water here has not yet reached its full height, this view near the Miraflores Locks is practically as it will look when the canal is formally opened.

impossible for Mexico or any other republic in Central America to borrow money abroad while a state of anarchy or civil war prevails, it will tend greatly to check speculation in revolutions by certain international banking houses and purveyors of munitions of war who do business on both sides of the Atlantic. This does not involve any interference with the rights and liberties of the people of such republics. It is rather a defense of their rights and liberties, because all that the United States Government can or ever will ask of them is that they hold fair elections and abide by the results. Now that the Federal Administration has taken the first step in this direction in dealing with Santo Domingo the development of this new policy will be watched with great interest."

MORE BRITISH PANAMA WORRY

THE FEAR VOICED by Prof. Adam W. Kirkaldy that the Panama Canal may wean British ships away from the Suez route, give American ships the advantage, and divert much Oriental and Australian trade from London to American ports, is not regarded very seriously by our newspapers. The facts that American coal can be sold cheaper at Panama than British coal at Suez, and that "all Japanese and New Zealand ports and all Australian ports east of Adelaide" will be nearer to New York than to London, upon which Professor Kirkaldy bases his conclusions, are not questioned, but some of the American papers wonder how this country, with no merchant marine to speak of, can crowd British ships out of business. The Brooklyn *Eagle* says Professor Kirkaldy "draws an agreeable picture for Americans to contemplate," the only trouble with it being the fact that "we have as yet no merchant marine in the sense that Great Britain has, nor are we taking any steps to create one." Professor Kirkaldy fills the chair of finance at Birmingham University, and is a recognized authority on current economic problems. His statement regarding the advantage the Panama Canal might give to American trade was contained in an address delivered the other day before the British Association in his home city. His warning that there will be a "strenuous attempt to displace British coal throughout the world in order to give American shipping the advantages at present enjoyed by the British," and that "the British coal industry must realize the situation, and both the capital and labor interested resolve to hold the market at all costs until the fuel question—coal or oil—is finally settled," moves the Washington *Post* to say that:

"Surely, American shipping looms large in the professor's imagination, as tho all that it lacks in order to 'deal a mortal blow to the British mercantile marine' is a trifle cheaper article of coal pending the replacement of coal by oil as a fuel. But why can not the minnow give the whale a mortal sting with a superior article of oil as easily as with coal? Professor Kirkaldy evidently is not aware that British shipping to-day uses more American coal than our shipping. Reasonably, the same thing may occur at the isthmus, if, as he says, we are to put coal on sale at the isthmus at a lower price than Welsh coal can be sold at Suez.

"However, seeing that there is no competition between our coastwise trade and the British lines, the advantage of coal supply would all lie with them. That is, unless the welfare of their coal industry outweighs that of shipping. At all events, if oil is to be the fuel of the future, as seems to be decided by the laying down of the latest British dreadnought as an oil-burner exclusively, the British coal-trade is doomed anyhow. She has no home supply of oil, and, therefore, has no substitute, as we have, to make up for the loss.

"Neither British nor Americans are likely to be beguiled by Professor Kirkaldy into thinking that a slight difference in the price of coal will give our shipless shipping commercial command of the seven seas."

In taking issue with Professor Kirkaldy, the New York *Sun* avails itself of the opportunity to argue vigorously for an American merchant marine:

"There seems to be no doubt that American coal can now be supplied for less per ton at Colon and Panama than it brings at the Suez termini. Professor Kirkaldy admits this. But in what bottoms is coal being carried from the Atlantic to the Pacific at the present time? According to Mr. Robert Dollar, one of the largest ship-owners on the Pacific coast, the United States Government has now under charter thirty foreign steamships to carry coal round the Horn. Coastwise ships can be used after the opening of the Panama Canal, but they must make reasonable rates if coal is to be quoted low at Colon and Panama.

"By 'American shipping,' however, Professor Kirkaldy does not mean the coastwise trade. He must have in mind the creation of a merchant marine to take advantage of the Panama route and cheap coal and serve American merchants. There is no merchant marine to speak of now. Is the United States to keep the canal in operation for the mercantile fleets of other nations,

using it only for its coastwise shipping? Mr. Robert Dollar, before quoted, declares that our flag can be put back on the high seas if Congress will permit ship-owners to operate 'as all our competitors are doing.' This subject should be taken up at the regular session that meets in December.

"A Panama Canal without an American merchant marine is a grotesque idea. Calculations of mileage, cost of coal, rates of freight, and theories about the changes to be effected in the world's commerce can have little interest for American manufacturers and producers unless there are American ships to carry their cargoes to the Pacific and the Far East."

By way of introduction, Professor Kirkaldy said that he believed that, so far as the outside world is concerned, "the greatest effect of the opening of the canal will be to get commerce and trade out of the groove, and cause an all-round modernization of business methods." "Friction among the factors of production," he assures us, "will have to be eliminated, capital and labor in competing countries will have to work harmoniously together." His detailed explanation of his somewhat sensational conclusions follows:

"Taking London and New York as the typical European and American ports, the markets of the world fall into three classes—(1) Countries in close proximity to the canal: here the effect will be greatest and, in many cases, the use of the canal a necessity. (2) Australasia and the Far East. At present there is a choice of routes to these markets; Panama will offer another alternative. (3) Ports not directly affected.

"Class 2 is receiving most attention from those estimating the effects on world trade. There is a parallel equidistant from London via Suez, and from New York via Panama. On the south coast of Australia this is Port Lincoln, Adelaide being the nearest great port. All Asiatic ports west of Japan will continue to be nearer to London, *e.g.*, Manila will be 2,000 miles nearer. But all Japanese and New Zealand ports and all Australian ports east of Adelaide will be nearer New York.

"Tolls.—Panama differs from Suez here. Suez had an immediate monopoly; with Panama there is in many instances a choice of routes, and high tolls will deflect tonnage.

"Freights.—To benefit American shipping, freight must be available both out and home. To benefit American manufacturers, freights must be low. At present, Europe supplies Australasia with manufactured goods, and the shipping goes via Suez. This route gives a maximum of trading possibilities and great facilities for coaling. The Cape route, too, offers to fully loaded steamships the advantage of cheap bunker-coal. For the homeward voyage from Australasia a partly loaded steamship goes via the Horn to pick up cargo at ports like Montevideo. The canal would not attract these ships. When Panama is open will all-round-the-world services be organized? Great Britain is in a better position to do this than any other country. The rumors current recently that an existing shipping combine was trying to arrange an amalgamation with one of the oldest Far Eastern shipping companies were probably due to the hope of being able to commence such a service, having some of the chief trades of the world as tributaries, from the moment that Panama is available. America hopes to open up new markets, *e.g.*, wool. This now concentrates at London, but there is a tendency toward decentralization, and if America develops the woolen industry, she will get a wool market without necessarily constructing a Panama Canal.

"Fuel Stations.—This will be one of the decisive factors, and lead to the keenest commercial rivalry. The American Government are planning to supply good coal at either end of the canal at $2.50 per ton. The English coal on the Suez route is at present much dearer; to maintain the Suez route in its integrity, the supply of cheaper coal is a necessity. When oil replaces coal the British Empire resources will be ample to maintain our commercial position, but this must not in the meantime be placed in jeopardy, or disaster may ensue.

"Insurance rates will probably be the same on both routes."

REPUBLICANS SEEING A LIGHT

EVIDENCE that conservative control in the Republican party is doomed to a speedy collapse is discovered by many editors in the resolution of the New York State Republican Convention repudiating those rules of representation in national conventions which played such a large part in precipitating the party split at Chicago last year, and the birth of the Progressive party. This resolution, which was adopted unanimously by the convention after William Barnes, Jr., the State Republican "boss," had vainly opposed it in committee, advocates an early call for a special Republican national convention to discuss a new basis for representation in future national conventions. It specifically recommends that "delegates be chosen in each State in the manner preferred by the Republican voters of such States," and that representation hereafter "be based more nearly on the Republican vote actually cast in the several States and Congressional districts." "Actions of that kind will accelerate the movement back to the Republican party," declares Senator Jones (Rep.), of Washington; and the

SAD POSSIBILITIES SUGGESTED BY THE CURRENCY BILL.

New York *Times* (Ind. Dem.) agrees that if the suggestion of the New York Republicans is carried out in the nation, it may go far toward rehabilitating the party.

"The events of the next few months are to determine the fate of the Republican party—whether it is to disappear or to rearise in its old power," declares the New York *Globe* (Ind. Rep.), which sees ground for hope in the fact that "the mixture of boys' play and bossism that has wrecked a great organization is weakening its hold," and that "as a beginning New York is for once alined with the progressives rather than the reactionaries on the national committee." The same paper, recalling the effect of Mr. Taft's "renomination by pocket-borough delegates" last year, goes on to say:

"It was deemed an outrage that the delegates representing two-thirds of the party's voting strength should be overridden by delegates representing one-third of the party's voting strength. So it is not strange that the first step for the party's rehabilitation is for the calling of a special national convention to make rules giving greater equality of representation and providing against abuse of power such as occurred at Chicago."

This proposed change, says the Philadelphia *Press* (Rep.), "covers the weakest point in the Republican organization:"

"The large representation given to the entire population of States which cast only a handful of Republican votes, and even at some elections none at all, is unfair and unreasonable and is hurtful to the party. It has always been a source of dissatisfaction at every national convention since and including that of 1876, and was the rock of offense which precipitated the division of the party at the last national convention.

"It is not enough for Republicans to remain passive, waiting to take advantage of Democratic blunders. The party must have its own policies and must get together in order to win. Before anything else it must reform its method of choosing delegates so that the voting strength from each State shall be great or small according as the Republican vote in that State is great or small and not be measured by a population which may be overwhelmingly Democratic. This unfair and demoralizing system has been a reproach to the party far too long and should be changed forthwith.

"The best time to make such a change is now, when the fortune of no Presidential candidate has this excessive Southern representation as its basis.

"The best time for reorganizing and stimulating the party in other respects is in this mid-term period, when there are no personal interests directly involved. The executive committee of the Republican National Committee has voted in favor of calling together the full committee after the adjournment of the present session of Congress to consider the question of a special national convention. Republicans who have only the good of the party at heart will naturally favor such a convention.

"It is the first step in the campaign for regaining power which probably would not have been lost except for the friction, irritation, suspicion, and division which the excessive power of the delegations from Democratic States brought about in the last Republican convention."

The New York *Tribune* (Rep.) rejoices in this "triumph of the progressive wing of the Republican party," and declares that "the movement will not stop with the adoption of that resolution." It adds:

"By giving its unqualified adherence at this juncture to the program of reforms in national management New York has gone far toward insuring the adoption of a new system of representation based on the Republican vote cast. It has put itself on the side of popular party rule. So far as the details of the new plan are concerned, they may be safely left to the special national convention."

But the New York *World* (Dem.) can see only reaction in the move which the Republicans are hailing as progressive. We read:

"When the Republicans of New York in State convention approved the plan to 'revise the basis of representation in national conventions' they abandoned the negro at the South. They call it progress. In fact, it is reaction.

"New York Republicans offered no objection to full Southern representation in their national conventions when slaves lately freed were in the ascendency. They were not opposed to big delegations from the South when the thieving carpetbaggers were in control of that section. They turn upon the negro; they invalidate the Fourteenth and Fifteenth Amendments; they cast the negro south of Mason and Dixon's line adrift at this time because it is the easiest way to defeat the Northern bosses of their own party. . . . . .

"The decision of New York Republicans to restrict representation in their national conventions to votes actually cast amounts to approval of the nullification by Southern States of two of the war amendments. The disfranchised negro of the South is to have no voice even in the grand council of the party which boasts that it conferred upon him freedom and the ballot.

"What will the negroes who in normal times give the Republicans their majorities in various important Northern States say to this proposition?"

THE EVIL OF TOO MANY LAWS

THE GREAT AMERICAN MANIA for lawmaking has about reached the limit of wasteful futility, according to a writer in the Chicago *Tribune*, but he sees no signs to indicate that our legislators, whether municipal, State, or Federal, have any intention of stopping even if they have reached it. About 100 new acts per day go into force in the various States and towns, he calculates, many of which are never enforced. In this average number he includes "only laws which affect a large territory and a large number of people," and does not take account of the many laws enacted by municipal bodies. The Illinois legislature is to be credited with a comparatively low record, the writer informs us, in having put its "solemn seal of approval," during the latest session, on "only about 250 pieces of legislation." Other State legislatures can boast a much better score, the biennial output of some of them amounting to 1,200 distinct acts. To the total of laws established by the legislatures must be added "the tremendous number of public—as opposed to private—acts passed by the Congress at Washington"; and, by way of illustration, the writer points out that from 1789 to 1874, a period of eighty-five years, the acts so passed fill seventeen bound volumes, while the statutes at large passed in the next twenty years fill sixteen volumes of the same size. No human intellect, he avers, can keep track of the new laws and the changes in the old ones "while the legislative sausage-machine is at work," and he quotes the opinion of a prominent lawyer, who says: "We have so many laws in this country that we have no law." Yet "the marvelous facility with which new laws are spawned," declares *The Tribune* writer, is not the worst of the matter, and he adds:

"The bad quality of many of the laws passed by the average State legislature is even more conspicuous. And no wonder! An act written and introduced by one member is amended by two or three others, sent to the second house of the legislature, pawed over and amended there, sent back to conference, has paragraphs cut out and added, and, finally, is jammed through in the closing hours of the session in a form so changed and mutilated that its original sponsor would need an introduction. It is likely to be full of bad English, contradictions, prunes, and jokers. Various bar associations, after careful investigation, have reported that a large percentage of the laws passed by the average legislature may be fairly classified under one of the following heads:

1. Useless.
2. Carelessly worded.
3. Mischievous.
4. Bad."

It is almost the rule with any act passed by the legislature, the writer proceeds to say, that if one is sufficiently interested to pay for a careful search "some contradiction or error will be found because of which the courts will be obliged to declare it unconstitutional," while on the evil of unenforced laws he remarks:

"It is a commonplace that the non-enforcement of certain laws breeds disrespect for all law. Immigrants come here from countries where every law is enforced to the letter; where obedience to law is inbred and unbroken. They see their neighbors habitually and publicly breaking the law; they naturally conclude that they may with impunity break another law. It is another commonplace that when laws are left to be enforced at the discretion of the police force or of any other body of men the temptation to graft is great. A man would be more than human if he did not occasionally take advantage of the ever-present opportunity to punish an enemy or reward a friend. And shall not a friend who has received many favors now and then return the compliment?"

FOREIGN COMMENT

A FLAG OF TRUCE IN THE HOME-RULE FIGHT

WHILE AN ARMY is being recruited under distinguished officers and a war-fund of $5,000,000 is being raised in Ulster to resist Home Rule if it becomes law, an olive-branch that may prove of good omen appears in the proposal of one of the Liberal leaders that the chiefs of both parties get together and reach some amicable solution of the problem. Such a proposal must be considered "a flag of distress" hoisted by the Asquith Ministry, declares the Birmingham *Post;* and the Glasgow *Herald* and Edinburgh *Scotsman* unite in calling it "a signal of distress, if not of despair." "We are on the edge of great events," is the pithy comment of Mr. Balfour, the Unionist ex-Premier. The flag of truce comes from Lord Loreburn, Lord Haldane's predecessor on the woolsack, and is in the form of a letter to the London *Times*. He argues for the submission of the Home Rule question to a general election, and, what is thought most important, would "let the party leaders meet and confer with a view to agreement or compromise." The press of England, Ireland, and Scotland are deeply stirred by the proposal, and agree that it is the crucial point in British politics at this moment. But many believe a conference would do no good. "There is no basis for a conference," declares the Liberal *Daily News*, and most of the Government organs, as well as the Nationalist Irish papers, agree with this dictum. Mr. Balfour, in the speech from which we have quoted, thinks that the question of Irish Home Rule must go before the country at a new general election, and pleads for dissolution. On this point the London *Times* declares on behalf of the Liberal ex-Lord Chancellor:

"Lord Loreburn furnishes a hundred arguments for a general election before the Home Rule Bill can become law. Ulster will now demand such an election more insistently than ever. If Lord Loreburn has written on behalf of the Cabinet, then the Cabinet has either gone too far or not far enough. If there is one thing more than another in politics about which there ought to be no ambiguity, it is the offering of olive-branches."

Copyrighted by the International News Service.

A GLIMPSE OF THE BITTERNESS

That prevails in Ulster between the Nationalists and Unionists. Home-rulers hanging Sir Edward Carson in effigy during the recent riots in Derry.

The Unionist papers are doubtful about the efficacy of a conference. "After all these years," says the aristocratic London *Morning Post*, "Liberals are hardly likely to acquiesce willingly in any policy that does not satisfy Nationalist aspirations. On the other hand, what reason is there to believe that Unionists would agree to such concessions as would be acceptable to the Government?" "In our view," says the Unionist *Daily Telegraph*, echoing the views of Mr. Balfour, "the time calls not so much for conference as for election." So *The Daily Mail* remarks:

"Unionists are quite open to consider whether any system of Irish devolution or local government can be devised which will give due security for the rights and aspirations of Ulster. But they can have no intention of going into a conference called with the object of bringing the present Home Rule Bill into effect. Negotiations on such a basis would be foredoomed to failure from the outset."

Irish Nationalist opinion may be measured by the following passage from the Dublin *Freeman's Journal*, a Home Rule organ:

"Home Rule by consent would be Home Rule rendered a hundredfold more welcome to the heart of Nationalist Ireland, but the Ulster leaders have declared again and again that they will never agree to settlement—that with or without a general election or a conference Ireland shall not have Home Rule. These declarations have not lost them the support of the typical leaders of the Unionist party, and an invitation to such men to enter into conference in the hope of evolving a peaceful settlement by consent was certain to be construed as a confession of weakness and irresolution and an admission of bankruptcy."

But the Unionist *Irish Times* (Dublin) expresses a different view as follows:

"The immediate effect of Lord Loreburn's letter is already clear. It has fallen like a bombshell among the official Nationalists. They realize that it must deal a heavy blow at the prospects of the Bill in that it publishes at the most critical of all moments the doubts and fears, not merely of the English electorate, but of the Cabinet itself. To the Unionists of Ulster Lord Loreburn's confession comes as a message of good cheer. It tells them they are fighting a winning cause. It kills the last pretense that the Home Rule Bill is supported by the country and ought to be submitted to the test of a general election. Whatever may come of his proposals for a conference, the Liberal ex-Lord Chancellor has told Ulster that she is absolutely right in refusing to accept the Bill."

English Liberal organs treat Home Rule as practically an accomplished fact, and say in so many words, "Victory sits on our helm." "The irreducible minimum of Home Rule is a Parliament in Dublin and an Irish Executive responsible to it," declares *The Daily News* (London). "That the Unionists will not discuss. There seems, therefore, no basis on which to confer." These views are echoed in *The Daily Chronicle*, Manchester *Guardian*, and the Liverpool *Post*, all Liberal organs.

More hopeful is the opinion of that ardent Home Ruler, Mr. William O'Brien, M.P. for Cork, exprest in a telegram to the London *Times* as follows:

"I have as yet seen a summary only of Lord Loreburn's letter, but it is a pronouncement which no party can possibly afford to disregard. Our All for Ireland motto, 'Conference, Conciliation, and Consent,' is sufficient proof how enthusiastically we welcome Lord Loreburn's plea for friendly consultation before it is too late. I am absolutely convinced that an unfettered conference such as he proposes will not separate without an agreement."

LATIN-AMERICAN FEARS

THAT SWEET SPIRIT of trustfulness that will pervade the nations when Mr. Carnegie's peace palace has done its perfect work seems regrettably absent from the mind of Latin America when thinking of the United States. Their newspapers print editorials every little while breathing high defiance of our supposed intention to eat them up, but at the same time betraying a more or less panicky feeling of helplessness. Colombia, already bereft of Panama, now fears that we have an eye on the river Atrato, whose upper waters run so close to the Pacific coast that it might be employed in the building of a second canal, in competition with our Panama waterway. Nicaragua, too, resents Mr. Bryan's idea of a virtual United States protectorate over it—an extension of the Monroe Doctrine which would preclude the possibility of a work being entered upon by a foreign Power to rival the present construction at Colon. Even Europe has its eyes on the supposed ambitions of the United States in Latin America, and it is curious to read in the *Petit Méridional* (Montpellier), an organ supposed to be inspired by Mr. Clemenceau, and edited by one of his supporters, Mr. Georges Mandel, the following estimate of American imperialism:

POT AND KETTLE.

P. C. WILSON—"What are you doing in that uniform, Huerta? You're no constable—only the worst rowdy in the crowd."
"P. C." HUERTA—"Well, at any rate, I'm not off my own beat."
—Liverpool *Courier*.

"Mr. Wilson and Mr. Bryan, who used to be so hostile to imperialism, are certainly to-day bent on a policy of expansion and conquest. It is only recently that Mr. Bryan announced his intention to establish a protectorate over Nicaragua, and at this present moment Mr. Wilson is making public his intervention in the affairs of Mexico.

"It is certain that Huerta does not look upon the matter from his point of view, and considers the intervention of the United States inadmissible. Citizens of the United States have not as great interests at stake in Mexico as those of other nations; they then have no more right than other nations to interfere in Mexico.

"Foreigners have never been badly treated in Mexico. The advice, therefore, given by Mr. Wilson to American citizens to quit that country is inexplicable. But the fact of the matter is that all these steps taken by the United States merely betray the desire of that country to annex Mexico. They acted in the same way with regard to the Philippines, Cuba, and Panama. The policy of Mr. Wilson is inspired by American financiers, who would oppose the policy of Diaz. These gentlemen have supported the leaders of the revolution in order to destroy Diaz. The Monroe Doctrine is only used to protect the projects of the financial power.

"The question of the protectorate over Nicaragua has caused great excitement in Latin America."

The London *Times* seems to be slightly amused at the attitude of the President and his Secretary of State. To quote from a recent editorial on the Democrats in and out of office:

"Ever since the Spanish War, with Mr. Bryan at their head, they have denounced the Republican leanings toward 'Imperialism,' and they have been particularly scornful of the 'big stick' which Mr. Roosevelt added to the arsenal of diplomacy. No sooner, however, are they in power and in touch with realities than they proceed, not merely to continue, but to expand the program they used to denounce. The rapidity and completeness of their conversion to the new Monroe Doctrine appear to have taken even their quick-moving fellow countrymen by surprize. What the outside world has to consider is that what was merely a party is now a national policy, and that the Nicaragua Treaty embodies a formula which the United States as a whole has every intention of adhering to in its future dealings with the Central American Republics. It is a formula, moreover, that will only cease to be applicable at the frontiers of a state competent to observe its obligations and maintain an adequate standard of domestic tranquillity; and with the example of Mexico before us it is difficult to say where in the whole of Central and throughout no inconsiderable section of South America such a state is to be found."

Turning to the Latin-American press, we find a strong protest against President Wilson's policy uttered by no less an organ than the powerful *Prensa* (Buenos Aires), which speaks as follows:

"President Wilson should not neglect the warning given in the message of Huerta in answer to his dispatch. All that Wilson has said in his address to the Congress at Washington has merely served to fortify the position taken by Huerta.

"The policy of Mr. Wilson has only one tendency, and that is to unite the Latin-American states, in spite of Uncle Sam, and make such a hostile federation a reality instead of the political dream which it has hitherto been."

More specific is the cry of alarm uttered by a Colombian journalistic watch-dog which would protect the possibilities of the river Atrato. The *Gaceta Republicana* (Bogota) speaks of "warnings of war," and while it is gratified that the United States Senate turned down Mr. Bryan's project of a protectorate over Nicaragua, it remarks guardedly:

"Thus are dissipated in a great measure the fears inspired by the unprecedented procedure of Mr. Bryan. We have not, however, the same confidence in the manifest intention of the United States to prevent the opening of a new interoceanic canal—a possible rival to that on which they have thrown away money, human life, engineering genius, and their reputation for good faith. A canal by the way of our river Atrato is much less a menace to Panama than one by the way of Nicaragua. We must sleep with one eye open, however, in order to protect our sovereignty in that region, whose occupation is likely to be for many years the object of the covetous contemplation of the United States. . . . North American diplomacy is small-minded and is bent on outlawing the peoples whose rights it covets to usurp. We, however, need not fear the United States, but we should bear constantly in mind the fact that they need and desire our river Atrato, and for this reason we should rally our energies toward setting up a dignified defense against them."

Mr. Bryan's idea of establishing a protectorate over Nicaragua has called forth a cry of alarm from Honduras, and we read in the *Cronista* of Tegucigalpa:

"The proposal of the United States to institute a protectorate over Nicaragua falls upon us like the club of Hercules, and this action hangs like a threat over the whole of Central America. It is idle to say that the Democratic party will guarantee the independence of weak states, for a year ago that party cast covetous eyes on Nicaraguan territory, eager to appropriate its great lake, fair as a promise of God, and its great river in a valley of fertility highly favored by nature. But Nicaragua, if it is to perish, will perish as a sovereign nation."

GRATITUDE.

TURK—"The Allies did more for me than I could do for myself." —*Gil Blas* (Paris).

WHY THE TURKS NEED ADRIANOPLE

TURKEY HAS TRIUMPHED over Bulgaria in the end, for the new Turco-Bulgarian frontier has been settled by the recent conference at Constantinople, the cable reports, and Turkey keeps Adrianople, Kirk-Kilisseh, and Demotica, while Bulgaria gets Mustapha Pasha, Tirnovo, and Ortakeui, more or less insignificant and mountainous territory admitting of difficult access to the sea. The Turks are especially jubilant over the recovery of Adrianople. It is their ancient capital, the symbol of their original triumph on European soil. It is the burial-place of their Sultans and possesses many shrines hallowed by patriotic and religious association. To have retaken it is what the French would think equal to the retaking of Alsace-Lorraine—a *revanche* on the Bulgarians, a retaliation, a revenge which is always sweet to the conquered. But more than this, Adrianople is a defiant outpost in the defense of Constantinople. This, of course, is the main cause of rejoicing to the politicians of Stamboul, who feared that the Turk might be totally banished from Europe, so that his commercial as well as his political importance would be shorn of half its power. Thus we read in the *Tanine* (Constantinople):

WHAT TURKEY GAINS.

The new boundary is approximately indicated here from cable dispatches telling the places allotted to Turkey and Bulgaria by the conference between their representatives at Constantinople.

"Adrianople is necessary to us not only for the defense of Constantinople, but to enable us to work vigorously in Asia. Some of our friends think, I don't know why, that Adrianople is going to be to us a cause of expense and trouble in the future, and that it will always stir up the Bulgarians to try to retake it. The defense of Adrianople will not increase but lessen our expense, for that citadel will break any attack from Bulgaria. Without Adrianople, to make our line of defense on the west adequate to our needs, we are told by military experts that an expense of $88,000,000 is needed.

"Macedonia and Albania did hinder our work of reform in Asia. But Thrace is in majority Mussulman, and, when ours, will both help us defend our capital and stimulate us to better work in Asia. Nor can we see how leaving Adrianople to Bulgaria would satisfy her ambition and keep her from desiring Constantinople also. To give Bulgaria Adrianople would but fire the imagination and stimulate the ambition of Ferdinand and his people to take our capital city. We are sure all the true friends of Turkey will acknowledge that the only solution of present problems is to leave Adrianople an Ottoman possession."

The *Ikdam* devotes an entire article to pointing out the injustice and the danger of giving Adrianople and Thrace to Bulgaria when in that city and province Bulgarians are in small minority and all the rest of the population, Moslem and Greek, prefer Ottoman rule. The Turks' recapture of Adrianople is also good for Russia, as Constantinople is thus saved to keep open the Dardanelles. Referring to the fact that Russia has so far supported Bulgaria against Turkey and has only been overruled by Sir Edward Grey's policy as backed by the Powers, this Constantinople paper remarks:

"Russia's championship of Bulgaria is hard to understand. Bulgaria has never shown herself grateful for Russia's help. A Bulgarian statesman once said, 'Russian boots open bad sores on Bulgarian feet.' Russia's support of Bulgarian claims will prove as bad for Russia as it will for Turkey. To do that effectively would be to further Austria's ambitions as well as open the way by and by for Bulgaria to grow strong enough

THE WARRIOR'S RETURN.

QUEEN—"What is that sickly shrub?"
FERDINAND—"These are my Balkan laurels."
—*Kladderadatsch* (Berlin).

to seize Constantinople. What has Russia to say to that? Bulgaria would be glad to control the straits; the very thing Russia could not tolerate. While they are in our control, no Russian interest suffers. Bulgaria, possessing Adrianople, would move, not south or west, but eastward, with Stamboul as her objective. Russians know that her interests will be saved with Thrace in Turkish hands, not in those of Bulgaria."—*Translations made for* THE LITERARY DIGEST.

FAILURE OF THE CHINESE UPRISING

"I AM ABLE to state that the first rebellion to be encountered by the Republic of China has been crusht completely, and the foolish instigators of it are either dead, in prison, or gone—to Japan!" Such are the words of President Yuan Shi-kai as communicated to the press, and, indeed, Dr. Sun Yat-sen, after a brief respite from strenuous activities as a revolutionary leader, is again an exile in Japan, whither he fled after the collapse of the Southern forces which he recently led against the forces of President Yuan Shi-kai. His revolutionary movement was the outcome of growing discontent among Southern Chinese with regard to the policies of the Yuan Administration. In spite of Yuan's assurance that he desires to be a Washington rather than a Napoleon, the South seems to entertain intense suspicion as to his sincerity. Then, too, the South is opposed to the loan contract which the Yuan Administration concluded with the five-Power syndicate without the consent of the National Assembly. Furthermore, Yuan's methods of dealing with the opposition, the Kuomin-tang (or Nationalist party), have been anything but pleasing to the Southern leaders. The recent assassination of Sung Chiao-jen, one of the leaders of the Kuomin-tang, of which President Yuan is suspected to have been the instigator, was enough to kindle the revolutionary risings which had long been smouldering.

A TROUBLESOME PAIR.
—*The National Review* (Shanghai).

The leaders of the revolutionary movement, excepting General Li Yuen-hueng, who still remains loyal to Yuan, are all men who were responsible for the overthrow of the Manchu dynasty. Huang-hsing, who engineered the revolution at Wuchang two years ago, is again in the forefront of the new movement, while Dr. Sun is obviously acting as his counselor. Judging from his utterances, Dr. Sun seems to be as firmly determined to overthrow the Yuan Administration as he was resolved to destroy the Manchu dynasty. Upon his arrival in Japan on August 8, he issued the following statement to the press:

"The present uprising seems to have ended in a failure, but the people throughout China have been awakened to the danger of permitting Yuan to remain in the saddle. Should the iron hand of Yuan relax for a moment, the whole country will rise against him. The present rebellion is only the beginning of a great movement which will never end until Yuan is ousted. I am thoroughly confident that the cause of revolution will eventually triumph.

"I am not fearful of assassins, but I am declining to receive visitors simply because foreign countries might suspect that I am making Japan the base of revolutionary operations, if I were to meet many Japanese and Chinese here. As long as Japan permits me to stay here, I am in honor bound to avoid any act that might arouse any suspicion that Japan is assisting the revolutionists."

Other revolutionary leaders, including Huang-hsing, are also in Japan, but their whereabouts are kept strictly secret on account of the numerous assassins whom the Peking authorities are reported to have sent to Japan. According to the Tokyo *Asahi*, the Yuan Administration has offered large sums for the heads of the revolutionists—$50,000 for Huang-hsing, $25,000 for Chen Chi-mei, and $10,000 each for Li Shu-cheng and Huang-fu. This severe measure adopted by the Peking Government seems to have alienated the sympathy of the Japanese press from Yuan Shi-kai more completely than ever. The Japanese Government itself, the leading journals of Tokyo report, was inclined to refuse shelter to the revolutionary leaders, but as it became evident that numerous assassins were poured into Japan by President Yuan, the Japanese press raised a hue and cry against the Government's intention to deport the revolutionists. Hu Han-min, one of the revolutionary refugees in Japan, in an interview with the reporter of the Tokyo *Jiji*, explains why the revolution failed:

"The attempt was premature. When the South was impelled to rise in rebellion by the assassination of Sung Chiao-jen, a Kuomin-tang leader, Yuan was thoroughly prepared for any emergency that might arise in the South. The large sum of money which Yuan was able to secure through the quintuple loan was freely utilized to corrupt the Southerners. The revolution had scarcely been started when the Powers handed to Yuan $10,000,000, thus enabling him to bribe Southern forces and to pour Northern soldiers into the disaffected regions. We felt sure of the fidelity of the Navy to our cause, because the naval officers and crews were mostly Southerners. But Yuan's money wrought a miracle, and the Navy was lost to us.

"The policy of the British Government at Hongkong and the action of the Powers were largely responsible for the questionable success of Yuan. The Southern Chinese are justified in resenting the act of the Powers in conferring upon Yuan a loan which was not sanctioned by the Senate, and in assisting Yuan to safeguard their interests relating to the loan by suppressing a revolution born of the universal will of the Southern patriots.

"The Powers are pursuing a mistaken policy, because they do not understand the true meaning of the revolution of two years ago and the ultimate destiny of the Chinese people. We have been defeated, but the cause of the people will eventually win."

The rebellion is denounced by the President not only on political, but on moral grounds. The revolutionaries, according to a statement given to the press by Yuan Shi-kai, were merely agents of the opium-traders, who had determined to reestablish in China that traffic in the deadly drug which was enriching them, but poisoning and enervating the heart of China:

"Altho the opium millionaires and the greedy money-lenders of Canton and Singapore did not fully show their hands from the beginning of the trouble to the flight of two of the extremist leaders, I have indisputable evidence now in my possession that (1) the opium-traders, through their regular backers and through rich usurers of Canton, Shanghai, and Nagasaki, made big loans or gifts to the rebel propaganda; (2) that they sent emissaries to preach sedition in Honan, Hupeh, and Szechuan, providing these agents with funds to aid farmers, small traders, and prominent users of the drug to fight the laws or bribe officials; (3) that promises were made by the opium clique (who in turn were backed by Indian and Malayan big growers) of an instalment fund of 1,000,000 Canton taels a month so long as the rebellion appeared to be making headway; and (4) that the wealthiest Hongkong importer of the drug, who is estimated to have made $20,000,000 out of the traffic in thirty-two years, declared that he had assurances from capitalists in Bombay and Calcutta that 5,000,000 taels would be turned over to any successful revolutionary government established in the south."

THE RETREATING GRAND PACIFIC GLACIER AND THE ADVANCING FIORD IN 1907.

The international boundary is shown by the line on the glacier, which extended then nearly four miles south of the boundary. In August, 1912, the glacier terminated north of the line in Canada, the head of the Reid Inlet fiord giving Canada a new harbor. At the boundary in 1894 the ice was 1,750 feet thick, excluding the part below sea-level. By 1907 a thousand feet had melted away, and by 1912 the whole 1,750 feet was gone.

A GLACIER THAT IS CHEATING A TREATY

A COLLISION between natural law and man-made law is apt to result in the nullification of the latter, whether the lawyers like it or not. The eminent legal experts who drew up the Alaskan boundary agreement between Great Britain and the United States decided that Canada should have no access to the Pacific through Alaska, no matter how far inland the fiords in that region should run. But in providing that the boundary should keep away from the salt water, they assumed that the coast-line was stationary—which it is not. In certain places it consists of the frontal walls of great glaciers, which are always protruding or retreating. At present they are mostly drawing back, so that the water which replaces them is now in some cases within Canadian territory. The question of the boundary at these points is of great interest. Ought it to be redetermined and based on the new coast-line? Or shall we let Canada enjoy her new harbors with the possibility of transit through our territory to the Pacific? Prof. Lawrence Martin, of the University of Wisconsin, who writes on the subject in *The Scientific American Supplement* (New York, August 30), points out that we can hardly insist on a moving boundary-line, even to satisfy a treaty. In due time the glaciers will return to their old locations, wiping out the Canadian harbors and restoring the lost continuity of the southern "panhandle" of Alaska. Says Professor Martin:

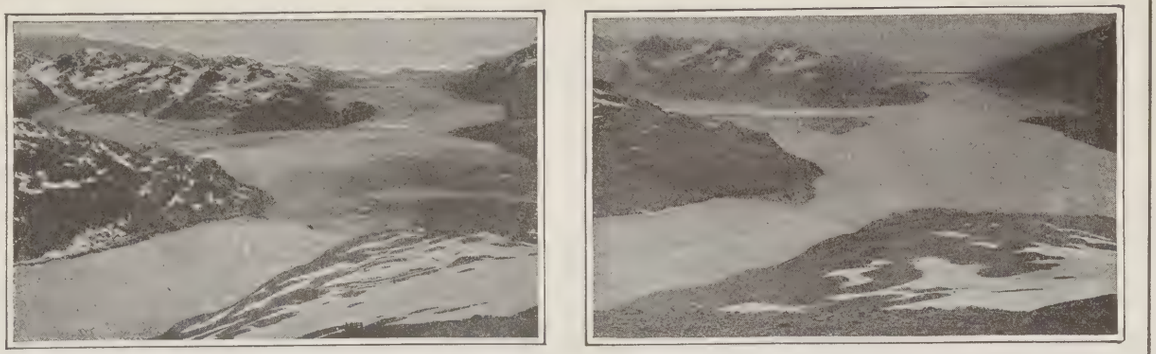
"This story, in a nutshell, is that because of certain great advances and retreats of Alaskan glaciers the boundary of Alaska is located differently from similar international boundaries which are determined in relation to mountain ranges and permanent coast-lines. If the portion of the boundary near Glacier Bay and Muir Glacier were to be redetermined now, Alaska would include a portion of what is British Columbia. If the boundary near Mount St. Elias and Yakutat Bay had been located early in the nineteenth century, Alaska would have included part of what is now Yukon Territory.

"The boundary, however, was settled in 1903, and for all time. It is ten marine leagues, or about 35 miles, from the coast. Certain glacier fronts have had advances and recessions of 20 to 60 miles; and as these glaciers, rather than the solid land, determined the coasts, an element enters into the situation which was not considered by the Joint Boundary Commission of Great Britain and the United States.

"Most of the glaciers in the world are oscillating at the terminus, sometimes moving forward to a more advanced position, sometimes melting back. . . . Such oscillations are always taking place. In the Alps the advance or retreat is measured in feet, in Alaska in miles. The case described below is a typical case of a great retreat in Alaska, whereby a boundary-line is disturbed.

"When Capt. George Vancouver visited southeastern Alaska, in the latter part of the eighteenth century, the glaciers were at a flood stage. The fiord which we now call Glacier Bay was filled with glacier ice to within two or three miles of the mouth. About 1814, according to the natives, the great ice tongue of Glacier Bay was advancing. . . . Between 1814 and 1879–80, when Glacier Bay was visited and explored by the great American naturalist, John Muir, there was a gigantic retreat of the glacier. It was dismembered into nine separate ice tongues, of which one, subsequently named Muir Glacier, had melted back 20 to 24 miles, and another, Grand Pacific Glacier, about 40 miles. A great fiord was reopened to the waters of the sea by this retreat."

By 1894 the retreat of Muir Glacier, in the eighty years since 1814, had attained over 25 miles, while Grand Pacific Glacier



VIEWS FROM THE SAME POINT IN 1894 AND 1907, SHOWING RETREAT.

had receded 44 miles. This is of interest as noted above, because the portion of the Canada-Alaska boundary near Glacier Bay, settled by treaty in 1903, was subsequently demarked upon the basis of the glacier termini as they were in 1894. From 1894 to 1911 Muir Glacier retreated nine miles and Grand Pacific Glacier ten miles. Altogether, there was a recession of about 60 miles from 1814 to 1912, 16 miles of this distance in the period of recent visits following that of Muir in 1879, and about 12 miles since 1894. Thus a fiord as long as the great Hardanger Fiord in Norway has been entirely revealed by the glacier recession of 60 miles in the 118 years since 1794. To quote further:

"The international boundary crosses the valley occupied by Grand Pacific Glacier about 12 miles northwest of the ice front of 1894. Here a portion of the boundary-line was placed less than 35 statute miles from the supposed head of the bay. This was probably in order to run it in a direct line to Mt. Fairweather, which was desired as a boundary peak. It is certain that this portion of the boundary was not located in the expectation of such a great retreat of Grand Pacific Glacier as has since taken place.

"On August 1, 1912, the Grand Pacific Glacier had receded so far that its terminus was in British Columbia rather than in Alaska, and Canada had acquired a new harbor. At this point the glacier surface rose 1,750 feet above the sea-level in 1894, but had melted down to 750 feet in 1907, and had all disappeared in 1912. . . . . .

"This new seaport lies in a snowy desert land and is reached only by traversing American waters; but in the spirit of the original treaty Canada should have no harbor whatever in this region. The international boundary is now fixt and, of course, will not be changed merely because the terminus of a tidal glacier was accepted as the head of a bay and the bay was later enlarged by retrogression of its head. If the boundary had been adjudicated soon after Vancouver made his map in 1794, with the Muir ice front 34 miles and the Grand Pacific ice front 60 miles from its 1912 position, Canada would have gained hundreds of square miles of territory. If the boundary were under treaty in 1912 with Grand Pacific Glacier 15 or 16 miles back from where it was in 1879, nearly 12 miles from where it was when considered by the boundary commission, and about 60 miles from the probable end in 1794, then Alaska would gain hundreds of square miles. Evidently a glacier is too variable a feature to be used in determining an international boundary.

"Moreover, there are advances as well as retreats in the Alaskan glaciers, and Canada's newly gained harbor will eventually be lost again through advance of the glacier. This we know from the ancient and modern advances of ice tongues in this very region. . . . It is to be hoped that Muir Glacier will soon advance again, at least to the position of the ice cliff of the nineties in the last century, for then the glacier was far more beautiful to travelers than now, tho the recent retreat adds an element of great interest to the scientist.

"Clearly the international boundary should not be shifted with every such fluctuation of a glacier, nor should coastal boundaries in glaciated mountains be located without knowledge of and regard for such glacial oscillations. . . . . .

"If the international boundary had been fixt a century ago Canada would have made up for its loss of territory near Mount St. Elias by the addition to British Columbia of a part of what is now Alaska, in the region east and north of Russell Fiord.

"Even this give-and-take as a result of differences in the coast-line, in connection with the advance and recession of glaciers, would have been unfair, for neither the emaciated glacier coast, favorable to the United States, nor the advanced glacier coast, favorable to Canada, marks a permanent condition. See what has just happened. Hidden Glacier continued the recession of the nineteenth century during the period of recent observations from 1890 to 1906. But between 1906 and 1909 this ice tongue advanced two miles, probably in 1907.

"All of these observations show the unfitness of the temporary terminus of a tidal glacier to be considered the head of a bay, especially in cases where the coast-line bears an important relationship to the determination of an international boundary. The events of the last century in the vicinity of Mount St. Elias, Russell Fiord, and Glacier Bay have demonstrated this clearly."

Map of Grand Pacific Glacier and the extension of Reid Inlet to and past the international boundary, between 1879 and 1912.

LESSONS FROM THE GLOWWORM

SCIENCE HAS OFTEN gone to school to the humblest of living creatures. The electric battery was invented by Volta in an attempt to imitate the electric action of the fish called the torpedo. This fact is recalled by Professor D. Berthelot, who suggests in an article contributed to the *Revue Scientifique* (Paris) that students of the lighting problem might do worse than to try to reproduce the mechanism by which the glowworm gives its light. Most of our light is thermic—it is due to heat; but in the glowworm's light, Professor Berthelot tells us, the energy curve of the spectrum does not obey at all the laws of thermic radiation. The whole of the energy given out is visible, the invisible infra-red and ultraviolet rays of the solar spectrum being absent, and the luminous efficiency being exactly 100 per cent. This wonderful creature produces light without heat, something that man has never as yet been able to do. Says Professor Berthelot:

"The glowworm gives a solution of the lighting problem, taken from an order of phenomena totally different from those that we utilize. The origin of his light is not thermic, but chemical. It is allied to phenomena of oxidation analogous to those that produce the phosphorescence of yellow phosphorus; and here also it is likely that electric energy plays the intermediary rôle of a disinterested attendant who asks nothing for his services. Anatomical study of the creature shows us, also, that the light-giving organ, like the electric organ of the torpedo, is made up of a series of identical cellular elements, constituting a photogenic layer traversed by an infinity of small air-tubes through which oxygen penetrates into the tissues.

"Will our future lighting systems utilize similar processes? Will bodies be found endowed with as new properties as those of the rare earths utilized in the Welsbach mantle? Shall we see coming into use again the wicks of our old-fashioned oil-lamps, which, soaked by capillary attraction, will bring about contact between liquids capable of producing by their mixture—in the fashion of certain phosphorescent substances—a brilliant emission of cold light? It would be rash indeed to predict.

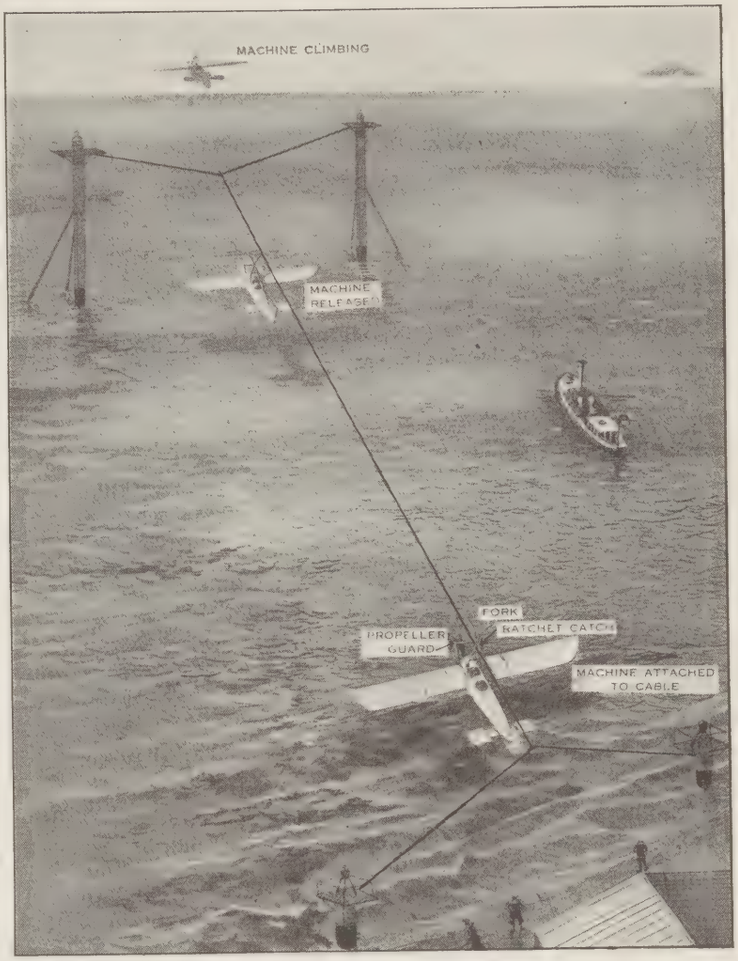
"A little more than a century ago, Volta, seeking to make an 'artificial torpedo' [fish], invented the voltaic pile, and, launched science in new waters. May there come a day when some new Volta, endowed with the same inventive force, with the same creative genius, shall realize the artificial glowworm, and by a mechanism as unexpected as the pile was in its day, revolutionize the science of illumination as his predecessor has revolutionized that of electricity!"—*Translation made for* THE LITERARY DIGEST.

BENZINE AS AN AID TO RED BLOOD—According to recent observations, reported in *The Scientific American* (New York, August 30), benzine has a marked action upon the corpuscles of the blood.

"In fact, it is found to destroy the white corpuscles without much action on the red. These results led Von Korangi to use benzine in cases where the blood contains a greater number of white corpuscles than the normal amount, this causing the disease known as leucemia, analogous to anemia. His first researches, made in 1912, gave good results and confirmed the previous author's observations. Since that time Aubertin and Parvu found a lessening of the white corpuscles and an increase in the number of red corpuscles due to small doses of benzine in the case of two patients, and this method may be called upon to replace radium treatment which was hitherto the only one available. . . . Only a few drops of benzine per day should be administered in order to avoid poisoning by this substance."

A PERCH FOR AEROPLANES

HITHERTO THE AEROPLANE has required plenty of room for taking flight and for alighting. The bird, which the inventors of the aeroplane have striven to imitate, can fly from a narrow perch and return to it again without trouble. Such ability would be particularly welcome to bird-men who are manipulating a hydroaeroplane attached to a war-ship, where space for starting and stopping is peculiarly difficult to get. Successful tests are now being carried out, we learn from *La Nature* (Paris, August 30), of a method whereby aeroplanes may both alight and take flight on a cable strung over the ship's deck. We translate and condense the following paragraphs from an article contributed to the paper named above by Lucien Fournier. Says this writer:



From "The Sphere," London.

BLERIOT'S AEROPLANE PERCH.

Not so simple as the one the bird uses, but the best we can do so far.

"A steel cable is fastened to the ship's side, and the departures and arrivals are made on this cable, to which the hydro-aeroplane is suspended. The cable is four-fifths of an inch thick and 300 feet long, and is sustained by four posts, two at each end, 60 feet apart, so that the plane may engage the cable by passing easily between the posts at either end.

"The plane is enabled to perch on the wire by means of either of two different devices . . . the trapeze and the fork. At the trials, the fork system appeared to have more of a future, because taking flight and alighting may be accomplished by its means with no special maneuvering.

"The fork, whose form is indicated by the illustration, is mounted between two pieces of steel carrying the mechanism

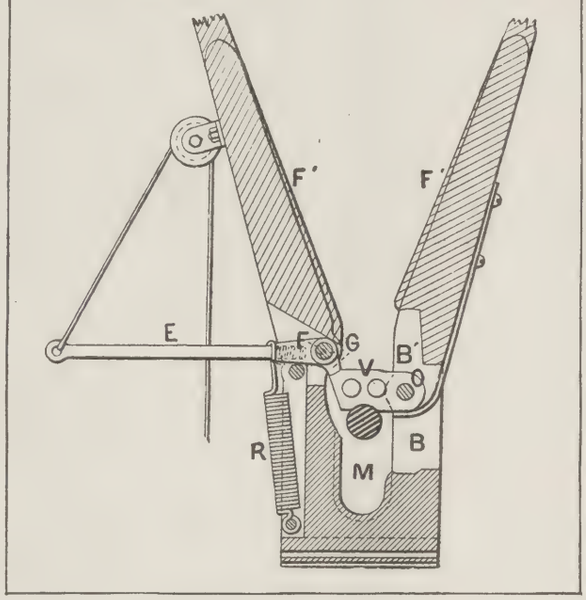
for alighting and taking flight. It is upheld by an assemblage of steel tubes surmounting the forward part of the aeroplane.

"The two fixt branches, *F'* are prolongations of the upright; at their base a piece, *V*, movable about the axis, *O*, closes the aperture, *M*, which is just large enough to admit the cable. The piece *V* may fall into either of the two sockets *B* or *B'*. A lever, *E*, hinged at *F*, bears a small branch, *G;* it is operated by a wire passing over a pulley on one of the branches of the fork. Finally, a spring, *R*, serves to bring the lever *E* back to place.

"When the aeroplane is engaged beneath the cable, the pilot easily places the two branches of the fork on one side and the other of the cable. The latter soon touches the hinged piece at the angle, which yields under the pressure, and the cable passes into the aperture *M*. Under the action of the spring the hinged piece tends to rise again, in which it is aided by the cable below it. The plane begins to slow up through the friction, which is enough to stop it in 75 to 100 feet.

"When the aviator desires to leave, the procedure is extremely simple. The motor having been started so that the propeller has put the machine in motion, the aviator pulls the cord of the lever when he judges the speed to be sufficient; the small branch of the lever moves toward the left, and the hinged piece is raised by the cable, which thus frees itself.

"The apparatus also includes a sort of automatic switch that interrupts the spark-circuit of the motor when the hinged piece closes behind the cable, so that the motive power is instantly shut off."



THE AEROPLANE'S CLAWS.

The fork corresponding to the bird's talons for clutching the perch.

WHY SEA POWER-PLANTS FAIL

NO PRACTICAL MAN who looks at the breakers crashing on a sea-beach can have failed to lament the wasting of so many millions of horse-power in all parts of the world. And yet no effort to recover and use any part of this power has been permanently successful on a commercial scale. The ocean as a source of engineering profit has been a failure. Tidal power-plants, wave-motors, plans for recovering the gold which sea-water undoubtedly contains—all have been unsuccessful. A recent scheme to utilize differences of temperature in the ocean depths, lately noted in these columns, is also believed by experts to be difficult of realization. A correspondent of *Engineering News* (New York, August 28) undertakes to furnish one of the reasons for at least some of the failures. This gentleman, Benjamin Brooks, of Kansas City, Mo., writes as follows:

"Having seen the great majority of these wave-motor schemes end in a pile of wreckage, I realize the almost impossibility of maintaining any floating structure exactly over a given point on the surface of the ocean, or connecting it to anything else in a mechanical way. Many of us well know the difficulty of keeping a dredger exactly where she belongs, even in comparatively smooth water, with steel-shod post-anchors and wire-cable guys. Consider, then, the difficulty of keeping a floating power-plant exactly centered over a 12-foot flume, 1,800 feet long, during a south Pacific hurricane! And, if we succeeded in this, how long would it take her to ram herself to pieces on the upper end of it? . . . . . .

"There are some sources of power which, tho enormous in extent, never have paid for the difficulty of maintaining the necessary plant to use them. Gasoline-engines have supplanted windmills. Countless wave-motors have gone to pieces before any dividends were forthcoming, and left steam-engines operating on the beach; so . . . a careful look at the difficulties beforehand will hasten the achievement, and possibly block the unscrupulous promoters who would use it to operate on the gullible."

VENTILATION THAT MARS ACOUSTICS

THAT CURRENTS of air in a theater or concert-hall may form a sort of transparent curtain between stage and auditorium, interfering seriously with the transmission of sound, has been shown by recent experiments. Whenever a sound passes into air of a different density it is partly reflected back toward its source and partly changed in direction. When a sound encounters such changes of density at many points in its course, it may thus be as seriously weakened as if a wall of glass intervened. This may happen if the heating apparatus is so arranged that streams of air at different temperatures rise in front of the stage, for a change of temperature in a free gaseous medium always changes its density. As we are told by a writer in *Cosmos* (Paris, August 28):

"Poor acoustics may be caused sometimes by agitation and convection of the air due to the heating or lighting systems, or to ventilation. In his book on 'The Theater,' Mr. C. Garnier mentions an example: 'This inconvenient fact has been noted in one of the theaters recently built in Paris. As the air is admitted near the footlights it serves as a sort of curtain between actors and spectators and interferes much with the performance. The sound coming from the orchestra is very intense and sonorous, while that from the stage is weak.'

"At other times, but rarely, the effect of the motion of air on the acoustic qualities of a hall may be to improve them. A theater was so ventilated that the air, heated behind the stage, reached the auditorium through the proscenium arch and finally escaped by the central dome of the ceiling, above the luster. Now it was shown that in this hall, when the ventilating apparatus was working, the acoustics were much improved. Here was realized the desire of Langhaus, of Berlin, who wished a slight current of air to proceed from the actors to the spectators, carrying the voices with it.

"In fact, a displacement of the whole mass of air in an auditorium does not seem to hurt the acoustics. The injurious effect shows itself only when there are in the hall several layers of air of different temperatures and densities; for at each surface of separation are produced certain effects of reflection and refraction, as is indicated by mathematical study of the subject.

"An English author, Mr. Watson, has studied this action of air-currents. . . . He finds that we should avoid, as much as possible, the formation of parallel layers of air, especially when these layers, by their arrangement, form, as it were, a curtain between the stage and the spectators.

"In general, ventilation can have only a slight influence in improving the acoustics of a hall; but its harmful effect may be very marked. . . . Mr. Watson recommends the disposal of heating and ventilating apparatus so as to form in the auditorium a single column of ascending air, having a temperature sensibly uniform throughout its mass and relatively low, which will allow sounds from the stage to pass without deviating or diffusing them."—*Translation made for* THE LITERARY DIGEST.

A GREAT COASTAL CANAL SYSTEM

IT IS PROBABLE that in the future vessels may be able to go from Boston to the Rio Grande entirely through inland waters. This will be effected by a system of canals connecting the various bays and sounds that parallel the Atlantic coast along most of its extent. Some of these canals we have already, such as that connecting Raritan Bay with the Delaware River, so that only enlargement will be necessary. One of the most costly, the great Cape Cod Canal, shortening the distance by water from New York to Boston by 70 miles, and cutting off the stormy trip around the Cape, is nearing completion. These works have hitherto been undertaken on their individual merits, but it is now proposed that they shall form part of a comprehensive plan for inland navigation just within the coast-line. In 1905 Congress ordered a survey of the route between Boston and Beaufort, N. C., and General Bixby, the Chief of Engineers, has just recommended, in an official report, that the missing links be constructed by the Federal Government. Regular appropriations have already been made during several years past to build needed sections of the route between New Orleans and the Rio Grande. The completion of the whole scheme is doubtless only a matter of time. Regarding the northern part of the plan *The Scientific American* (New York, September 6) speaks as follows:

"The arguments in favor of putting through this great work are based upon the favorable physical conditions along the proposed route, the advantages that would be derived by our coastwise traffic, and the naval and military value of a chain of interior canals in time of war.

"If a study is made of the several maps which accompany this article, showing the Atlantic coast-line from Boston to Beaufort, it will be seen at once that its configuration is such as to invite the construction of the interconnecting canals. Cape Cod Bay, Long Island Sound, New York Bay, the Delaware River, and the long reaches of Chesapeake Bay, Albemarle Sound, and Pamlico Sound, already afford several hundred miles of protected waterway, far removed from the coast-line, which, if connected by canals, would afford a continuous interior route, protected alike against the shoals and heavy gales of the Atlantic and against attacks by the ships of a hostile navy.

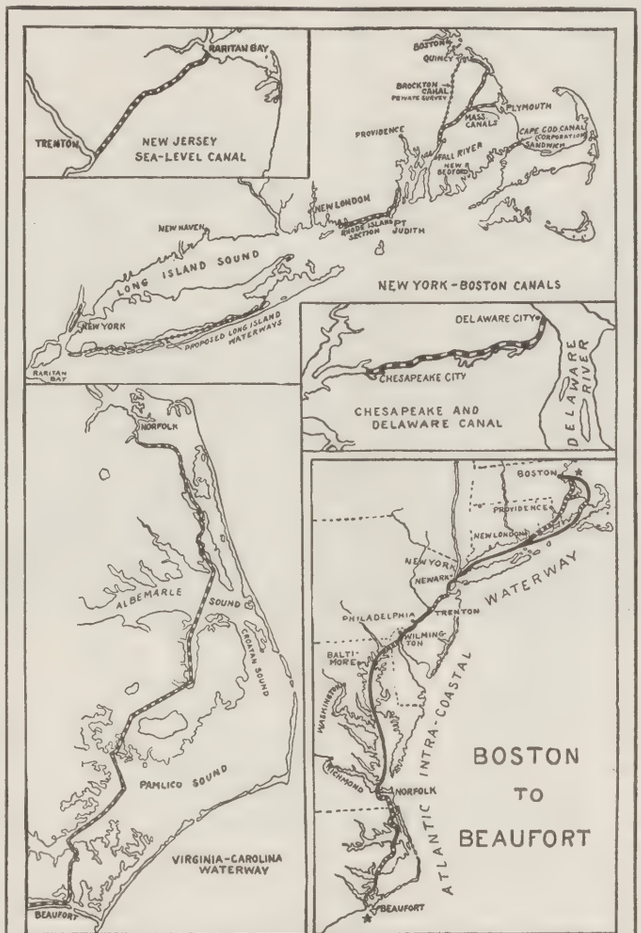
"As the result of several years of earnest work on the part of the various commercial interests, shipping and otherwise, Congress authorized the army engineers to make surveys and estimates to determine the feasibility of the scheme, considered as an engineering proposition; the prospects of a sufficiently large amount of traffic to warrant the cost of its construction; the naval and military advantages of the canal in the event of war, and the best size and type of canal to meet all the conditions, present and future."

With regard to that part of the route that parallels the Gulf of Mexico, *Cassier's Magazine* (New York, September) prints an article entitled "A Dream Come True," part of which runs as follows:

"One of the greatest projects in waterway development that has been promulgated in the United States is the Intercoastal Canal extending from the Mississippi River through the coast sections of Louisiana and Texas to the mouth of the Rio Grande River. . . . The canal is now open to navigation from New Orleans to the Mermentau River in that State, and from Galveston to Arkansas Pass and Corpus Christi, in Texas. Appropriations have been made for the canal from the Mermentau River in Louisiana to the Sabine River which will connect the same with the channel already completed from the Sabine River to Port Arthur and Sabine Pass.

"A hearing has recently been held by the Board of Engineers of the United States Army, and undoubtedly a favorable report will be made on that section connecting Port Arthur with Galveston; also a hearing is soon to be held to consider a portion of the Corpus Christi-Brownsville section, from Corpus Christi to Baffin Bay. If these two latter sections are approved and appropriations made by Congress for same, then there will be left only that portion of Corpus Christi to Baffin Bay section extending from Baffin Bay to the mouth of the Rio Grande River.

"Thus it will be seen that in the near future the Mississippi River will be connected by an inland route with the Rio Grande River, which means, when Mexico shall become tranquil again, that the canal proposed in that country will continue inland navigation as far as Vera Cruz, Mexico, and eventually there will doubtless be an inland water route to the Panama Canal, which means, in turn, that boats from the upper Ohio and Mississippi rivers and their tributaries may carry freight to Louisiana, Texas, and Mexican ports with barge and tug. It means further that with the completion of the Atlantic and the Atlantic to the Mississippi River inland routes, boats may come from Boston to the Mississippi River and through this western canal to the Rio Grande without the attendant dangers of ocean and gulf navigation.



THE SYSTEM OF INTRACOASTAL CANALS
For which Congress is asked to make appropriations.

"The importance of this great inland waterway is largely increased by virtue of the fact that the rivers and bayous tributary to the Intercoastal Canal of Texas and Louisiana amount to a mileage of 7,000 miles. The canal connects these tributaries with each other and with the various ports of Texas. . . . .

"The citizens along the route of the completed sections of this canal are rapidly taking advantage of its facilities, and when the canal is completed in its entirety it bids fair to carry a tonnage equaled by no other inland waterway route in the world.

"In addition, it serves as a source of drainage and opens up thousands of acres of the most fertile land in the country."

A point of some interest is that *The Scientific American* calls this enterprise an "*intra*coastal canal," while *Cassier's* names it "*inter*coastal." The former means "within the coast," the latter, "between coasts." Does this signify that while the Federal engineers think of our coast as a unit, it is still regarded in the South as made up of the separate "coasts" of Carolina, Virginia, Louisiana, and so on?

LETTERS AND ART

EDISON'S REVOLUTIONARY EDUCATION

MR. EDISON has been led by his young son to devise a sort of revolutionary scheme of secondary education. His plan is to utilize the motion pictures to teach all sorts of elementary facts. Like all children, the young Edison displayed an inquisitive streak that taxed the time of his parent, but turned his attention to the needs of the growing child. "In the bad old days," says Mr. Leonard P. Ayres, of the Russell Sage Foundation, "the courses of study in our schools afforded a maximum of unpleasantness diluted with a minimum of interest." Mr. Ayres, in company with a number of educational experts, has been inspecting the new devices produced in the Edison laboratories, and in *The Survey* (New York) declares that "Mr. Edison has devised a new sort of school work calculated to supply a maximum of interest and no unpleasantness at all." He has made a list of between seven hundred and a thousand subjects for scenarios, tho, as yet, he has put only fifty or sixty into scenario form. The scenarios are all prepared by a specialist in the particular field dealt with, and when a film is made it is "tried out" before various audiences. The one Mr. Edison most relies on is composed of children who tell freely what impresses them. "By a process of deduction this indicates what fails to 'get across' to their young minds. When all this has been done, the scenario pretty likely has to be rewritten and the first film to go to the scrap-heap. The process is kept up until a satisfactory film on each subject has been prepared." Mr. Ayres, after attending a demonstration, gives his impressions:

Copyrighted by Thomas A. Edison

MR. EDISON AND SOME OF HIS CENSORS.

The great wizard submits his new educational films to the criticism of his "gang" and doesn't hesitate to "scrap" anything that doesn't "get over to them."

"The materials of the new educational device consist of wonderfully clever motion pictures of natural phenomena in motion. They portray with startling vividness the workings of pumps in which we look through transparent walls and see the valves opening and shutting, and the water rising with each piston stroke. There are transparent working models of steel converters in which the whole process developed by Bessemer is seen in vivid detail. Other films show the development of the house-fly through all its different stages. The caterpillar encloses itself in the chrysalis, and later emerges a beautiful butterfly. By means of motion pictures taken through powerful microscopes the minutest forms of plant and animal life are seen, the development of cell growths becomes a vivid reality, and one watches in every detail the formation of the most beautiful and intricate sorts of crystals.

"As each new process is portrayed, short, clear, printed sentences of explanation are thrown upon the screen. As each new object is shown, a human hand bearing a pointer carrying words of explanation appears from the side and indicates its exact nature and significance. Nothing is left to speculation or imagination. No phase of the process or feature of the object is left unexplained or unnamed.

"The educational motion pictures represent supreme success in the presentation of predigested information."

But this characteristic, thinks Mr. Ayres, also constitutes their gravest limitation as instruments of education in the public schools. For—

"Their very perfection of detail and interesting character render them dangerously convenient adjuncts of the old 'pouring-in' method of teaching. This method has characterized all our schools for generations. Under it the teacher, orally or through the text-book, gave information to the children each day, questioned them next morning to find out how much they had retained overnight, and then gave out that day's allotment of information. The children's minds were treated as tho they were tanks into which large amounts of information were poured in the hope that some of it would stick. A good deal of it did stick.

"The new educational motion pictures are a most convenient ladle for the pouring-in of information. Under this form of their misuse, the function of the pupils would be to sit in a darkened room while the elements of knowledge were passed before them on a screen. This would obviate the necessity of their giving voluntary attention to their lessons and relieve the teacher of the burden of teaching or assigning them.

"The objection to this is that the old plan of lesson-assigning and lesson-hearing was vicious, and what we want is not its perfection, but its destruction. School work needs to be real instead of artificial. Manual work is being introduced into every progressive school because it enlists the interest and application of children as the mere studying of books does not.

"When children work together in the planting of a garden or the making of a relief-map in clay, their work is social and cooperative. When they sit silent in a darkened room they are individual and exclusive. When they are making something, material or abstract, because they need it in their business, they are active and alert. When they watch motion pictures or study books because the science period comes at 10.30, they are passive and inert. When they are doing or making something real that has an object behind and a result to come, they are energetic. When they listen to, or watch, or read something that is to them artificial, they are apathetic.

"Every tool can be misused. The more effective it is when rightly handled, the greater is its capacity for damage when unskilfully wielded. The new motion pictures are an educational tool of great potential value, and while their dangers and limitations are real, they are not inherent or unavoidable. While they may be used for the mere imparting of facts, they may also be employed to organize, to illustrate, to clarify, and to summarize knowledge which the children have acquired for themselves through the exercise of guided, intelligent inquisitiveness.

"Whether they will in practise be used mainly to supply information or to clarify knowledge will depend partly on the skill with which they are developed in Mr. Edison's laboratories

and partly on the wisdom with which they are used in the schools. If they become truly vital factors in education, it will be because they have been rendered as excellent pedagogically as they now are scientifically."

Prof. John Dewey, of Columbia University, who was also one of the spectators at the Edison studios, was chiefly imprest, he says, with "the immense advantage a great commercial enterprise has over the greatest of our existing educational institutions in the matter of conducting systematically an experimental development of a new proposal before putting it into general practise." Further,

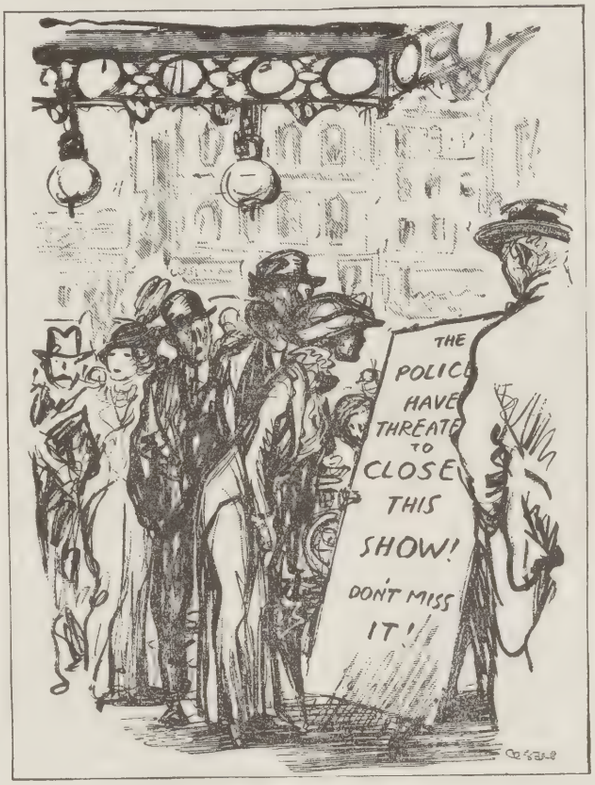
"No intimation was given of the sum of money that is being put into the development of this new undertaking. But it is clear that a large staff is employed to develop 'scenarios,' to make suggestions and criticisms, and to try out various schemes, in addition to the expense involved in taking the pictures themselves. A large sum of money will have been spent before pecuniary returns begin to come in—a good deal of it strictly experimental inquiry.

"Where is there a school system having at command a sum of money with which to investigate and perfect a scheme experimentally before putting it into general operation? And can we expect continuous and intelligent progress in school matters until the community adopts a method of procedure which is now a commonplace with every great industrial undertaking? Is not the existing method of introducing reforms into education a relic of an empirical cut-and-dry method which has been abandoned in all other great organizations? And is not the failure to provide funds so that experts may work out projects in advance a penny-wise and pound-foolish performance?

"That children will be immensely interested in at least the greater part of the material the Edison people prepare is sufficiently attested by the delight of the adults on the evening of our visit — to say nothing of the hold the nickel 'movies' already have upon them. That Mr. Edison has a sound psychologic basis in relying upon the instinctive response of human beings to whatever moves and does something is unquestionable. So is the fact that the deadness of much existing education is due to the absence of anything moving and doing in the school-room. Personally I believe that Mr. Edison is in the right in his conviction that children, as well as adults, do best in and learn most from matters in which they are interested; and that there is more discipline, in the sense of actual training of power, where there is interest, than where what is done is repulsive and arbitrary.

"I was also imprest by the fact that, after all, seeing things behave is rather a vicarious form of activity, and that there is some danger of the better becoming an enemy of the best. I mean that a wide-spread adoption of motion pictures in schools might have a tendency to retard the introduction of occupations in which children themselves actually do things. The more hopeful view, of course, is that the former would pave the way for the latter, affording an intermediate step that in many cases would not be taken directly. . . . . .

"Despite all that has been indicated, there can be no doubt that Mr. Edison is developing an educational instrument that is destined to play a new and most important part in school work."



THE LURE —Cesare in *The Sun*.

DRAMATIZING VICE

THE PREACHER who illustrated his sermon on profanity with all the oaths that his flock should avoid is matched in New York by the theatrical managers who are staging frank revelations of vice as horrible examples to keep theatergoers in the straight and narrow path. To the surprize and disappointment of the managers, however, something like a shriek went up from many whose sense of decency was outraged, and the plays have been rewritten. Several questions remain unanswered. One is, Shall humorous and inviting representations of sin continue unchecked while serious treatment is banned? Another is, Who shall be the censor? Two plays, "The Lure" and "The Fight," were both condemned and approved by press and public, and were brought to the cognizance of the chief police magistrate of New York. It was intended to submit the question of their propriety to the Grand Jury, but the managers, after a temporary withdrawal of the plays, represented them in an altered form, with the objectionable scenes removed. In the controversy that raged, not only the New York papers, but journals all over the country joined in, and where so many voices were raised it is not surprizing that the issues were not kept wholly clear. The question of "decency," immorality, propriety, were freely handled; but the end which the managers claim to have been their purpose—to treat realistically the problem of the white-slave traffic, was often lost sight of. In a letter sent by Mr. Lee Shubert to the Assistant District Attorney, this claim was made for "The Lure":

"Before this play was first produced the manuscript was submitted to reform workers who were engaged in the suppression of the 'white-slave' traffic, and they without exception indorsed and urged its production as in the interest of the work in which they were engaged. Thus encouraged, and in the belief that we were furthering a deserving cause, as we still believe, the play was produced.

"It met with the immediate indorsement of high public officials and reform workers, among others such men as Stanley W. Finch, who is at the head of the branch of the Department of Justice at Washington having in charge the suppression of the 'white-slave' traffic, with hundreds of men under his charge; your chief, Hon. Charles S. Whitman, who witnessed the performance over four weeks ago; Judge Warren W. Foster, Magistrate Corrigan, ex-Police Commissioner Bingham, Mrs. Blatch, Mrs. Catt, Mrs. Israels, Julius Hopp, organizer of the Wage-Earners' League; Norman Hapgood, George Sylvester Viereck, and a host of other social and charity workers.

"Since this controversy has arisen I have been urged by many public-spirited citizens not to abandon the struggle to continue the production of this play.

"I have, however, concluded that since it has become apparent that there are substantial differences of opinion in the community concerning the wisdom, in the public interest, of producing the play in its present form, even tho it admittedly preaches a useful sermon, not to continue the previous

production, but to have the play rewritten to meet the objections that have been urged against it."

The action against the plays was instituted by Chief Magistrate McAdoo, whom *The Outlook* describes as "prominent in securing the representation in New York of Mr. Bernard Shaw's play 'Mrs. Warren's Profession.'" His opinion of "The Lure" shows that he places it in a category different from the one of his former championship:

"I believe the play to be indecent and immoral, and in part gross and revolting, and that it is entirely covered by Section 1140 of the Penal Law. The main objections to the play center around the second act, which shows the parlor or reception-room of an illegal place. The more realistic the scene the more offensive. . . . . .

"The play is said to be an exposé of white slavery, and therefore to be used as a valuable preventive against young girls being lured into these traps. This play is said by its defenders to be a sort of moral prophylaxis against the evil it depicts.

"We do not need to uncover a sewer to convince people as to its filthiness nor to warn those of ordinary cleanly habits against getting into it."

The Outlook thinks that "all decent people will agree in this, and will agree also with Mr. McAdoo, that a magistrate should disregard charges of being finical or puritanical, and that he should under his official responsibility answer the question whether a particular play is in point of fact indecent and immoral." Going on:

"Ultimately this is always a question of fact, but a question not to be determined offhand by the subject of the play. For the fact to be determined is not that of subject, but of intent and effect. Even the hideous subjects of prostitution and sexual disease may be, and have been, treated on the stage and in fiction with a noble purpose and without the slightest effect of rousing evil passion or satisfying prurient curiosity. Witness for example, Brieux's 'Damaged Goods,' described some time ago in *The Outlook;* witness, on the other hand, some of the incidents of the 'gay' musical comedies in which not an offensive word is said, but in which the essential purpose is salacious and dangerous. Who shall decide as to intent is a question hard to answer, but one that must be answered. Certainly the play must be seen, not read about; but whether censor (as in England), or magistrate (as has been the usual custom here), or grand jury (as in the cases now under discussion) is made the final arbiter, the decision must distinguish between that legitimate use of passion and plain speaking which seriously deals with evil to make it repulsive and a tragic warning, and that use which appeals purposely, and with vile desire to make money, to all that is lowest in human nature."

Against this is the statement of Nora Blatch de Forest, secretary of the Woman's Political Union, in the New York *Times:*

"'The Lure' does not give sexual instruction; it does not appeal to the sexual instincts; there is not one thrill from the beginning to the end of it. There is no 'lure' about it. 'The Lure' would have done to white slavery what 'Uncle Tom's Cabin' did to black. It deals with one phase of white slavery, the preventable causes which lead girls into prostitution, namely, economic necessity, false offers of marriage, and actual kidnaping."

ART FOR ART'S SAKE
THIS PLAY IS GUARANTEED TO OFFEND EVERY SENSE OF REFINEMENT AND DELICACY

THE DRAMA
ROBERT CARTER

THE WHITE SLAVE.

—Carter in *The Evening Sun.*

Leaving aside what the Chicago *Record-Herald* refers to as "floods of insincere and hypocritical defenses of the plays," there remains the unsettled problem of police censorship. The city of Providence anticipates the crisis, and, in the person of her superintendent of police, declares that the plays in question cannot go there. *The Journal* of that city feels "no one will be disposed to quarrel with him" for this decision, averring that "it is better to prevent their presentation than to prohibit them after a performance." The Philadelphia *Ledger* thus discriminates:

"If the stage were not so completely commercialized, and if the motives and morals of many managers and playwrights were not so patently attuned to the note of dollars and cents, the question of the fitness of this or that phase of life for dramatic representation might be left to adjust itself. But, unfortunately, there is no agreement among the serious friends of dramatic art as to how far the author is justified in dealing with the hideous and the immoral aspects of the life which he portrays, nor even as to the legitimacy of the discussion of certain questions before the footlights. . . . . .

"Who is to be the judge in these things? That is the crux of the difficulty. A censorship is impossible, for the average result must always be the suppression of the original and the progressive and the sanction of the commonplace and the conventional. It is intolerable that the police or any other such authority should be empowered to pass upon artistic productions of any sort. The surest safeguards are to be found in an enlightened public opinion, and in such a regulation of theatrical announcements that the discussion of social problems should be clearly advertised for what they are. There is no way of guaranteeing that the latter shall always be written from the high standpoint of the moralist or the teacher, but the public can and should be protected against the traps laid by the purveyor of vile plays masquerading under titles which give no clue to their real nature and content."

The New York *Times* broadens the field by declaring that "in all matters relating to the influence of plays, books, or pictures on public morals, it is well, it is absolutely right, that restriction or suppression should be due chiefly to the force of public opinion." Continuing:

"In a democracy the censorship of art, from a moral point of view, can not be safely intrusted to magistrates and policemen. But in the case of these two plays public opinion has exprest itself directly and forcibly. Nearly every newspaper in New York has condemned them and demanded their removal from the public gaze. Large numbers of reputable citizens have seen the plays and protested against their continuance.

"Mr. McAdoo takes cognizance of the assertions of the managers that the purpose of these plays is moral. He admits that the managers are 'taking advantage of the present righteous indignation of the public against what it calls white slavery.' It is the custom of playwrights and managers to try to make their plays timely, to deal with subjects people are talking about.

"There has been a great deal of painful and morally degrading discussion of evils which can never be lessened by promiscuous and irresponsible debate. The public movement against these brothel dramas indicates that the people are alive to the dangers of the situation. They have called a halt. Too many abominable books with a pretense of moral purpose have been tolerated."
